The approach will involve (a) laboratory measurements of acoustic signals under AF communication devices, (b) field measurements under AF communication devices and (c) exposure of human subjects under laboratory conditions to various acoustic signals. Data will be analyzed in the laboratory to identify operational situations with hearing damage risk potential, factors contributing to the problem and possible remedies. This is a consolidation and coordination of effort previously accomplished under work units 72310802, 72310803, and 72310806. semiannual review was accomplished 30 Sep 78 in conjunction with the preparation of the technical management review.

SUPPORTED BY U.S. Dept. of Defense, Air Force, Aerospace Medical Research Lab.

6.0023, HEARING PROTECTOR EVALUATION PERFORMANCE AND METHODOLOGY
M.R. Stephenson, U.S. Dept. of Defense, Air Force, Aerospace Medical Research Lab., *Wright Patterson A.F.B., Dayton, Ohio* 45433 (DF325100)

AMRL/BBA is responsible for evaluating personal hearing protectors, helmets, ground communication headsets and inflight communication headsets for use in AF hazardous noise environments. The objective of this work unit is to (a) maintain an ongoing program of investigating hearing protection performance of the above mentioned devices and (b) maintain current methodological procedures and evaluate potential methodologies for determining hearing protector effectiveness, to comply with current AF and national standards for sound attenuation measurements.

Human subjects will be employed in the laboratory evaluation of a hearing protector's sound attenuation characteristics as measured by the American National Standard Institute (ANSI) real ear attenuation at threshold (REAT) method. Hearing protectors submitted to determine their acceptability or suitability as devices meriting inclusion on the AF qualified products list (QPL) will be evaluated in accordance with the requirements of MIL SPEC 38268B. Results of these and other evaluations will be used to formulate recommendations to the Office of the AF Surgeon General concerning potential application for widespread or special purpose AF use. Data will be processed and prepared in formats consistent with general methods used by the scientific community as well as the AF for estimation of noise reduction in operational situations. Should the methodology for evaluating hearing protectors change, or should the requirements specified for AF evaluations be modified, then appropriate experimental analyses will be accomplished to evaluate and implement the most suitable procedure. This work unit is a consolidation of effort from work units 72310804 and 72310805, for purposes of increased management effectiveness, and does not constitute a new research effort. Semiannual review was accomplished 30 Sep 78 in conjunction with the preparation of the TMR.

6.0030, REGIONAL COOLING
S.A. Nunneley, U.S. Dept. of Defense, Air Force, School of Aerospace Medicine, *Brooks Air Force Base, San Antonio, Texas* 78235 (DF325130)

The project will explore the physiological advantages and limitations of regional cooling, particularly the head and thorax. These areas were selected because they (1) allow practical garment integration, (2) represent 33 percent of body surface area (3) are resistant to cold-induced vasconstriction, and (4) are subject to solar heating in the cockpit. A possibility that requires examination is that head or neck cooling may produce paradoxical effects with the body shutting down its defenses against heat.

The effects of regional cooling will be evaluated using a computer model to select critical combinations of metabolic rate and external environment, then validating the predictions by means of tests on human subjects.

SUPPORTED BY U.S. Dept. of Defense, Air Force, School of Aerospace Medicine

6.0031, UPGRADED INFLIGHT PHYSIOLOGICAL/ENVIRONMENTAL DATA ACQUISITION SYSTEM
D.G. Powell, U.S. Dept. of Defense, Air Force, School of Aerospace Medicine, *Brooks Air Force Base, San Antonio, Texas* 78235 (DF324510)

Current Air Force flying operations expose aircrew members to stressful and potentially hazardous environments. To build a data base on these environmental conditions and correlate them with physiological responses, it is desirable to develop instrumentation capable of collecting these data during actual inflight conditions. It is necessary to develop a total system which

will take the data from the collection point all the way through limited field processing to detailed laboratory processing, analyses, and plotting.

This work unit is established to coordinate with the U.S. Navy Pacific Missile Test Center in their development of a combination inflight physiological data acquisition system and miniature environmental monitor (IFPDAS/MEM), as well as associated data reduction systems, sensor systems, and software development. The work unit includes previously separate work units 7930-10-11 (upgraded IFPDAS) and 7930-10-12 (upgraded MEM). The IFPDAS/MEM will be a micro-circuited, battery-operated, man- or console-mounted data collection device which records analog and digital data.

SUPPORTED BY U.S. Dept. of Defense, Air Force, School of Aerospace Medicine

6.0032, BIOCHEMICAL EVALUATION OF CARDIAC STRESS RESULTS FROM ACCELERATION

R.J. Reyes, U.S. Dept. of Defense, Air Force, School of Aerospace Medicine, *Brooks Air Force Base, San Antonio, Texas* 78235 (DF324520)

Appraisal of the physiologic 'cost' of stress from acceleration (plus gz), while highly desirable, is technically difficult. Where there is much to indicate that a plus gz resulting from high performance aircraft impose physiologic loads on the flyer, quantitative evaluation needs to be further elucidated.

Post plus gz biochemical evaluation appears to be promising. A urinary battery of determinations (catecholamines, 17-hydroxysteroids, various electrolytes and certain nitrogenous metabolites) will be measured which relate to autonomic, endocrine and metabolic activities. These studies will ultimately lead to plasma analysis of these constitutents which may result in a more immediate qualitation of stress.

8.0001, SHORT-RANGE ORDERING STUDIES USING SCANNING TRANSMISSION ELECTRON MICROSCOPY

J.M. Cowley, Arizona State University, School of Liberal Arts, Dept. of Physics, *Tempe, Arizona* 85281 (DMR77-21843)

A high resolution scanning transmission electron microscope (STEM) will be used for the study of short-range ordering of atoms in nonstoichiometric oxides and sulfides and in various amorphous materials. Modifications of the instrument and the addition of new systems for data collection will also be undertaken to further enhance its capabilities. For some nonstoichiometric oxides and sulfides which show tendencies for the formation of superlattices having very large periodicities, the nature of the atomic disorder and the origins of the ordering energies will be sought in terms of local perturbations of the crystal structure and local strain fields. For amorphous semiconductors and glasses the form of the local atomic clusters will be studied.

Developments of the theory of STEM imaging of crystals and computing methods for determining intensity distributions in images and electron diffraction patterns will accompany the experimental observations and investigations will be made of the statistics of atom correlations in two-dimensional projections of limited three-dimensional distributions.

This is the first year of a two-year continuing grant.

SUPPORTED BY U.S. National Science Foundation, Directorate for Mathematical & Physical Sciences, Div. of Materials Research

8.0002, LOW-TEMPERATURE RESEARCH IN LIQUID HELIUM

R.E. Packard, University of California, Berkeley Campus, School of Letters & Science, Dept. of Physics, *Berkeley, California* 94720 (DMR76-82934 A01)

Research done under this grant will be a continuation of research begun under NSF Grant No. DMR73-02461. The work involves two main projects: vortex photography and ultralow-temperature research on 3He. A technique has been developed to photographically record the positions of quantized vortex lines in superfluid helium. Both the dynamics of vortex motion and the equilibrium distribution will be studied. The 3He work is done in a nuclear demagnetization refrigerator. Experiments

to study the flow properties and magnetic relaxation properties of the low-temperature phases of 3He will be performed.

SUPPORTED BY U.S. National Science Foundation, Directorate for Mathematical & Physical Sciences, Div. of Materials Research

8.0003, REACTION KINETICS OVER SURFACES OF SOLIDS

H. Suhl, University of California, San Diego Campus, Graduate School, Dept. of Physics, *P.O. Box 109, La Jolla, California* 92037 (DMR77-24957)

This research was previously supported by DMR-7624178.

The characterization of simple surface reactions in terms of solid-state parameters will be extended to the cases in which phonons provide the principal energy exchange mechanism. Also, the so-called transmission coefficient of absolute rate theory will be expressed in terms of substrate response functions. A study of adsorption equilibria in relation to substrate properties is to be carried out with a view to separating out substrate effects on the partition function of the activated complex from substrate effects on the pre-exponential factor. A study is to be made of the possibilities for inducing oscillatory reactions over surfaces at will, by coupling to transport phenomena in the substrate. Under previous grants, magneto-catalytic anomalies were explained and a particular one, the initial anomalous oxidation rate of nickel near its Curie point, was both calculated and observed. Under the present grant it is planned to determine if the anomaly can be used as an indicator for studying the details of more advanced stages of the oxidation process. Also, it is planned to attack some long-standing mysteries in catalysis, for example the compensation effect, the extreme sensitivity of certain reactions to rather small applied magnetic fields, anomalous behavior of transport coefficients as a function of adsorbate, etc. Also, coupling between substrate transport properties and adsorbates are to be examined for possible technological uses.

First year of a two-year continuing grant.

8.0007, DYNAMICS OF MOLECULES IN CRYSTALS AND ON SURFACES

N.S. Gillis, Colorado State University, School of Science, Dept. of Physics, *Fort Collins, Colorado* 80523 (DMR76-18738 A01)

Research previously supported by DMR76-18738.

Theoretical research in condensed matter physics will be carried out. The main thrust of the work will be in the areas of the dynamics of motion of molecules in crystals and on surfaces. This will involve an investigation of the rotational excitations of molecules in these environments as well as the coupling of the rotational molecular motions with one another and with other degrees of freedom of these systems, such as phonons. Two specific areas will be studied: (1) Structural phase transitions in molecular solids, particularly the family of the inorganic azides. (2) Rotational motion of substitutional impurities of molecular nitrogen in rare gas matrices.

SUPPORTED BY U.S. National Science Foundation, Directorate for Mathematical & Physical Sciences, Div. of Materials Research

8.0008, DYNAMICS OF LIQUID STRUCTURE

T.A. Litovitz, Catholic University of America, School of Arts & Sciences, Dept. of Physics, *620 Michigan Ave. N.E., Washington, District of Columbia* 20017 (DMR77-14555 A01)

This systematic investigation is aimed at discovering the nature of the elementary processes that govern translational molecular motions and structural dynamics in relatively simple liquids. The basic approach is to take advantage of the time-dependent information about the relative motion of molecules that can be inferred from the interaction-induced components of the infrared absorption and depolarized Rayleigh scattering spectra, and from molecular dynamics computer simulation experiments. Molecular dynamics computations are used to 'calibrate' each experiment by performing them on a model system whose dynamics are known. Time correlation functions of quantities that depend on interparticle separations are investigated rather than just molecular positions. In this way one expects to be able to isolate a new facet of the dynamics of structural breakup in liquids which is revealed when one looks at the motion of the particles from the reference frame of their drifting environments rather than from a laboratory-fixed viewpoint.

This is a continuation of research supported under DMR 76-17514. First year of a three-year continuing grant.

8.0010, OPTICAL PROPERTIES OF SOLIDS

L.L. Chase, Indiana University, Bloomington Campus, School of Arts & Sciences, Dept. of Physics, *Memorial Hall, Bloomington, Indiana* 47401 (DMR78-09426)

Experimental investigations of light scattering and laser spectroscopy of solids previously supported by NSF grant DMR-7609091 will continue. The studies will concentrate on the two problem areas: (1) Impurity-induced Raman scattering measurements of coupled electronic and vibrational excitations for impurities with degenerate, or nearly degenerate, ground states; (2) Two-photon absorption and induced absorption studied of excitons and exciton interactions in wide band-gap semiconductors. In addition, light scattering studies of impurity-induced ferroelectric phase transitions in $KTaO_3$, primarily at low impurity concentrations will be initiated. These studies of optical scattering in solids using laser radiation are directed toward providing an improved understanding of electronic and vibrational dynamical effects in insulators and wide band gap semiconductors.

This is the first year of a three-year continuing grant.

8.0013, SURFACE REFLECTION SPECTROSCOPY

H.D. Drew, University of Maryland, College Park Campus, School of Arts & Sciences, Dept. of Physics, *College Park, Maryland* 20742 (DMR79-09064)

Optical spectroscopy can give useful and sometimes unique information about the electronic structure of interfaces. Surface reflectance spectroscopy can be applied to such practically important cases as the solid-electrolyte interface and the solid-gas phase interface. These cannot be probed by the powerful electron spectroscopies (such as ultraviolet photoemission spectroscopy) which require high vacuum. Changes in reflectance due to the addition of monolayer films, however, are very small and difficult to measure. Moreover, the classical interpretation of the data in terms of a uniform thin layer with a characteristic dielectric function has been questioned. In previous work a sensitive difference spectrometer was developed that is suitable for scanning measurements over the spectral range from 0.1-11 eV using a rotating sample configuration. Theoretical expressions were derived relating the changes in reflectance to certain averages of the dielectric function of the system.

In the present grant period, well characterized systems such as hydrogen and xenon on tungsten (100) are being studied. The results are being compared with those from the electron spectroscopies. Theoretical investigations are made into the electrodynamics of the vacuum-metal interface and the electronic structure of chemisorbed layers. In particular, the effects of local field corrections on the optical properties of the interface are being examined.

Renewal of work supported by DMR76-82128.

SUPPORTED BY U.S. National Science Foundation, Directorate for Mathematical & Physical Sciences, Div. of Materials Research

8.0014, STATISTICAL MECHANICS AND THE MANY-BODY PROBLEM

F.Y. Wu, Northeastern University, College of Arts & Sciences, Dept. of Physics, *360 Huntington Ave., Boston, Massachusetts* 02115 (DMR78-18808)

Research previously supported under DMR7620643.

The phenomena of order-disorder transition through the consideration of model systems in lattice statistics will be investigated. Specific problems proposed for study include the percolation process, the Ashkin-Teller and the Potts models, phase transition in HC, a two-layer Ising system, and exact renormalization group transformation for the Ising model. Emphases will be on exact and rigorous results, and the interrelationship between the various lattice models. In the many-body theory the off-diagonal matrix elements for inhomogeneous systems will be evaluated. The magnetic properties of a many-electron system will also be studied.

This is the first year of a three-year continuing grant.

SUPPORTED BY U.S. National Science Foundation, Directorate for Mathematical & Physical Sciences, Div. of Materials Research

8.0015, POLARIZED NEUTRON SCATTERING BY SPIN WAVES IN FERROMAGNETIC MATERIALS

J.B. Sokoloff, Northeastern University, School of Liberal Arts, Dept. of Physics, *360 Huntington Ave., Boston, Massachusetts* 02115 (DMR79-06371)

A preliminary inelastic neutron scattering experiment on nickel with polarized neutrons indicated magnon scattering for neutrons polarized against the sample magnetization for temperatures above 0.9 Tc (curie temperature), in violation of the conventional Stoner theory of magnetism in metals based on the random phase approximation. These measurements on nickel will be extended to other neutron wavevectors and applied magnetic fields, in conjunction with complementary theoretical work, to study the microscopic structure of magnetization fluctuations or droplets. Such fluctuations are believed to be described by some form of soliton theory, and the results may provide a direct check on such theories. These studies will be extended to other metallic ferromagnets, as well as one and two dimensional ferromagnets, which are described by the localized spin model of magnetism.

This is the first year of a three-year continuing grant.

SUPPORTED BY U.S. National Science Foundation, Directorate for Mathematical & Physical Sciences, Div. of Materials Research

8.0016, MILLIMETER MICROWAVE SPECTROSCOPY OF HIGH-PURITY METALS

G.L. Dunifer, Wayne State University, School of Liberal Arts, Dept. of Physics, *4841 Cass Ave., Detroit, Michigan* 48202 (DMR72-00181 A01)

Investigations of the microwave properties of metals begun under NSF Grant GH-39825 will be continued. The transmission of microwaves at 80GHz through thin plates of pure metal under conditions of varying magnetic field strength, orientation, and temperature will be measured. A careful study of spin wave excitations in the conduction electrons of aluminum will be carried out for samples of optimum thickness and orientation to obtain accurate measurements of the relevant Landau Fermi-Liquid Parameters. The Conduction Electron Spin Resonance (CESR) and possible spin wave excitations of copper and silver will be examined to obtain information at high microwave frequencies on g-anisotropy of the Fermi surface and exchange interactions among the conduction electrons. Finally, an extensive study of the alkali metals will be made, including a search for new physical effects which should occur only at millimeter microwave frequencies.

SUPPORTED BY U.S. National Science Foundation, Directorate for Mathematical & Physical Sciences, Div. of Materials Research

8.0017, INTERFACE AND DEPTH INHOMOGENEITY BY ELLIPSOMETRY

N.M. Bashara, University of Nebraska, Lincoln Campus, School of Engineering & Technology, Dept. of Electrical Engineering, *Lincoln, Nebraska* 68508 (DMR76-19048 A01)

Internal reflection ellipsometry (IRE), a relatively new technique, will be used to study the solid-solid interface and defect profiles in single crystal hemicylinders of silicon and gallium arsenide and an insulating overlay such as silicon dioxide. This technique has excellent potential in the semiconductor industry as a nondestructive means of assuring homogeneity of and measuring gradients in composition and defect content.

A second part of the program will be to further extend at-the-surface ellipsometry on epitaxial layers of phosphorus on silicon to correlate with assumed profile models. An ancillary portion of the project will be to use internal reflection ellipsometry at liquid-liquid interfaces in order to develop simplified IRE procedures. An extension of the theory of IRE will be made to anisotropic liquid-liquid interfaces with the intent of ultimately applying it to solids.

H.Z. Cummins, City University of New York, City College, School of Liberal Arts & Sciences, Dept. of Physics, *Convent Ave. & 138th St., New York, New York* 10031 (DMR79-05534)

Funds are granted for the acquisition of UV argon-pump laser capable of continuous-wave operation in the 4400-5000A wavelength range with a tunable dye laser. This apparatus will be used to study resonant Brillioun scattering in cadmium sulfide and other semiconductors with particular emphasis on effects related to interacting exciton-polaritons at high pumping intensities.

SUPPORTED BY U.S. National Science Foundation, Directorate for Mathematical & Physical Sciences, Div. of Materials Research

8.0020, EXPERIMENTAL STUDIES AT LOW TEMPERATURE
D.H. Douglass, University of Rochester, School of Arts & Sciences, Dept. of Physics & Astronomy, *260 Crittenden Blvd., Rochester, New York* 14627 (DMR78-10260)

This is a continuation of work sponsored under DMR-7621622. An experimental study will be made of synthesis and properties of superconducting transition metal compounds. Studies will be made of sputtered transition metal carbides and of various chromium alloys. A new program will be initiated to study the properties of materials at low temperature. An experimental study of second sound in a single crystal of sapphire will be initiated. Measurement of internal friction in crystals of silicon and sapphire will be made. This work is important for understanding the process of synthesis of high-temperature superconducting materials.

This is the first year of a three-year continuing grant.

SUPPORTED BY U.S. National Science Foundation, Directorate for Mathematical & Physical Sciences, Div. of Materials Research

8.0021, ATOMIC SCATTERING FROM SOLIDS II
E.D. Thompson, Case Western Reserve University, School of Engineering, Dept. of Electrical Engineering & Applied Physics, *University Cir., Cleveland, Ohio* 44106 (DMR79-01658)

Research previously supported by DMR7681184.

Molecular-solid surface scattering calculations, including both elastic and inelastic effects, will be performed, and, from the results and comparisons with experimental data, the dynamical interactions between the molecule and the solid surface will be ascertained. These dynamical interactions are fundamental to understanding such phenomena as physical adsorption, catalytic reactivity, surface viscous drag, and energy transfer. Surface structure analysis from atomic scattering will be carried out for silicon and other semiconductor materials as data become available.

This is the first year of a three-year continuing grant.

8.0023, FERROMAGNETIC RESONANCE IN COMPLEX MAGNETIC SYSTEMS
P.E. Wigen, Ohio State University, Columbus Campus, School of Mathematics & Physical Sciences, Dept. of Physics, *164 W. 17th Ave., Columbus, Ohio* 43210 (DMR78-10300)

The magnetic properties of materials at solid surfaces and of thin films are often quite different from the properties in bulk samples. This is an active area of solid physics which may lead to new phenomena or new electronic structures. Ferromagnetic spinwave resonance will be used to investigate a variety of magnetic interactions in thin films of Yttrium Iron Garnet (YIG). Magnetic interactions of the YIG surface with magnetic metals will be investigated. In particular, recent theories predict that vanadium metal will have an antiferromagnetic surface layer, two or three atomic layers thick. The YIG surface is very sensitive to the onset of such interactions and will be used to study this effect. The exchange coefficient in magnetically diluted sublattices will be studied and compared with recent theories.

This research was previously supported under DMR-7614450.

8.0025, FRACTIONAL CIRCULAR POLARIZATION FROM WHITE DWARFS AND PULSAR RADIATION
N.V. Swamy, Oklahoma State University, Agricultural Experiment Station, Dept. of Physics, *107 Whitehurst Hall, Stillwater, Oklahoma* 74075

The model of a charged non-relativistic oscillator does not explain the observed fractional circular polarization in the radiation from white dwarfs. The contribution from the intrinsic magnetic moment of the charged particle as well as from relativistic effects has been studied. Regarding pulsar radiation, modification of the arrival times of different frequency components in the radiation from pulsars due to the presence of magnetic charges has been studied using a plasma fluid approach.

SUPPORTED BY Oklahoma State Government

8.0026, COLLABORATIVE RESEARCH ON NUCLEAR PHYSICS AT INTERMEDIATE ENERGIES
L.W. Swenson, Oregon State Higher Education System, Oregon State University, School of Science, Dept. of Physics, *126 Agricultural Hall, Corvallis, Oregon* 97331 (PHY76-82333 A03)

Experiments will be conducted at the Los Alamos Meson Physics Facility (LAMPF) and at the TRIUMF cyclotron in Vancouver.

At LAMPF, the pion beam will be used to continue studies of particles emitted from the nucleus in coincidence with inelas-

tically scattered pions to try to understand what are the processes which initially occur when pions interact with nuclei. When the high-resolution EPICS spectrometer is completed, studies of elastic and inelastic scattering of positive and negative pions from nuclei will be conducted with special attention to studies of proton and neutron densities in the nuclear surface. Studies of X-rays emitted by muonic atoms will be conducted to obtain information on nuclear shapes in the mass-190 region. A study will be conducted to measure neutrons and protons emitted in muon capture on nuclei; the proton spectra are expected to give information on the importance of charge-exchange processes at medium energies.

At TRIUMF, a variety of experiments will utilize the special features of that accelerator-polarized protons, energy variability and high duty factor. These will include elastic and inelastic scattering of 200-550 MeV protons, proton-proton bremsstrahlung and coincidence studies of muonic atoms.

This work is a continuation of work supported by the Foundation under grant PHY76-82333.

SUPPORTED BY U.S. National Science Foundation, Directorate for Mathematical & Physical Sciences, Div. of Physics

8.0027, THEORETICAL RESEARCH IN SOLID-STATE PHYSICS

J.R. Schrieffer, University of Pennsylvania, School of Arts & Sciences, Dept. of Physics, *34th & Spruce Sts., Philadelphia, Pennsylvania* 19104 (DMR77-23420)

Theoretical research in condensed matter physics previously supported by NSF grant DMR-7681602 will be continued. The primary focus of this research will be in the area of surface physics. The emphasis, however, will be shifted from application of many-body theories to accurately handle exchange and correlation effects in the strongly inhomogenous electron systems encountered in surface physics problems. The one-electron methods will be improved, particularly in relation to interpreting experimental work with surface spectroscopics. Also, nonlinear excitations in lattices and coupled electron-lattice systems will be investigated.

This is the first year of a three-year continuing grant.

SUPPORTED BY U.S. National Science Foundation, Directorate for Mathematical & Physical Sciences, Div. of Materials Research

8.0028, NUCLEAR STRUCTURE AND NUCLEAR REACTIONS

B.L. Cohen, University of Pittsburgh, School of Arts & Sciences, Dept. of Physics, *4200 5th Ave., Pittsburgh, Pennsylvania* 15260 (PHY77-24134)

This proposed action will support the operation of the laboratory and the research program in nuclear structure and reaction studies. In addition, some work in nuclear applications and energy-related research will be supported. The nuclear physics program is a healthy mix consisting of some continuing productive programs and some work in new directions. Perhaps the most obvious example of a new area is the proposed research in weak interactions which will test the fundamental conserved vector current (CVC) theory of beta-decay. The studies of heavy-ion fusion and total reaction cross sections are also new areas which are of considerable interest in heavy-ion physics. Work will also continue in areas which have proved particularly fruitful in the past. For example, the pioneering work on quadrupole moment measurements of the first excited states of many nuclei will be extended to look at higher moments in samarium isotopes and to examine the quadrupole moments of excited bands. Studies of the nuclear continuum, a region which has generally received little attention until recently, will also be extended, possibly with the use of heavier ions.

8.0029, STUDIES OF THE PHYSICS AND CHEMISTRY OF THE TERRESTRIAL ATMOSPHERE

E.C. Zipf, University of Pittsburgh, School of Arts & Sciences, Dept. of Physics & Astronomy, *4200 5th Ave., Pittsburgh, Pennsylvania* 15260 (NAG 6-2)

SUPPORTED BY U.S. National Aeronautics & Space Admin., Wallops Flight Center

8.0030, THEORETICAL STUDY OF ELECTRON-ELECTRON INTERACTIONS AMONG THE CONDUCTION ELECTRONS IN SOLIDS

J.J. Quinn, Brown University, Graduate School, Dept. of Physics, *University Hall, Box 1883, Providence, Rhode Island* 02912 (DMR78-08556)

Research previously supported by DMR7401454.

Theoretical research in solid-state physics will be carried out. Topics which will be investigated will include: (1) The electronic properties of semiconducting surface space charge layers. These systems exhibit intrinsically interesting phenomena and are of technological interest for the development of MOSFET devices. (2) The normal modes of a semi-infinite solid, such as surface phonons and plasmons. These have an effect on such experimental surface probes as Raman scattering and attenuated total reflection. (3) Electron-hole scattering in semimetals and semiconductors, which is an important mechanism for understanding the conductivity in these materials.

This is the first year of a 3-year continuing grant.

SUPPORTED BY U.S. National Science Foundation, Directorate for Mathematical & Physical Sciences, Div. of Materials Research

8.0031, CODEPOSITION FACILITY FOR AMORPHOUS TRANSITION METAL ALLOYS

D.G. Naugle, Texas A & M University, College Station Campus, School of Science, Dept. of Physics, *College Station, Texas* 77843 (DMR78-10900)

A facility for making multicomponent amorphous superconducting alloys and for making in-situ measurements will be developed. This facility consists of a high vacuum chamber, a liquid helium cryostat, a superconducting magnet, electron beam deposition-equipment and the equipment necessary to monitor the vacuum and composition of the atmosphere. Thin films of amorphous metals will be made so that a wide range of experiments can be done to explore their unusual properties. The effect of the method of preparation on the physical properties will be examined.

SUPPORTED BY U.S. National Science Foundation, Directorate for Mathematical & Physical Sciences, Div. of Materials Research

8.0032, ADMINISTRATIVE SUPPORT FOR THE SOLAR POWER SATELLITE CONCEPT EVALUATION RESOURCE ANALYSIS WORKSHOP

R.E. Thomas, Texas A & M University, College Station Campus, School of Science, Dept. of Physics, *College Station, Texas* 77843 (NAS 9-16059)

8.0033, DYNAMIC AND COLLECTIVE EFFECTS IN PARAELECTRIC AND PARAELASTIC SYSTEMS

B.G. Dick, Utah Higher Education System, University of Utah, School of Science, Dept. of Physics, *1400 E. 2nd S., Salt Lake City, Utah* 84112 (DMR77-25773)

Several theoretical problems connected with orientable ions in ionic crystals will be studied: (1) Development of strong coupling polaron theory of phonon assisted tunneling of paraelectric-paraelastic defects. (2) Study of the various processes which produce Arrhenius-like transition rates for systems. (3) Interference effects in transitions between tunneling as opposed to directed states. (4) Cooperative phenomena in mixed alkali halide-cyanide crystals. (5) Phonon scattering from tunneling defect systems with more than two sites, with strong defect-lattice interaction, and the relaxation of the Condon approximation. (6)

A simple tunneling-optical dichroism based theory for Raman scattering of tunneling defects.
Research previously supported by DMR73-02516.

SOCIAL SCIENCES

Includes Social Sciences (general); Administration and Management; Documentation and Information Science; Economics and Cost Analysis; Law and Political Science; and Urban Technology and Transportation.

9.0001, SOIL INTERPRETATIONS AND SOCIOECONOMIC CRITERIA FOR LAND USE PLANNING
G.A. Nielsen, Montana State University, Agricultural Experiment Station, Dept. of Plant & Soil Science, *Bozeman, Montana* 59715 (0074442; MONB00377)

OBJECTIVE: Determine biophysical and socioeconomic factors that influence non-urban land use. Organize and deliver existing biophysical and socioeconomic land related data needed for land-use policy making and planning. Identify and develop critically needed data and interpretations for land-use policy making and planning; develop and evaluate alternatives to overcome soil limitations affecting land-use and environmental degradation.

APPROACH: Prepare a county resource inventory handbook to optimize the use of land resource data. Compile State General Soil Maps and develop a computer-graphic system that identifies land-use potentials. Focus effort on the effects of soil temperature and moisture regimes on soil use and test models for predicting these regimes.

PROGRESS: The Montana Land Resources Demonstration Project is investigating the use of remote sensing imagery to determine land use and cover information. This project, a cooperative effort of Montana's Department of Natural Resources, Department of Revenue, Montana State University, and NASA uses LANDSAT multispectral scanner digital imagery. The output will identify the following land uses: irrigated and dryland agriculture, range, saline seep, water, and wetlands. Statistical analyses relating land use to location variables will be feasible. A Montana Land Use Map (1:1,000,000 scale) is being prepared from color composite photos utilizing LANDSAT multispectral bands 4, 5, and 7 (green, red, infrared). Digitally enhanced LANDSAT imagery is being analyzed by ground truth in Southwestern Montana to determine its usefulness for planning. A computer graphic system containing 18 soil, climatic, geologic, and vegetative parameters is being used to help guide research programs. It was used to help select the location for a new research center and to locate agricultural areas similar to Montana's six existing research centers. A 1:1,000,000 scale map of Montana showing 'Areas Where Summer Fallow May Not Be Recommended' was compiled based on soil water holding capacity and early spring soil moisture. It was printed in newspapers throughout Montana to reach appropriate crop producers. The Blue Ribbons 208 Areawise Planning Organization in Southwestern Montana is charged with enhancing water quality.

SUPPORTED BY U.S. Dept. of Agriculture, Cooperative Research Office, Montana

9.0002, SOIL INTERPRETATIONS AND SOCIOECONOMIC CRITERIA FOR LAND USE PLANNING
W.R. Butcher, Washington State University, College of Agriculture, Dept. of Agricultural Economics, *Pullman, Washington* 99163 (0072194; WNP00366)

OBJECTIVE: Determine biophysical and socioeconomic factors in influencing non-urban land use. Organize and deliver existing bio-physical and socioeconomic land related data needed for land use policy making and planning. Develop critically needed data and interpretations for land use, policy making and planning; develop and evaluate alternatives to overcome soil limitations and environmental degradation.

APPROACH: Available studies will be utilized to assess the likelihood of shortages in the national and international markets the Washington agricultural lands might serve and then applied to the concept of social opportunity costs to assess possible gains and losses not reflected in market prices. An analysis will be made of aerial photos taken at time intervals to identify and tabulate land conversions and relate these to levels of population and economic activity in order to establish and estimate functional relationships linking the demand for land to independent variables and prepare estimates of future levels of demand for agricultural land. Users and developers of converted lands within a specific area will be interviewed to devise developer and land user criteria models and both the economic and social costs and benefits will be estimated. A set of policy alternatives will be developed from secondary sources, and the results of the study and probable response to these policies will be estimated.

PROGRESS: Analysis of costs for 20 housing developments in Clark County, Washington showed costs to be lowest and profits highest for small (4 lots or less) developments within urban areas. Lowest profits were for small rural developments because of large land requirements per lot and the high costs of providing water, sewerage, access and other services to a small number of dispersed residences. Among more conventional subdivisions, costs per lot tended to be lower for large lot developments and for larger subdivisions, up to 60 lots. Neither cost nor selling prices were related to distance from the central business district. Total costs of development and urban services would be much less if developments were closely grouped on small lots. A survey of land buyers, sellers and owners will be conducted in January and February and an analysis made of effects on the land market.

10.0013, SUPPORT OF THE GEOPHYSICS RESEARCH BOARD (GRB), AND THE COMMITTEE ON SOLAR-TERRESTRIAL RESEARCH (CSTR) (ABBREV)
P.J. Hart, National Academy of Sciences, National Research Council, *2101 Constitution Ave. N.W., Washington, District of Columbia* 20418 (EAR79-01089)

This award will continue the operations of the Geophysics Research Board and one of its committees, the Commmittee on Solar-Terrestrial Research (CSTR) of the National Academy of Sciences for one period commmencing January 1, 1979. The board, operating primarily through its committees, develops and coordinates U.S. contributions to international geophysical programs such as the programs of the Special Committee of Solar-Terrestrial Physics (SCOSTEP) and the Inter-Union Commission of Geodynamics. It conducts studies in major areas of the geophysical sciences and cooperates with the various committees and unions of the International Council of Scientific Unions. Close liaison is maintained with government agencies actively participating in the execution of the domestic programs. The CSTR includes the committee itself, the Panel on the International Magnetospheric Study (IMS), and a working group on the Middle Atmosphere Program (MAP). The CSTR was established to plan and coordinate programs in solar-terrestrial relationships, to keep under review the status of U.S. research in this field, and to develop recommendations on the national solar-terrestrial research programs and the international coordination of such programs. It conducts studies broadly dealing with solar-terrestrial physics. Through the CSTR IMS panel and MAP working group, it provides advice, planning, and recommendations regarding U.S. participation in the IMS and MAP. Provision is made in this award for one meeting each of the CSTR, the IMS panel, and the MAP working group, and one additional meeting of a subgroup of the CSTR, IMS panel and AMP working group.

D.H. Douglass, University of Rochester, School of Arts & Sciences, Dept. of Physics & Astronomy, *260 Crittenden Blvd., Rochester, New York* 14627 (PHY77-07315 A02)

Research will continue on the design and operation of gravitational wave detectors of greatly increased sensitivity. A conventional room-temperature detector has been improved, and will continue in operation to search for signals at a level of 1 GPU. The feasibility study on dielectric detectors will be completed, and a small silicon crystal will be used as an antenna. Future work will include construction and use of a large (100 kg) crystal cryogenic detector which is expected to have a sensitivity in the range of 10 to the minus 3rd power to 10 to the minus 7th power GPU.

This work is a continuation of that currently supported under NSF grant number PHY72-04755 A05.

SUPPORTED BY U.S. National Science Foundation, Directorate for Mathematical & Physical Sciences, Div. of Physics

10.0024, PHOTOMETRY, SPECTROSCOPY AND INTERFEROMETRY OF IRREGULAR GALAXIES
G.H. de Vaucouleurs, University of Texas, Austin Campus, School of Natural Sciences, Dept. of Astronomy, *200 W. 21st St., Austin, Texas* 78712 (AST7808744)

A comprehensive photometric spectroscopic and interferometric study of late-type spirals and irregular galaxies, particularly of the magellanic type will be carried out. This is a relatively neglected field of optical extragalactic astronomy (excepting the Magellanic Clouds themselves), but one which is of special interest to radio astronomers because of the high hydrogen content of this class of galaxies, leading to a high rate of star formation, an abundance of supergiant stars and, in some sense, a rapid rate of evolution. The complex structure and internal motions of these irregular, often asymmetric systems is also a challenge to theories of galaxy formation and dynamics.

The expected results of this project would provide observations for most of the nearest and/or largest Magellanic irregulars and related late-type systems listed in the article by de Vaucouleurs and Freeman in Vistas in Astronomy, Volume 14 (1922). The DDO dwarfs detected at 21 cm. need to be observed. Information on the structure and morphology, luminosity and stellar density distributions, total magnitudes and effective diameters, colors, stellar and galaxian luminosity functions, distances and space density, H II regions and H emission, rotation, velocity dispersion and other motions, total masses and comparisons with H I data will be provided.

The tools and techniques for such a comprehensive study have been developed and are available to us at McDonald Observatory or through our associates. This is a continuation of research done under grant AST 75-22900 A01.

SUPPORTED BY U.S. National Science Foundation, Directorate for Astronomical Atmospheric Earth & Ocean Scis., Div. of Astronomical Sciences

10.0025, ASTROMETRIC STUDIES OF NEARBY STARS FROM THE SOUTHERN HEMISPHERE
P.A. Ianna, University of Virginia, Leander McCormick Observatory, *Garrett Hall, Charlottesville, Virginia* 22903 (INT77-21525)

Under this new award, work will continue for two years on a cooperative program begun in January, 1976, with the Australian National University's Mount Stromlo and Siding Spring Observatory for the determination of the trigonometric parallaxes and proper motions of nearby, astrophysically important stars in the Southern Hemisphere. Since the inception of the program, a total of 984 photographic plates of 71 star fields have been obtained. In the coming year, approximately 100 stars will be added to the program, including 15 bright, late-type giants to aid in luminosity calibration problems. The work to date has taken place under grant OIP 75-22605 in the first year and renewal INT 75-22605 A01 in the second.

Parallax and proper motions of nearby stars are important in determining distances and motions that permit astronomers to derive true luminosity and, with other data, the masses of stars in double star systems. Motions furnish data for understanding the structure of the Milky Way and astrometric measures also supply the yardstick for calibration of the cosmic distance scale.

The photographic observations, which focus on white dwarfs and other stars of low luminosity, are obtained with the Mt. Stromlo 66-cm refractor and subsequently measured and reduced at the University of Virginia's observatory. A special effort is being made to coordinate the photographic observa-

tions of a small sample of stars accessible to both McCormick and Mt. Stromlo. The program affords a unique opportunity for detailed data comparison between a Northern and a Southern Hemisphere refractor and an astrometric reflector to investigate sources of accidental and systematic errors in stellar parallaxes. D.S. Mathewson has replaced O.J. Eggen as the Australian principal investigator.

MULTILINGUAL AERONAUTICAL DICTIONARY
1980 896 p In ENGLISH, FRENCH, DUTCH, GERMAN, GREEK, ITALIAN, PORTUGUESE, TURKISH, SPANISH, and RUSSIAN (LC-77-93566; ISBN-92-835-01666-7) Avail: NTIS HC $123.50; Distributed In North America by NTIS, 5285 Port Royal Road, Springfield, Va., USA and Distributed Outside North America by AGARD, 7 rue Ancelle, 92200 Neuilly sur Seine, France

A multilingual dictionary to aid scientists, engineers, and translators in the field of aeronautics was developed. The dictionary contains an alphabetical list of English terms, accompanied by English language definitions and translations of each term into the nine other languages. Nine alphabetical lists of terms in the languages other than English are included, each term accompanied by a reference number, keyed to its English language equivalent. A list of English acronyms, abbreviations, and symbols is also included, each accompanied by its expansion in English. J.M.S.

02 AERODYNAMICS

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

COMBINED LINEAR THEORY/IMPACT THEORY METHOD FOR ANALYSIS AND DESIGN OF HIGH SPEED CONFIGURATIONS Final Report
D. Brooke and D. V. Vondrasek Washington NASA Sep. 1980 34 p refs
(Contract NAS1-15535)
(NASA-CR-3314) Avail: NTIS HC A03/MF A01 CSCL 01A

Pressure distributions on a wing body at Mach 4.63 are calculated. The combined theory is shown to give improved predictions over either linear theory or impact theory alone. The combined theory is also applied in the inverse design mode to calculate optimum camber slopes at Mach 4.63. Comparisons with optimum camber slopes obtained from unmodified linear theory show large differences. Analysis of the results indicate that the combined theory correctly predicts the effect of thickness on the loading distributions at high Mach numbers, and that finite thickness wings optimized at high Mach numbers using unmodified linear theory will not achieve the minimum drag characteristics for which they are designed. Payloads were configured for, and used in, three successful data-gathering balloon flights for the Balloon Altitude Mosaic Measurements (BAMM) program. All were significantly different, and each worked as planned. A radiometer and a TV camera were carried on Flight 1, and an interferometer was added for Flights 2 and 3. Recovery was by ground impact for the first two flights, but the third was snatched from the air by helicopter. GRA

AN ANALYTICAL SOLUTION OF LIFT LOSS FOR A ROUND PLANFORM WITH A CENTRAL LIFTING JET
K. T. Yen 10 Mar. 1980 38 p refs
(WR02302000)
(AD-A086669; NADC-80057-60) Avail: NTIS HC A03/MF A01 CSCL 20/4

An analysis of the lift for a round planform fitted with a centrally-located round jet is presented. The pressure distribution over the lower surface of the planform is solved analytically by matching an inner viscous solution with an outer potential solution. By comparing the calculated pressure distributions with NACA experimental data, satisfactory agreement has been obtained, although the planforms are not exactly the same. In addition, Wyatt's formula for the lift loss is found to be essentially valid, but only under limited conditions, and an improved formula is suggested. Additional works, both experimental and theoretical, needed to solve the lift loss problem are discussed with recommendations. GRA

EXPERIMENTAL STUDY OF THREE-DIMENSIONAL SHOCK WAVE TURBULENT BOUNDARY LAYER INTERACTION: SCALING OF SHARP AND BLUNT FIN-INDUCED FLOWFIELDS Final Report, 4 May 1978 - 3 May 1980
David S. Dolling and Seymour M. Bogdonoff Jul. 1980 61 p refs
(Contract N60921-78-C-0068; WR02302003)

(AD-A086875; MAE-1483) Avail: NTIS HC A04/MF A01 CSCL 20/4

An experimental study of three dimensional (3-D) shock wave turbulent boundary layer interaction has been carried out. Interactions generated by fin models having sharp and hemicylindrically blunted leading edges have been studied. Tests have been made using incoming turbulent boundary layer varying in thickness in the ratio of about 4:1. Extensive surface property measurements have been made on the test surface on which the incoming boundary layer developed and on the fin itself. All of these tests were carried out at a nominal freestream Mach number of 3, a freestream unit Reynolds number of about 63 million per meter, and under approximately adiabatic wall conditions. The emphasis in the study reported on in this paper was on two main areas. First, to determine the key geometric and/or flow parameters controlling the overall scaling and characteristics of both blunt and sharp fin-induced interactions. Second, to identify the conditions under which both blunt and sharp fins induced interactions have the same local scale and characteristics. GRA

EFFECT OF NEAR-ZERO SPIN ON INSTABILITY OF CONTROLLED PROJECTILES IN ASCENDING OR DESCENDING FLIGHT Final Report

Charles H. Murphy May 1980 21 p refs

(DA Proj. 1L1-61102-AH-43)

(AD-A086775; AD-E430473; ARBRL-MR-03023) Avail: NTIS HC A02/MF A01 CSCL 19/4

Lloyd and Brown have shown that constant-amplitude horizontal and vertical side forces applied to a spinning projectile can cause dynamic instability. A subsequent ARRADCOM report (AD-A072808) removed some of the limitations of the Lloyd-Brown work and gave somewhat more general results. Unfortunately, these results were applied in the report to a case for which they were unsuitable; a nonspinning statically stable missile. The present report derives correct results for the zero-spin case and shows that the results of the earlier report are valid for spin rates greater than about five times the resonant spin value. GRA

QUANTITATIVE MEASUREMENTS OF THE EFFECTS OF VARIATIONS IN PANEL METHOD COMPUTER PROGRAMS Final Report

Wilson C. Obi Jan. 1980 155 p refs

(WF41400000)

(AD-A086358; NADC-80029-60) Avail: NTIS HC A08/MF A01 CSCL 20/4

Panel distributions have been characterized independently in terms of computable and controllable parameters. Thus, a methodology has been developed which will permit a conclusive establishment of the sensitivities of paneling parameters to aerodynamic estimation quality for a wide variety of paneling codes. It has been demonstrated that the global performance (input-output relationships, precision, and accuracy) of a panel method computer program can be established through calibration. Application of the sensitivity analysis developed herein to SURAIR (a Woodward constant pressure panel method derivative) has shown that it is possible to increase estimation accuracy without the commonly expected increase in computation cost. COMPARISON OF WIND TUNNEL AND FLIGHT TEST MEASUREMENTS OF STATIC AERODYNAMIC LOADING OF A CAPTIVE STORE Final Report, 18 Jun. 1976 - 31 Aug. 1978

R. E. Dix and G. R. Mattasits AEDC Jul. 1980 117 p Sponsored by Air Force

(AD-A087237; AEDC-TR-79-9) Avail: NTIS HC A06/MF A01 CSCL 01/1

A coordinated series of experiments was conducted in three wind tunnels and in flight to measure the static aerodynamic loading of a MK 83 store attached to the bottom center station of a triple ejector rack mounted on the left inboard pylon of an F-4 aircraft. Fundamental agreement between wind tunnel and inflight loads data was demonstrated over a range of angle of attack from -2 to 6 deg and a Mach number range from 0.6 to 0.9. Differences that were noted were thought to be attributable either to improper store-to-aircraft alignment or to poor definition of inertial loads during maneuvering flight. GRA

A THEORETICAL INVESTIGATION OF THE SHOCK LOCATION ON AN AXISYMMETRIC BODY AND ON A TWO DIMENSIONAL AIRFOIL IN TRANSONIC FLOWS AFFECTED BY AXIAL PRESSURE GRADIENTS AND SHIFTS IN PRESSURE LEVEL

Richard Kleebaur 22 Jun. 1979 70 p refs In GERMAN; ENGLISH summary

(MBB-FE-124/S/PUB/9) Avail: NTIS HC A04/MF A01

The influence of pressure deviation on shock locations due to interference free, transonic wind tunnel flows was investigated. A finite element computer program was used to determine the shift in shock location on an axisymmetric body and on a two dimensional airfoil due to deviations in the static pressure level and due to axial pressure gradients in the theoretical model of a wind tunnel flow. Wall pressure measurements in a transonic wind tunnel enabled a comparison to be made between an experimentally determined shift and a calculated shift in shock location as affected by wall interference and with increasing Reynolds number. The result for the axisymmetry body shows that about half of the rearward shift of the shock, with increasing Reynolds number, can be attributed to inerference measured on the wall of the wind tunnel. The calculations for the two dimensional case showed the high sensitivity of the shock location with deviations caused by interference free wind tunnel flow. Lack of wall pressure measurements prevented a quantitative correlation with Reynolds numbers for this case. Author (ESA)

In-flight wire strikes pose a serious threat to low-level helicopter operations. Tests were conducted to determine the suitability for U.S. Army helicopter applications of the Canadian Wire Strike Protection System (WSPS), developed by Bristol Aerospace Limited. The WSPS consists of fuselage-mounted upper and lower cutters and a windshield centerpost deflector with a sawtooth cutter. Using the NASA/Langley Research Center Crash Impact Dynamics Facility, an OH-58A fitted with the WSPS was subjected to pendulum swing tests in which the helicopter struck fixed cables at approximately 40 knots airspeed. The system demonstrated the capability to easily sever 10,000 pound strength 3/8 inch steel messenger cable, 50-pair copper communications cable, and 0.419 inch high power transmission lines, including multiple arrays of those cables. Data acquired indicated that the wire impact/deflection/cutting sequence would not have a significant effect on helicopter performance, control crew functioning, or blade flapping. Installation of the WSPS on the entire Army tactical helicopter fleet is recommended. An additional test of a device to deflect wires past the helicopter skid gear, vertical stabilizer, and tail rotor was conducted. A 7/8 inch tubular steel deflector was designed and fabricated. The device proved to be inadequate. It was concluded that a skid gear deflector is not a practical OH-58A retrofit from a cost and weight standpoint. GRA

VORTEX ADVISORY SYSTEM. VOLUME 1: EFFECTIVENESS FOR SELECTED AIRPORTS Final Report, Sept. - Dec. 1977
J. N. Hallock May 1980 122 p refs
(AD-A086982; TSC-FAA-80-11-1-Vol-1;
FAA-RD-80-62-1-Vol-1) Avail: NTIS HC A06/MF A01 CSCL 17/7

The Vortex Advisory System (VAS) is based on wind criterion--when the wind near the runway end is outside of the criterion, all interarrival Instrument Flight Rules (IFR) aircraft separations can be set at 3 nautical miles. Five years of wind data have been obtained for 20 airports. By comparing the VAS wind criterion to the 5 years of wind data, the percentages of time that interarrival separations can be reduced at the 20 airports have been found. The percentages are given on an hourly and a monthly basis. Volume 2 (to be published at a later date) will examine the VAS effectiveness at Chicago O'Hare (ORD) with respect to the length of the intervals during which reduced separations might have been used. LIGHT TWIN-ENGINE AIRCRAFT ACCIDENTS FOLLOWING ENGINE FAILURES Special Study, 1972 - 1976
13 Dec. 1979 89 p refs
(PB80-177306; NTSB-AAS-79-2) Avail: NTIS
HC A05/MF A01 CSCL 01B

Data collected during the investigation of 477 light-twin aircraft accidents from 1972 through 1976 which involved engine failure or malfunction were studied. Pilot handbooks and other sources which provide information on engine-out performance and emergency procedures in light-twins were reviewed. A limited number of interviews with pilots and instructors were conducted. FAA training regulations were also studied. A major conclusion reached is that many of these accidents involved a lack of pilot proficiency in managing a light-twin after loss of power in one engine. Four recommendations are made to the FAA for corrective action and one previously made recommendation is reiterated. GRA

TACTICAL NIGHT TERRAIN FLIGHT NAVIGATION Final Report
James A. Bynum and Garvin L. Holman Sep. 1979 49 p refs
(DA Proj. 2Q2-63743-A-772)
(AD-A086458; ARI-RR-1226) Avail: NTIS HC A03/MF A01 CSCL 01/2

This report documents two experiments which were conducted to determine the training required to improve tactical night terrain flight aircrew performance. These experiments sought, specifically, to identify critical factors which should be included in a program of instruction for tactical night terrain flight navigation training with unaided vision. In the first experiment a passive navigation task was used to establish an altitude which would provide adequate training with a safety margin, the types of terrain or other features which should be used for checkpoint identification, and the effect of daylight exposure to a route on subsequent navigation performance. Using Experiment 1 as a building block, Experiment 2 tested the effects on active navigation performance of light level, type of map, and order in which light level was experienced. Multiple step-wise linear regression was used to determine associations among the variables and provided an accounting of the variance attributable to each variable of interest. It was concluded that unaided vision navigation is possible at illumination levels as low as .0002 foot candles. Instructional programs must consider restrictions to visibility, map type, proper preflight planning, adequate dark adaptation, a standardized intra-cockpit phraseology, and should use natural terrain features with vertical relief for checkpoint identification. DEVELOPMENT OF LORAN-C DATA COLLECTION AND ANALYSIS PROCEDURES Final Report, Dec. 1979 - Feb. 1980
Leon M. DePalma, Edward A. Sohoen, and Stephen F. Donnelly Mar. 1980 174 p refs
(Contract DOT-FA79WA-4271)
(AD-A086683; TASC-TR-1021-1; FAA-RD-80-48) Avail: NTIS
HC A08/MF A01 CSCL 17/7

A unified data collection and analysis plan to support NAFEC and the FAA in the assessment of Loran-C as either a replacement for or supplement to the current network of VOR/DMEs is presented. This effort focused on four specific areas: Developing mathematical models of temporal variations in Loran-C signal phase and amplitude; Developing data collection procedures to enable an assessment of the accuracy and adequacy of proposed models; Defining a data analysis plan that will enable maximum

use of the data collected in identifying parameters of the proposed models and cause and effect relationships of Loran-C temporal variations; and Defining a plan for the design of a data management system for the storage and maintenance of collected data and an efficient interface for the data analysis programs. The plans and models provide the necessary structure for the data collection and analysis effort anticipated to commence early in 1980. Subsequent analysis of the Loran-C data will validate the models and dictate any modifications of the plans. GRA

POWER LINE CARRIER RADIATION AND THE LOW-FREQUENCY AERONAUTICAL RADIO COMPASS Final Report
William A. Kissick. May 1980. 137 p. refs.
(Contract DOT-FA79WAI-023)
(AD-A087126; FAA-RD-80-31) Avail: NTIS
HC A07/MF A01 CSCL 17/3

The power line carrier is a telecommunication technique widely used by the power utilities for communication and telemetry. This system uses the power lines as a propagation medium and operates largely in the LF band. Potential for interference to an aeronautical radio compass operating in the 190-535 kHz aeronautical radio-navigation band exists. The purpose of this work was to examine that potential for interference. Laboratory measurements of radio compass receivers were made. These results indicate that 44 to 54 dBu of undesired signal or an undesired-to-desired signal ratio of 4 to 10 dB was required to cause measurable radio compass bearing errors, depending on the type of receiver. An airplane equipped with a spectrum analyzer/data recording system was used to make power line carrier radiation measurements over two selected power lines in Tennessee. The results indicate that, for the limited measurements taken, radio compass bearing errors could be caused by power line carrier radiation for an injected carrier power of 4 W. The distance and height dependence of the power line carrier radiation is discussed. GRA

CRASH TESTS OF FOUR IDENTICAL HIGH-WING SINGLE-ENGINE AIRPLANES
Victor L. Vaughan, Jr. and Robert J. Hayduk. Aug. 1980. 70 p. refs.
(NASA-TP-1699; L-13076) Avail: NTIS HC A04/MF A01 CSCL 01C

Four identical four place, high wing, single engine airplane specimens with nominal masses of 1043 kg were crash tested at the Langley Impact Dynamics Research Facility under controlled free flight conditions. These tests were conducted with nominal velocities of 25 m/sec along the flight path angles, ground contact pitch angles, and roll angles. Three of the airplane specimens were crashed on a concrete surface; one was crashed on soil. Crash tests revealed that on a hard landing, the main landing gear absorbed about twice the energy for which the gear was designed but sprang back, tending to tip the airplane up to its nose. On concrete surfaces, the airplane impacted and remained in the impact attitude. On soil, the airplane flipped over on its back. The crash impact on the nose of the airplane, whether on soil or concrete, caused massive structural crushing of the forward fuselage. The livesable volume was maintained in both the hard landing and the nose down specimens but was not maintained in the roll impact and nose down on soil specimens. Author

EVALUATION OF THE IMPACT OF TOWING DC-9 TRANSPORT AIRPLANES AT BOSTON-LOGAN AIRPORT Final

Report, Sep. 1978 - Oct. 1979
E. A. Hoover May 1980 121 p
(Contract DOT-FA78WA-4198)
(AD-A086864; FAA-NA-80-23) Avail: NTIS
HC A06/MF A01 CSCL 01/2

This report summarizes an investigation to determine the impact of the proposed revisions to airport rules at Boston-Logan International Airport regarding ground movement of aircraft by towing in lieu of taxiing as it affects the fatigue life of the DC-9 aircraft. Tests were conducted using an instrumented tow bar to determine the range of loads which could be expected to occur in service. These loads were then incorporated into a loads model which represents the Boston-Logan towing regime. This loads model was then utilized to perform analysis on the DC-9 nose landing gear and its support structure to determine the fatigue effects. Cost estimates of additional testing, inspection and replacement of affected parts is provided. The results of this investigation indicate that several nose landing gear components could be seriously affected depending upon the degree of exposure to the additional towing at Boston and the number of flights already accumulated by the part at the time the additional towing is initiated at Boston. The immediate effect on these components could be minimized by a redistribution of aircraft within the airline fleet to reduce the exposure of high-time parts of the Boston towing regime. GRA

DESIGN, DEVELOPMENT, AND FLIGHT DEMONSTRATION OF THE LOADS AND STABILITY CHARACTERISTICS OF A BEARINGLESS MAIN ROTOR Final Report, Jun. 1976 - Oct. 1979
Peter G. C. Dixon Jun. 1980 162 p refs
(Contract DAAJ02-76-C-0026; DA Proj. 1F2-63211-D-157)
(AD-A086754; USAAVRADCOM-TR-80-D-3) Avail: NTIS
HC A08/MF A01 CSCL 01/3

The successful design, development, bench and whirl testing, and flight demonstration of the loads and stability characteristics of a bearingless main rotor (BMR) on the BO-105 helicopter were accomplished. The initial tests indicated that ground resonance damping was inadequate. For this program, a minimal modification, the stiffening of the aircraft skid landing gear, provided adequate damping for the continuation of the program. The BMR/BO-105 had similar air resonance to the baseline BO-105, except at low collective pitch settings where the BMR had lower but sufficient damping. Vibration levels were generally similar to the baseline, but in some regimes were higher. Maneuvering stability showed a significant improvement and other flight characteristics were similar to those of the standard BO-105. The level flight speed was limited only by power available and the 35-hr flight test program was not limited by structural characteristics. The feasibility of helicopter bearingless main rotors has thus been demonstrated. Understanding of the loads distribution in the two-beam lag/flap/torsion flexure at the blade root of this configuration needs improvement. Use of Froude scaled model wind tunnel testing accurately predicted the flight aeromechanical stability characteristics of the BMR; however, the analytical stability prediction methodology, although sufficiently accurate in hover, requires improvement and expansion into the forward flight modes. CALIBRATION OF MIRAGE MAIN UNDERCARRIAGE TO DETERMINE WHEEL LOADS FROM MEASURED STRAINS
K. C. Watters and P. Atcliffe Jul. 1979 60 p refs
(AD-A086721; ARL/Struc-TM-300; AR-001-745) Copyright. Avail: NTIS HC A04/MF A01 CSCL 01/3

The port and starboard legs of a test main undercarriage of the Mirage IIIO have each been instrumented with six independent strain gauges and a potentiometer to measure oleo deflection. Calibration tests were performed in which components of the ground-to-wheel load were applied to each leg, both singly and in combination, and, from the measured strains, calibration parameters were derived. In order to determine wheel load components from measured strains, an iterative method of inverting the non-linear set of equations formed from the calibration parameters was developed. It was found that, due to the insensitive response of any gauge to the vertical load component, the equations were ill-conditioned, with calculated load components being very sensitive to changes in the measured strains. EVALUATION OF THE IMPACT OF TOWING THE L-1011 AIRPLANE AT BOSTON-LOGAN AIRPORT Final Report, Oct. 1978 - Aug. 1979
Max A. Gamon May 1980 113 p refs
(Contract DOT-FA78WA-4199)
(AD-A086977; LR-29190; FAA-NA-80-24) Avail: NTIS
HC A06/MF A01 CSCL 01/3

Results of a research program to determine the impact of towing transport airplanes at Boston-Logan Airport are presented. This study includes the measurement of actual towing loads during airline operations with the L-1011 at Los Angeles International Airport and Dorval, Quebec. The measured towing loads were obtained with an instrumented towbar and portable data recording package. Towing loads were also measured during controlled test conditions at Palmdale using the flight-test L-1011 airplane. A fatigue load spectrum representing ground maneuvering including the effects of extended towing was developed. Stress analysis of the nose landing gear and back-up structure was performed using the load spectrum representing extended towing at Boston-Logan. The results indicate that the proposed extended towing operations do not cause a reduction of fatigue life of the nose gear to below the design life for the L-1011. A discussion of alternate towing concepts is presented, and limiting condi-

tions are defined to ensure acceptable operational safety during extended towing. GRA

A PLAN FOR DEVELOPING AND VALIDATING A GUN SYSTEM DESIGN TRADE-OFF METHODOLOGY Final Report, Jun. 1979 - Feb. 1980
Charles F. Price and Jang G. Lee 15 Feb. 1980 44 p refs
(Contract DAAK10-79-C-0213)
(AD-A087239; AD-E400432; TASC-TR-1640-1; ARSCD-CR-80008) Avail: NTIS HC A03/MF A01 CSCL 19/5

Procedures are described for validating a Helicopter Weapon Simulation Model (HWSSM) using data collected from Army's recent Air-to-Air Self Defense Test (AASDT), and for integrating the HWSSM with a gun system sizing model to compute system weight as a function of the basic performance parameters. These parameters include firing interval, probability-of-hit or probability-of-kill, the types of engagements, and the number of engagements of each type per mission. These procedures will provide the Army with an overall methodology for conducting airborne gun system design tradeoff studies. GRA

SIMULATION DEVELOPMENT AND EVALUATION OF AN IMPROVED LONGITUDINAL VELOCITY VECTOR CONTROL WHEEL STEERING MODE AND ELECTRONIC DISPLAY FORMAT
George G. Steinmetz Aug. 1980 97 p refs
(NASA-TP-1664; L-13435) Avail: NTIS HC A05/MF A01 CSCL 01D

Using simulation, an improved longitudinal velocity vector control wheel steering mode and an improved electronic display format for an advanced flight system were developed and tested. Guidelines for the development phase were provided by test pilot critique summaries of the previous system. The results include performances from computer generated step column inputs across the full airplane speed and configuration envelope, as well as piloted performance results taken from a reference line tracking task and an approach to landing task conducted under various environmental conditions. The analysis of the results for the reference line tracking and approach to landing tasks indicates clearly detectable improvement in pilot tracking accuracy with a reduction in physical workload. The original objectives of upgrading the longitudinal axis of the velocity vector control wheel steering mode were successfully met when measured against the test pilot critique summaries and the original purpose outlined for this type of augment control mode. HELICOPTER ELECTRO-OPTICAL SYSTEM DISPLAY REQUIREMENTS. 2: PERFORMANCE OF HELICOPTER PILOTS WHEN USING A LOW-LIGHT-LEVEL TELEVISION SYSTEM DURING SIMULATED NAP-OF-THE-EARTH FLIGHT
Aaron Hyman, Richard M. Johnson, and Paul A. Gade Mar. 1980 21 p
(DA Proj. 2Q1-62722-A-765)
(AD-A086855; ARI-TR-442) Avail: NTIS HC A02/MF A01 CSCL 01/2

Previous ARI research has shown that pilots feel they can successfully use a low light level television system as an aid in night nap-of-the-earth (NOE) flight, even when the highlight luminance of its display is as little as 0.06 footlambert (fL). Videotaped presentations were used in this prior research, and estimations of the lowest usable display luminance were established on the basis of pilot judgment. The present experiment was designed to provide more objective evidence for determining the utility of such low luminance displays when they are used as aids in night NOE flight. Each of 24 Army helicopter pilots made 24 simulated flights over a highly realistic three dimensional terrain model as generated from an optical probe used in conjunction with an SIT television camera. The results showed that pilots had fewer crashes when using a larger display. All pilots flew as well with displays set so that highlight luminance was about 0.05 fL as they did with displays set so highlight luminance was about 0.2 fL. This report discusses the implications of these results for designing a usable low light level television system for night NOE flight. GRA

NONOPERATING FAILURE RATES FOR AVIONICS STUDY Final Technical Report, Sep. 1977 - Mar. 1979
George A. Kern, Steve S. Tung, Irving Quart, and Kam L. Wong Griffiss AFB, N.Y. RADC Apr. 1980 151 p refs
(Contract F30602-77-C-0187; AF Proj. 2338)
(AD-A087048; HAC-FR-79-70-1190R; RADC-TR-80-136) Avail: NTIS HC A08/MF A01 CSCL 14/4

This report presents the results of a study of the nonoperating failure rates of USAF avionic equipments. Quantitative assessment data on 26 different equipment/aircraft applications are included. The nonoperating failure rates as determined by three different methods utilizing Air Force maintenance data were measurably significant. On average, MTBF assessment results are improved by 22% when nonoperating failures are excluded from operational MTBF assessments. Average operating to nonoperating failure rate ratios for the equipments investigated ranged from 41 to 188. Comparisons between several reliability prediction methods and operational reliability levels achieved are included. Based on the six equipment types analyzed, it is concluded that field nonoperating failure rates cannot be predicted to a reasonable degree of accuracy by using any of the established prediction methods. ENGINE CYCLE STUDIES PROGRAM Final Report, Sep. 1978 - Oct. 1979
R. D. Allan, J. E. Johnson, W. Joy, R. H. Brown, and H. J. Barrial Aug. 1980 176 p refs
(Contract NAS3-21388)
(NASA-CR-159500; R80AEG428) Avail: NTIS HC A09/MF A01 CSCL 21E

The double bypass, variable cycle engine (VCE) used as the propulsion system for a Mach 2.4 cruise supersonic commercial transport was examined in the following areas: (1) the acoustic and performance payoffs of the high flow mode of the double bypass VCE; (2) possible cycle improvements for noise; (3) manufacturing cost, reliability and maintainability of the VCE compared to other engine concepts; (4) an assessment of the performance and economic payoffs of the features used in the double bypass VCE. The high flow capability of the double bypass VCE did show acoustic and performance payoffs both with unsuppressed and with mechanically suppressed coannular exhaust systems. At lower noise goals, changes to the baseline VCE cycle improved takeoff gross weight for a design version by up to 4%. The double bypass feature of the VCE provided performance and acoustic flexibility that resulted in lower takeoff gross weight for all noise levels, utilizing unsuppressed coannular nozzle, suppressed coannular nozzle, and single stream fully suppressed nozzle. The manufacturing cost, reliability, and maintainability of the double bypass VCE compares favorably with the simpler concepts studied (within 1 to 5.5%). L.F.M.

HIGH ENERGY X-RAY STUDY Final Report, Jan. 1978 - Feb. 1979
Malcolm K. Lewis Jun. 1980 204 p refs Prepared in cooperation with Lockheed Missiles and Space Corp., Palo Alto, Calif., and Varian Associates, Inc., Palo Alto, Calif.
(Contract F40600-78-C-0001)
(AD-A086279; AEDC-TR-79-53) Avail: NTIS HC A10/MF A01 CSCL 14/2

This study program investigated the feasibility, and developed a conceptual design, for an analytical/diagnostic X-ray system. This system would be used in existing AEDC test cells and would provide a capability to internally examine turbine engines and solid propellant rocket motors while operating under simulated altitude conditions. Diagnostic X-ray capabilities in each Test cell -- J-1/J-2, C-1/C-2, and J-5 -- were studied, and recommendations made. The participating contractors each developed conceptual plans for recommended equipment including the X-ray source, film detector, and positioning components. In addition, test cell environment, portability/survivability, cell modifications, personnel safety/radiation shielding and equipment standardization were studied, and recommendations were made. GRA

The proliferation of increasingly sophisticated enemy military forces in the past decade, and the ability to quickly apply those forces anywhere in the world, has stressed the importance of a demonstrated deterrent capability. This capability should combine rapid reaction with the ability to apply the appropriate force at the appropriate place. Strategic and tactical power, global mobility and precise, well-ordered strike capability are necessary parts of the required capability. Communication and accurate time-space coordination will be required capabilities. The ability to strike at night and in adverse weather and to successfully redirect to a higher priority target, all in a well-coordinated manner, will help to offset the superiority of enemy aircraft numbers. The Integrated Flight Trajectory Control (IFTC) program has been concerned with solving these problems. The solution involves the development of a system which adds flight management capabilities through the use of digital computers to integrate guidance and control with control and display, navigation, weapon delivery, data-link systems and other on-board sensors. Following system development, the concept was demonstrated by realtime, man-in-the-loop simulation in the LSI Hybrid Computing Facility. GRA

This report describes a digital computer program that

calculates static stability, high lift and control, and dynamic derivative characteristics using the methods contained in the USAF Stability and Control Datcom (revised April 1976). Configuration geometry, attitude, and Mach range capabilities are consistent with those accommodated by the Datcom. The program contains a trim option that computes control deflections and aerodynamic increments for vehicle trim at subsonic Mach numbers. Volume 1 is the user's manual and presents program capabilities, input and output characteristics, and example problems. The program is written in ANSI FORTRAN IV. The primary deviations from standard FORTRAN are Namelist input and certain statements required by the CDC compilers. Core requirements have been minimized by data packing and the use of overlays. User oriented features of the program include minimized input requirements, input error analysis, and various options for application flexibility. GRA

The Deep Space Network monitor and control system, Mark III-80 is described. The major implementations required to evolve from the Mark III-78 to the Mark III-80 configuration are identified. The affected facilities are the deep space stations and the network operations control center (NOCC). At the deep space stations a stand-alone host processor is implemented. Included are software (host software) changes which provide downline loading to the stand-alone host processor from a disc unit of any idle data system computer. At deep space stations with a 34 m antenna, the microwave subsystem is provided with an interface which allows remote configuration selection at the central monitor and control operator's position. In the NOCC, software changes are implemented to provide precision power monitor and GCF monitor displays. M.G.

AUTOMATED FREQUENCY STANDARD STABILITY DATA REDUCTION c60
L. J. Knapp *In its* The Telecommun. and Data Acquisition Rept. 15 Aug. 1980 p 38-40 (For primary document see N80-30319 21-12)
Avail: NTIS HC A06/MF A01 CSCL 09B

A design using a medium sized computer, a fiber optic communication link, and a desk top computer to reduce data collected at a remote site for analysis of frequency standard

tests is described. Data generated at the Interim Frequency Standards Test Facility is collected on magnetic tape, which is then transported to a Sigma 5 computer. An Allan variance (two sample variance) is then calculated. The Allan variance (sigma vs tau) is then written to a data file in the Sigma 5. A fiber optic communication link between the Sigma 5 and a desk top computer was designed to transmit data in the Sigma 5 file to the desk top computer. A program was written for the desk top computer that will automatically access the data file in the Sigma 5, process the data and provide a data plot. M.G.

SIGNAL TO NOISE RATIO CALCULATION FOR FIBER OPTICS LINKS **c74**

K. Y. Lau *In its* The Telecommun. and Data Acquisition Rept. 15 Aug. 1980 p 41-48 refs (For primary document see N80-30319 21-12)

Avail: NTIS HC A06/MF A01 CSCL 20F

The signal to noise ratio (SNR) effect upon the maximum transmission length of a fiberoptic system is discussed. The relationships of different system parameters are discussed. A general formula to obtain the SNR of a single mode fiberoptic system is derived. The SNR attainable with single mode and multimode fiber optics links was calculated from fundamental noise considerations. It was found that for single mode fibers, laser noise dominates the noise contributions for links less than 30 km long, while thermal noise dominates for longer links. Multimode fibers degrade SNR for long links because of intermode dispersion. For frequency standard transmission, as long as the baseband modulation signals are within the bandwidth of the fibers, respectable SNR can be attained with low loss fibers (approximately 1 dB/km) for links as long as 70 km. For wideband transmission SNR is decreased by a factor equal to the ratio of the bandwidth. M.G.

N80-30332*# Jet Propulsion Lab., California Inst. of Tech., Pasadena.

INPUT SIGNAL CONDITIONER FOR THE MULTIMEGASYMBOL TELEMETRY SYSTEM FEASIBILITY MODEL **c17**

G. L. Stevens *In its* The Telecommun. and Data Acquisition Rept. 15 Aug. 1980 p 49-58 ref (For primary document see N80-30319 21-12)

Avail: NTIS HC A06/MF A01 CSCL 17B

The input signal conditioner portion of the multimegasymbol telemetry demodulator and detector feasibility model is described. The input signal conditioner accepts the 55 MHz wideband IF signal of a Block 4 Deep Space Network receiver and provides selectable bandpass filtering, total power automatic gain control, and frequency translation providing inphase and quadrature outputs at baseband. M.G.

N80-30333*# Jet Propulsion Lab., California Inst. of Tech., Pasadena.

USE OF K SUB A-BAND FOR RADIO METRIC DETERMINATIONS **c32**

P. D. Potter *In its* The Telecommun. and Data Acquisition Rept. 15 Aug. 1980 p 59-66 refs (For primary document see N80-30319 21-12)

Avail: NTIS HC A06/MF A01 CSCL 20N

The use of K sub A-band to alleviate the radio metric degradation caused by charged particles is discussed. Those aspects of radio metrics which are relevant to the possible future use of K sub A-band deep space to Earth and Earth to deep space links are reviewed. In particular the effects of the Earth ionosphere, troposphere, and solar plasma are examined. It is concluded that, from the standpoint of reducing the harmful effects of charged particles, the use of K sub A-band appears highly desirable. While stability will be a more serious design constraint at K sub A-band than it is at X-band (for example in the ground power amplifier and the spacecraft multiplier stages) this problem is amenable to a state of the art engineering solution. M.G.

N80-30334*# Jet Propulsion Lab., California Inst. of Tech., Pasadena.

QUICKLIST: THE BASIS FOR A COMPUTER AIDED LOGIC DESIGN SYSTEM **c33**

W. A. Lushbaugh *In its* The Telecommun. and Data Acquisition Rept. 15 Aug. 1980 p 67-71 (For primary document see N80-30319 21-12)

Avail: NTIS HC A06/MF A01 CSCL 09C

Quicklist, a preprocessor for an existing wire list program that cuts the description of the wire list by about 67 percent over previous methods, is described. Quicklist uses two different methods to shorten the input data. The first of these is the use of parentheses to allow a compact way of describing signal names which increment (or decrement) by one, i.e., typical signal names in a bus. The other method used is the equal sign. Using this symbol in a signal list says that the rest of the signals on that chip are the same as those on the previous chip described. Quicklist is intended to be the basis of a computer aided logic design system. M.G.

FEASIBILITY AND COST STUDY ON VOIR SAR DATA TRANSFER VIA A BENT PIPE LINK **c32**

Y. H. Park and A. M. Goldman, Jr. *In its* The Telecommun. and Data Acquisition Rept. 15 Aug. 1980 p 82-90 (For primary document see N80-30319 21-12)

Avail: NTIS HC A06/MF A01 CSCL 17I

An INTELSAT/DOMSAT double hop bent pipe link for the Venus orbiting imaging radar synthetic aperture radar imaging data transfer from deep space stations 43 and 63 to the Jet Propulsion Laboratory was investigated. The cost for the bent pipe transfer was estimated and compared to that for the planned tape record/airfreight-the-tape transfer method. R.C.T.

N80-30337*# Jet Propulsion Lab., California Inst. of Tech., Pasadena.

SPATIAL ACQUISITION OF OPTICAL SOURCES IN THE PRESENCE OF INTENSE INTERFERENCE **c74**

V. A. Vilnrotter *In its* The Telecommun. and Data Acquisition Rept. 15 Aug. 1980 p 91-96 refs (For primary document see N80-30319 21-12)

Avail: NTIS HC A06/MF A01 CSCL 20F

The problem of spatially acquiring an optical beacon in the presence of intense optical interference is considered. It is demonstrated that conventional acquisition procedures cannot establish acceptable levels of acquisition probability when competing with strong optical interference without requiring unreasonable amounts of prime power. As a possible solution, it is shown that a more sophisticated acquisition scheme can virtually eliminate the effects of optical interference while requiring only a modest increase in system complexity. HALLEY'S COMET 1985-86: A UNIQUE OPPORTUNITY FOR SPACE EXPLORATION
Robert W. Farquhar and William H. Wooden, II Jan. 1980 15 p refs
(NASA-TM-80633) Avail: NTIS HC A02/MF A01 CSCL 22A

A coordinated program to explore Halley's comet in 1985 to 86 is proposed. The program employs a variety of observational systems for remote observations and utilizes spacecraft encounters with the comet to obtain in-situ measurements. Included in the observational network are groundbased observatories, the Space Telescope, a Spacelab cometary observatory, small astronomical satellites, and experiments carried on airborne observatories and sounding rockets. It is assumed that a ballistic flythrough technique will be used to carry out the spacecraft encounters. The proposed strategy calls for the simultaneous launch of two spacecraft towards an intercept with Halley in March 1986. Following the Halley encounter one spacecraft is retargeted to intercept comet Borrelly in January 1988, while the other spacecraft proceeds to an encounter with comet Tempel 2 in September 1988. STUDY ON THE UTILIZATION OF SOLAR ENERGY FOR THE OPERATION OF SPACELAB MATERIAL SCIENCE FURNACES Final Report
M. Bader, J. P. Baselt, W. Breitling, H. Lenski, and K. Suttner 24 Oct. 1979 113 p refs
(Contract ESA-3788/78-F-FC(SC))
(DS-ERT-21-79; ESA-CR(P)-1314) Avail: NTIS HC A06/MF A01

The user requirements, possibilities and constraints resulting from the Orbiter/Spacelab vehicle are summarized. The major elements of a solar heating facility are defined and technical solutions for the various components are outlined. Two different concepts are possible: a light concept and heat concept. The heat concept uses a heat storage element and heat pipe furnaces for isothermal, gradient or zone melting processing. It operates in day/night orbits up to temperature of 1250 - 1580 K, depending on the process. In the light concept light transfer in a light guide is discussed, but a more simple system with the furnace directly in the focus is described in detail. This furnace allows zone melting up to 3000 K and an isothermal coversion up to 200 K. For both concepts the technology is available and the usage of solar heating facilities appears very attractive.

THE ROLE OF COMMAND AND DATA MANAGEMENT SUBSYSTEM (CDMS) IN A FUTURE PAYLOAD OPERATIONS SCENARIO Final Report
O. Neff, H.-J. Moster, and H. Reffel Feb. 1970 210 p refs
(Contract ESA-3906/79-F-HEW(SC))
(ESA-CR(P)-1325) Avail: NTIS HC A10/MF A01

Analysis of payload operation tasks resulted in an autonomous experiment concept. Features of the recommended concept include: experiment specific tasks are to be performed by microcomputers (Dedicated Experiment Processors - DEPs) and not by Command and Data Management Subsystem (CDMS); and development and complete checkout of autonomous experiments (hardware and software) is the principal investigator's responsibility. Based on this concept a payload operations scenario and requirements concerning crew activities, CDMS, and DEPs are defined. Modifications, necessary for the adaptation of CDMS to the concept, are described and include development of the DEP-Experiment Bus Adaptor, implementation of the subsystem computer/experiment computer link, and experiment computer system modifications. It is recommended that support be provided to the principal investigator to reduce experiment development and checkout costs by a DEP instrumentation pool and a CDMS simulation package for experiment checkout. STUDY OF TECHNICAL FEASIBILITY AND COSTING OF BIORACK. VOLUME 1: TECHNICAL REPORT Final Report
H. Braumann, W. Breitling, H. Francois, H. Lenski, P. Schiller, and P. Reusser (Reusser (Peter U.) A.G.) Nov. 1979 134 p
(Contract ESA-3988/79-F-DKR(SR))
(ESA-CR(P)-1332-Vol-1) Avail: NTIS HC A07/MF A01

Biorack is designed as a multi-user facility for carrying out biological experiments in Spacelab in the areas of cells, tissues, and micro-organisms. Fourteen proposed life science experiments have provided the basis for the Biorack design which consists of two different types of incubators, a freezer (-20 C minimum) and a glovebox for preservation and fixation techniques, all accommodated in one standard Spacelab single rack. Two each of two types of incubators are included in the Biorack, and operate in the temperature ranges of 27 C to 37 C (type 1) and 2 C to 27 C (type 2). A 35 mm camera, a high power microscope (1250 x), a low power stereo microscope (400 x), a centrifuge (200 g), and the necessary supporting subsystems for power conditioning and distribution, and data acquisition and recording, are included. For the development planning and cost estimation of the Biorack building phase, a low cost approach was adopted, which resulted in a development phase duration of 29 months and an estimated cost of about 5 million AU.

DESIGN OF A DYNAMIC TEST PLATFORM FOR AUTONOMOUS ROBOT VISION SYSTEMS
Gary C. Rich Aug. 1980 76 p
(Grant NsG-7369; Contract JPL-954880)
(RPI-TR-MP-69; NASA-CR-163500) Avail: NTIS HC A05/MF A01 CSCL 14B

The concept and design of a dynamic test platform for development and evluation of a robot vision system is discussed. The platform is to serve as a diagnostic and developmental tool for future work with the RPI Mars Rover's multi laser/multi detector vision system. The platform allows testing of the vision system while its attitude is varied, statically or periodically. The vision system is mounted on the test platform. It can then be subjected to a wide variety of simulated can thus be examined in a controlled, quantitative fashion. Defining and modeling Rover motions and designing the platform to emulate these motions are also discussed. Individual aspects of the design process are treated separately, as structural, driving linkages, and motors and transmissions. R.K.G.

RADIATION DOSE IN SATELLITES AT 1111 KILOMETERS WITH AN INCLINATION OF 63 DEG Interim Report
Mary D. Stemple 16 May 1980 35 p refs
(RR0120141)
(AD-A086779; AD-E000447; NRL-MR-4236) Avail: NTIS HC A03/MF A01 CSCL 22/2

A computer program was written to provide a convenient means of calculating the radiation dose received by a satellite in a specified orbit over a given time period. In this case, the orbit is circular at 1111 km altitude, 63 deg inclination. The input data required are tables of annualized orbit-integrated radiation dose vs. shielding thickness (or density) which were obtained from a separate calculation. These were prepared by the National Space Science Data Center, covering the time period from 1981 to 1989, from space environment models AP-8, AE-5, AE-6, AEI-7, and SOLPRO. The radiation dose was calculated using an infinite slab shielding geometry for trapped electrons, bremsstrahlung, trapped protons, and solar protons. A plotting routine for graphing 26 shield thicknesses up to 700 mils of aluminum is provided. Instructions for program execution and data deck setup, samples of the data tables and graphs, and a program listing are included. GRA

SATELLITE CONSTELLATIONS FOR WORLDWIDE AND HEMISPHERE COVERAGE Final Report
L. N. Rowell Dec. 1979 58 p refs 3 Vol.
(Contract DCA100-78-C-0058)
(AD-A086920; RAND/N-1432-DCA) Avail: NTIS HC A04/MF A01 CSCL 17/2

Continuous Earth-to-space communications require that at least one satellite be in view of the ground station at all times. The satellite constellations discussed in this note are designed to maximize the probability that one or more of the satellites in the constellation will always be at an elevation angle of 20 degrees or more above the horizon of the ground station. (This maximum elevation angle is based on the assumption that millimeter waves will be used for communication.) Constellations of satellites in circular orbits at synchronous and five times synchronous altitude and also in elliptical orbits are presented. Some of the constellations are designed to maximize global coverage and station located anywhere on Earth) and others are designed to maximize coverage for the northern hemisphere. GRA

The P78-2 (SCATHA) satellite was launched on 30 January 1979 to measure the characteristics of the spacecraft charging process near synchronous orbit. A Charging Electrical Effects Analyzer onboard measures the characteristics of electrical discharges in both the frequency and time domain. Pulses are detected in response to commands, during electron and ion beam operations and during natural charging events. GRA

RITZ 2 SOFTWARE: DYNAMIC LONGITUDINAL ANALYSIS USING A VARIATIONAL METHOD FOR SLENDER BODIES OF REVOLUTION CONTAINING LIQUIDS [LOGICIEL RITZ 2 - ANALYSE DYNAMIQUE LONGITUDINALE PAR METHODE VARIATIONNELLE DE STRUCTURES MINCES DE REVOLUTION CONTENANT DES LIQUIDES]
Henri Morand (Direc. de Lanceurs) and Bruno Belon (CAP SOGETI) Sep. 1979 355 p In FRENCH; ENGLISH summary
(CNES-NT-91) Avail: NTIS HC A16/MF A01

A variational method to study launch vehicle structures by longitudinal modal analysis is presented along with the corresponding software. The method is especially well adapted to liquid propellant rocket behavior. The added mass of the liquid is calculated on the basis of a hydroelastic hypothesis and according to theoretically defined variation principles. A matrix representation is generated numerically using a finite element routine. Machine memory loading is minimized by a simulataneous assemblyreduction subroutine. The RITZ 2 software computes eigenvalues, eigenvectors, generalized masses, and dynamic pressures for most axisymmetric configurations. The results are shown appropriate for pogo studies. A program user manual is also included. Author (ESA)

STUDY ON USE OF ISEE-B PLATFORM AS A PROBE FOR ESA/NASA COMETARY MISSION. VOLUME 1: TECHNICAL RESULTS Final Report
W. Trogus, R. D. Auer, R. Ockert, E. Bachor, L. Borucki, B. Caesar, R. Gieselmann, K. Goehler, M. Granzow, R. Hendricks et al Oct. 1979 291 p refs
(Contract ESTEC-3874/79-NL-MS)
(ESA-CR(P)-1316-Vol-1) Avail: NTIS HC A13/MF A01

The use of the existing international Sun Earth explorer B (ISEE-B) concept as probe for the planned cometary mission is assessed. A systems review covers mission and operations, selection and accommodation of a model payload as well as probe system configuration trade-offs. Starting from ISEE-B structure and subsystems, preferred solutions are selected and various options presented. Special points of effort were the definition of an micrometeorite hazard protection shield, the electromagnetic cleanliness, the confirmation of the thermal control design feasibility and the layout of spin-up ejection mechanism, which enclosed the antenna. It is concluded that the proposed probe baseline design and the subsystem concept are feasible and within state-of-the-art. Author (ESA)

STUDY OF OTS 2: INFLIGHT BEHAVIOR NUTATION INTERACTION WITH MOMENTUM WHEEL Final Report
Jean-Louis Lacombe, Delaunay, G. Pelta, and A. Legars Dec. 1979 89 p refs
(Contract ESA-3768/78-NL-JS)
(Rept-30/1357; ESA-CR(P)-1328) Avail: NTIS HC A05/MF A01

Synthesis of OTS 2 inflight data characterizing the nutation indicates a constant linear damping of the nutation conical angle with the Teldix wheel in service. With the signal wheel in service there is a nutation angle divergence the time constant of which has daily periodic variation (+ or - 30%). angle variation were investigated including: passive energy dissipation due to liquid sloshing and to structural damping; energy dissipation inside the wheel bearings; coupling between nutation motion and pitch control; coupling between nutation and solar array drive system; and interaction with the external geomagnetic and solar disturbances. Comparison between OTS 2 and Symphonie behavior supports the conclusion that Teldix wheel bearings do not contribute significantly to nutation angle decay. Analysis of the grease bearing characteristics indicates that the observed behavior is consistent with a worst case effect of the grease bearing. Simple and safe in-flight tests are proposed to validate the study assumption. Author (ESA)

STUDY OF A MATHEMATICAL MODEL OF A FLEXIBLE SOLAR ARRAY SUB-PANEL ASSEMBLY (VELSA 2) Final Report
K. J. Zimmermann 10 Dec. 1979 86 p refs
(Contract ESTEC-2990/76-NL-HP(SC))
(Rept-10.2-93/NT; ESA-CR(P)-1335) Avail: NTIS HC A05/MF A01

Methods and results of an analysis are presented for a flexible communication technology satellite (CTS) solar array sub-panel assembly and its correlation to test results. An approach is proposed for the design verification of large flexible solar arrays. The mathematical model used for the analysis of the blanket behavior is described and the methods applicable to the correlation of the mathematical model to the test results are discussed. The analytical results are given for the initial and the updated mathematical model for on-ground conditions. Dynamic results are provided for on-ground and on-orbit conditions differing from the later defined test conditions. Test enhancements are formulated based on the lack of data identified during the course of the model correlation. Aspects of the sensitivity of the mathematical

model to mesh size variations, boundary conditions, global and local stiffness changes, etc. were considered in the updated mathematical model. The latter predicts the test results with a sufficient accuracy (mean error 5%). Author (ESA)

FLIGHT FEASIBILITY ASSESSMENT OF SHUTTLE/LANDSAT-D/LANDSAT-D' MISSIONS
Richard E. Kincade and Michael B. Wortham Aug. 1980 44 p ref
(NASA-TM-81145; JSC-16760; Rept-80-FM-38) Avail: NTIS HC A03/MF A01 CSCL 22A

Because of performance limitations, the shuttle cannot rendezvous with the LANDSAT D satellite in its primary orbit; the actual rendezvous altitude is a function of the performance of the two LANDSAT vehicles and of the shuttle. The feasibility of retrieving LANDSAT D from a 210 n.mi. orbit, following delivery of LANDSAT D' to a 200 n. mi. orbit was assessed from an orbital analysis point of view. Parameters such as orbital altitude, phasing and length of rendezvous, which affect flight design for this flight are identified. The results of a study made for delivery to a 235 n. mi. orbit followed by retrieval from 245 n. mi. are included. A.R.H.

TELEMETRY SYSTEM FOR EVALUATION OF BURN PROTECTION IN FULL-SCALE FUEL FIRE MANIKIN EXPOSURES Final Report
J. R. Piergallini and A. M. Stoll 1 May 1980 12 p refs (ZF61542001)
(AD-A086700; NADC-80092-60) Avail: NTIS HC A02/MF A01 CSCL 09/6

An eighteen channel PAM/FM (Pulse Amplitude Modulated/Frequency Modulated) telemetry system was developed for measuring temperature rise on the surface of a manikin beneath protective clothing for full-scale fuel fire exposures in completely enveloping flames. Thermistors are used as temperature sensors at various locations on a manikin surface and backed by material of known thermal properties in order to correlate temperature rise with skin burn damage. The transmitted signals are recorded on analog magnetic tape and converted to a digital format for computer analysis. The clothed manikin is passed through an aviation gasoline fire for three seconds with the telemetry system recording data during this period. Temperatures are analyzed at 0, 1, 2 and 3-second intervals with voltage outputs from the thermistors being converted to resistance readings and temperature readings by equations developed from curves of thermistor characteristics. Experimental results with respect to burn prediction are in agreement with data obtained by analysis of vesicant papers calibrated radiometrically to correlate with temperature-time effects productive of burns in living tissue. To date, 12 full-scale fuel fire tests have been conducted using the telemetry system and the performance of this system has exceeded original expectations in many respects such as sensitivity, accuracy and freedom from interference by ionizing gases within the flames. DYNAMICS AND CONTROL IN MODAL-SPACE OF FLEXIBLE SPACECRAFT Ph.D. Thesis
Hayrani Oz 1979 191 p
Avail: Univ. Microfilms Order No. 8020190

The independent modal space control proposed in this investigation shifts the problem of high dimensionality from the control problem to the structural dynamics problem, in recognition of the fact that the capabilities of available structural dynamics computational algorithms exceed those of modern control theory by at least one order of magnitude. The controller design is modular in form. Both nongyroscopic and gyroscopic systems are being considered. It is shown that for nongyroscopic systems no control spillover exists due to the uncontrolled modes included in the mathematical model. In the case of gyroscopic systems, the method calls for a 2nth order mathematical model to control n modes independently, which results in the elimination of the truncation effects relative to the 2nth order model in controlling the n modes. The derivation of a deterministic decoupled modal observer which estimates a linear combination of the modal state is given. Dissert. Abstr.

CALIBRATION VALIDATION FOR THE GEOS-3 ALTIMETER
C. F. Martin (Edgerton, Germeshausen and Grier, Inc., Riverdale, Md.) and R. Kolenkiewicz Jun. 1980 43 p refs Submitted for publication
(NASA-TM-80710) Avail: NTIS HC A03/MF A01 CSCL 14B

The absolute bias calibration for the GEOS-3 intensive mode altimeter was measured using two satellite passes whose

groundtracks were within 1 km of the Bermuda laser station. The Bermuda laser tracked on the two passes, and was supported by two other NASA lasers on one pass and by the NASA Spacecraft Tracking and Data Network on the other pass. For each pass, the altimeter data around Bermuda was smoothed and extrapolated to the point closest to overhead at the laser site. After correcting for tide heights and sea state effects, the two passes give calibration biases which are in agreement to within 26 cm and have a weighted mean of -5.69 + or - 0.16m for correcting altimeter measurements to the center-of-mass of the spacecraft (i.e., including the antenna tracking point correction). It was found impossible to reconcile the two calibration passes, as well as a set of altimeter crossovers in the middle of the GEOS-3 calibration area, without allowing for a data time tag error. On the bias of a selected set of four crossovers, and an assessment of probable sources of timing error, it was concluded that one interpulse period (10.24 msec) should be added to the data time tags. L.F.M.

SUB ARC SECOND SENSOR CALIBRATION Final Report
G. Sedmark, S. Furlani, M. Pucillo, L. Rusconi, and P. Santin. 3 Nov. 1978. 155 p. refs.
(Contract ESTEC-3413/77-NL-AK(SC))
(OAT-586; ESA-CR(P)-1309) Avail: NTIS HC A08/MF A01

A feasibility study was performed for a subarcsecond sensor calibration system capable of performing geometrical calibrations on star and Sun sensors of accuracy of 1 milliarcsecond over + or - 1 arcsecond and 10 milliarcseconds over + or - 1 arcdegree, respectively. The realization of a calibration system consistent to the specified accuracy is meaningful only if the sensors to be calibrated are substantially insensitive to a rotationally symmetrical curvature of the wavefront output from the calibration system. The monitor subsystems required can be implemented by means of commercially available laser interferometers and autocollinators. The actuators required for positioning of the system components can be implemented by integrating commercially available piezoelectric actuators to custom-made electric motor endless screw actuators. The system should be isolated to external mechanical noise by a stack of two antivibration tables. Moreover, it is necessary to operate the system in a vacuum of 0.00001 atmosphere to avoid beam propagation errors induced by the atmosphere. The system should be computer controlled to optimize the calibration operations against internal mechanical noise, while the typical sensor scanning speed should not exceed 10 scans/second. Avail: Issuing Activity CSCL 21H

Two hydrogen-oxygen rocket engine system concepts were analyzed parametrically over a thrust range from 100 to 1000 pounds and a chamber pressure range from 175 to 1000 psia. Both concepts were regeneratively cooled with hydrogen and were pump fed by electric motor driven positive displacement pumps. Electric power was provided by either a turboalternator (turboalternator concept) or some means external to the engine system (auxiliary power concept). The computer program used to conduct the analyses along with the design characteristics of the major engine system components are briefly described. The feasible design range of the systems over the parametric range of thrust is discussed in terms of allowable chamber pressure considering the constraints of thrust chamber cooling and cycle power. Engine system estimated performance, mass, and dimensional envelope parametric data within the feasible design range are presented. Author

ADVANCED EXPANDER CYCLE ENGINE FOR MANNED ORBIT TRANSFER VEHICLES
L. B. Bassham. *In* APL. The 1980 JANNAF Propulsion Meeting, Vol. 5. Mar. 1980. p. 53-67. refs (For primary document see N80-30381 21-20)
Avail: Issuing Activity. CSCL 21/8

An approach to the design of a high energy orbit transfer vehicle (OTV) space engine using an advanced expander turbopump power drive cycle (AEC) is presented. The AEC engine concept selection resulted from an evaluation of potential performance, and risk reduction considerations. As such, the AEC engine meets all mission technical requirements of low weight, and high performance with a fixed envelope with maximum service life (totally reuseable) while maintaining benign operating environment for all critical components. Engine power cycle alternatives are evaluated against the design drivers and trades are made which isolate the most desirable features. Development risk is then factored into the evaluation to definitize the most desirable solution. The selected advanced expander engine (AEC) exemplifies the mergence of previous operational experience, manned system requirements and performance of high energy propellants with economic risk assessment for the manned orbit transfer vehicle engine.

UPPER STAGES UTILIZING ELECTRIC PROPULSION
David C. Byers. *In* APL. The 1980 JANNAF Propulsion Meeting, Vol. 5. Mar. 1980. p. 69-84. refs (For primary document see N80-30381 21-20)
Avail: Issuing Activity. CSCL 21H

The payload capabilities of upper stages using electric propulsion for a LEO to GEO orbit transfer mission are presented. The impact on payloads of total mass in LEO, thrusting (trip) time, propellant type, specific impulse, and power source characteristics was evaluated. Dependent upon detailed assumptions, electric stages were found capable of delivering payloads in thrusting time less than 50 days with payloads always initially increasing rapidly with increasing thrusting times. For the shorter thrusting (trip) times the payloads increased with increasing propellant mass and decreasing specific impulse. At very long trip times, however, the payload increased with decreasing propellant mass and increasing specific impulse. Variation of the specific mass of the power source between 5 and 30 kg/kW caused the minimum trip times to vary about a factor of three and at short trip times strongly affected the electric stage payload capabilities.

CRYOGENIC LOX/H2 ENGINE CANDIDATES FOR ORBITAL TRANSFER MISSIONS. PART 1: EXPANDER CYCLE OPTIMIZATION
R. Wahl, A. Martinez, A. Sobin, and J. Gloss. *In* APL. The 1980 JANNAF Propulsion Meeting, Vol. 5. Mar. 1980. p. 85-100 (For primary document see N80-30381 21-20)
Avail: Issuing Activity. CSCL 21H

Main propulsion LOX/hydrogen engines exhibiting high performance, high reliability, reusability, light weight, simplicity, and well advanced state of development were characterized for use in the orbital transfer vehicle (OTV). Two well known engine cycles (the staged combustion and the expander) demonstrated the best potential of meeting OTV requirements, with the staged combustion excelling in performance and the expander excelling in mechanical simplicity. Characterization included performance, weight, payload, cost, programmatics, engine off design operation, reliability, and risk assessment analyses. Results provided inputs for subsequent vehicle studies and indicated further optimization of both engines was in order. In the case of the expander cycle engine, further optimization has increased performance significantly, while in the case of the staged combustion cycle engine simplicity and performance are improved.

DUAL THROAT ENGINE DESIGN FOR A SSTO LAUNCH VEHICLE
C. J. OBrien and J. W. Salmon. *In* APL. The 1980 JANNAF Propulsion Meeting, Vol. 5. Mar. 1980. p. 101-118. refs (For primary document see N80-30381 21-20)
(Contract NAS8-32967)
Avail: Issuing Activity. CSCL 21H

A propulsion system analysis of a dual fuel, dual throat engine for launch vehicle application was conducted. Basic dual throat engine characterization data are presented to allow vehicle optimization studies to be conducted. A preliminary baseline engine system was defined. Dual throat engine performance, envelope, and weight parametric data were generated over the parametric range of thrust from 890 to 8895 KN (200K to 2M lb-force), chamber pressure from 6.89 million to 34.5 million N/sq. m (1000 to 5000 psia) thrust ratio from 1.2 to 5, and a range of mixture ratios for the two tripropellant combinations: LO2/RP-1 + LH2 and LO2/LCH4 + LH2. The results of the study indicate that the dual fuel dual throat engine is a viable single stage to orbit candidate.

TITAN LIQUID BOOST MODULE FOR SHUTTLE PERFORMANCE AUGMENTATION
J. G. Muehlbauer and A. E. Inman (Martin Marietta Corp., Denver, Colo.). *In* APL. The 1980 JANNAF Propulsion Meeting, Vol. 5. Mar. 1980. p. 135-145 (For primary document see N80-30381 21-20)
Avail: Issuing Activity. CSCL 21/8

The shuttle orbital vehicle 103/external tank 26 has a projected payload capability of 24,000 pounds on DOD Mission 4 with a 109% rated thrust level SSME, a 6,000 lb external tank weight reduction, and a 5,100 lb orbiter weight reduction. As this is significantly below the 32,000 lb Mission 4 requirement, performance enhancement, in the form of thrust augmentation is supplied by the Titan Liquid Boost Module (LBM). The Titan LBM, installed aft of the external tank, has ignition at five seconds after liftoff when the shuttle is clear of the facility. Following a 200 second burn, LBM is jettisoned using an ordnance separation device. This burn duration provides over 17,000 pounds

performance improvement at VAFB, well beyond Mission 4 requirements. J.M.S.

A PUMP FED BIPROPELLANT PROPULSION SYSTEM FOR PLANETARY MISSIONS
P. N. Estey. *In* APL The 1980 JANNAF Propulsion Meeting, Vol. 5 Mar. 1980 p 165-179 refs (For primary document see N80-30381 21-20)
(Contract NAS7-100)
Avail: Issuing Activity CSCL 21H
A pump fed bipropellant liquid propulsion system is proposed for use on planetary missions. The primary use of this system is to provide the thrust for orbit insertion around the planet. The mass scaling equations for the pump fed and pressure fed N2O4/MMH propulsion systems are developed and presented graphically. It is shown that the pump fed propulsion system begins to be less massive than the equivalent pressure fed system at a propellant mass of approximately 450 kg (1000 lb sub m). Using the Venus Orbiting Imaging Radar (VOIR) mission as an example, it is shown that the pump fed propulsion system saves approximately 371 kg (818 lb sub m) of spacecraft mass at launch over the VOIR spacecraft using a pressurized propellant feed system. Some of the candidate pumps and drive systems are presented and briefly described. The applicability of the pump fed system to the JPL fluorine hydrazine propulsion system is also addressed. J.M.S.

UNDERSTANDING FLOW BLOCKAGE IN SMALL THRUSTERS
D. E. Fritz, R. L. Sackheim, and J. C. Lewis. *In* APL The 1980 JANNAF Propulsion Meeting, Vol. 5 Mar. 1980 p 203-216 refs (For primary document see N80-30381 21-20)
Avail: Issuing Activity CSCL 21/8
The requirements of high performance, low thrust, and large total impulse of hydrazine engines used in geosynchronous communication satellites are discussed. The use of electrical augmentation energy to increase thruster specific impulse into the 300 second range is considered. The phenomenon of nonvolatile residue (NVR) deposition in the small diameter injector flow passageways of low thrust hydrazine engines is investigated. The deposition rate affects the life and performance of both conventional catalytic and electrical augmented thrusters. Data of nonvolatile residue induced flow blockage in hydrazine engines are presented. Mechanisms for NVR deposition and design considerations for minimizing or eliminating NVR buildup are discussed. J.M.S.

NORTH-SOUTH STATION KEEPING WITH ELECTRIC PROPULSION USING ONBOARD BATTERY POWER
B. A. Free. *In* APL The 1980 JANNAF Propulsion Meeting, Vol. 5 Mar. 1980 p 217-229 refs Sponsored by the International Telecommunications Satellite Organization (For primary document see N80-30381 21-20)
Avail: Issuing Activity CSCL 21/8
If electric propulsion is substituted for monopropellant hydrazine for north-south stationkeeping of geostationary satellites, a net propulsion system mass reduction equal to about one tenth of spacecraft mass is gained. Conventional solar cell powering of the electric propulsion system imposes a severe cyclic lifetime requirement. With onboard batteries, larger and more efficient thrusters can be used, and the required cyclic lifetime is reduced considerably. Battery powered electric propulsion becomes more feasible as the satellite end of life power-to-mass ratio increases, and as the thruster efficiency improves. Battery powered north-south stationkeeping (NSSK) is practicable for many satellites with state of the art electric propulsion hardware. Author

PULSED PLASMA PROPULSION TECHNOLOGY
V. N. Benham and M. R. Brasher. *In* APL The 1980 JANNAF Propulsion Meeting, Vol. 5 Mar. 1980 p 269-280 (For primary document see N80-30381 21-20)
Avail: Issuing Activity CSCL 21/8
A pulsed plasma propulsion system with an impulse bit approximately 50 times larger and total impulse approximately 25 times larger than previous is described. The helical feed thruster system consisting of electrodes, capacitors, electronics, and propellant is integrated into a high altitude facility and operated 24 hours a day. Direct impulse and mass discharge measurements are taken to determine the performance of the thruster. Analysis is made during testing of any deficiencies in thruster system design which affect the long life and high performance. The discharge life testing of low inductance, extended foil capacitors having a design life of 10 to the 7th power shots and an energy

density of 88J/kg when operated at rated voltage and peak currents of 35KA, reversal of 25%, and rep-rate below Hz is discussed. The earlier capacitors consist of aluminum foil and a dielectric sandwich of polyvinylidene fluoride film ('K-film'), paper, and castor oil impregnant. They have a nominal capacity of 65 mu fd and are rated 2.5KV. The newer capacitors are composed principally of aluminum foil, 'K-film' and silicon oil impregnant. These have a nominal capacity of 80 mu fd and are rated at 2.2KV. J.M.S.

OXYGEN PRODUCTION FOR INTERPLANETARY RETURN MISSIONS
R. Richter, R. Ash (Old Dominion Univ., Norfolk, Va.), and W. Dowler *In* APL The 1980 JANNAF Propulsion Meeting, Vol. 5 Mar. 1980 p 281-299 refs (For primary document see N80-30381 21-20)
(Contract NAS7-100)
Avail: Issuing Activity CSCL 21H

Interplanetary missions with extraterrestrial returns are limited by large propulsion mass requirements. The injected mass landed on an extraterrestrial body can be reduced substantially by utilizing indigenous materials for the production of propellant on the extraterrestrial body. Analyses reported show that for Mars return missions, in situ production of oxygen during the wait between landing and the next low-energy return opportunity reduces the Earth-launch mass requirements to the allowable limit for direct entry and direct return missions. A small chemical processor using radioisotope thermal energy can extract oxygen several times its own mass from carbon dioxide, during the several-hundred-days wait on Mars. The fundamental element of the concept is the electrolytic process. Solid electrolyte cells for extracting oxygen from gaseous feedstock are identified. The basic physical principles underlying the extraction process are analyzed, and the relations between the major parameters established. The laboratory equipment for experimental investigation of the process is presented. J.M.S.

ADVANCES IN PROPELLANT PROPULSION TECHNOLOGY FOR INTERMEDIATE RANGE BALLISTIC MISSILE
D. L. Leonard, W. R. Bissell, W. H. Geniec, and I. E. Rosman. *In* APL. The 1980 JANNAF Propulsion Meeting, Vol. 5. Mar. 1980. p 481-499. Sponsored by General Dynamics/Convair. (For primary document see N80-30381 21-20)
Avail: Issuing Activity. CSCL 21/8

Currently available liquid propulsion system technology was applied to intermediate range ballistic missiles and shows advantages over solid propellant systems in terms of range, performance, and weight. Design of specific systems was based upon parametric data optimization and new technology data developed for air launched and ground launched ballistic missile systems through in house and contractual studies. Both pressure fed and pump fed liquid propellant systems were studied for a variety of propellant combinations, payload reqirements, launch constraints, and missile ranges. Pump fed systems were found to be lighter weight and higher performing than equivalent solid motor systems for both ground launched and air launched missiles. Pump fed system were also found to be smaller and higher performing for the same range and payload requirements than the comparable pressure fed missiles. It was determined that a combined lighter weight tank structure and rocket engine could be used with the pump fed liquid system and propellant carry capability improvements realized through better packaging within the missile's gross weight limit for pump fed systems. Avail: Issuing Activity. CSCL 21/8

The results of the balance of development and the subsequent qualification program, in which all tests were successfully completed, except hot aging followed by cold firing are described. An extensive company sponsored failure analysis program was conducted in which the cause of the anomalous performance of the aged motors was determined to be hardening of the propellant in the forward section of the motor due to the migration of plasticizer from the propellant into the insulator/liner. Subsequently, sufficient plasticizer was added to the liner to establish a chemically balanced system. Motors made with the modified liner formulation were successfully hot aged and cold fired, qualifying the motor for production. R.C.T.

MACH 3 HYDROGEN EXTERNAL/BASE BURNING
Warren C. Strahle, Douglas H. Neale, and James E. Hubbartt. *In* APL. The 1980 JANNAF Propulsion Meeting, Vol. 5. Mar. 1980. p 523-543. refs (For primary document see N80-30381 21-20)
(Grant AF-AFOSR-2794-75)
Avail: Issuing Activity. CSCL 21/8

Experimental studies of base pressure manipulation for an axisymmetric model at Mach 3 with simulated and actual external/base burning are described. Early work using contoured test section walls and cold gas base region injection is reviewed to demonstrate wake detail and length scale changes under the influence of simulated external/base burning. Tests with actual combustion of radially and axially injected hydrogen are then reported. Outstanding performance values with significant base drag reduction is shown for injection and burning directly in the near wake (base burning). Current attempts at radial injection and burning in the free stream (external burning) have not yet succeeded. These tests, however, have defined an envelope within which external burning, if feasible, is achieved. Author

MODULATION OF A GAS GENERATOR
Morton Shorr *In* APL The 1980 JANNAF Propulsion Meeting, Vol. 5 Mar. 1980 p 545-556 refs (For primary document see N80-30381 21-20)
Avail: Issuing Activity CSCL 21/8

A theoretical mathematical examination of gas generator modulation that can be achieved by injecting an oxidizer into the combustion zone of an underoxidized solid propellant grain is presented. The chamber pressure time history is assumed to have a comparable slope with and without injection so that pressure modulation limits define also the mass flow limits.

The YSR113-TC-1 rocket motor developed for use in the AGM-88A high speed antiradiation missile (HARM) is described. The HARM Weapon System is designed to detect, acquire, display, and select a radiating surface-to-air threat and to launch a missile which will guide to and destroy the threat. The weapon system is employed on A-6, A-7, and F/A-18 aircraft and on the F-4G. Features of the rocket motor discussed are: an envelope 2.12 m (83.5 in) in length and 0.254 m (10.0 in) in diameter; the required impulse in accordance with a prescribed boost/sustain thrust profile; interface with the launcher, control section, and four aerodynamic fins; and a low visual signature during flight.

LLMM SRAM 3-D GRAIN STRUCTURAL ANALYSIS c28
A. W. Macbeth *In* APL The 1980 JANNAF Propulsion Meeting, Vol. 5 Mar. 1980 p 595-612 (For primary document see N80-30381 21-20)
Avail: Issuing Activity CSCL 21/8

During the SRAM Longer Life Motor Modification (LLMM) development program, soft and hard propellant areas were found near the propellant-liner-insulation bondline. Structurally, this grain condition was thought to be detrimental. A technique was developed to characterize the mechanical and failure properties of soft and hard propellants. Analyses indicated that an LLMM SRAM grain with soft and hard layer penetrometer readings between 0.7 and 6.2 mm met the SRAM 0.4 MS design criteria. Structural test vehicle (STV) mechanical behavior results showed that the laboratory uniaxial constant strain stress relaxation modulus data did not accurately represent propellant grain behavior during most loading conditions. Conversely, laboratory uniaxial constant strain rate initial tangent modulus or maximum stress secant modulus data did represent grain mechanical behavior. STV deformations were predicted accurately when these data were used. Another STV result showed that near bondline grain soft spots appeared to be averaged or masked out; therefore, the uniform soft layer assumption was found experimentally to be conservative. The LLMM SRAM grain structural adequacy was demonstrated by the absence of failure in three STVs.

An evaluation of the use of singular perturbation methods for developing computer algorithms for on-line optimal control of ramjet powered vehicles is presented. Optimal control solutions using singular perturbation theory (SPT) are derived which incorporate optimal aerodynamic control of turn rate and optimal thrust magnitude control of velocity. Maximum lift coefficient, maximum load factor, minimum and maximum velocity and thrust, and instrumentation related constraints are enforced. Particular attention is given to identifying quantities that can be precomputed and stored (as a function of total energy), thus reducing the onboard computational load. Numerical results are given that illustrate the nature of the optimal intercept flight paths, and which demonstrate the impact on trajectory shaping through use of optimal control techniques.

APPLICATION OF AN ADVANCED TRAJECTORY OPTIMIZATION METHOD TO RAMJET PROPELLED MISSILES
S. W. Paris, B. K. Joosten, and L. E. Fink *In* APL The 1980 JANNAF Propulsion Meeting, Vol. 5 Mar. 1980 p 635-650 refs (For primary document see N80-30381 21-20)
Avail: Issuing Activity CSCL 21/8

The mission performance characteristics of ramjet propelled missiles are highly dependent upon the trajectory flown. Integration of the trajectory profile with the ramjet propulsion system performance characteristics to achieve optimal missile performance is very complex. A general computer code (CTOP) is applied to ramjet powered missiles to compute open-loop optimal trajectories. The CTOP employs Chebychev polynomial representations of the states and controls, allowing a transformation of the continuous optimal control problem to one of parameter optimization. With this method, the trajectory boundary conditions are always satisfied. State dynamics and path constraints are enforced via penalty functions. The presented results include

solutions to minimum fuel to climb, and minimum time to target intercept problems. J.M.S.

PLUME INTERFERENCE WITH SPACE SHUTTLE RANGE SAFETY SIGNALS
F. P. Boynton and P. S. Rajaseknar *In* APL JANNAF 11th Plume Technol. Meeting, Vol. 2 Jul. 1979 p 1-25 refs (For primary document see N80-30422 21-20)
(Contract NAS8-32528)
Avail: Issuing Activity CSCL 20H

The computational procedure for signal propagation in the presence of an exhaust plume is presented. Comparisons with well-known analytic diffraction solutions indicate that accuracy suffers when mesh spacing is inadequate to resolve the first unobstructed Fresnel zone at the plume edge. Revisions to the procedure to improve its accuracy without requiring very large arrays are discussed. Comparisons to field measurements during a shuttle solid rocket motor (SRM) test firing suggest that the plume is sharper edged than one would expect on the basis of time averaged electron density calculations. The effects, both of revisions to the computational procedure and of allowing for a sharper plume edge, are to raise the signal level near tail aspect. The attenuation levels then predicted are still high enough to be of concern near SRM burnout for northerly launches of the space shuttle. R.C.T.

HIGH RESOLUTION BAND MODELS: APPLICATION TO THE 4.3 MICROMETER CO2 BAND
Lawrence S. Bernstein, David C. Robertson, and John A. Conant *In* APL JANNAF 11th Plume Technol. Meeting, Vol. 2 Jul. 1979 p 79-93 refs (For primary document see N80-30422 21-20)
Avail: Issuing Activity CSCL 21/8

A general theory for predicting band model parameters for the parallel bands of linear triatomic molecules is used to determine high resolution band model parameters for the 4.3 micrometers CO2 band from 200 - 3000 K. Comparisons are made to experimental data covering this same temperature range. The band model predictions and data are shown to be in good agreement. Application of the high resolution band model parameters to plume emission-atmospheric absorption calculations in the CO2 fundamental band head region (2380 - 24 per cm) is discussed. Line by line and band model plume signature predictions are compared for an aircraft plume over 0, 0.5, and 5 km atmospheric paths. The line by line and band model predictions for the 0 and 0.5 km paths are in good agreement. For the 5 km path, the band model overestimates the atmospheric transmission by a factor of two. The reason for this overprediction is discussed and a correction formula is presented which should extend the accuracy of band model emission-atmospheric absorption predictions to long viewing paths (approximately 20 km at sea level). R.C.T.

DIRECT SIMULATION MONTE CARLO METHOD APPLIED TO SHUTTLE FLOW FIELD ANALYSIS
R. A. Outlaw, L. T. Melfi, Jr., F. J. Brock (Old Dominion Univ.), and J. E. Hueser (Old Dominion Univ.) *In* APL JANNAF 11th Plume Technol. Meeting, Vol. 2 Jul. 1979 p 117-146 refs (For primary document see N80-30422 21-20)
Avail: Issuing Activity CSCL 20D

A program for analyzing the flow field in the neighborhood of the orbiting shuttle was developed which uses a probabilistic Monte Carlo technique and is capable of analyzing three dimensional steady or unsteady flow with internal and external boundary conditions. A numerical solution for the flow field is produced which is the probabilistic equivalent of a complete solution for the time dependent, three dimensional Boltzmann equation. The program computes the inward molecular flux at the flow boundaries, both external and internal, and the motion of all molecules within the flow field under the influence of both surface interactions and molecular collisions. The internal boundary is a close approximation of the actual shuttle geometry. The shuttle surface is divided into 38 surface elements for which temperature and outgassing flux density may be independently specified. A typical flow field analysis (including 9 molecular species) for an aft thrust-up VCS engine firing is discussed. Results are compared to engine off results and both are compared to the Woods Hole criteria. A.R.H.

A NOZZLE BOUNDARY LAYER MODEL INCLUDING THE SUBSONIC SUBLAYER USABLE FOR DETERMINING BOUNDARY LAYER EFFECTS ON PLUME FLOWFIELDS
Basil P. Cooper, Jr. *In* APL JANNAF 11th Plume Technol. Meeting, Vol. 2 Jul. 1979 p 147-165 refs (For primary document see N80-30422 21-20)
(Contracts NAS8-21810; NAS8-31644)
Avail: Issuing Activity CSCL 21H

A model for the boundary layer at the exit plane of a rocket nozzle was developed which, unlike most previous models, includes the subsonic sublayer. The equations for the flow near the nozzle exit plane are presented and the method by which the subsonic sublayer transitions to supersonic flow in the plume is described. The resulting model describes the entire boundary layer and can be used to provide a startline for method-of-characteristics calculations of plume flowfields. The model was incorporated

into a method of characteristics computer program and comparisons of computed results to experimental data show good agreement. The data used in the comparisons were obtained in tests in which mass fluxes from a 22.2-N (5 lbf) thrust engine were measured at angles off the nozzle centerline of up to 150 deg. Additional comparisons were made with data obtained during tests of a 0.89-N (0.2 lbr) monopropellant thruster and from the OH-64 space shuttle heating tests. The agreement with the data indicates that the model can be used for calculating plume backflow properties. A.R.H.

CRITICAL REQUIREMENTS FOR MID-ALTITUDE IR PREDICTIONS
S. Rudman, P. DelGuidice, and R. Ambruso *In* APL JANNAF 11th Plume Technol. Meeting, Vol. 2 Jul. 1979 p 167-185 refs (For primary document see N80-30422 21-20)
(Contract F44620-76-C-0021)
Avail: Issuing Activity CSCL 21/8

It is shown that it is increasingly difficult to predict rocket plume radiation as altitude increases. This is a result of a compounding of the effects of increasing sensitivity of the Planck function to temperature increments and the increasing uncertainty in the temperature predictions as altitude increases. An analysis is used to derive an expression which shows the specific dependence. An analysis is used to derive an expression which shows the specific dependence of station radiation on plume temperature, radiator species mass fraction and temperature profile parameters. One expression successfully reduces all the far field station radiation for two model problems to a single constant. Another relationship is equally successful in the near field region. The analysis is best suited for an optically thin gas, but may not be limited to that case. Major sources of temperature increments or inaccuracies which plume modellers must account for or control include nonideal thermochemical properties, finite rate chemical relaxation, shock heating associated with multiple nozzle exhaust systems and tolerances of numerical calculation schemes. Two surface receiving stations, 64 kilometers (40 nautical miles) apart, measured an unmodulated S-band (2,200-MHz), radio frequency (RF) test signal emitted by a Poseidon missile. On site, horizontally and vertically polarized received signals were measured. At the other site, the Range Instrumentation Ship USNS Range Sentinel (TAGM-22), measured left- and right-hand circularly polarized received signals. The nature of rocket plume interactions with the microwave test signal was studied as a function of aspect angle, particularly regarding plasma-induced RF angle modulations. For tailon aspect angles, where severe plume attenuations were evident, Doppler shifts of the plume-induced signal were quantified together with time histories. The results illustrate an apparent multipath effect possibly created by plume-caused shifts in the equivalent phase center of the transmitting array. Phase-shift jitter also was noted during the postboost phase. Predetection tape recordings of the signal were reduced and analyzed by fast Fourier transform and digital filtering techniques. A.R.H.

TECHNIQUE AND MEASUREMENT OF HEAT FLUX AND FLAME TEMPERATURE IN ROCKET PLUME EXPOSURES Final Report
J. R. Piergallini and A. M. Stoll 7 May 1980 12 p refs
(WF52852300)
(AD-A086533; NADC-80093-60) Avail: NTIS
HC A02/MF A01 CSCL 06/5

An investigation was performed using model rocket static test engines simulating full scale rocket engine firings with instrumented live animals, heat flux transducers and thermocouples for burn injury assessments. Available data on rocket engine flame temperatures was either extrapolated or computed from chemical compositions and because of the unique 'dirty' characteristics of the flame, it was necessary to devise special instrumentation for direct measurements. A heat flux transducer was fabricated to measure the energy impingent upon the skin surface at various distances from the rocket engine. The transducer was calibrated against a graphite imaging furnace capable of producing 15 cal/sq cm sec, in conjunction with a standard radiation source and radiometer. Radiometric observations were used also to describe precisely the pulse shape of the rocket engine plume. External and intradermal thermocouples measured the actual temperatures experienced in producing a white burn in the rat (equivalent to a second degree burn in the human) and for monitoring each test and correlating one exposure with another. This paper describes the techniques and measurements used, the generation of a time-temperature profile for producing the standard burn effect and provides a temperature history at the level of the burn site. MODELING PROPELLANT COMBUSTION INTERACTING WITH AN ERODING SOLID SURFACE
A. C. Buckingham (AIAA) 6 May 1980 12 p refs Presented at AIAA-SAE-ASME 16th Joint Propulsion Conf., Hartford, Conn., 30 Jun. - 2 Jul. 1980 Sponsored in part by AROD and U.S. Army ARRADCOM Submitted for publication
(Contract W-7405-eng-48)
(UCRL-83727; CONF-800620-2) Avail: NTIS
HC A02/MF A01

Turbulent combustion flow acting on and influenced by an eroding wall surface was modeled. The combustion flow field is particle laden. Significant particulate mass loading occurs in the immediate neighborhood of the wall as a result of erosion products issuing from the deteriorating solid surface. Cases are also considered in which a substantial particle mass loading develops near the wall as a result of finely divided (sub micron diameter) particulates such as TiO2 and talcum powder which are added to suppress erosion. In addition to statistical turbulent field particle flow interaction, the model includes multi-component molecular diffusion processes, and gas phase, gas/surface and or solid surface chemical reactions. Results indicate that despite the unsteady flow conditions, a limiting erosion rate is approached. This occurs as a result of the effective blowing off of the issing vapor phase products. The blowing reduces the gradients driving the incident combustion heat and mass transfer. DOE

DEVELOPMENT AND TESTING OF CLEANING PROCEDURES AND FEEDING SYSTEMS FOR A FIELD EMISSION THRUSTER MODEL Final Report
D. Stewart and P. Wilson May 1979 188 p refs
(Contract ESTEC-2502/75-AK)
(FRI-R664/3; ESA-CR(P)-1305) Avail: NTIS

HC A09/MF A01

Tests were made to determine a successful cleaning procedure for operating the feed system of a field emission thruster using cesium as the propellant. Emission tests using an emitter made from nickel arrays show that cleaning can be achieved without electron or argon ion bombardment. The emitter and accelerator electrode geometry were studied and a high beam transmission, greater than 99%, was obtained. No significant improvement in performance was gained by the use of quadruple arrays or razor blade emitters. Two tests made with gallium as the propellant were unsuccessful due to poor wetting of the emitter.

FIELD EMISSION ELECTRIC PROPULSION ION OPTICS OF DOUBLE EDGED MATERIALS Final Report

C. L. Thomas and P. F. Little Dec. 1978 43 p refs

(Contract ESTEC-3308/77-NL-AK(SC))

(CLM-RR/E1/25; ESA-CR(P)-1307) Avail: NTIS HC A03/MF A01

Calculations of some aspects of the ion optics of double edged emitters are reported. The correct source distributions for various beam currents were derived by adjusting the source distributions so as to reproduce current distributions measured experimentally, downstream of the accelerator. The experimental accelerator was modified so that a smooth electrode profile allows 100% transmission of ions. This electrode was further modified to reduce the effect of electron back-bombardment of the emitter. To obtain information about the disposition of the liquid surface within the double emitter, the electric field inside the emitter was computed. The two electrode system was augmented by a decelerator in an attempt to focus the beam. It was found that with the voltage specified, no focusing is possible. Neutralizing electrons are introduced into the beam downstream of the decelerator but only a 3 1/2% reduction in the emergent angle is obtained.

STRUCTURAL DEFECTS IN LASER- AND ELECTRON-BEAM ANNEALED SILICON

J. Narayan 1979 14 p refs Presented at the Symp. on the Sci. Basis for Nucl. Waste Management, Boston, 26 Nov. 1979

(Contract W-7405-eng-26)

(CONF-791112-62) Avail: NTIS HC A02/MF A01

Laser and electron beam pulses were used to provide an almost ideal source of heat by which thin layers of semiconductors are rapidly melted and solidified with heating and cooling rates exceeding 10 to the 80th power C/sec. Microstructural modification obtained as a function of laser parameters were examined. It is shown that both laser and electron beam pulses can be used to remove displacement damage, dislocations, dislocation loops and precipitates. Annealing of defects underneath the oxide layers in silicon is possible within a narrow energy window. The formation of cellular structure provides a rather clear evidence of melting which leads to segregation and supercooling and subsequent cell formation.

STATISTICAL ANALYSIS OF THE FATIGUE OF COMPOSITE MATERIALS Ph.D. Thesis

Harry Richard Miller 1980 138 p

Avail: Univ. Microfilms Order No. 8019353

Several aspects of the problem of defining the statistical distribution function for the fatigue life of composite materials are studied. The maximum likelihood method is employed to obtain the parameter estimating equations for the case where the underlying distribution is a two parameter Weibull and the sample on which the estimation is to be based is doubly progressively censored. An iterative solution scheme for these equations is presented and an example shown. An application to proof testing is also suggested. The maximum likelihood parameter estimating equations are derived for the case where the underlying distribution is composed of two segments, one in the low life region and one in the high life region, where each segment has the form of a two parameter Weibull distribution. A model is developed for the fatigue failure of structures composed of identical elements arranged in parallel. The exact equations for the probability of failure of two and three element parallel systems are derived. Solution of these equations is shown to require multiple numerical integration. An approximate recursion formula is also derived.

STRUCTURE AND DEFORMATION CHARACTERISTICS OF RHEOCAST METALS Final Report, 24 Jun. 1976 - 23 Jun. 1979
R. Mehrabian, F. M. Hosking, F. Folgar Portillo, and R. Wunderlin Mar. 1980 95 p refs
(Contract DAAG46-76-C-0046; DA Proj. 1T1-62105-AH-84) (AD-A086469; AMMRC-TR-80-5) Avail: NTIS HC A05/MF A01 CSCL 11/4

This report describes work aimed at developing wear resistant composites of aluminum base alloys, using rheocasting and associated processes. It is anticipated that the feasibility of use of such composites in track blocks of land vehicles would be subsequently determined. Composites of two wrought (2014 and 2024) and one cast (201) aluminum alloys containing 2 to 30 weight percent of Al2O3 and SiC particles in the size range of the 1 to 142 micrometers were prepared using a compositing apparatus developed in this investigation. The non-metals were successfully added and retained in the aluminum alloy matrices using the rheological properties of a partially solidified, vigorously agitated alloy to advantage. Subsequently, the composites were reheated to above their liquidus temperature, shaped and solidified under high pressure in a forging press. The microstructures, the wear behavior and the mechanical properties of the composites were studied. Composites with particulate additions larger than 5 micrometers in size possessed homogeneous structures. On the other hand, 1 micrometer particles tended to cluster. The wear behavior of the composites was studied on a pin-on-disk type machine built during this investigation. It was shown that composites containing large amounts of non-metals, about 20 wt%, of Al2O3 or SiC exhibit excellent wear resistance and low coefficients of friction. The wear mechanism in the matrices and the composites were also established. GRA

A FUNDAMENTAL STUDY OF A NEW FABRICATION TECHNIQUE FOR FIBER REINFORCED ALUMINUM MATRIX COMPOSITES Final Report, 22 Mar. 1976 - 11 Aug. 1979
R. Mehrabian 20 Apr. 1980 21 p refs
(Grants DAAG29-76-G-0170; DAAG29-78-G-0067)
(AD-A086282; ARO-13847.3-MSX) Avail: NTIS HC A02/MF A01 CSCL 11/4

The feasibility of fabricating fiber-reinforced aluminum alloys by addition of discontinuous fibers to partially solid slurries and completely liquid matrices was investigated. In the first phase of the program, emphasis was placed on the study of interface interactions between polycrystalling Al2O3 fibers and Al-2 to 8%Mg, Al-4.5%Cu and Al-4.5%Cu-1 to 2%Mg alloys produced by the slurry process. In general, it was observed that the incorporation of fibers could be readily achieved by this technique, and that fibers appeared wetted after a few minutes of contact with the melt. The composites produced exhibited an intimate, void free bond between the constituents. In addition, a region of significantly altered microstructure resulted from accumulation of oxide and/or aluminate particles which either formed within the melt and were attached to the moving fibers, or used the fiber surface as a substrate to grow on. Microscopic examination of this interaction zone and thermodynamic considerations indicated that it consisted of fine alpha-Al2O3, aluminates, oxides of the alloying elements, and probably some intermetallic compounds. FATIGUE BEHAVIOR OF GLASS FIBER REINFORCED POLYBUTYLENETEREPHTHALATE Final Report, May 1978 - Apr. 1979
A. T. DiBenetto Apr. 1980 77 p refs
(Contract DAAG46-78-C-0027; DA Proj. 1L1-62105-AH-8H) (AD-A087104; AMMRC-TR-80-17) Avail: NTIS HC A05/MF A01 CSCL 11/4

The fatigue behavior of short glass fiber reinforced PBT composites has been investigated under different environmental conditions. Exposure to water at high temperature causes embrittlement, while improved processing and exposure to high humidity cause an increase in ductility. The fatigue life is a function of the environmental conditioning, the stress level of the test and the ductility of the material. The quantity (Theta (max)/- Theta =)2 ln t(B) is independent of environmental conditioning and increases with increasing ductility. The total deformation-to-break during fatigue consists of a deformation attributable to cyclic softening and a longer term deformation that continues at nearly constant rate until failure occurs. The cyclic softening is associated with cyclic stress-strain characteristics, while longer term deformation is controlled by creep and microcavitational phenomena. Crack propagation rates in notched plates were measured. The crack propagation behavior was somewhat dependent on the stress history of the material. GRA

DEVELOPMENT OF ALTERNATE SILICONE POTTING COMPOUNDS. VOLUME 6: DEVELOPMENT OF SECONDARY ALTERNATES FOR DOW CORNING'S AEROSPACE SEALANT, DC93-119
W. E. Cady and A. T. Buckner 2 Feb. 1980 29 p refs
(Contract W-7405-eng-48)
(UCRL-52434-Vol-6) Avail: NTIS HC A03/MF A01

A substitute for Dow Corning's DC-93-119 silicone compound can be formulated from Sylgard 184, dielectric gel Q3-6527, and either accelerator QCF3-6559 or DC1107 fluid. Also, a substitute can be formulated from Sylgard 186, dielectric gel Q3-6527, and accelerator QCF3-6559 because the system is not fast enough with QCF3-6559; although, it can be speeded up with the addition of DC1107, the level of extractables is unacceptably high. WIND-TUNNEL AND FLIGHT TESTS OF ABLATORS AND INSULATORS FOR ROCKET VEHICLES
Robert E. Sheldahl, Sam G. Beard, Jr., Irving Auerbach, and Thomas F. Covert Apr. 1980 30 p refs Presented at 26th Intern. Instrumentation Symp., Seattle, 5-8 May 1980
(Contract EY-76-C-04-0789)
(SAND-80-05230; CONF-800502-12) Avail: NTIS HC A03/MF A01

Some high performance rocket systems experience enough aerodynamic heating aft of the nose cone to require thermal protection to keep the temperature of the structure below allowable limits. Results of rocket tests and wind tunnel tests indicate that any of the 10 materials tested could provide the required thermal protection for the payload and motor of a rocket system for the environments studied. The temperatures of the cork phenolic showed two entirely different responses. In the wind tunnel, the material apparently burned and produced the highest structure temperatures. On the Terrier-Malemut rocket test, it proved the best insulator, probably as a result of the low oxygen content in the boundary layer. This indicates that cork phenolic works very well for this type of test, but for a rocket launched in a shallow trajectory, the cork phenolic may react more as it did in the wind tunnel. Cork phenolic may prove very effective where a char is of no consequence and the vehicle trajectory is not shallow. DOE

DEPENDENCE OF SILICON CARBIDE COATING PROPERTIES ON DEPOSITION PARAMETERS: PRELIMINARY REPORT
R. J. Lauf and D. N. Braski May 1980 35 p refs
(Contract W-7405-eng-26)
(ORNL/TM-7209) Avail: NTIS HC A03/MF A01

The effects of deposition variables on the structure and properties of the SiC layer in fission fuel particles are investigated. The silicon carbide is deposited by the thermal decomposition of methyltrichlorosilane in an excess of hydrogen. The grain size and shape depend on coating rate and deposition temperature. The fine structure of the coating, observed at the submicrometer level by transmission electron microscopy, has been found to vary in the same way as does the general microstructure observed optically. X ray diffraction has shown the presence of one or more polytypes of alpha-SiC in coatings deposited at relatively low temperatures and/or relatively high coating rates. The coating density and surface morphology are strongly dependent on deposition temperature and coating rate. The best surface appearance is observed in those coatings that have the highest density. ADVANCED ELECTRON BEAM TECHNIQUES FOR METALLIC AND CERAMIC PROTECTIVE COATING SYSTEMS
Donald H. Boone and John W. Fairbanks Feb. 1980 27 p refs Presented at the ASM/SAMPE Conf. on Specialized Cleaning, Finishing and Coating Processes, Los Angeles, 5 Feb. 1980
(Contract W-7405-eng-48)
(LBL-10520; CONF-800235-1) Avail: NTIS HC A03/MF A01

The need for protective coatings in energy conversion equipment operating at high temperatures with nonpetroleum alternative fuels is discussed. The development of electron beam evaporation physical vapor deposition (EB-PVD) processes for applying such ceramic coatings is described, and current research is reviewed. It is concluded that the needs for the use of protective coatings will continue to increase as our quest for greater energy efficiency and more diversified fuel sources expands. Overlay coatings and composite system will be required to meet these requirements in a cost effective manner consistent with materials availability. These needs spurred interest and activity in the overlay coating processing area in general and in EB-PVD techniques in particular where even greater activity is predicted in the future. DOE

A LOW TEMPERATURE SPECIFIC HEAT STUDY OF SOME DISORDERED ALLOY SYSTEMS Ph.D. Thesis
Patrick Francis Gleeson, Jr. 1980 131 p
Avail: Univ. Microfilms Order No. 801932

The specific heat of some crystalline and amorphous alloy systems was measured in the temperature range 0.5-30 K. Two ternary platinum-based crystalline alloy systems, Ptlr-Au and Pt-Rh-Au are studied and changes in the electronic contribution of the specific heat are discussed in the context of several models. The specific heat of the metallic glass Fe40Ni40P14B6 is compared to the specific heat of the same alloy measured after each of two successive annealing processes, where care was taken to avoid recrystallization temperatures. Changes in the electronic and lattice contributions are discussed in terms of short range ordering models. Dissert. Abstr.

N80-30453 California Inst. of Tech., Pasadena.
SHOCK TEMPERATURES OF MATERIALS: EXPERIMENTS AND APPLICATIONS TO THE HIGH PRESSURE EQUATION OF STATE Ph.D. Thesis
Gregory Allen Lyzenga 1980 214 p
Avail: Univ. Microfilms Order No. 8021025

Temperature measurements obtained during impact driven shock wave experiments with solid and liquid samples at pressures near 100 GPa are reported and discussed. Experimental results confirm that throughout moderate ranges of shock pressure amplitude, transparent dielectrics emit thermal radiation from the region of the shock front, with a spectrum which is characteristic of the Hugoniot state temperature. Shock temperatures in sodium chloride crystals have been measured in the pressure range 70 to 105 GPa. The observed temperatures, between 4000 and 8000 K, are in agreement with the results of earlier determinations and with calculations assuming the occurrence of shock induced melting. Results of experiments to measure shock temperatures in metallic silver include a successful measurement of 5950 K at a pressure of 185 GPa. Shock temperature measurements in silica (SiO2) produced anomalous results suggestive of melting occurring in the stishovite phase near 100 GPa pressure and 4700 K temperature. Experimental measurements with alpha quartz, fused silica samples single crystal forsterite, and water are also discussed. Dissert. Abstr.

N80-30454 California Inst. of Tech., Pasadena.
NON-STEADY BEHAVIOR OF A FLAME SPREADING FROM A POINT IN A TWO-DIMENSIONAL DUCT Ph.D. Thesis
Mallaoi Venkata Subbaiah 1980 134 p
Avail: Univ. Microfilms Order No. 8020431

Non-steady behavior of a flame stabilized in a two dimensional duct was studied. The problem was formulated by an integral technique in which the governing equations were integrated across the duct to obtain integral relations for the mean flow variables. The flow on either side of the flames sheet were matched by appropriate matching conditions. Fluid flow through the flame surface caused the integral relations to explicitly involve the fluid velocities at the flames. An independent description of the flame shape and the irrotational flow field upstream of the flame was provided by a source distribution on the duct axis. The integral relations were analyzed by perturbation technique, in which the dominant order solution represents the steady flame development. The steady flame configuration was perturbed by an acoustic wave incident on the compact flame region. The time dependent counterpart of the integral relations describes the ensuing non steady flow fields. The flame perturbation describes the ensuing non steady flow fields. The flame perturbation exibited a traveling wave pattern with considerable amplification along the flame zone. Dissert. Abstr.

STRUCTURE AND PATHOLOGY OF THE STEADY STATE, STABILITY AND DYNAMICS OF THE COMBUSTION OF AN IMPERVIOUS CARBON PARTICLE Ph.D. Thesis
Eduardo Mon 1979 201 p
Avail: Univ. Microfilms Order No. 8019550

A model of diffusion and reaction based on the Stefan-Maxwell equations was constructed for the stagnant boundary that surrounds a carbon particle during combustion. The model included the heterogeneous combustion reactions in concert with radiation as nonlinear boundary conditions. Using the stoichiometric coupling of the molar fluxes, the problem was reduced to a single conservation equation that results from the homogeneous oxidation of carbon monoxide. The effects of various parameter values on the solution were examined. In particular, variation of the particle size provide conclusions as to whether or not a carbon monoxide flame develops in the boundary layer. A simplified transient model was used to develop local asymptotic stability criteria for analysis of the multiple steady states. A special case arose when carbon monoxide burned outside the boundary layer as the linearized conservation equations were then solvable by a finite Fourier transform. In the more general case, results were obtained by Galerkin's method. Regions of instability created by variation of the particle size and ambient oxygen concentration were investigated. Dissert. Abstr.

PYROLYSIS AND OXIDATION KINETIC MECHANISMS FOR PROPANE Ph.D. Thesis
Donald Jerome Hautman 1980 266 p
Avail: Univ. Microfilms Order No. 8018658

The reaction kinetics of complex paraffins were investigated. The experiments were performed in a high temperature, adiabatic, turbulent flow reactor. Spatial chemical sampling and temperature measurements were made using an instrumented probe. The composition of the chemical samples was determined using a gas chromatograph. The kinetic analysis employed both overall and elementary reaction mechanisms. Pyrolysis and oxidation kinetics were investigated since both processes can be present in combustion phenomena. Overall and elementary kinetic descriptions of the pyrolysis of C3H8 were proposed. The overall rate of C3H8 disappearance was described by a first order rate expression. This rate expressions agrees with previously reported rate data. Dissert. Abstr.

N80-30457 Minnesota Univ., Minneapolis.
STUDIES OF CONTINUOUS CHROMATOGRAPHIC REACTORS Ph.D. Thesis
Byong Kwon Cho 1980 274 p
Avail: Univ. Microfilms Order No. 8019517

Theoretical numerical and experimental investigations of continuous chromatographic reactors were conducted. In the first part, the steady state behavior of a countercurrent chromatographic reactor was analyzed mathematically for a reversible reaction adsorption system occurring in an ideal chromatographic reactor in which negligible axial diffusion and instantaneous adsorption equilibrium are assumed. In the second part, a continuum model for the reaction in a rotating annular reactor under ideal chromatographic conditions was set up, assuming the reactor bed, packed with catalyst and/or adsorbent particles, can be treated as a homogeneous continuum. The resulting hyperbolic system of quasilinear first order particle differential equations was solved using Lax first order finite difference method. Comparisons of numerically simulated reactor performance with experimental results showed good agreement, although some differences occurred as experimentation proceeded, most probably due to deactivation of the adsorbent, activated charcoal. Dissert. Abstr.

PRESSURE DEPENDENCE OF THE ABSOLUTE RATE CONSTANT FOR THE REACTION OH + C2H2 FROM 228 TO 413K
J. V. Michael, D. F. Nava, R. P. Borokowski, W. A. Payne, and L. J. Stief Jul. 1980 25 p refs Submitted for publication
(NASA-TM-80743) Avail: NTIS HC A02/MF A01 CSCL 07D

The pressure dependence of absolute rate constants for the reaction of OH + C2H2 yields products has been examined at five temperatures ranging from 228 to 413 K. The experimental techniques which was used is flash photolysis-resonance fluoresence. OH was produced by water photolysis and hydroxyl resonance flurorescnet photons were measured by multiscaling techniques. The results indicate that the low pressure bimolecular rate constant is 4 x 10 the the minus 13th power cu cm molecule (-1) s(-1) over the temperature range studied. A substantial increase in the bimolecular rate constant with an increase in pressure was observed at all temperatures except 228 K. This indicates the importance of initial adduct formation and subsequent stablization. The high pressure results are well represented by the Arrhenius expression (k sub bi) sub infinity = (6.83 + or - 1.19) x 10 to the minus 12th power exp(-646 + or - 47/T)cu cm molecule (-1)s(-1). The results are compared to previous investigated and are theoretically discussed. The implications of these results on modeling of terrestrial and planetary atmospheres and also in combustion chemistry are discussed. Author

NEW NONLINEAR OPTICAL PROCESSES IN MOLECULES AT INFRARED FREQUENCIES Annual Report, 30 Sep. 1978 - 29 Sep. 1979
Michael F. Becker 1 Nov. 1979 32 p refs
(Grant AF-AFOSR-3712-78)
(AD-A086206; AFOSR-80-0465TR; AR-1) Avail: NTIS HC A03/MF A01 CSCL 07/4

This report details progress in the study of optical nonlinearities in molecules at infrared wavelengths. The objectives have been to investigate triply resonant third harmonic generation and singly, two photon resonant third harmonic generation. In the first area, the limiting process of multiphoton absorption has received emphasis. In the second area, work has concentrated on molecules which have very strong, narrow, two photon resonances. The successful application of third harmonic generation techniques to study collisionless multiphoton excitation in sulfur hexafluoride was accomplished. Depending on the excitation frequency, one or two photon processes have been identified which deplete the population of the discrete vibrational energy levels into the quasi-continuum. Similar third harmonic generation experiments have yielded lower conversion efficiency in ammonia than in sulfur hexafluoride. Only a single rotational level in ammonia is found to be resonant, so the susceptibility is only minimally enhanced. In the area of two photon resonant molecules, the susceptibility and projected conversion efficiency has been calculated for deuterated methane. Because of the very narrow and strong two photon resonance, the calculated third harmonic conversion is larger than has been observed in any gas phase molecule to date. GRA

DETERMINATION OF AROMATICITY OF FUELS AND LUBRICANT BASESTOCKS BY ULTRAVIOLET SPECTROSCOPY Interim Report, Jan. 1977 - Feb. 1980
Frank M. Newman and Marvin K. Greenberg Feb. 1980 26 p refs Presented at the Conf. on Anal. Chem. and Appl. Spectry., Pittsburgh, Mar. 1978
(Contracts DAAK70-78-C-0001; DAAK70-80-C-0001)

(AD-A086654; AFLRL-103) Avail: NTIS HC A03/MF A01 CSCL 07/4

A rapid and inexpensive ultraviolet spectroscopic method for determining the aromaticity of turbine and diesel fuels and of lubricant basestocks has been developed. The method employs fixed cells of 0.010, 0.10, and 1.00 cm pathlength in which a sample spectrum is obtained in the 190 to 350 nm region. Absorbance values at several wavelengths and simple matrix calculations yield weight percent ring carbon in substituted benzenes, napthalenes, and phenanthrenes/anthracenes. The precision and accuracy of the method are good for both standards and fuel blends. The method is currently in use for correlation work in both turbine combustors and diesel engines. A large number of virgin and re-refined lubricant basestocks have been analyzed and the results compared to those from other methods. The UV data are more detailed and are believed to be more reliable and accurate. GRA

INSTRUMENTATION FOR DETECTING HAZARDOUS MATERIALS. Final Report, Jun. 1979 - Jun. 1980

Gerard J. Gross, David E. Harris, Gerard Lachs, and Robert M. Dillman. Jun. 1980. 261 p. refs

(Contract DCPA01-79-C-0305)

(AD-A086467; Rept-940-4) Avail: NTIS HC A12/MF A01 CSCL 17/5

The status of material sensing technology as it might be applied to the detection and identification of hazardous materials is reviewed. The scope of types of hazards includes toxic, fire, and explosion hazards but not nuclear radiation hazards. A list of 115 materials considered to pose significant hazards in emergency operations is derived. Then both remote and nonremote instrument types are evaluated, with emphasis on their potential application for development of a portable detection instrument. Though no instrument exists now in a form ready to use for the role studied here, several types show promise for future development: a remote passive IR absorption instrument, a nonremote dispersive IR analyzer, and a nonremote portable gas chromatograph/mass spectrometer. A number of instrument types for purposes other than primary identification are also reviewed and comments made on application and future development. An extensive list of references on material sensing technology is included. GRA

CHEMILUMINESCENT REACTIONS OF SELENIUM AND TELLURIUM WITH FLUORINE

William G. Thorpe. Apr. 1980. 217 p. refs

(AF Proj. 2303)

(AD-A087202; FJSRL-TR-80-0010) Avail: NTIS HC A10/MF A01 CSCL 07/4

The Group VI elements, selenium and tellurium, are found to react with fluorine emitting a broad spectral chemiluminescence. The chemiluminescence is characteristic of that emitted by a diatomic molecule. The proposed emitting species are SeF and TeF. Selenium reacts with fluorine with a weak chemiluminescence in the visible between 3800 A and 8900 A. Identical spectra are obtained regardless of whether the source of selenium is the elemental vapor or hydrogen selenide. In the hydrogen selenide/fluoride reaction, vibrationally excited HF is produced with the identified bands: (4,0), (5,1), (6,2), and (3,0) superimposed on the SeF chemiluminescence. GRA

CATALYTIC OXIDATION OF CARBON MONOXIDE AT HIGH HUMIDITY AND LOW TEMPERATURE. Interim Report

J. K. Musick and F. W. Williams. 10 Jun. 1980. 19 p.

(AD-A087206; AD-E000475; NRL-8397) Avail: NTIS HC A02/MF A01 CSCL 07/4

Two catalysts (hopcalite and palladium) were tested for efficiency in promoting oxidation of carbon monoxide (CO). The catalysts were tested using air at 21,000 per h to the minus 1 space velocity, 50% relative humidity, and various temperatures. The air was contaminated with approximately 100 ppm each of methane, dichlorofluoromethane (R-12), and dichlorotetrafluoroethane (R-114) in addition to approximately 5000 ppm of CO. Hopcalite was further tested under similar conditions except that the air was at 100% relative humidity. There is little difference in the efficiencies of hopcalite and palladium catalyst for oxidizing CO at 57 to 62 C, both are low. At 119 to 122 C, the palladium is more efficient than hopcalite. The simultaneous presence of three other contaminants decreased the efficiency of both hopcalite and palladium for oxidizing CO. With the hopcalite preheated to about 119 C, the heat of reaction is not sufficient to maintain the oxidation of CO under the conditions tested. The minimum temperature at which hopcalite and palladium catalysts will completely oxidize CO under the conditions tested is in the 70 to 100 C range. GRA

PERFECTING OF NUCLEAR MICROANALYSIS OF DEUTERIUM BY MEANS OF ION IMPLANTATION. APPLICATION TO THE STUDY OF THE HYDROGENATION OF AMORPHOUS SILICON THROUGH IONIC IMPLANTATION. Final Report [MISE AU POINT DE LA MICROANALYSE NUCLEAIRE DU DETERIUM A L'AIDE D'UN IMPLANTEUR D'IONS ET SON APPLICATION A L'ETUDE DE L'HYDROGENATION DE SILICIUM AMORPHISE PAR IMPLANTATION IONIQUE]

D. Dieumegard and D. Dubreuil. 1979. 80 p. refs. In FRENCH. (Contract DGRST-77-7-1650)
Avail: NTIS. HC A05/MF A01

The technique of nuclear microanalysis of deuterium by means of the reaction D (3He, p)4He was perfected on an ion implantor of 400 kV. The sensitivity of the method was about 10 to the 13th power deuterium atoms /sq cm, for an analytical depth of 5000 A in silicon for a three minute experiment. This technique was applied to the study of the hydrogenation of amorphous silicon, by means of ionic implantation and in a deuterium plasma. Kinetics of the trapping of deuterium were measured between ambient temperature and 460 C. The measurements of the concentration outline allow the determination of the diffusion coefficient of the deuterium in amorphous silicon. The thermal stability of the deuterium in the layers was also studied.

COMBUSTION OF DROPS AND SPRAYS OF NO. 2 DIESEL OIL AND ITS EMULSIONS WITH WATER AND METHANOL. VOLUME 1: EXPERIMENTAL. Final Report, Jul. 1978 - Aug. 1979
S. R. Gollahalli, M. L. Rasmussen, and S. J. Moussavi. Jan. 1980. 231 p. refs. 2 Vol.
(Contract DOT-RC-82011)
(PB80-178213; OU-AMNE-79-15-Vol-1; DOT/RSPA/DPB-50-80/1-Vol-1) Avail: NTIS. HC A11/MF A01. CSCL 21G

The combustion behavior of No. 2 diesel oil and its emulsions with water and methanol is examined experimetally. The experiments are carried out in three parts: a study of stability and microstructure of emulsions, single drop combustion studies, and spray combustion studies. The results show that unsupported drops of No. 2 diesel oil emulsions with water and methanol undergo disruption during combustion and the fragmentation activity depends on emulsion and ambient variables. The ignition and pollutant emission characteristics of No. 2 diesel oil sprays also are seen to be affected by emulsification. GRA

(Contract DOT-RC-82011)
(PB80-178221; OU-AMNE-79-16-Vol-2; DOT/RSPA/DPB-50-80/2-Vol-2) Avail: NTIS. HC A07/MF A01. CSCL 21G

The combustion behavior of No. 2 diesel oil and its emulsions with water and methanol is analyzed theoretically. Two theoretical models to analyze the variation of drop temperature with emulsion parameters are developed. The differential model considers the diffusion and specific heat effects inside the composite emulsion drop. The integral model does not consider the temperature variation inside the drop. Analytic solutions for both models are developed assuming constant properties. The integral model is also solved numerically considering the variation of properties and using some empirical input data. Both models predict the variation of drop disruption time with the internal phase content in qualitative agreement with the experimentally measured values for the drops of No. 2 diesel oil-water emulsion with water volume fractions up to 0.20. DEVELOPMENT OF REVERSE OSMOSIS MEMBRANE FOR SEAWATER DESALINATION. Final Report
Richard G. Sudak, James B. Bott, Ronald L. Fox, Susan J. Gagner, and Max E. McKee. Sep. 1979. 118 p.
(Contract DI-14-34-0001-8523)
(PB80-182090; W80-04802) Avail: NTIS. HC A06/MF A01. CSCL 07D

Composite reverse osmosis membranes were formed with a polysulfone porous substrate. The membrane barrier layer was formed by the interfacial polycondensation of polyethylenimine and isophthaloyl chloride. The barrier layer was capable of single stage seawater desalination in that selected membrane samples had a flux of 17 GFD and a rejection of 99%. Asymmetric polyimide membrane was developed further by optimization of casting formulations and conditions. When tested, the best results were 5.8 GFD and 98.4% rejection. A composite membrane barrier layer was formed on polysulfone substrate interfacially with poly(epichlorohydrin-secondary diamines) and isophthaloyl chloride. The best results were 9.6 GFD and 95% rejection. GRA

FATIGUE OF Ni-Al-Mo ALIGNED EUTECTICS. Ph.D. Thesis
John Michael Tartaglia. 1980. 242 p.
Avail: Univ. Microfilms. Order No. 8020416

The influence of test temperature, environment frequency and heat treatment on fatigue resistance of two nickel-aluminum-molybdenum (gamma/gamma prime-alpha) aligned eutectics, Ni-17.7 w%Al - 16.3% Mo, designated AGI5, and Ni-14.4% Al-20% Mo, designated AG34, were determined. Both alloys were tested in high cycle tension-tension fatigue at 25 C and 825 C. Testing at room temperature was performed in air and in vacuum. All tests were performed at 20 hz except that AGI5 was tested at 20.2 and 0.2 hz. Cracks at 725 C were surface initiated, while fractures at 825 C originated within the specimen cross section, suggesting the possbility of a creep fatigue interaction at 825 C. Both alloys reveal stage 2 cracking at elevated temperature; AGI5 has lower fatigue resistance at 725 C when the test frequency is decreased. Dissert. Abstr.

THE INFLUENCE OF COHERENCY STRAINS ON THE ELEVATED TEMPERATURE MECHANICAL BEHAVIOR OF Ni-15Cr-Al-Ti-Mo ALLOYS. Ph.D. Thesis
Douglas Arthur Grose. 1980. 281 p.
Avail: Univ. Microfilms. Order No. 8020405

The effect of changes in weight traction gamma prime on the minimum of steady-state creep rate was investigated. The temperature dependence of coherency strain as represented by the gamma-gamma prime mismatch was determined over the temperature range 25 C to 800 C by X-ray diffraction. Elevated temperature tensile tests were performed on single-phase, control alloys. Steady state creep data was obtained at 0.58 Tm for selected alloys following peak-aging and 500 hour aging heat treatments at 760 C. Transmission electron microscopy was employed to characterize the deformation substructures and to establish mechanical property-structure relationships. The flow stress increment due to precipitation of gamma prime when normalized by the weight fraction of gamma prime was found to be linearly correlated to the magnitude of gamma-gamma prime mismatch over the temperature inteval 25 C to 800 C. The linear correlation was strongest for high gamma-gamma prime misfit alloys regardless of the antiphase boundary energy (APBE). Dissert. Abstr.

HYDROGEN-RELATED PHENOMENA IN A NICKEL-BASE ALLOY Ph.D. Thesis
Richard James Coyle 1980 163 p
Avail: Univ. Microfilms Order No. 8020958

A series of hydrogen related phenomena which influence embrittlement processes were examined. These phenomena included the influence of aging on hydrogen absorption during and outgassing after electrolytic charging, the effect of aging time on hardness, time to failure and fracture mode, accelerated hydrogen transport by mobile dislocations, hydrogen induced changes in fracture mode, and the effect of hydrogen on ductile fracture mechanisms. The results indicate the dependence of embrittlement on aging time in Hastelloy C-276 involves two processes. At short aging times embrittlement may be due to either P segregation or planar slip caused by short-range order. At longer times long range order is most likely responsible for embrittlement by promoting a planar slip mode. Dissert. Abstr.

FRACTURE TOUGHNESS OF SOME CRYOGENIC ALLOYS Ph.D. Thesis
Bruce Robert Somers 1980 305 p
Avail: Univ. Microfilms Order No. 8019729

The elastic plastic fracture behavior of some alloys for cryogenic service was investigated using fractographic and J integral techniques. The stable crack growth initiation processes of four materials were studied: an iron 13 percent chromium 19 percent manganese austenitic alloy (Fe13Cr19Mn); an aluminum alloy with 6 percent magnesium (AMG 6); an aluminum alloy with 4.4 percent magnesium (5083); and a 99.8 percent aluminum (1180). The J integral versus crack extension, resistance curves were determined in both LT and TL orientations for Fe 13Cr19Mn, AMG 6 and 5083 at 111K and for Fe13Cr19 Mn at 76K. Compact specimens of 18 mm and 20 mm thickness were used. The J value required to initiate true crack growth, J sub IC at 111K for the 5083 LT and TL using a linear least squares R curve with 19 points averaged for each crack extension was 19.1; 16.8, 18.7, 11.3, 380, and 188 KJ square meters respectively. The J sub IC at 76K for the Fe13Cr19 LT and TL orientations using a 9 point average for each crack extension was 225 and 123 KJ/square meters respectively. At 111K the J sub IC of the 1180 aluminum was too high to be measured using a 20 mm thick specimen. Using the thickness, J levels up to 88 KJ/square meters produced only blunting.

HEATS OF TRANSFORMATION OF EUTECTIC ALLOYS Ph.D. Thesis
Diana Farkas 1980 256 p
Avail: Univ. Microfilms Order No. 8019916

A method to determine unknown eutectic compositions was developed, based on combined results of differential thermal analysis with metallography and microprobe analysis. A differential thermal analyzer, which gave satisfactory accuracy for qualitative measurements, was built to handle the relatively large samples that are required for this procedure. The method allowed determination of eutectic composition in no more than three steps. The heats of the resulting alloys were measured using commercial calorimeters, a differential thermal analyzer and a differential scanning calorimeter. The possibility of measuring heat capacities by differential thermal analysis was also analyzed.

THE COMPUTER SIMULATION OF MARTENSITIC TRANSFORMATIONS IN IDEALIZED SYSTEMS Ph.D. Thesis
Sheree Hsiao-Ru Chen 1979 155 p
Avail: Univ. Microfilms Order No. 8014635

The theory of the martensite transformation was studied by constructing a computer model of martensitic transformation in an idealized system. The model had its source in the general observation that the characteristics of martensitic transformations in solids are largely determined by the problem of accommodating the strain associated with the martensitic distortion of the crystal lattice. The martensitic transformation was modeled as a transformation which occurs through the sequential formation of individual martensitic elements, each of which carries the elementary transformation strain. Statistical equations were developed which govern the selection of the transformation path, or specific sequence in which elementary martensite particles appear in the model, and which specify the kinetics of transformation along any known path. A useful representative path was defined, the minimum energy path. The resulting model was then used for the detailed simulation of a martensitic transformation in a pseudo two dimensional system. Despite the simplicity of the model virtually all interesting qualitative aspects of the developing martensitic transformation are shown to be inherently present within it.

HC A04/MF A01 CSCL 11F

The physical and numerical formulation of a model for the horizontal solidification of a binary alloy is described. It can be applied in an ingot. The major purpose of the model is to calculate macrosegregation in a casting ingot which results from flow of interdendritic liquid during solidification. The flow, driven by solidification contractions and by gravity acting on density gradients in the interdendritic liquid, was modeled as flow through a porous medium. The symbols used are defined. The physical formulation of the problem leading to a set of equations which can be used to obtain: (1) the pressure field; (2) the velocity field; (3) mass flow and (4) solute flow in the solid plus liquid zone during solidification is presented. With these established, the model calculates macrosegregation after solidification is complete. The numerical techniques used to obtain solution on a computational grid are presented. Results, evaluation of the results, and recommendations for future development of the model are given. The macrosegregation and flow field predictions for tin-lead, aluminum-copper, and tin-bismuth alloys are included as well as comparisons of some of the predictions with published predictions or with empirical data.

EVALUATION OF THE CYCLIC BEHAVIOR OF AIRCRAFT TURBINE DISK ALLOYS, PART 2 Contractor Report, Jul.

1978 - Mar. 1980
B. A. Cowles and J. R. Warren. Jul. 1980. 196 p. refs.
(Contract NAS3-21379)
(NASA-CR-165123; PWA-FR-13153-Pt-2) Avail: NTIS HC A09/MF A01 CSCL 11F

Several nickel-base aircraft turbine disk superalloys were evaluated at 650 C for resistance to fatigue crack initiation and propagation under cyclic and cyclic/dwell conditions. Controlled strain low cycle fatigue (LCF) and controlled load crack propagation tests were performed and results utilized to provide a direct comparison among the alloys. Tests were performed on selected alloys to evaluate the effects of hold times, mean stresses, stress-dwell cycle types, inert environment, and contractor test methods. At the lower total strain ranges of interest, the alloys exhibited generally increasing initiation life with increasing tensile strength for both cyclic (0.33 Hz) and cyclic/dwell (900-sec hold per cycle) conditions. Rank order of the alloys by LCF initiation life changed substantially at higher strain ranges, approaching the rank order expected from monotonic tensile ductilities. The effect of the 900 sec (15 min) hold time fatigue life varied significantly from alloy to alloy. Generally, the higher-strength, finer-grained alloys exhibited more significant reductions in fatigue life due to the dwell. The effects of mean strain were found to be negligible and the effects of mean stress were pronounced. At high strain ranges the mean stress was near zero and did not contribute to reduction in life. At low strain ranges, however, mean stresses were large and significant reductions in LCF lives occurred. L.F.M.

MONITORING METASTABLE PHASES AND GRAIN STRUCTURES DERIVED FROM GLASSY ALLOYS. Technical Report, Oct. 1978 - Jan. 1980
Ken-Sue Tan, Thomas Wahl, and Roy Kaplow. 24 Mar. 1980. 13 p. refs. Presented at Conf. on Rapidly Quenched Mater., Reston, Va., 24 Mar. 1980. Submitted for publication.
(Contract N00014-76-C-0171; Grant NSF DMR-78-24185; NR Proj. 031-795)
(AD-A085882; TR-4) Avail: NTIS HC A02/MF A01 CSCL 11/2

The glassy phase affords a potentially unique route to achieving new metastable structures with desirable properties. X-ray diffraction, Mossbauer spectroscopy and electron microscopy studies of iron base alloys show a number of potentially useful (and perhaps generally characteristic) behaviors in the transition from the as-quenched glass towards equilibrium, such as relaxed glassy states, supersaturated solid solutions, unique metastable compounds and phase morphologies, and ultra-fine grain sizes. AUSTENITIC GRAIN GROWTH CHARACTERISTICS IN RAPIDLY SOLIDIFIED MARTENSITIC STEELS. Technical Report, Oct. 1978 - Jan. 1980
M. Suga, J. L. Goss, G. B. Olson, and J. B. VanderSande. 25 Mar. 1980. 10 p. refs. Presented at 2d Intern. Conf. on Rapid Solidification Processing Principles and Technologies, Reston, Va., 23-26 Mar. 1980. Submitted for publication.
(Contract N00014-76-C-0171; NR Proj. 031-795)
(AD-A085883; TR-5) Avail: NTIS HC A02/MF A01 CSCL 11/6

Comparison of the austenitic grain growth characteristics of conventionally processed and rapidly solidified 9Ni-4Co and 2Mo steels has revealed an unusual resistance to grain coarsening of the rapidly solidified material. At 1200 C where the conventionally processed material coarsens to a grain size of several hundred microns, the rapidly solidified material retains a grain size of approximately 20 micrometers. The morphological characteristics of the inhibited grain growth indicate strong pinning at prior powder particle boundaries. Long-time austenitizing treatments at 1100-1200 C eventually lead to discontinuous coarsening. Evidence so far suggests that the unusual coarsening resistance may be due to finely distributed sulfides. It is anticipated that high austenitizing treatment of rapidly solidified steels will allow improvement of sharp-crack fracture toughness (K sub IC) without the loss of Charpy energy and tensile ductility associated with excessive grain coarsening; exploitation of this phenomenon, however, will require an extreme level of cleanliness in powder processing. A STEM ANALYSIS OF TWO RAPIDLY SOLIDIFIED STAINLESS STEELS. Technical Report, Oct. 1978 - Jan. 1980
T. F. Kelley and J. B. VanderSande. 25 Mar. 1980. 15 p. refs. Presented at 2d Conf. on Rapid Solidification Processing Principles and Technologies, Reston, Va., 23-26 Mar. 1980. Submitted for publication.
(Contract N00014-76-C-0171; NR Proj. 031-795)
(AD-A085887; TR-6) Avail: NTIS HC A02/MF A01 CSCL 11/6

Scanning transmission electron microscopy (STEM) has been used for microstructural and microchemical analysis of two rapidly solidified austenitic stainless steels. One steel is a high sulfur, 303 stainless type. In this rapidly solidified steel, sulfide particles (MnS) are found to be two or three orders of magnitude smaller in size, and more uniformly distributed, than in the conventionally processed material. Extremely small sulfide particles have been observed at the cell walls and in the intracellular region of the solidification structure of individual rapidly solidified powder particles. Moreover, composition profiles have been obtained by the STEM across regular and nonregular cell walls in these powders which indicate that a high degree of chemical homogeneity was obtained. A comparison is made of the microstructures and microchemistry of individual powders, consolidated powder product, and conventionally processed versions of this high sulfur austenitic stainless steel. The rapidly solidified powders of a high phosphorus stainless steel have also been observed in STEM. The results of these observations are presented in light of the data obtained on the high sulfur steel. GRA

AN ION BEAM MILLIPROBE FOR MATERIALS ANALYSIS. Final Report
R. D. Willis and A. R. Knudson. 21 Mar. 1980. 26 p. refs.
(RR0220844)
(AD-A086109; AD-E000433; NRL-MR-4187) Avail: NTIS HC A03/MF A01 CSCL 20/7

An ion beam 'milliprobe' has recently been constructed and tested in the Materials Modification and Analysis Branch and is now being applied to the microanalysis of materials. Singly charged ion beams from the NRL 5 MV Van de Graaff accelerator with energies up to 4 MeV can be utilized. A miniature electrostatic lens in line with a pinhole aperture focuses these ion beams to spot sizes as small as approximately 20 micrometers in diameter (0.8 mil, hence the name 'milliprobe'). The sample is positioned in the millibeam by means of a motorized X-Y translation stage which allows one to conduct computer controlled two dimension scans of the sample with one micrometer steps. The milliprobe has been used in conjunction with conventional ion beam analysis techniques to characterize the near-surface regions of alloys and semiconductor materials when good lateral resolution

is a requirement. The use of the microprobe is briefly illustrated in two current studies: (1) wear reduction in stainless steels by the implantation of nitrogen and (2) surface composition changes induced by the laser annealing of silicon that has been implanted with nitrogen. GRA

REVIEW OF EUROPEAN POWDER METALLURGY OF SUPERALLOYS Technology Assessment Report
R. W. Evans. Dec. 1979. 65 p. refs. Sponsored in part by AFOSR
(AD-A086682; EOARD-TR-80-10) Avail: NTIS
HC A04/MF A01 CSCL 11/6

This review is an attempt to summarise the state of research and development in Europe into powder metallurgy of superalloys, and to ascertain which areas of the technology still require attention before the promised advantages of the powder metallurgy route are achieved. Although 'superalloys' are normally taken to be those alloys whose bases are nickel or cobalt, the present review deals with materials which are currently in prospect of production by powder metallurgy and which find use in the hot parts of aeroturbines. Thus it includes an account of some ferritic materials and some titanium alloys. The review deals with disc and blade alloys and discusses powder production, consolidation and the relationships between processing, structure and the final properties of powder alloys. GRA

The advent of powder metallurgical methods for nickel-base superalloys has made it possible to use high-strength alloys for large components such as turbine disks. Although much of the manufacturing and process technology for such products is reasonably well understood, many of the features of the structure-property relationships in these alloys remain unclear. This document describes the results of a three-year effort undertaken to provide insight into the factors that control specific properties in advanced powder metallurgical nickel-base superalloys. The first-year effort examined the stress-rupture characteristics of smooth sections of a number of alloys including AF115 and MERL 76. It was concluded that the ability of a material to store dislocations controls the creep rate but that the fracture processes were dictated by grain boundary structures. Models that satisfactorily accounted for the behavior pattern were developed. The second-year effort extended the study to notch-rupture properties which were found to depend upon a larger number of variables. An interesting parallel between short notch lives and the fracture times of smooth sections tested under stress relaxation was found. Based on this observation, certain mechanical criteria for poor notch characteristics could be identified. GRA

STUDIES ON CORROSION PREVENTION OF MARDAN CONNECTORS BY ORGANIC COATINGS Final Report, May 1977 - Sep. 1979
B. J. Kinzig and J. S. Murday. 9 Jun. 1980. 36 p. refs
(AD-A086730; AD-E000464; NRBL-MR-4230) Avail: NTIS
HC A03/MF A01 CSCL 11/3

Electrical disturbances caused by the formation of corrosion products on computer contacts is a serious problem, especially in older contacts containing a tarnish-prone silver layer under gold plating. The efficacy of a number of corrosion preventative organic fluids in preventing corrosion in sulfide-bearing atmospheres has been evaluated, in conjunction with a chromating process for the same purpose. Studies were made both with connectors and with silver. A statistical treatment applied to visual evaluation clearly identified two organic formulations as effective corrosion inhibitors, verifying other observations. These fluids were as effective as chromating alone, but an additional measure of protection was afforded by the combination of chromate/organic fluid. GRA

THE INFLUENCE OF PRIOR WARM ROLLING ON FRACTURE TOUGHNESS OF HEAT TREATED AISI 52100 STEEL M.S. Thesis
Jeffrey F. McCauley. Mar. 1980. 83 p. refs
(AD-A086821) Avail: NTIS HC A05/MF A01 CSCL 11/6

An investigation was conducted to determine the effects of prior warm rolling on AISI 52100 bearing steel in the hardened condition. Microstructural and mechanical properties of both standard and warm rolled 52100 were investigated. Heat treatments, consisting of both conventional hardening treatments and isothermal transformation treatments, were conducted prior to fracture toughness, hardness, and tensile testing. Conventional hardening treatments resulted in martensitic structures with low toughness; prior warm rolling resulted in the rolled materials exhibiting both higher hardness and toughness than the standard 52100 in the hardened condition. Isothermal transformation treatments resulted in substantially improved toughness, especially in the material processed at 300 C. GRA

STUDIES OF MICROSCOPIC ASPECTS OF WEAR PROCESSES IN METALS Annual Report, 1 Apr. - 31 Dec. 1979
A. W. Ruff and J. P. Blau. Jun. 1980. 79 p. refs
(Contract N00014-79-F-0034)
(AD-A086760; NBSIR-80-2058) Avail: NTIS
HC A05/MF A01 CSCL 11/6

Wear experiments have been conducted in copper alloys and steels under dry sliding conditions in order to study the microscopic aspects of wear and the mechanisms involved. Two experimental wear test systems have been developed, a linear sliding tester and a block-on-ring computer controlled tester. Preliminary findings have compared the wear rates of three different steels, one a high strength-low alloy 'dual phase' steel, and two copper-aluminum alloys. Worn surface and subsurface morphologies have been studied using optical and scanning electron microscopy. Wear debris particles have been recovered from the tests and compared in morphological characteristics between the materials. Mechanical properties measurements of two of the steels were carried out to determine strain hardening characteristics for comparison with wear behavior. Micro-hardness measurements have also been made. Initial wear rate and friction transients for tests in laboratory air and argon have been examined to study processes involved in the early stages of sliding. GRA

THE ROLE OF HYDROGEN IN THE STRESS CORROSION FAILURE OF HIGH STRENGTH Al-Zn-Mg ALLOYS AND SENSITIZED AUSTENITIC STAINLESS STEELS Final Annual Technical Report
L. Christodoulou, M. G. Lackey, H. M. Flower, F. J. Humphreys, and P. R. Swann. Apr. 1980. 39 p. refs

(Grant DA-ERO-77-G-011; DA Proj. 1T1-61102-BH-57)
(AD-A086427) Avail: NTIS HC A03/MF A01 CSCL 11/6

An investigation into the effect of exposure of Al-Zn-Mg alloys to water vapor has shown that hydrogen, produced by the reaction is absorbed by both the alloy grain boundaries and matrix. The amount of absorbed hydrogen depends on the local chemistry and the metal/oxide interface and is influenced by alloying additions. Attainment of a critical concentration of dissolved hydrogen in the boundaries leads to brittle intergranular fracture on the subsequent application of stress. Attainment of a critical hydrogen concentration in the matrix leads to transgranular cleavage fracture. Depending upon the alloy composition and heat treatment bubbles of gaseous hydrogen can be formed at suitable sites within the alloys such as grain boundary particles. The formation of grain boundary bubbles reduces embrittlement by reducing the local concentration of dissolved hydrogen. It is proposed that the interaction of stress and environmental variables with the above criteria governs the environmental failure of Al-Zn-Mg alloys in aqueous and water vapor containing environments. It is suggested that such failures are hydrogen embrittlement dominated. GRA

THE FLASH EVAPORATION OF POWDERED INDIUM ANTIMONIDE
R. H. Hartley Jan. 1980 20 p refs
(AD-A086531; ERL-0103-TR; AR-001-904) Avail: NTIS HC A02/MF A01 CSCL 11/6

It has been shown experimentally for deposition rates of practical interest, that the flash evaporation of powdered indium antimonide from a black body source yields a stoichiometric vapor over a wide angular range about the axis of the source. Films deposited by this means have an excellent surface finish and are free from the surface defects often associated with flash evaporation employing other source geometries. GRA

Isothermal transformations were carried out in the vicinity of M sub s temperatures on Si, Al: Si modified AISI 4330, 4340 steels, which had been remelted by electroslag refining (ESR) techniques. The microstructures of the heat-treated variants were characterized by transmission electron microscopy. Mechanical property evaluations (Charpy impact energies, tensile strengths, plane-strain fracture toughness data) of the different microstructures were also carried out. Isothermal transformations in these steels resulted in bainite, bainite: martensite microstructures, containing moderate amounts of retained austenite. The austenite was found to be in the form of thin films around the bainite, martensite laths. The strength-toughness combinations obtained in this investigation for Si-modified AISI 4330 steel appear to be superior to those for unmodified AISI 4340 and 300- M steels, whilst the strength-toughness combinations obtained for Al: Si modified AISI 4340 steel appear to be comparable to those for 18 Ni Co Mo maraging steel. The merits of ESR-processing these steels are also reflected in the uniform Charpy impact properties obtained for the different orientations investigated. GRA

SCATTER OF FATIGUE CRACK RATES IN 7XXX ALUMINUM ALLOYS
D. G. Ford Mar. 1980 17 p refs
(AD-A086543; ARL/Struc-TM-309) Avail: NTIS HC A02/MF A01 CSCL 11/6

Thirty-three crack growth curves were analysed in order to estimate the logarithmic variance of fatigue crack growth rate for several 7XXX Aluminum Alloys in various conditions. The estimated standard deviation common to all of these was s = 0.1241 with 18 degrees of freedom. It was concluded that this estimate holds for differing types of 7XXX aluminium alloys, constant amplitude and block programme loading. The errors it summarises include effects of microstructure, heat treatment and purity not described by the alloy specification. R.C.T.

AN INVESTIGATION OF MECHANISMS EFFECTING ENVIRONMENTAL STRESS CRACKING IN TITANIUM ALLOY
Ira J. Graham 3 Apr. 1980 31 p refs
(Contract N00019-79-C-0137)
(AD-A086979) Avail: NTIS HC A03/MF A01 CSCL 11/6

The acoustic emission technique was applied to monitor visible crack growth and microcrack formations as energy release in real time in titanium alloy using a 12.8 mm (0.510 in) WOL compact specimen in a plane strain mode. The specimens were fatigued in the 30 - 60 Hz range at a determined stress intensity factor (K sub I) with an acoustic emission transducer at a gain of 85 dB and a bandpass frequency of 0.1 - 0.3 MHz. A stable crack advanced and microcracks formed at angles other than parallel to the advancing stable crack as intermittent energy bursts in or along the boundaries of the grains. The energy release, referred to as 'acoustic emission', is a kind of elastic stress impulse. Crack movement in the order of magnitude million in/cyl were detected. Determination was made of the subcritical stress intensity factor (K sub sc) where the amplitude of the fatigue cycles no longer provide the energy source large enough to cause the crack to advance. DEFORMATION OF AN ALLOY WITH A LAMELLAR MICROSTRUCTURE: EXPERIMENTAL
K. S. Chan, C. C. Wojcik, and D. A. Koss May 1980 34 p refs
(Contract N00014-76-C-0037; Grant AF-AFOSR-2596-74)
(AD-A087100; TR-12) Avail: NTIS HC A03/MF A01 CSCL 11/6

The deformation behavior of individual Widmanstatten colonies comprised of aligned lamellae of ductile phases has been investigated. Based on the alpha-beta Ti alloy, Ti-8Al-1Mo-1V, this study shows the existence of a large 2 X variation in the critical resolved shear stress for yielding of individual colonies. Schmid's Law is not obeyed except for prism slip parallel to the beta lamellae. In addition, colonies with a high yield stress exhibit a high work hardening rate and fine, uniform slip, while colonies with a low yield stress deform by planar, non-uniform slip. This behavior appears to be independent of slip system basal, prism, or pyramidal and of microstructure alpha-beta vs. alpha-alpha: martensite. The experimental behavior is correlated to several colony orientation parameters including the stress axis, slip plane, slip direction, and orientation of the alpha-beta interface. The yield stress of a colony is found to increase as the slip direction of the dominant macroscopic slip plane tends toward being normal to the alpha-beta interface. These results indicate that the macroscopic flow behavior of colonies comprised of ductile lamellae depends on the ability of a slip system, once activated in the softer phase, to shear through the harder phase. The data also indicates that the interaction stresses at the phase interfaces are not a principal factor controlling macroscopic yielding. Finally, the alignment of a slip system in the alpha-phase

with a potential slip system in the beta-phase lamellae does not appear to affect the yield stress strongly. GRA

METALLOGRAPHIC PREPARATION OF TITANIUM DIBORIDE COATINGS
Mark E. McAllaster Mar. 1980 12 p
(Contracts EY-76-C-04-0789; DE-AC04-76DP-00789)
(SAND-80-0596) Avail: NTIS HC A02/MF A01

A method is described for preparing metallographic cross sections of thin, hard, chemically vapor deposited titanium diboride coatings on various softer substrates. Standard metallographic preparation techniques were found to result in fracturing and edge rounding of the coatings. It is shown that these problems can be avoided by unidirectional grinding on worn 600 grit silicon carbide abrasive paper. Typical photomicrographs of chemically vapor deposited titanium diboride coatings are shown along with photomicrographs of intermediate phases that form at the titanium diboride substrate interfaces. HYDROSTATIC STRESS DEPENDENT YIELD OF 7075-T6 ALUMINUM
Steve E. Benzley, Tom G. Priddy, and Mark S. SooHoo Mar. 1980 21 p refs
(Contracts EY-76-C-04-0789; DE-AC04-76DP-00789)
(SAND-79-2220) Avail: NTIS HC A02/MF A01

Tension and compression tests on notched cylindrical bars made of 7075-T6 aluminum, conducted as a part of an investigation of the mechanics of ductile fracture, are discussed. The compression tests showed significantly stiffer behavior in the nonlinear portion of the experiment than those found from the tension tests. This difference was accounted for by incorporating a hydrostatic stress dependent yield model in the analysis of the experiment. The model was verified by comparing finite element calculations with the actual experimental results. DOE

CONSEQUENCES OF THE RE-TRANSFORMATION OF PRECIPITATED AUSTENITE IN FERRITIC CRYOGENIC STEELS
J. W. Morris, Jr., C. K. Syn, J. I. Kim, and B. Fultz Jun. 1979 12 p refs Presented at the Intern. Conf. on Martensitic Transformation, Boston, 24 Jun. 1979
(Contract W-7405-eng-48; N00014-75-C-0154)
(LBL-10128; TN-8; CONF-7906103-4) Avail: NTIS HC A02/MF A01

The retransformation of precipitated austenite (gamma/sub R/) in Fe-(6-9)%Ni steels is investigated, with particular emphasis on the influence of transformation characteristics on alloy toughness at cryogenic temperature. In all cases studied the precipitated austenite retransforms, either during cooling to cryogenic temperature or during deformation prior to fracture of the alloy. When the retransformation is thermally induced the product martensite tends to form in a variant identical to that present before precipitation of the austenite, no significant refinement of the microstructure is achieved. On the other hand, mechanical transformation of the austenite produces a distribution of martensite variants determined by the local strain, hence preserving a refined microstructure conducive to low temperature toughness. DOE

EFFECT OF ALLOY DEFORMATION ON THE AVERAGE SPACING PARAMETERS OF NON-DEFORMING PARTICLES
J. Fisher and J. Gurland Feb. 1980 16 p refs Submitted for publication
(Contract DE-AC02-80ER-10556)
(COO-3084-75; TR-75) Avail: NTIS HC A02/MF A01

It is shown on the basis of stereological definitions and a few simple experiments that the commonly used average dispersion parameters, are a fraction (alpha/sub alpha/)/sub beta/, areal particle density N/ sub alpha beta/ and mean free path lambda/sub alpha/, remain invariant during plastic deformation

in the case of non-deforming equiaxed particles. Directional effects on the spacing parameters N/sub alpha beta/ and lambda/sub alpha/arise during uniaxial deformation by rotation and preferred orientation of nonequiaxed particles. Particle arrangement in stringered or layered structures and the effect of deformation on nearest neighbor distances of particles and voids are discussed in relation to strength and fracture theories. NICKEL-IRON ALLOY CORROSION IN A SEALED PYROTECHNIC SYSTEM
Elton E. Tibbitts and Robert F. Salerno 1980 23 p refs
Presented at the 7th Intern. Pyrotechs. Seminar, Vail, Colo., 14 Jul. 1980
(Contract DE-AC04-76DP-00053)
(MLM-2707(OP); CONF-800713-2) Avail: NTIS HC A02/MF A01

Actuators loaded with Ti/KClO4 and aged for several days had chlorine containing corrosion products on Alloy-52 electrode pins and Tophet-C bridgewire surfaces. An in depth analysis of these materials indicated that moisture, organic contamination, and chlorine were the major causes of the corrosion. Definite evidence was uncovered that indicated a partial decomposition of the KClO4 was the major source of the chlorine. In the presence of moisture, particles that settle on the metal surface cause the formation of galvanic or oxygen concentration cells that dissolve to produce electrolytes on the metal surface causing corrosion of the metal. It is shown that corrosion can be eliminated by reducing the humidity to below a critical level and vacuum drying the pyrotechnic so that no moisture is considered on the metal. Since water is consumed in the reaction forming hydrated oxides or hydroxides, the extent of the reaction is limited by the amount of water in the sealed unit. DOE

EVALUATION OF TITANIUM BOLTS COATED WITH IVADIZE ALUMINUM AND KALGARD 2240 C IN TORQUE TENSION TESTS
J. Newnham, B. Hassell, and P. Behan Nov. 1979 68 p refs
(Contract ESTEC-3698/78-NL-PP(SC))
(SPS-5254; ESA-CR(P)-1304) Avail: NTIS HC A04/MF A01

Proprietary aluminum coatings were evaluated in torque tension tests on titanium alloy nuts and bolts. The objective was to identify a coating/lubricant combination for titanium alloy fasteners, which would give consistent frictional conditions on repeated installations, provide corrosion resistance in marine environments, and be compatible with space conditions. The coatings evaluated were the McDonnell 'Ivadize' coating, and Kalgard 2240 C paint coating. Both were tested in the unlubricated condition, and lubricated either with an oil or a bonded molybdenum disulphide coating. Ivadize coated fasteners did not allow more than about five applications even with the best lubricant. Kalgard coatings allowed the full twenty five installations without excessive increase in friction, when molybdenum disulphide was used as lubricant. Author (ESA)

A survey of background information on the chemistry, geology, and supply sources and a detailed evaluation of current and future usage for all six platinum group metals are presented. The extensive use of platinum, palladium, and later, rhodium in automotive emission control systems is projected to continue for some time. Recycling of spent or discarded catalytic converters is advised as an important source of the platinum group metals they contain, but the current (1978) economic picture appears to make the activity marginal at best. The content of the National Stockpile is reviewed and the need to increase the amounts and to upgrade the forms to existing specifications is shown. In addition, it is recommended that rhodium be added to the stockpile list as a critical and strategic material. GRA

CHARACTERIZATION OF MACROMOLECULAR FILMS ADSORBED IN TRACK-ETCHED MEMBRANES Ph.D. Thesis
Gregory Lawrence Powers 1980 208 p
Avail: Univ. Microfilms Order No. 8018600

A method was developed for determining the thicknesses of adsorbed macromolecular layers in porous membranes. Bovine serum albumin (BSA) was chosen as the solute macromolecule owing to its uniformity, stability, and size. The porous membranes were of muscovite mica with pores formed by the track etch process. The thickness of the (tightly bound) layer was determined by measuring electrolyte conductance (KCl) through the pores in the presence and absence of BSA. Electrolyte conduction was also employed to provide an accurate assessment of molecular partitioning in the pores. The partitioning measurement gave information on the total amount of BSA in the pores, both that bound as a wall layer as well as additional protein in solution within the pore. Membranes were made from sheets of muscovite mica 7 micron thick. Damage tracks were formed by irradiation with a collimated beam of massive fission fragments emitted from a Cf252 source. The damage tracks produced were etched into discreet pores with hydroflouric acid. Dissert. Abstr.

FATIGUE EFFECTS IN THE WEAR OF POLYMERS Ph.D. Thesis
Vinod Kumar Jain 1980 184 p
Avail: Univ. Microfilms Order No. 8019638

A wear equation was developed using the concept of repetitive loading of asperities on the mating surfaces in a sliding situation. It postulates elastic deformation in the contact zone and asperities with spherical tips. The wear equation is epxressed in terms of the sliding parameters, surface topographical parameters, modulus of elasticity, and fatigue properties of the

weaker material. The equation is consistent with experimental data for the case of poly(methyl methacrylate), poly(vinyl chloride) and high density polyethylene pins sliding against a steel disk. Scanning electron microscopy revealed that the worn surfaces of poly(methyl methacrylate) and high density polyethylene pins were covered with arced ripples stretching across the transverse direction. In the case of poly(vinyl chloride) there were signs of considerable plastic deformation on the worn surface. The fracture surfaces of notched fatigue samples of poly(methyl methacrylate) exhibited well-defined striation markings which were obscure, ill-defined and discontinuous in the case of high density polyethylene and poly(vinylchloride). The final stage of fatigue fracture in the latter two materials was accompanied with plastic deformation. Dissert. Abstr.

HC A04/MF A01 CSCL 11/4

Because of their elevated physical properties, epoxy resins are widely used as matrices for high performance composites. However, due to moisture induced plasticization and formation of microcavities, high temperature and humidity tend to reduce their physical properties. A history dependent solubility model is generalized in accordance with the Dual Mode Sorption theory to account for effective water diffusion coefficients based on microcavitational damage brought about by temperature and moisture. Laboratory testing for weight changes in sorption-description experiments have been accomplished using a McBain quartz-spring microbalance placed in a temperature and humidity controlled cell. Equilibrium moisture absorption levels were represented both by linear and upward isotherms depending upon the humidity history. Analysis of sorption data, using a transport model in which part of the diffusing molecules are completely immobilized in the formed microcavities, revealed the damaging process to be in agreement with the diffusion coefficient depressions and solubility increases predicted by the model. A crazing criterion is qualitatively used to test the nature of the damaging process. GRA

HC A02/MF A01 CSCL 11/9

The overall objective of this research program has been to investigate the physical nature of macromolecular systems as a function of the chemical and stereochemical structure of the macromolecule. A potential improvement in important facets of polymer properties was an underlying premise in the design and execution of the research. The work performed included investigations of the behavior of polymers in solution, as well as in the solid state and was accompanied by a program of theoretical studies to complement the experimental work. One focus of the research was the area of polymer-polymer interactions in binary blends, in which factors influencing compatibility, i.e., mutual solubility, were systematically investigated by a number of thermodynamic techniques. Heats of polymer mixing were obtained for selected systems and shown to be useful in predicting phase behavior otherwise obscured by non equilibrium effects. The latter were also investigated theoretically in studies of the effect of domain size and composition on glass transition temperatures and allied phenomena. Another area of research concerned the physical properties of model epoxy network systems, and in particular, the effect of water on these properties. A characteristic of cross linked polymers is their ready plasticization by relatively small amounts of low molecular weight materials and the basis of this observation has been explained on a thermodynamic basis. Solution properties of polymers were studied by means of quasi-elastic light scattering. GRA

HC A03/MF A01 CSCL 11/9

The X-ray crystal structures of two monomeric model compounds for polybisbenzoxazole (PBO) and polybisbenzthiazole (PBT) are presented. The PBO model compound molecules stack along the b crystallographic axis in two vertical columns of differing orientation and are inclined to b by an angle of 36 deg. The repeat distance along b is 5.94A and the perpendicular distance between adjacent molecules in a particular stack is 3.4A. The PBT model compound molecules stack most efficiently along its b crystallographic axis with an inclination angle of 36.8 deg. Adjacent molecules along c exhibit a crossing pattern with a dihedral angle of 73.6 deg. The relationship between the model compound structures and the gross packing features of polymer chains in PBO and PBT are discussed. GRA

TRIAXIALLY WOVEN FABRICS OF KEVLAR, DACRON POLYESTER AND HYBRIDS OF KEVLAR AND DACRON POLYESTER Final Report
Eleanor Th. Vadala. 3 Apr. 1980. 20 p. refs.
(WF414110001)
(AD-A086866; NADC-80020-60) Avail: NTIS
HC A02/MF A01 CSCL 11/9

To provide data for possible LTA (Lighter Than Air) application, four triaxially woven fabrics were made using yarns of: (1) Kevlar aramid, (2) Dacron polyester and (3) hybrids of aramid and polyester. The woven triaxial fabrics were coated with urethane. The material samples were characterized by removal and test of specimens. The test matrix included creasing and environmental conditioning tests. ORGANIC METALS AND SEMICONDUCTORS: THE CHEMISTRY OF POLYACETYLENE, (CH) SUB X, AND ITS DERIVATIVES Interim Report
Alan G. MacDiarmid and Alan J. Heeger. 24 Nov. 1979. 13 p. refs. Presented at the 3d Intern. Congr. of Quantum Chem., Kyoto, Oct. 1979.
(Contract N00014-75-C-0962; NR Proj. 356-602)
(AD-A086870; TR-79-11) Avail: NTIS HC A02/MF A01 CSCL 20/12

Polyacetylene, (CH)x, is the simplest possible conjugated organic polymer and is therefore of special fundamental interest. In a series of studies, Shirakawa and Ikeda have shown that it can be prepared in the form of lustrous, silvery, flexible,

polycrystalline films having any desired cis/trans content by catalytic polymerization of gaseous acetylene, C2H2. The cis-rich films can be stretched easily at room temperature in excess of three times their original length with concomitant partial alignment of the (CH)x fibrils. Dark red gels of toluene in (CH)x may be prepared using a lower catalyst concentration. Highly porous, very low density, 'foam-like' (CH)x can be obtained from these gels. Both cis- and trans-(CH)x are p type semiconductors which can be treated with a variety of p or n type dopants with concomitant increase in conductivity to give a series of semiconductors and ultimately, 'organic metals'. This report will be directed primarily towards a description of the more chemically oriented aspects of (CH)x and its derivatives. GRA

CONDUCTING ORGANIC POLYMERS: DOPED POLYACETYLENE Interim Technical Report
Alan J. Heeger and Alan G. MacDiarmid. 24 Nov. 1979. 45 p. refs. Presented at the Advanced Study Inst. on the Phys. and Chem. of Low Dimensional Solids, Tomar, Portugal, Aug. 1979
(Contract N00014-75-C-0962; NR Proj. 356-602)
(AD-A086869; TR-79-10) Avail: NTIS HC A03/MF A01 CSCL 11/9

Linear polyacetylene, (CH)x is the simplest conjugated organic polymer and is therefore of special fundamental interest. Interest in this semiconducting polymer has been stimulated by the successful demonstration of doping with associated control of electrical properties over a wide range; the electrical conductivity of films of (CH)x can be varied over 12 orders of magnitude from that of an insulator (sigma approximately equal to ten to the minus 9th power/ohm/cm) through semiconductor to a metal (sigma approximately equal to ten to the minus 13th power/ohm/cm). Various electron donating or accepting molecules can be used to yield n-type or p-type material, and compensation and junction formation have been demonstrated. GRA

FRACTURE STUDIES OF HIGH TEMPERATURE CERAMICS Final Report, 1 Oct. 1975 - 30 Sep. 1979
D. Lynn Johnson. May 1980. 67 p. refs.
(Grants AF-AFOSR-2920-76; NSF DMR-76-80847; AF Proj. 2306)
(AD-A086653; AFOSR-80-0501TR) Avail: NTIS HC A04/MF A01 CSCL 11/2

A high-temperature isothermal instrumented impact testing apparatus was designed and built and utilized to test a variety of high performance ceramic materials at temperatures up to 1500 C. Test specimens were held on an anvil in the furnace and heated rapidly to the test temperature. An impacter broke the samples in 3 point bending, and high speed digital recorders stored the outputs of force and velocity transducers. The controlled flaw technique was utilized to obtain the critical stress intensity factor, K sub IC. Hot-pressed silicon nitride materials containing MgO, CeO2 or ZrO2 sintering aids showed a decrease in K sub IC as the temperature exceeded 1300 C. Hot-pressed silicon carbide containing alumina sintering aid showed a similar decrease. Sintered alpha-SiC, on the other hand, showed a gradual increase in K sub IC at temperatures up to 1500 C. Reaction bonded SiC failed to break at the controlled flaw, but exhibited a drop in impact fracture force at temperatures approaching the melting point of silicon. GRA

CHEM-BRAZE ABRADABLE SEAL ATTACHMENT Final Report, 6 Oct. 1978 - 15 Oct. 1979
Charles C. McComas, Steve T. Narsavage, and Hal W. Pettit, Jr. May 1980. 51 p.
(Contract DAAG46-78-C-0062)
(AD-A086872; PWA-FR-12248; USAAVRADCOM-TR-80-F-5) Avail: NTIS HC A04/MF A01 CSCL 11/2

An improved Chem-Braze bonding system for attaching sintered abradable seals to compressor blade tip-shrouds was developed. The improved Chem-Braze system incorporates glycerin as an inhibitor to prevent premature evaporation which prolongs working life and allows adequate time to attach seals to engine hardware. Manufacturing guidelines including glycerin concentration, working environment, slurry thickness, bonding pressure, drying and curing parameters, and refurbishing techniques were established. Tooling techniques for attaching abradable seals to engine hardware using this improved system were selected based on a feasibility demonstration which incorporated simulated engine hardware. Nondestructive inspection (NDI) techniques for verifying bond integrity were investigated, but a satisfactory technique was not identified. A preliminary economic analysis indicated significant cost savings for attaching abradable seals to compressor blade tip-shrouds using the improved Chem-Braze system compared to attachment with gold-nickel braze. MOISTURE PROTECTIVE COATINGS FOR ALKALI HALIDE IR OPTICS Semiannual Report, 1 Nov. 1979 - 30 Apr. 1980
Frederick G. Yamagishi and Leroy J. Miller. Jul. 1980. 23 p.
(Contract MDA903-80-C-0096; ARPA Order 3833)
(AD-A086747) Avail: NTIS HC A02/MF A01 CSCL 11/3

The objective of this program is to develop plasma-polymerized films that are transparent, moisture-protective coatings to increase the lifetime and durability of press-forged KBr IR optical elements. Reaction conditions have been established that yield uniform films of plasma-polymerized ethane (PPE) on polished and etched single crystal KBr flats. On polishing, polycrystalline KBr formed localized grains that could not be removed by chemical etching with HBr. Surface passivation could be achieved with a plasma of CF3Br or CF2C12. An air leak in the reactor caused extensive corrosion problems with CF3Br. Repairing the leak eliminated the corrosion problem. On a concurrent IR D program, we are developing a new surface passivation method for NaCl using a non-IR-absorbing surfactant. PPE deposited on this treated surface afforded protection from damage by 98% relative humidity for 11 days. It is important to eliminate trapped free radicals in the film to reduce the chance of forming a more polar material caused by the reaction of the radicals with atmospheric oxygen. Treating the film briefly with a hydrogen plasma quenched the radicals, but the method was no more effective than the present method of storing under an ethylene atmosphere. The use of DEHA, a two hydrogen atom donor, is being studied in an IR D program as a radical quencher and may be applied to this program if it proves successful. GRA

PHOTOCONDUCTIVITY IN POLYACETYLENE Interim Technical Report
S. Etemad, M. Ozaki, D. L. Peebles, A. J. Heeger, and A. G. MacDiarmid. 8 Jul. 1980. 19 p. Submitted for publication
(Contracts N00014-75-C-0962; DE-AC04-79ET-23002)
(AD-A086942; LRSM-TR-80-6) Avail: NTIS HC A02/MF A01 CSCL 11/9

An extensive study of the photoconductivity together with new measurements of the absorption coefficient of polyacetylene have been carried out. It is shown that the photoconductivity in trans-(CH) sub x is controlled by localized states (inside the gap) induced either by isomerization or by dilute doping. The presence of such states and their effect on the photoconductivity of trans-(CH) sub x is accounted for by the recently proposed soliton model. GRA

THE DYNAMIC BEHAVIOR OF NYLON AND POLYESTER LINE Final Report
Kenneth R. Bitting Apr. 1980 115 p refs
(AD-A087106; CGR/DC-9/79; USCG-D-39-80) Avail: NTIS HC A06/MF A01 CSCL 11/9

Tests to determine the dynamic response of nylon and polyester, double braided and 8 strand plaited line were conducted. Line samples were excited mechanically in a tensile testing machine according to an experimental design in which frequency of excitation, mean load, and load amplitude were varied. The dynamic stiffness was measured. Samples of nylon and polyester line were placed in the ocean for 4 to 5 years and then tested with the same dynamic test procedure as was previously performed on the new line samples. The dynamic stiffness of nylon double braided line approximately doubled after five years of exposure to the marine environment, and polyester 8 strand plaited and double braided line increased about 10 to 25 percent. Snap load tests were conducted on nylon 8 strand plaited line (snap load is a cyclic loading in which zero is the minimum tension) and it was found that samples failed from fatigue when the maximum load exceeds 30 percent of the rated breaking strength. Samples do not fail by 200,000 cycles if the maximum load does not exceed 30 percent. Field and laboratory abrasion tests were also conducted on nylon, polyester, and polypropylene line of the 8 strand plaited, double braided, and 3 strand twisted constructions. R.K.G.

DRY ANAEROBIC FERMENTATION TO METHANE OF ORGANIC RESIDUES Ph.D. Thesis
Walter John Wujcik 1980 253 p
Avail: Univ. Microfilms Order No. 8020903

Anaerobic fermentation was studied over a two year period with mixtures of dairy cow manure and residue material, including straw, sawdust, peat moss, and newsprint paper. Batch reactors were operated at total solid concentrations of 10 to 68.5 percent. The effect of water content, available water, and salts (sodium chloride and ammonia-nitrogen) on anaerobic fermentation to methane of dry substrates was measured. Performance was evaluated in terms of gas and methane production, substrate utilization, volatile acid production, and other parameters. The role of moisture content in the anaerobic fermentation to methane of organic residues was defined. A first order decay model was utilized to describe the kinetics of microbial decomposition for batch dry anaerobic fermentation. The relative importance of salt inhibition versus water content of the substrate was determined. Dissert. Abstr.

N80-30533 North Carolina State Univ. at Raleigh
DEVOLATILIZATION KINETICS AND ELEMENTAL RELEASE IN THE PYROLYSIS OF PULVERIZED COAL Ph.D. Thesis
Victor Hugo Agreda 1979 428 p
Avail: Univ. Microfilms Order No. 8020475

The evolution of volatile matter and trace elements from pulverized coal during pyrolysis in an inert atmosphere was studied in batch and laminar flow furnace reactors. Five coals were investigated, ranging in rank from ignitic to anthracitic. It was determined that at any pyrolysis temperature ash losses may have a significant effect on calculated extents of devolatilization, making the commonly used ash tracer technique a potential source of error in all experimental pyrolysis studies. A technique to correct estimated weight losses for this effect was developed. An empirical mathematical model was developed to correlate the equilibrium release of Hg, Pb, Cl, As, and Se, as a function of temperature for the five coals studied. The same model was found to correlate sulfur release data for coals with rank up to bituminous. Dissert. Abstr.

N80-30534 California Univ., Davis
DOWNDRAFT GASIFICATION CHARACTERISTICS OF MAJOR CALIFORNIA RESIDUE-DERIVED FUELS Ph.D. Thesis
Bryan Martin Jenkins 1980 385 p
Avail: Univ. Microfilms Order No. 8018978

The results of 30 fuel trials in a laboratory scale, fixed bed air blown downdraft gas producer operating at ambient pressure to produce a low-Btu fuel gas from solid agricultural, forest, and municipal residues are reported. The nature of the residue fuels, including chemical composition, energy content, and processing required to produce a suitable fuel for use in the gas producer, is also included. The nature of the products and by-products of the gasification process is discussed. Mass and energy balances on the producer are calculated for each fuel trial. The process occurring in the producer is described. The influences of fuel moisture content, air input rate, fuel ash content and the form of the fuel on producer operation are discussed. A mathematical model using the techniques of chemical equilibrium is developed to predict gas composition from the fuel composition, fuel moisture content, and air to fuel ratio. Dissert. Abstr.

AUTOIGNITION CHARACTERISTICS OF AIRCRAFT-TYPE FUELS
Louis J. Spadaccini and John A. TeVelde Jun. 1980 88 p refs
(Contract NAS3-20066)
(NASA-CR-159886; R80-914617-1) Avail: NTIS HC A05/MF A01 CSCL 21D

The ignition delay characteristics of Jet A, JP 4, no. 2 diesel, cetane and an experimental referee broad specification (ERBS) fuel in air at inlet temperatures up to 1000 K, pressures of 10, 15, 20, 25 and 30 atm, and fuel air equivalence ratios of 0.3, 0.5, 0.7 and 1.0 were mapped. Ignition delay times in the range of 1 to 50 msec at freestream flow velocities ranging from 20 to 100 m/sec were obtained using a continuous flow test apparatus which permitted independent variation and evaluation of the effect of temperature, pressure, flow rate, and

fuel/air ratio. The ignition delay times for all fuels tested appeared to correlate with the inverse of pressure and the inverse exponent of temperature. With the exception of pure cetane, which had the shortest ignition delay times, the differences between the fuels tested did not appear to be significant. The apparent global activation energies for the typical gas turbine fuels ranged from 38 to 40 kcal/mole, while the activation energy determined for cetane was 50 kcal/mole. In addition, the data indicate that for lean mixtures, ignition delay times decrease with increasing equivalence ratio. It was also noted that physical (apparatus dependent) phenomena, such as mixing (i.e., length and number of injection sites) and airstream cooling (due to fuel heating, vaporization and convective heat loss) can have an important effect on the ignition delay. R.K.G.

ANALYTICAL TECHNIQUES FOR AROMATIC COMPONENTS IN AIRCRAFT. Final Report, 15 Jun. 1978 - 30 Jun. 1979
J. Scott Warner and Richard P. Kenan. Oct. 1979. 87 p. refs
(Contract F33615-78-C-2019; AF Proj. 3048)
(AD-A086343; AFAPL-TR-79-2093) Avail: NTIS HC A05/MF A01 CSCL 21/4

An ultraviolet detector was shown to be highly satisfactory for the selective determination of aromatic components in jet fuels. The detector was operated at 208 nm and used with a glass capillary column gas chromatographic system. The detector gave a linear response in the range of interest and could detect individual benzenes and naphthalenes in jet fuels at levels down to 0.1% and 0.02% respectively. A photoionization detector having a 9.5 eV source was found to be not sufficiently selective for aromatic hydrocarbons to be of value for fuel characterization. GRA

SIMULATIONS OF GAS PHASE DETONATION: INTRODUCTION OF AN INDUCTION PARAMETER MODEL
E. S. Oran, J. P. Boris, T. R. Young, Jr., M. Flanigan, M. Picone, and T. Burks (Science Applications, Inc., McLean, Va.). 25 Jun. 1980. 34 p. refs
(RR024241)
(AD-A087007; AD-E000488; NRL-MR-4255) Avail: NTIS HC A03/MF A01 CSCL 19/1

Detailed numerical simulations of supersonic reactive flow and gas phase detonation problems are very expensive due to their computer time and memory requirements. The bulk of this cost is in integrating the ordinary differential equations describing chemical reactions. A global induction parameter model has thus been developed which describes the chemical induction time of a mixture and allows for release of energy over a finite time period. The specific gases for which it has been calibrated are stoichometric mixtures of hydrogen and methane in air. The relatively inexpensive induction parameter model is then used in time-dependent one and two dimensional simulations of supersonic reactive flows. GRA

EXPLOSIBILITY OF EXPLOSIVE AND PROPELLANT DUST. Final Report
W. T. Moore, P. Lu, S. Roorda, B. Fishburn, N. Slagg, R. M. Rindner, and W. Seals. Jul. 1980. 43 p. refs
(AD-A087240; AD-E400449; ARLCD-TR-79045) Avail: NTIS HC A03/MF A01 CSCL 09/4

A specially designed flow system was constructed to obtain more detailed data on the effect of particle size and concentration on the spark ignition of propellant and explosive dusts. With this apparatus the concentration can be controlled over a 1.5 m (5 ft), and streak photography can be employed to determine the velocity of flames and/or explosion waves. Thus information on both ignition and propagation can be obtained. The ignition characteristics of M1 propellant, RDX, HMX, and ball powder were determined. The concentration was varied from 0.15 to 1.5 g/liter, and the particle size was from 75 to 225 micrometers. Ignition with subsequent flame propagation required a concentration of at least 0.15 to 0.3 g/liter for all dusts tested. Values from previous studies conducted in a Hartmann apparatus ranged from 0.1222 g/liter to 0.5 g/liter for some of the same materials with similar particle sizes. Thus the lower limits of ignition are in good agreement; however, due to the relatively small size of the Hartmann apparatus, direct comparisons of ignition at upper limits are difficult. GRA

ALLOY CATALYSTS WITH MONOLITH SUPPORTS FOR METHANATION OF COAL-DERIVED GASES. Quarterly Technical Progress Report, 21 Jun. - 20 Sep. 1979
Calvin H. Bartholomew. 5 Oct. 1979. 40 p. refs
(Contract EF-77-S-01-2729)
(FE-2729-8) Avail: NTIS HC A03/MF A01

Kinetic studies of monolithic Ni/Al2O3 revealed a shift in activation energy for methanation of CO above 573 K. In kinetic studies at high pressure rapid deactivation was observed for low loading monolithic catalysts. A one dimensional computer model for methanation over monolithic catalysts was developed to provide insight into experimental conversion vs. temperature data taken in this laboratory. A method for qualitatively determining sulfur on poisoned catalysts was developed and tested. Metal crystallite size distribution data obtained from transmission electron micrograph (TEM) studies on Ni/silica catalysts suggest that sintering may occur by both crystallite and atomic migration mechanisms. The TEM studies of 3% Ni/TiO2 reveal the presence of raft-like crystallites. These and other accomplishments are reported and discussed. DOE

EXPERIMENTAL PROGRAM FOR THE DEVELOPMENT OF PEAT GASIFICATION. TASK 2: HYDROGASIFICATION. TASK 3: FLUIDIZED-BED TESTS. Interim Report, 1 Oct. 1978 - 31 Jul. 1979
Feb. 1980. 72 p. refs
(Contract EX-76-C-01-2469)
(FE-2469-48; IR-7) Avail: NTIS HC A04/MF A01

The effects of temperature, hydrogen partial pressure, residence time, and particle size on product distribution and yields were determined. A total of thirty tests were conducted in an

entrained flow hydrogasification process development unit with Minnesota, North Carolina, and Maine peats. These tests were conducted at temperatures of about 1000 to 1500 F, hydrogen partial pressures of 0 to 250 psia, residence times of 2 to 30 seconds, and particle sizes of -10+100, -10+20, and -60+120 mesh. The results show that overall carbon conversion and hydrocarbon gas yield for the Minnesota peat are about 20% and 50% higher than those for North Carolina and Maine peats, respectively. R.C.T.

PRODUCTION OF SUGARCANE AND TROPICAL GRASSES AS A RENEWABLE ENERGY SOURCE Quarterly Reports, 1 Jun. - 30 Nov. 1979
A. G. Alexander. 1979. 73 p. refs.
(Contracts ET-78-S-05-5912; DE-AS05-78ET-20071)
(ORO-5912-T3; AES-UPR-C-481; QR-1/2) Avail: NTIS HC A04/MF A01

The principal yield trends for biomass included: (1) increased yields with delay of harvest frequency; (2) lack of response to narrow row spacing; and (3) lack of appreciable yield differences between varieties when allowed to reach maturity. First ratoon yields for both sugarcane and napier grass significantly exceeded the plant crop yields. For sugarcane, the average production of millable cane was 88.6 tons/acre year. Total dry matter (including trash) averaged 33.6 tons/acre year. Second year yield increases consisted largely of dry matter (32%) as opposed to green material (18%). The highest napier grass yields were about 91 green tons and 33 dry tons/acre year, approximately 29% and 35% higher than the year 1 output. Production costs for sugarcane amounted to $25.46/oven-dry ton, or about $1.70/million BTUs. Puerto Rico is presently paying around $4.00/million BTUs in the form of imported bunker C residual oil. Sucrose yields were quite low, averaging 6.6%, but total fermentable solids were comparable to the commercial sugarcane yields in Puerto Rico. L.F.M.

REFINING AND UPGRADING OF SYNFUELS FROM COAL AND OIL SHALES BY ADVANCED CATALYTIC PROCESSES. LABORATORY AND PILOT PLANT STUDIES OF THE PROCESSING OF SRC-1 Interim Report
R. F. Sullivan, B. E. Stangeland, H. C. Chen, and C. E. Rudy. Nov. 1979. 80 p.
(Contract EX-76-C-01-2315)
(FE-2315-45; IR-2) Avail: NTIS HC A05/MF A01

Solvent refined coal (SRC) from the SRC-1 process is a high melting solid material that contains large amounts of nitrogen, oxygen, and metallic contaminants and is low in hydrogen content. It is a feed that is extremely difficult to convert to transportation fuels in high yields using commercial fixed bed, catalytic hydroprocessing technology. It was demonstrated that SRC 1 can be hydrotreated in the presence of a coal derived solvent at moderate cracking conversions (e.g., 50% conversion to material boiling below 850 F) for at least 1000 hours without serious plugging of the catalyst bed. However, even at these relatively low conversion levels, catalyst deactivation rates are unacceptably high. With higher severity hydroprocessing, high conversion can be obtained and most of the heteroatoms can be removed. However, severe plugging occurs in the catalyst beds in a short period of time. We do not regard conversion of SRC-1 to transportation fuels by the routines here as being commercially feasible. DOE

UPGRADING OF COAL LIQUIDS: HYDROCRACKING OF EDS PROCESS DERIVED GAS OILS Interim Report
Frederick J. Riedl and Armand J. DeRosset. Nov. 1979. 120 p.
(Contract EF-77-C-01-2566)
(FE-2566-33) Avail: NTIS HC A06/MF A01

The applicability of commercial UOP catalysts and processes for hydrocracking coal derived distillates, produced by the Exxon Donor Solvent (EDS) process was evaluated. Process conditions within commercial ranges were selected to produce either fuel oil or gasoline. Hydrocracking was done in two stages. When operating in the gasoline mode, the first stage produced a high nitrogen product to be used in a series flow, two reactor, second stage hydrocracking process. When operating in the fuel oil mode, first stage operation produced a low nitrogen product to be used in a single reactor second stage hydrocracking process. The volumeric yields of C5(+) gasoline and butanes from the gasoline mode operation ranged from 105 to 115.5% and 18 to 26%, respectively. The octane number of the C5(+) gasoline ranged from 75 to 83 RON clear. The overall hydrogen consumption ran from 3300 to 4200 SCF/bbl, all of which can be supplied by reforming the gasoline and steam reforming the C1 to C4 gases. In the fuel oil mode, yield of environmentally acceptable distillate was about 88%. DOE

THERMOPHYSICAL PROPERTIES OF COAL LIQUIDS Quarterly Technical Status Report, 1 Jan. - 31 Mar. 1980
J. W. Droege, G. H. Stickford, and S. P. Chauhan. 15 Apr. 1980. 31 p.
(Contract DE-AC01-79ET-14941)
(BMI-2053; QTSR-2) Avail: NTIS HC A03/MF A01

Certain physical properties of coal solvent slurries, namely, viscosity, thermal conductivity, density, heat of reaction, and specific heat, as these slurries undergo dissolution reactions were determined. Major modifications to the viscometer were made, providing a lifting force more nearly constant with position of the bob, and a sensing coil for velocity measurements which gives a signal linear with velocity. The viscometer was calibrated with a series of liquids with a variety of viscous properties. The calibration constant varies somewhat with viscosity. A transient line source technique was selected for thermal conductivity measurements. A thin vertical wire acts both as heater and thermometer. When a current is passed through the wire, its temperature changes in a manner that depends partly on the thermal conductivity of the surrounding medium. Density determinations may be possible as a byproduct of the viscosity work. DOE

UPGRADING OF COAL LIQUIDS FOR USE AS POWER GENERATION FUELS Final Report
P. J. Angevine, M. Becker, R. B. Callen, M. J. Dabkowski, M. P. Granchi, L. A. Green, R. H. Heck, C. A. Simpson, S. S. Shih, and T. R. Stein. Dec. 1979. 247 p. refs. Sponsored by Electric Power Research Inst.
(EPRI Proj. 361-2)
(EPRI-AF-1225) Avail: NTIS HC A11/MF A01

Residual coal liquids were hydroprocessed in fixed bed unit to upgrade them to power generation fuels. A series of catalysts was evaluated for the desulfurization of short contact time (SCT) Solvent Refined Coal (SRC). Low sulfur (0.4 wt. %) boiler fuels were produced with hydrogen consumptions as low as 800 and 1200 scf/B from Indiana 5 regular SRC and W. Kentucky SCT SRC, respectively. Constant temperature aging runs were conducted with both regular and short contact time SRC. A kinetic aging model was developed to estimate process conditions and yields in either a fixed bed or ebullated bed reactor. Chemical characterization indicated that W. Kentucky SCT SRC molecules are significantly larger and more polar than those of Indiana 5 regular SRC. The high conversion of asphaltenes to less polar material does not appear necessary for SRC desulfurization. DOE

ADVANCED COAL GASIFICATION SYSTEM FOR ELECTRIC POWER GENERATION Quarterly Progress Report, 1 Oct. - 31 Dec. 1978
H. K. Altiner, M. J. Arthurs, E. J. Chelen, P. Cherish, Z. F. Hudson, S. Katta, D. L. Kearns, L. K. Rath, N. D. Rohatgi, L. A. Salvador et al. 30 Jun. 1979. 137 p. ref.
(Contract EF-77-C-01-1514)
(FE-1514-97) Avail: NTIS HC A07/MF A01

The operation of the PDU focused on testing of the single stage gasifier system using numerous coal feedstocks and oxygen and steam as the gasification media. Operating summaries with the significant results of these tests are described. Test TP-018-5 was the last shakedown test in an experimental test grid with highly caking Pittsburgh seam coal. This test grid was designed to show the effects of varying the oxygen and steam

flows on the higher heating value of the product gas on a dry basis. In addition, a slight modification to the oxidant tube geometry was examined during this test as well as in tests TP-019-1 and TP-019-2. The operability of the oxygen blown gasifier on more highly reactive feedstocks was explored in the TP-019 test series. Three coals successfully gasified ranged from Montana Rosebud sub bituminous coal to two highly volatile bituminous B rank coals: Indiana No. 7 and Western Kentucky No. 9. DOE

APPLIED RESEARCH AND EVALUATION OF PROCESS CONCEPTS FOR LIQUEFACTION AND GASIFICATION OF WESTERN COALS. Quarterly Progress Report, Jul. - Dec. 1979
Wendell H. Wiser. Mar. 1980. 12 p. refs.
(Contracts EX-76-C-01-2006; E(49-18)-2006)
(FE-2006-17). Avail: NTIS. HC A02/MF A01.

The experimental work on coal dissolution in hydrogen donor solvents was completed. The data are analyzed and interpreted to explain the major structural features of each high volatile bituminous coal examined. The findings are related to the heterogeneity, polymeric nature, aromaticity, aromatic cluster size and distribution of the clusters in the coal. The results are specific to the particular coal, but agree generally with the current understanding of coal structure. The effects of pressure, temperature, and contact time on sulfur removal were determined at a constant hydrogen/oil feed ratio of 5000:1 std cc H2/cc oil, one specific catalyst bed weight (equivalent stationary bed heights of about 5 in.) and one catalyst particle size (49 micron average diameter). Within the chosen operating range, the SRC allowed smooth and stable operation of the fluid bed without any agglomeration of the catalyst particles. Some typical results are shown. DOE

SIMULTANEOUS PHOTOPRODUCTION OF HYDROGEN AND OXYGEN BY PHOTOSYNTHESIS
Elias Greenbaum. 1979. 21 p. refs. Presented at 2d Symp. on Biotechnol. in Energy Production and Conserv., Gatlinburg, Tenn., 2-5 Oct. 1979.
(Contract W-7405-eng-26)
(CONF-791072-32). Avail: NTIS. HC A02/MF A01.

Results suggest that the photosynthetic production of hydrogen and oxygen represents an intriguing way to capture and convert solar energy into stored chemical free energy. It is particularly noteworthy that all three of the only known potential, direct photosynthetic watersplitting systems - blue-green algae, green algae, and the chloroplast-ferredoxin-hydrogenase system, have now been shown to photoproduce molecular hydrogen and oxygen simultaneously for prolonged periods of time. MATERIALS TECHNOLOGY FOR COAL-CONVERSION PROCESSES. Progress report, Jul. - Dec. 1979
1980. 95 p. refs.
(Contract W-31-109-eng-38)
(ANL-80-12; PR-19). Avail: NTIS. HC A05/MF A01.

Analysis of refractories exposed to slag attack during the last 500 h test run shows that complex spinels formed at the slag refractory interfaces of the chrome-spinel, alumina-chromia, and alumina refractories. Silicon carbide refractories reacted with iron oxides and produced a low melting ferrosilicon alloy and CO or CO2 gas. A high temperature ultrasonic erosion scanner was installed and field tested at the Solvent Refined Coal (SRC) coal liquefaction plant. Automatic data acquisition was accomplished through direct coupling to the SRC on site computer. The scanner has detected erosive wear in the SRC erosion corrosion test loop. Results suggest that as exposure time increases, a greater oxygen partial pressure is required for breakaway corrosion. Synergistic erosion corrosion studies conducted in a simulated coal gasification atmosphere at 815 C, with 150 Al2O3 at 22 m/s as erodant, show that Incoloy 800 was the most corrosion resistant alloy tested and 1015 carbon steel the least resistant. RESEARCH AND EVALUATION OF BIOMASS RESOURCES/CONVERSION/UTILIZATION SYSTEMS (MARKET/EXPERIMENTAL ANALYSIS FOR DEVELOPMENT OF A DATA BASE FOR A FUELS FROM BIOMASS MODEL) Quarterly Technical Progress Report, 1 Nov. 1979 - 31 Jan. 1980
Yong K. Ahn, Yung C. Chen, Herbert T. Chen, Richard W. Helm, Eric T. Nelson, Kevin J. Shields, Richard P. Stringer, and Richard C. Bailie (West Virginia Univ., Morgantown). 1980. 106 p.
(Contracts ET-78-C-02-5022; DE-AC02-78ET-20611)
(DOE/ET-20611/11). Avail: NTIS. HC A06/MF A01.

The biomass allocation model was developed and is undergoing testing. Data bases for biomass feedstock and thermochemical products are complete. Simulated data on process efficiency and product costs are being used while more accurate data are being developed. Process models for entrained bed and fixed bed gasifiers based on coal were adapted to biomass. Conceptual economics were generated for seven of the fourteen process configurations via a biomass economic computer program. Pulse tests in a fluidized bed to determine the effect of particle size on reaction rates and product gas composition were completed. Two hour shakedown tests using peanut hulls and wood as the biomass feedstock and the fluidized bed reactor mode were carried out. A comparison was made of the gas composition using air and steam. To date approximately 70 biomass types were collected. Thermal gravimetric, pyrogaschromatographic and effluent gas analysis were began on pelletized samples of these biomass species. DOE

DESIGN AND EVALUATION OF PROGRESSIVELY BURNING PYROTECHNIC FORMULATIONS
James L. Austing and Paul W. Cooper. 1980. 24 p. refs. Presented at the 7th Intern. Pyrotechnics Seminar, Vail, Colo., 14 Jul. 1980. Prepared in cooperation with Sandia Labs., Albuquerque, N. Mex.
(Contract EY-76-C-04-0789)
(SAND-80-0355C; CONF-800713-1). Avail: NTIS. HC A02/MF A01.

The design and evaluation of a pyrotechnic that burns for 2 ms and generates gas cubically with time is described. The charge is a mixture of two aluminum-plated pyrotechnics, viz., aluminum-potassium perchlorate (Al-KC104) and aluminum-vanadium pentoxide (Al-V2O5). The Al-KC104 is a gas generator, each gram of which produces 320 cc of gas (STP); the Al-V2O5, on the other hand, is a gasless pyrotechnic. Progressive generation of gas is achieved by utilizing mixtures of two pyrotechnics in increments that are progressively richer in gas generant, over a range of 14.6% to 100% Al-KC104 by weight. The deflagration rate of the system is a function of the Al-KC104 content, and ranges from 16.2 in./msec for a mixture with 14.6% Al-KC104 by weight to 30.0 in./msec for pure Al-KC104. An evaluation of the pyrotechnic charge fired in air showed that the design goals were adequately achieved. The growth of the gas cloud was monitored by high speed Fastax photography. DOE

MOLTEN SALT COAL GASIFICATION PROCESS DEVELOPMENT UNIT. Quarterly Technical Progress Report, Apr. - Jun. 1979
M. H. Slater. 30 Sep. 1979. 56 p.
(Contract EF-77-C-03-1429)
(SAN-1429-52; QTPR-13). Avail: NTIS. HC A04/MF A01.

The design, construction, and operation of a process development unit (PDU) which will convert 1 ton of coal per hour into low Btu gas is described. The third successful gasification run was performed. The solids feed system, the combustion air system, the gasifier/quench system, the ash removal system, the sulfur removal system, and the sodium carbonate regeneration system were all operated simultaneously as a single, integrated unit. The gasifier was operated at atmospheric pressure for a total of 272 continuous hours. Gas was produced with an average HHV of 88.6 Btu/scf while gasifying coal at a rate of 400 lb/hr. DOE

ENVIRONMENTAL IMPLICATIONS OF ACCELERATED GASOHOL PRODUCTION: PRELIMINARY ASSESSMENT
Jan. 1980 129 p refs
(Contract W-31-109-eng-38)
(ANL/ES-91) Avail: NTIS HC A07/MF A01

The environmental impacts of increasing US production of fuel ethanol by 330 million gallons per year in the 1980 to 1981 time frame in order to substitute gasohol for 10% of the unleaded gasoline consumed in the United States are assessed. Alternate biomass feedstocks are examined and corn is selected as the logical feedstock, based on its availability and cost. Three corn conversion processes that could be used to attain the desired 1980 to 1981 production are identified; fermentation plants that use a feedstock of starch and wastes from an adjacent corn refining plant are found to have environmental and economic advantages. If ethanol production is increased substantially after 1981, the environmentally acceptable use or disposal of stillage, a liquid by product of fermentation, could become a serious problem. DOE

(Contract DE-AC21-78MC-08332)
(AESD-TM-3026) Avail: NTIS HC A07/MF A01

The coalbed site was further explored to improve its definition as a methane fuel reservoir and to develop the design of a system capable of providing a large scale demonstration of the recovery of coalbed methane and utilization of it in an industrial application, i.e., process heat and electric power. Three new wells were cored and drill stem testing was conducted on two of them. The site was evaluated as containing 7960 mcf of coalbed methane per acre. The producing well, previously developed, continued in operation except for brief periods of shutdown for equipment maintenance. The well attained a peak flow rate of 85.3 mcf/day and an average daily flow rate in excess of 38 mcf. L.F.M.

PLANAR MECHANICS OF FULLY GROUTED CONCRETE MASONRY Ph.D. Thesis
Robert Oakford Nunn 1980 126 p
Avail: Univ. Microfilms Order No. 8018792

A continuum model for the behavior of fully grouted concrete masonry is developed. Both unreinforced and reinforced masonry are considered, but otherwise attention is restricted to a single material type. Data were taken from prisms of several configurations, and from 5 foot square panels cut at an angle relative to the joint system. The panels were tested under direct biaxial stresses with one edge in tension and the other in compression or stress free. The elastic behavior is found to be linear. The form of the elastic law describing this behavior is determined and the moduli are evaluated showing substantial anisotropy in stiffness. Hysteresis loops at several load rates are described, and the relation of these loops to the damping of structure is discussed. The significance of prism configuration and end conditions, and the relation of prism compressive strength to wall compressive strength are discussed. A law describing the dependence of unreinforced uniaxial tensile strength on direction shows moderate anisotropy in tensile strength and is incorporated into a law of unreinforced biaxial strength for the special case of principal stresses of opposite sign. Dissert. Abstr.

MICROCRACKING AND ENGINEERING PROPERTIES OF HIGH-STRENGTH CONCRETE Ph.D. Thesis
Ramon Luis Carrasquillo 1980 270 p
Avail: Univ. Microfilms Order No. 8020801

The differences in mechanical properties between high strength and normal strength concretes are established and those differences are explained in terms of differences in observed internal microcracking in concrete at different stages of loading. Concretes made using gravel and crushed limestone coarse aggregates at each of three different strength levels ranging from 4,000 psi to 11,000 psi were studied. The results of the microcracking study and the study of the mechanical properties are presented. A criterion for definition of failure in uniaxial compression for the concretes tested is presented. Failure is considered to occur at the discontinuity point defined as that point when a self propagating microcracking mechanism is developed eventually causing disruptive failure with time. The predicted stress and strain ratios at discontinuity based on the microcracking study are compared to those at which sudden changes occur in the Poisson's ratio and volume change curves. Dissert. Abstr.

MOORING DYNAMICS: COMPUTER MODELS AND EXPERIMENTS AT A SIXTY FOOT SCALE
David B. Dillon Jul. 1980 95 p refs
(Contract N00014-78-C-0273)
(AD-A086854; EG/G-TR-4999-0004) Avail: NTIS HC A05/MF A01 CSCL 20/4

The U.S. Navy Civil Engineering Laboratory is conducting a series of dynamic cable experiments in order to evaluate computer models of cable systems used in the ocean. The results of an experiment using 60 foot cables are compared to two computer simulations in this report. Other experiments at scales of six feet and 2,500 feet have been performed. Three cases from the experiment conducted in the hydroballistics tank of the Naval Surface Weapons Center in 1976 are compared to the SNAPLOAD and SEADYN computer models. Two of the runs simulate the anchor-last deployment of a mooring, the third shows the relaxation of a mooring displaced laterally, then released. The quality of the experimental data is evaluated by comparing each case to the static, elastic catenary equations at the start and finish of each run. The measured positions of points along the static catenaries are found typically to agree with the catenary calculations within 1 to 2 percent of the cable length. Tension measured at the fixed end typically agrees with the calculated value within about 12 percent. GRA

HYDRODYNAMICS OF TURBOMACHINES Final Report
A. J. Acosta May 1980 7 p refs
(Contracts N00014-67-A-0094; N00014-76-C-0156)
(AD-A086873) Avail: NTIS HC A02/MF A01 CSCL 13/10

The present concerns have been primarily with applications to flows of liquids in turbomachines rather than gases. Each medium has its own special problems in addition to the common basis in fluid mechanics. Liquid flows in particular are subject to cavitation when the pressure falls below the vapor pressure. Cavitation is a major element in many applications of naval hydrodynamics. Here the 'turbomachine' is the propulsion system and cavitation on the components of this system, primarily the rotor or propeller, may cause intense noise, if the extent of cavitation is small, significant material erosion if there is a somewhat larger amount of cavitation, or a major performance change (loss of thrust, efficiency, etc.) when there is a large extent of cavitation. The establishment of conditions for the onset of cavitation is then an important feature in almost all naval hydrodynamic applications. Just this particular problem has been the source of much recent effort in cavitation inception research and has been a feature of some of the present work herein. GRA

USE OF FABRICS AND OTHER MEASURES FOR RETARDING REFLECTIVE CRACKING OF ASPHALTIC CONCRETE OVERLAYS Final Report
Ralph D. Jackson Mar. 1980 22 p refs
(Contract DOT-FA78WAI-837)
(AD-A085851; WES/MP/GL-80-2; FAA-RD-80-8) Avail: NTIS HC A02/MF A01 CSCL 13/2

Prevention or control of reflection cracks in asphaltic concrete overlays has been a problem from the inception of this type of construction. The many different treatments that have been tried in an effort to solve this problem are: (1) reinforcement within and below the overlay, (2) bond breakers, (3) stress relieving layers, (4) asphalt-mix additives, and (5) placement of fabrics between the existing pavement and the overlay. At the present time, no treatment has been tried that will completely prevent the formation of reflection cracks. Some treatments do delay the formation of cracks, while others do not appear to help at all. Indications are that fabrics do have some beneficial effects, such as a moisture barrier, even though the overlays develop reflection cracks. The fabrics that have been tried for the control of reflection cracks included: (1) Petromat, (2) Bidim, (3) Typar,

(4) Cerex, (5) Mirafi, (6) Structofors, (7) Bituthene, (8) Protecto-Wrap, and (9) Fiberglass. Asphalt-rubber interlayers, as formulated by the Arizona Refining Company and the Sahuaro Petroleum Company, show promise in retarding reflection cracks. GRA

MANUFACTURE OF SUPERCONDUCTING WIRE Progress Report, 1 Feb. - 15 Oct. 1979
B. Avitzur, Y. T. Chou, S. Talbert, and R. Wu. Oct. 1979 79 p refs
(Contract DE-AC02-79ER-10367)
(DOE/ER-10367/2) Avail: NTIS HC A05/MF A01

Aspects of the manufacturing technology for superconducting wires are addressed. The typical present day procedure to assemble a billet, extrude and draw it, with intermediate and final anneals, is described. Then an hypothetical production line with potential alternative processes along the entire path from heavy billet to fine wire, is laid out. Several processes at different stages of development, are offered, with the message that their potential must be explored for the development of a more reliable product, at a more economical production cost. An analysis of core fracture and its prevention during the process of drawing is provided. Treatment of velocity fields for a bi-metallic rod leads to the determination of criteria for the prevention of fracture. The criteria are presented graphically. Finally, the micro properties of superconducting wires are examined. A modification of the bronze method for niobium-tin superconductors is proposed. DOE

PREDICTION OF EARTHQUAKE RESISTANCE OF STRUCTURES Final Report
Ping-Chun Wang. 20 Jan. 1980 200 p refs
(Grant NSF PFR-76-14893)
(PB80-170731; NSF/RA-800013) Avail: NTIS HC A09/MF A01 CSCL 13M

Methods of predicting structural resistance to earthquakes were studied. Particular emphasis was given to developing an upper bound or critical ground excitation for a structure of major importance, so that a high level of confidence in the prediction of structural resistance may be achieved. Both linear and nonlinear structures were considered. The method was applied to several nuclear reactors. Results indicate that the method is conservative but not overly so. The responses from the critical excitation are in the range of 1.1 to 2 times those produced by recorded earthquakes of the same intensity. GRA

DEVELOPMENT STUDY OF A NOVEL CONTINUOUS-FLOW IMPACTOR Final Report, Jul. 1976 - Nov. 1978
E. F. Brooks, N. Gat, M. E. Taylor, T. E. Chamberlain, R. J. Golik, and R. Watson. Jan. 1980 127 p refs
(Contract EPA-68-02-2165)
(PB80-179286; EPA-600/7-80-014) Avail: NTIS HC A07/MF A01 CSCL 13B

Results of a development study involving feasibility verification of a novel particle impactor in which the impaction surface is the interface between two opposing jets are given. Particles cross the interface between the aerosolladen gas and a previously particle-free gas, are entrained in the latter, and are conveyed out for analysis. Work consisted of an initial literature search and analysis, followed by design, fabrication, and testing of a laboratory unit. A good particle separation capability was demonstrated. A design effort showed the feasibility of a staged in situ particle monitoring subsystem to give semicontinuous output of particle size distribution. GRA

COMMONALITY OF EARTHQUAKE AND WIND ANALYSIS Ph.D. Thesis
Pedro J. Cevallos-Candau and W. J. Wall. Jan. 1980 210 p refs
(Grants NSF ENV-75-08456; NSF ENV-77-07190)
(PB80-178312; UILU-ENG-80-2002; SRS-472; NSF/RA-800022) Avail: NTIS HC A10/MF A01 CSCL 13M

The common features of general dynamic analysis procedures employed for evaluating the effects of wind and earthquake excitation were investigated. A major goal was to investigate and develop a basis for generating response spectra for wind loading, which in turn would permit the use of modal analysis techniques for wind analysis in a manner similar to that employed for earthquake engineering. Random vibration techniques were applied for developing response spectra for wind loading. In order to generate wind response spectra, the wind loading is divided into two parts, a mean load treated as a static component and a fluctuating load treated as a dynamic component. The spectral representation of the wind loading constitutes a simple procedure for estimating the forces associated with the dynamic component of the gusting wind. GRA

SIMPLE AND COMPLEX MODELS FOR NONLINEAR SEISMIC RESPONSE OF REINFORCED CONCRETE STRUCTURES
Mehdi Saiidi and Mete A. Sozen. Aug. 1979 194 p refs
(Grant NSF PFR-78-16318)
(PB80-182413; UILU-ENG-79-2013; SRS-465; NSF/RA-790388) Avail: NTIS HC A09/MF A01 CSCL 13M

The possibility of simplifying the nonlinear analysis of reinforced concrete structures subjected to severe earthquakes was investigated. One thrust was a microscopic study of the simple models leading to acceptable results. For this phase, a multi-degree nonlinear model was developed to analyze rectangular reinforced concrete frames for given base acceleration records, and which is capable of accepting a collection of hysteresis systems, some previously used and others developed in the course of this project. The second phase comprised a macroscopic study which included development of a simple model that resulted in a reasonably close estimate of nonlinear response. A given structure was viewed as a single degree of freedom system which recognized stiffness changes due to the nonlinearity of material. GRA

DESIGN AND CONSTRUCTION OF LARGE-PANEL CONCRETE STRUCTURES. REPORT 6: DESIGN METHODOLOGY
Donald M. Schultz. Mar. 1979. 118 p. refs.
(Contract HUD-H-2131R)
(PB80-189137; HUD-0001431) Avail: NTIS
HC A06/MF A01 CSCL 13M

The structural integrity of large panel concrete buildings under abnormal conditions is considered with emphasis on the importance of the design strengths of large panel structures and their individual elements. Topics covered include the scope, limitations, and definitions involved in the design methodology, some general considerations of analysis and design, and minimum requirements for integrity. Foundations, floor and roof elements, walls, joints, and connections between precast members are discussed and details of handling, assembly, and erection, and special provisions for seismic and wind design are included. An appendix on site planning considerations is provided. GRA

THE CALIBRATION OF ANGLE BLOCKS BY INTERCOMPARISON. Final Report
Charles P. Reeve. Apr. 1980. 27 p. refs.
(PB80-182132; NBSIR-80-1967) Avail: NTIS
HC A03/MF A01 CSCL 14B

The calibration of angle blocks at the National Bureau of Standards is described. Test blocks normally come in sets of 16 nominal sizes from 1 second to 45 degrees. Their angular values are calibrated by intercomparison with NBS master angle blocks and other test blocks of the same nominal size. Each test block is also measured for its maximum out-of-flatness and out-of-squareness. Statistical tests are performed in order to maintain control over the short term and long term variability of the measurement process. A complete description of the measurement process is given with special attention paid to the mathematical model for the measurements and the least squares estimation of the angular values. The method for determining the standard deviations of the short term and long term errors is also given. GRA

THE INFLUENCE OF RANDOM MEDIA ON THE PROPAGATION AND DEPOLARIZATION OF ELECTROMAGNETIC WAVES. Ph.D. Thesis
Jerry Michael Harris. 1980. 111 p.
Avail: Univ. Microfilms. Order No. 8018891

A discrete model for the continuous random medium is developed by dividing the volume occupied by the inhomogeneities into independent elementary scattering volumes. Scattering by each of these elementary volumes is analyzed to obtained the complex amplitude and polarization of the single scattered field. Then multiple scattering among the many elementary volumes is used to estimate the composite values for scattering per unit length and depolarization per unit length of the medium. The manifestation of scattering in the medium is the generation of an incoherent or fluctuating electric wavefield and a coherent or average electric wavefield. It is shown that the total electrical wavefield propagating in the medium satisfies an integral equation which is directly reducible to the classical equation for radiation transfer. Two phenomenological parameters are needed to describe the penetration of the wave into a plane-parallel medium, when a polarized plane wave is normally incident. These parameters appear as diffusion constants in expression for the solution for the coherency and Stokes matrices. These solutions describe how wave energy is progressively converted from the initially coherent and polarized field to an incoherent and unpolarized field as the wave propagates. Dissert. Abstr.

A SEARCH FOR ADVANCED FIELDS IN ELECTROMAGNETIC RADIATION. Ph.D. Thesis
Jeffrey David Schmidt. 1980. 209 p.
Avail: Univ. Microfilms. Order No. 8019697

An experiment to search for an advanced component of electromagnetic radiation, as suggested by the time symmetry of Maxwell's equations was conducted. A dipole transmitting antenna was driven periodically with 10.2 GHz microwave pulses of 12 ns duration and 4 watt instantaneous power. A receiving dipole antenna at a distance R = 10m away was instrumented to search for power above noise received in a time gate at a time r/c prior to transmission of each pulse. Data were integrated over 10 to the 7th power pulses. The experiment was performed at Lick Observatory, atop Mt. Hamilton, CA, to enable placement of the antennas so that a line connecting them, when extended to infinity in both directions, encounters no local complete absorber. Defining R to be the ratio of signal power in the advanced time gate to power received in a corresponding retarded gate at time r/c after pulse transmission, a limit is obtained: R < 10 to the -11.5th power. Runs were also made using dielectric microwave lenses placed to focus an advanced radiation component, yielding a more theory dependent result: R > 10 to the 14th power. Dissert. Abstr.

CERENKOV RADIATION IN DIELECTRIC-LOADED WAVEGUIDES. Ph.D. Thesis
Kevin Lee Felch. 1980. 224 p.
Avail: Univ. Microfilms. Order No. 8019066

The use of Cerenkov radiation as a source of high frequency, high power microwave radiation is dealt with in detail. Using the Cerenkov interaction, when a relativistic electron beam is passed down the center of a dielectric-lined waveguide, microwave radiation at frequencies in excess of 150 GHz and power levels of about 1 W were produced. In addition, microwave radiation with approximately 1 kW of peak power at frequencies between 20 GHz and 35 GHz were observed. These results and a theoretical model serve to explain many of the experimental observations and the basic scaling of such a Cerenkov microwave generator. By the proper manipulation of the various parameters of the experiment it is shown theoretically how a Cerenkov generator might be scaled in such a way as to be a viable source of high power, submillimeter radiation. Finally, specific methods which may be applied to the present experimental efforts in order to investigate the various ways in which higher output frequencies and powers may be obtained. Dissert. Abstr.

EDGE EFFECTS IN LOW SIDELOBE ARRAY ANTENNAS. Ph.D. Thesis
Leonard Howard Yonnks. 1980. 159 p.
Avail: Univ. Microfilms. Order No. 8018630

The influence of the edge effects, which fall in the category of systematic errors, on the sidelobe performance of a very low sidelobe antenna was examined. This was accomplished by examining the problem of an infinite linear parallel plate array with strip blockage. The analysis was performed by deriving a Fredholm integral equation of the first kind for the electric field in the array aperture. The integral equation was subsequently solved using the moment method to obtain the aperture field.

the reflection coefficients, and the radiation patterns, or element factors, of each the elements. Solutions were obtained for waveguide arrays excited with both TE wave and TEM waves. An efficient method of computing the element factors of the elements in either the special array under study or in a uniform array was introduced. The contribution of edge effect to antenna sidelobes was quantified by introducing the element factor error function. By examining the upper bound on the sidelobe contribution due to edge effects, it was shown that the antenna size has a lower bound below which the edge effect sidelobe contribution may not be neglected. Dissert. Abstr.

N80-30583 Drexel Univ., Philadelphia, Pa.
PROPAGATION IN A DIELECTRIC WAVEGUIDE USING THE GREEN'S FUNCTION METHOD Ph.D. Thesis
Louis Anthony Pitale 1980 75 p
Avail: Univ. Microfilms Order No. 8019354

The Green's function response of a two dimensional linear, homogeneous, isotropic, lossless, planar dielectric waveguide to an elemental electric current source is described. The source is located within the waveguide transverse to the direction of propagation. Solutions are found by first considering the associated one dimensional transverse transmission line problem. A field point is chosen at different points within the waveguide showing the field distribution in terms of the various singularities of the asymptotic form of the Green's function. Extensions to the Hertz potential and to electric and magnetic fields are shown. Responses to longitudinal electric current sources and transverse and longitudinal magnetic current sources are also indicated. Applications to transverse deterministic and stochastic inhomogeneous waveguide media and the dyadic Green's function construction is noted. Dissert. Abstr.

N80-30584 Virginia Polytechnic Inst. and State Univ., Blacksburg.
CW AND PULSED BEAM PROPAGATION IN FOCUSING MEDIA WITH RANDOM-AXIS MISALIGNMENTS Ph.D. Thesis
Stelios John Patsiokas 1979 119 p
Avail: Univ. Microfilms Order No. 8020223

A statistical technique which allows the asymptotic evaluation of second- and higher-order statistical observables related to the stochastic complex parabolic equation, without having first to derive equations for second- or higher-order coherence functions was applied to the problem of CW and pulsed beam propagation in a focusing medium characterized by random-axis misalignments. Particular emphasis is placed on the computation of second- and fourth-order physical observables (e.g., the spreading of the mean CW intensity, the variance of on- and off-axis intensity fluctuations, etc., as well as the on-axis ensemble-averaged pulse intensity). Dissert. Abstr.

N80-30585 Polytechnic Inst. of New York.
ON THE EXTRAPOLATION OF BAND-LIMITED SIGNALS Ph.D. Thesis
Christodoulos C. Chamzas 1980 210 p
Avail: Univ. Microfilms Order No. 8019391

The determination of the Fourier Transform of a band-limited signal in terms of a finite segment is examined. The Papoulis' Extrapolation Algorithm is extended in a broader class of signals and its convergence is considerably improved by a multiplication with an adaptive constant, chosen to minimize the mean square error in the extrapolation interval. The discrete version of the iteration is examined and then modified in order to converge to the best linear mean square estimator of the unknown signal when noise is added to the given data. The problem of determining the frequencies, amplitudes and phases of a sinusoidal signal from incomplete noisy data, is considered and the extrapolation algorithm is properly modified to estimate these quantities. The obtained iteration is nonlinear and adaptively reduces the spectral components due to noise. The adaptive extrapolation technique is applied to the problem of image restoration for objects consisting of point or line sources, and to an ultrasonic problem. Dissert. Abstr.

N80-30586 Cincinnati Univ., Ohio.
THE PROPAGATION OF ELASTIC WAVES IN HETEROGENEOUS MEDIA Ph.D. Thesis
James S. Kelm 1980 152 p
Avail: Univ. Microfilms Order No. 8021073

Approximate solutions are presented for the case of general properties in the media. Solutions are developed for a transformed canonical form of the well known wave equation, referred to as the Klein-Gordon form. These approximate solutions use as a basis, the constant coefficient exact solution in their development. Solutions restricted to the wavefront (or arrival time) and far field time domains are developed. Also, a solution is developed for slowly varying coefficients of the Klein-Gordon equation. This solution provides an accurate representation of wave propagation throughout the time domain. The solution is particularly useful in predicting transient pulse propagation and the ensuing local tailing or reflection of the wave in media with rapidly varying properties. The solution techniques presented complement and extend the work available in the literature. These techniques provide greater insight to the problem of elastic wave propagation in heterogeneous media and can be applied in a reasonably simple manner. Dissert. Abstr.

GENERATION AND INJECTION OF E.M. WAVES IN SPACE PLASMA BY MEANS OF A LONG ORBITING TETHER Semiannual Progress Report, 11 Dec. 1979 - 10 Jun. 1980
Jul. 1980 44 p refs
(Contract NAS8-33520)
(NASA-CR-161533; SAPR-1) Avail: NTIS HC A03/MF A01 CSCL 20N

The generation and injection of electromagnetic waves in space plasma by means of a long orbiting tether are considered. The objectives include an estimation of the portions of the primary electrodynamic power developed by the tether that goes to excite each of various wave generation and injection mechanisms expected to be present during a tether's orbital flight, an evaluation of the signal levels associated with each one of the mechanisms above, and verification of their detectability with state-of-the-art instrumentation on the Earth surface or elsewhere. The generation and injection of Alfven waves and electron whistler waves were identified as the most relevant mechanisms activited by the electrodynamic tether. The physical mechanisms that govern these two families of phenomena were investigated and the ratio between the power that goes in Alfven waves and in whistlers was derived. The analysis of the possible production of accelerated electrons by the electrodynamic tether was initiated. E.D.K.

DISTRIBUTION OF PACKET DELAY AND INTERDEPARTURE TIME IN CARRIER SENSE MULTIPLE ACCESS
Fouad A. Tobagi 1 Apr. 1980 37 p refs
(Contract DAAG29-79-C-0138)
(AD-A086446; TR-187; ARO-16783.1-A-EL) Avail: NTIS HC A03/MF A01 CSCL 17/2

Existing analysis of the carrier sense multiple access mode (CSMA) has led to the determination of the average channel performance in terms of average throughput and average packet

delay. This was achieved by formulating a semi-Markovian model for CSMA channels with a finite population of users. In this paper, it is shown that, using the same model, it is possible to derive the actual packet delay distribution. The analysis is similar in nature to that provided for slotted ALOHA channels. These results are useful in the design of systems intended for real time applications such as digitized speech, and in the analysis of multihop packet radio systems. GRA

PATTERN ANALYSIS OF A HORN ANTENNA IN THE PRESENCE OF OBSTACLES
W. D. Burnside and C. S. Kim. Feb. 1980. 44 p. refs.
(Contract N62269-78-C-0379; WO6380000)
(AD-A086426; ESL-711588-1; NADC-80095-30) Avail: NTIS
HC A03/MF A01 CSCL 20/14

It is suggested that the geometrical theory of diffraction (GTD) can be applied to problems in which the single antenna considered previously is replaced by a large array. It is demonstrated that GTD can successfully predict the low scattering associated with a pattern side lobe hitting a plate or set of plates. In that it is not pertinent what created the low side lobe which intersects the plate, a rectangular horn is used as the source in that it is much simpler to control experimentally. Based on many comparisons between calculated and measured results, it appears that GTD can accurately predict these low scattering levels, i.e., especially accurate for at least the first 20 dB below the maximum plate illumination level. E.D.K.

THE MAGNETIC CHARACTERISTICS OF TAPE WRAPPED CYLINDRICAL FERROMAGNETIC LAMINATIONS FOR FREQUENCIES BELOW 50 KHZ
Louis J. Dalsass. 22 Feb. 1980. 19 p. refs.
(AD-A086333; NUSC-TM-791227) Avail: NTIS
HC A02/MF A01 CSCL 09/3

The leakage magnetic fields from magnetic devices are known to create EMI problems for sensitive shipboard VLF receivers and sonar equipment. Devices which contain ferromagnetic cores can be particularly significant EMI offenders because of the high flux densities available in their magnetic circuits. This memorandum discusses the magnetic characteristics of various laminated cores found in shipboard equipment (with source frequencies extending into the VLF band). Test results are presented for an open tape cylindrical lamination containing an axial and radial air gap. Although this is a more complicated magnetic circuit, its behavior is shown to be identical to predictions derived for simple lamination shapes without air gaps for frequencies up to 50 kHz. GRA

SYNTHESIS OF MCJ CODES. Interim Report
Hugo M. Beck. 4 Apr. 1980. 21 p. refs.
(AD-A086778; AD-E000444; NRL-8393) Avail: NTIS
HC A02/MF A01 CSCL 09/4

Constructive techniques are given for the encoding and decoding of Massey-Costello-Justesen (MCJ) error control block codes. These codes form a family of maximum distance separable (MDS) codes distinct from the Reed-Solomon (RS) codes. The MCJ codes offer ease of encoding and decoding for either hardware or software implementations, based on the more natural Galois ground field mathematical operations involved in the associated algorithms. Because of inherent burst error control capabilities, these codes can be considered for channel error protection as well as for end-to-end message error control. GRA

A NEW CLASS OF PULSE COMPRESSION CODES AND TECHNIQUES. Interim Report
B. L. Lewis and F. F. Kretschmer. 26 Mar. 1980. 26 p. refs.
(SF12141491)
(AD-A086787; AD-E000442; NRL-8387) Avail: NTIS
HC A03/MF A01 CSCL 17/9

A new class of symmetrical polyphase codes is introduced that promises to be very useful in pulse expander-compressor circuits for radar systems. These codes are very compatible with digital signal processing techniques. The code symmetry permits digital pulse expander-compressors to be implemented with less hardware than required with any previously known code. Another significant advantage of the new codes is that precompression bandwidth limiting such as normally would be found in any well-designed radar actually improves the mainlobe to sidelobe ratios obtainable with the new codes while it degrades that obtainable with the previously known Frank code. GRA

INTERACTION BETWEEN A PARALLEL-PLATE EMP SIMULATOR AND A CYLINDRICAL TEST OBJECT. Final Report
J. Lam. Kirtland AFB, N. Mex. AFW. May 1980. 41 p. refs.
(Contract F29601-78-C-0045; AF Proj. 3763)
(AD-A086815; AD-E200519; DC-FR-1299-3;
AFWL-TR-79-138) Avail: NTIS HC A03/MF A01 CSCL 20/14

The interaction between a bounded-wave EMP simulator and a test object is studied with a geometrical model. The model consists of a finite, open-ended cylinder inside a parallel-plate waveguide. The interaction problem is formulated exactly by means of an integrodifferential equation, which is subsequently reduced to a matrix equation. An approximate analytical solution of the matrix equation is obtained. The singularities of the solution in the complex-frequency plane are investigated. The effects of the simulator/test-object interaction on the pole singularities are numerically evaluated. GRA

DISCRETE AND CONTINUOUS SPECTRA OF FINITE-WIDTH, PARALLEL-PLATE SIMULATOR FIELDS Final Report
F. C. Yang Kirtland AFB, N. Mex. AFWL May 1980 108 p refs
(Contract F29601-78-C-0045; AF Proj. 3763)
(AD-A086813; AD-E200518; DC-FR-1299-2; AFWL-TR-79-137) Avail: NTIS HC A06/MF A01 CSCL 20/14

The discrete (referred as modes) and continuous spectra of finite-width, parallel-plate simulator fields are investigated. Formulas suitable for numerical calculation are obtained for both the transverse-magnetic (TM) and transverse-electric (TE) fields. Numerical results for the propagation constants and the field distributions of the higher order TM modes are presented. It is found that in the working volume of the parallel-plate simulator some of the higher-order TM modes resemble those of a closed waveguide, and the field of the continuous spectrum decays at least as z-2 for waves propagating along the z-direction. PARALLEL-PLATE TRANSMISSION LINE TYPE OF EMP SIMULATORS: SYSTEMATIC REVIEW AND RECOMMENDATIONS Final Report
D. V. Giri, T. K. Liu, F. M. Tesche (LuTech, Inc., Albuquerque, N. Mex.), and R. W. P. King (Harvard Univ.) Kirtland AFB, N.Mex. AFWL May 1980 169 p refs
(Contract F29601-78-C-0045; AF Proj. 3763)
(AD-A086814; AD-E200520; DC-FR-1299-4) Avail: NTIS HC A08/MF A01 CSCL 20/14

This report presents various aspects of the two-parallel-plate transmission line type of EMP simulator. Much of the work is the result of research efforts conducted during the last two decades at the Air Force Weapons Laboratory, and in industries/universities as well. The principal features of individual simulator components are discussed. The report also emphasizes that it is imperative to hybridize our understanding of individual components so that we can draw meaningful conclusions of simulator performance as a whole. GRA

EXCITATION OF THE PARALLEL-PLATE SECTION OF A BOUNDED WAVE EMP SIMULATOR BY A CONICAL TRANSMISSION LINE Final Report
J. Lam Kirtland AFB, N. Mex. AFWL May 1980 55 p refs
(Contract F29601-78-C-0045)
(AD-A086812; AD-E200517; DC-FR-1299-1; AFWL-TR-79-136) Avail: NTIS HC A04/MF A01 CSCL 20/14

The excitation of a parallel-plate electromagnetic pulse (EMP) simulator by an electromagnetic pulse via a conical transmission line is analyzed. The analysis first establishes an exact formulation of the problem by use of the technique of electric-field integrodifferential equations. It then goes over to a simpler, approximate formulation in the form of an integrodifferential equation for the total longitudinal surface current flowing on the simulator. This equation is further transformed into an integral equation, and the model structure of its solution investigated. A self-consistent method for solving the integral equation is developed. An analytical formula for the current in the transverse-electromagnetic (TEM) mode is thereby obtained. The analysis concludes with a numerical study of the TEM current and its variation with the parameters of the simulator geometry. GRA

RADIO RECEIVER, SPURIOUS RESPONSE: TEST OPERATIONS PROCEDURE Final Report
12 May 1980 15 p
(AD-A086463; TOP-6-2-545) Avail: NTIS HC A02/MF A01 CSCL 17/2

This TOP determines and measures the spurious responses of AM/FM radio receivers by using commonly available test instrumentation. It has general applicability to all receivers, including image, intermediate frequency (IF) feed-through, local oscillator related, and extraneously produced spurious responses. Spurious responses are signals propagated at frequencies outside of the tuned principal response frequency to which the receiver responds with measurable output power. They reveal frequencies where the receiver is most susceptible to undesired signals (jamming). GRA

SPECTRAL ANALYSIS OF SCINTILLATION DATA TAKEN FROM AN AIRCRAFT, PART 1 Final Report, Oct. 1976 - Oct. 1979
Theodore B. Barrett Hanscom AFB, Mass. AFGL Feb 1980 83 p refs
(Contract F19628-76-C-0296; AF Proj. 7663)
(AD-A086837; AFGL-TR-80-0055-Pt-1; Rept-0296-1) Avail: NTIS CSCL 20/14

This report provides theoretical background material for the development of a thin phase screen model for radio scintillation. This model is then used to derive an expression for the expected amplitude scintillation spectra (spectral density funciton) which might be observed in a geometry which includes a satellite based transmitter, an aircraft based receiver and a thin, intermediate scintillation-producing medium. A computer procedure was developed for testing the model under various geometries and for various parameters describing the bulk properties statistical properties of the medium. In addition to the development of a theoretical model, this report includes material on experimental spectral analysis and, in particular, details on a spectral analysis procedure which was used on amplitude scintillation and data gathered from an aircraft in geomagnetic equatorial regions. GRA

WAVE PROPAGATION IN HONEYCOMB AND FOAM-CORE PANELS FOR APPLICATION TO PANEL NDE Final Technical Report, 1 Jul. 1977 - 11 Oct. 1979
Henry L. Bertoni and S. K. Park Griffiss AFB, N.Y. RADC Apr. 1980 141 p refs
(Contract F19628-77-C-0130; AF Proj. 2305)
(AD-A086667; RADC-TR-80-112) Avail: NTIS HC A07/MF A01 CSCL 13/13

For rapid inspection, it is most useful to consider acoustic waves traveling along the larger dimensions of the panels. A study was made of the waves propagating in the honeycomb itself, particularly in the frequency range where the wavelength is on the order of the cell diameter. The characteristics of Bloch waves propagating in a honeycomb of infinite extent were calculated. At low frequencies, the honeycomb was found to act as an elastic continuum. At high frequencies, the periodicity and anisotropy of the honeycomb affect the propagation of the Bloch waves, and result in the presence of stop bands for propagation in certain directions. Computations of the frequency dependence, direction dependence, and polarization of the Bloch waves were made. In addition, the propagation characteristics

of the waves guided by an aluminum face plate bonded to a honeycomb of semi-finite extent were studied in the low frequency range where the honeycomb acts as an elastic absorber. It was found that the presence of the honeycomb strongly perturbs the waves guided by the face plate, so that one can expect to inspect for de-bonded regions by measuring propagation characteristics. Similar results were found for a foam core bonded to an aluminum face plate. In this case, a glue layer bonding face plate to the foam was also considered and found to have a significant effect on the guided waves. GRA

ADAPTIVE TIME DELAY CIRCUITRY FOR INTERFERENCE CANCELLATION SYSTEMS. Final Technical Report, 30 Oct. 1978 - 31 Oct. 1979
Donald E. Clark and William A. Hardell. Griffiss AFB, N.Y. RADC Apr. 1980. 58 p. refs.
(Contract F30602-78-C-0120; AF Proj. 2338)
(AD-A086326; GIT-A-2287(F)) Avail: NTIS
HC A04/MF A01. CSCL 09/1

The objective of this research program was to study and investigate variable time delay techniques for use in interference cancellation systems so as to improve their performance. A comprehensive survey of past research pertaining to HF, VHF, and UHF variable time delay techniques was undertaken. The survey also included microwave variable time delay techniques that are adaptable to the lower bands. As part of this program, variable delay lines were constructed and experimental measurements performed. Specifically, two types of delay lines were investigated, one using a coaxial transmission section with a helix surrounding a ferrite rod and the other a powdered ferrite and dielectric loaded coaxial section. The report presents experimental results over the HF, VHF, and UHF bands. GRA

MODELING OF PULSES HAVING ARBITRARY AMPLITUDE AND FREQUENCY MODULATION. Ph.D. Thesis
Francis Martin Lunney. Mar. 1980. 150 p. refs.
(AD-A086567) Avail: NTIS. HC A07/MF A01. CSCL 09/4

A model is developed which provides for the generation of the approximate spectra of pulsed signals with arbitrary amplitude and frequency modulation. Error bounds associated with the model are developed providing an insight into performance accuracy. The concept of using two approximate spectra to generate a more exact spectrum by means of computationally trivial calculations is addressed. The model is used to validate the feasibility of using frequency domain discriminants in the signal classification process. GRA

HC A05/MF A01. CSCL 17/2

An efficient contention resolution scheme has been developed by Gallager to be used in allocating usage of common channel to a large number of independent transmitters. Time is divided into equal size intervals called slots. Message transmissions begin only at slot boundaries and do not overlap boundaries. Depending on the channel history, as monitored by the users, the algorithm defines a system-wide 'transmission interval' at the beginning of each slot. A user can only transmit when it possesses a message with a generation time falling at the current transmission interval. This algorithm is modelled as a Markov process. The Gallager algorithm is based on the assumption that the transmitters make no errors in the detection of channel activity. This thesis investigates the case where a limited class of detection errors is introduced into the system. A modified algorithm is proposed to effectively correct these errors. This Noisy Channel Algorithm includes a stack mechanism and two special processing states. The algorithm is again modelled as a Markov process and retains some key features of the Gallager algorithm. The algorithm is analyzed and the degree to which system performance is downgraded by errors is determined. GRA

ANALYTICAL STUDY OF THE BISTATIC RADAR CROSS-SECTION OF A PROLATE SPHEROID. Final Report, 1 May 1979 - 1 Feb. 1980
Albert W. Biggs and Stanton B. McMillian. Mar. 1980. 37 p. refs.
(Grant AF-AFOSR-0105-79; AF Proj. 2305)
(AD-A086846; AFOSR-80-0532TR) Avail: NTIS
HC A03/MF A01. CSCL 17/9

Bistatic radar has important application in strategic and tactical space surveillance and in weapon tracking. At the present time, there is a lack of standard techniques for measuring radar cross sections. This effort was a feasibility study into obtaining an exact radar cross section for the Advanced Strategic Air Launched Missile (ASALM). The study was limited to the bistatic cross section of a typical target. A prolate spheroid was selected because it resembles an air cruise missile. Results were configured in the form of bistatic cross sections with a computer program to generate additional cross sections for prolate spheroids with different major to minor axis ratios. Any surface that is convex at each point, and which has no two distinct points where the outward normal vectors are in the same direction, can be handled similarly. Hence, the program written could very quickly be changed to handle a figure that is ellipsoidal in all the major planes, or even a parabola of revolution that extends to infinity in one direction. It is simple a matter of being able mathematically to describe the surface. GRA

THE HUMAN USE OF TELECOMMUNICATION SYSTEMS. Final Report, 1 Oct. 1974 - 30 Jun. 1980
Alphonse Chapanis. Jun. 1980. 25 p. refs.
(Contract N00014-75-C-0131; NR Proj. 196-135)
(AD-A086745) Avail: NTIS. HC A02/MF A01. CSCL 05/10

This report summarizes a series of studies in a research program dealing with interactive communication, conferencing and teleconferencing. The studies fall into three broad classes: (1) a naturalistic study of real conferences in academic, business, and government settings; (2) several laboratory experiments investigating human and system variables in telecommunications; and (3) studies relating to language and language usage in interactive communication and telecommunication. The principal findings of the studies are summarized and integrated and implications are drawn for the design of telecommunication systems. GRA

COMMUNICATION CONTROL AND LEADERSHIP IN TELECOMMUNICATIONS BY SMALL GROUPS
Peter D. Pagerey. Jun. 1980. 125 p. refs.
(Contract N00014-75-C-0131; NR Proj. 196-135)
(AD-A086746; TR-10) Avail: NTIS. HC A06/MF A01. CSCL 05/10

This experiment examined the effect of communication control on the telecommunications of four subject problem solving groups, and on the emergence of leaders within the groups. Sixteen four-subject teams solved four realistic problems, one on each of four days, by communicating over a closed-circuit television system with an added audio capacity. Teams were assigned to communication systems which either did or did not have centrally controlled switching so that only one person could talk at a time, and to systems in which either (1) one subject was appointed to perform some of the experimenter's tasks or (2) no group member was so designated. Four degrees of control over communication thus ranged from no control (communication was not centrally switched, no appointed helper) to absolute control (appointed helper who switched the communication). The subject who switched the communication and/or helped the experimenter was chosen at random by the experimenter prior to the start of the first experimental session and remained the same throughout the remaining sessions. Teams were paid a bonus of up to $2.60 for each problem solution. The size of a team's bonus depended on how well the team solved each problem as determined by comparing their solutions with criterion solutions. Dependent measures include the time to solution, a measure of the quality of solution based on the size of the bonus, measures of verbal communication, and questionnaire responses. GRA

COLLISION-RESOLUTION ALGORITHMS AND RANDOM-ACCESS COMMUNICATIONS Interim Report
James L. Massey. Apr. 1980. 80 p. refs. Submitted for publication
(Contract N00014-78-C-0778)
(AD-A086695; UCLA-ENG-8016) Avail: NTIS. HC A05/MF A01. CSCL 17/2

The problem considered is the random-accessing by very many transmitters of a common receiver over a time-slotted collision-type channel with feedback. A collision-resolution algorithm (CRA) is a protocol for the transmission and retransmission of packets such that, after a collision, all transmitters eventually and simultaneously learn that all the colliding packets have been successfully retransmitted. Focus is placed on a CRA due to Capetanakis (the CCRA) and a slight modification thereof (the MCCRA). The fundamental traffic-independent properties of the CCRA and MCCRA are derived by means of a recursive analysis, with emphasis on the mean and variance of the number of slots required to resolve a collision among N packets. These results are then used to analyze by a Markovian approach the performance of various random-access algorithms, built upon the CCRA and MCCRA, for the case of infinitely many identical sources generating Poisson traffic. The maximum stable throughput is determined for each random-access algorithm, and tight upper and lower bounds are developed for the delay-throughput characteristic of the 'obvious' random-access algorithm built upon the CCRA. GRA

THEORETICAL ANTENNA ANALYSIS Interim Report
H. E. King, Robert B. Dybdal, and Dorothy S. Chang. 1 Jul. 1980. 23 p. refs.
(Contract F04701-79-C-0080)
(AD-A086703; TR-0080(5930-06)-1; SD-TR-80-50) Avail: NTIS. HC A02/MF A01. CSCL 20/14

The results of the analytical work for the Antennas task of the FY 1979 Mission-Oriented Investigation and Experimentation (MOIE) program are summarized. The radiation pattern computation of a 46.8 lambda diameter paraboloidal reflector antenna is compared with experimental results. The pattern analysis accounts for the feed blockage and feed-strut scatter. Good agreement between the theoretical and experimental results exists for wide-angle sidelobes. The diffraction levels from a half-plane edge and a rounded edge were computed, and good correlation with experimental results is indicated. The radiation patterns of a monopole mounted on a circular and a rectangular ground plane were also computed. GRA

AN EXPERIMENTAL INVESTIGATION OF THE KING SURFACE CURRENT PROBING TECHNIQUE IN A TRANSIENT APPLICATION Electromagnetics Research Report, 1 Jan. 1978 - 1 Dec. 1979
L. Wilson Pearson and Youn M. Lee. Dec. 1979. 90 p. refs.
(Contract N00014-77-C-0362)
(AD-A087203; RR-79-4) Avail: NTIS. HC A05/MF A01. CSCL 20/3

An experimental technique to measure transient surface currents of a scatterer using a King-type semicircular miniature probe is reported. The principal extension of the King technique is the use of the loop probe in transient currents measurement. The transient characteristics of the probe are considered based on the Whiteside theory (29) for the loop. The probes fabricated were subjected to transient excitation in a coaxial calibration jig. Their frequency responses were determined by Fourier transforming their output and deconvolving the excitation spectrum. The agreement between the measured results and the Whiteside theory is observed and evaluated. The probe geometry was tested in an application context, namely, the probing of current on a cylindrical scatterer. The induced surface currents were measured using the probe along the scatterer, and deconvolution of the probe transfer function was carried out subsequently. The deconvolved waveforms are reported and the results of numerical predictions by way of a time domain integral equation technique are reported for comparison. The application goal for this work lies in the numerical extraction of the Singularity Expansion Method (SEM) description of scattering from a given object, using measured transient data. GRA

MULTIPLE SCATTERING IN CLOUDS
A. P. Ciervo. Sep. 1979. 78 p. refs.
(Contract N00014-78-C-0751; DARPA Order 8650; RT21222801)
(AD-A087043; PSR-923) Avail: NTIS. HC A05/MF A01. CSCL 20/6

This report develops an analytic model for the propagation of an optical pulse through a multiple scattering medium. Such a model is needed to investigate the effect of clouds on optical communications from a satellite to a submarine. A key initial result is the derivation of simple expressions for the first two spatial and angular moments of the radiance distribution for a narrow delta-function source immersed in an infinite scattering medium. The moments support a diffusion approximation for the transport process in an infinite plane-parallel cloud. First the radiance is calculated at the cloud exit and on a plane an arbitrary distance below the cloud, then power collected by a finite receiver located on this plane is computed. The model is validated by comparing its results with computer simulation curve fits for optically thick clouds (i.e., tau = 15). The model is capable of duplicating nearly all the simulation results but at significantly lower cost. Furthermore, detailed calculations impractical to simulate are readily computed. GRA

Preliminary studies of spin relaxation of optically pumped sodium in xenon gas have shown that Van der Waals NaXe cause a substantial part of the relaxation. The electron-nuclear spin exchange cross section between Na and Xe129 has been

measured to be less than ten to the -19th power/sq cm. Calculations and preliminary experiments have shown that radiofrequency spectroscopic studies of the anomalously long lived 5D state of cesium are possible. Further studies of dense alkali vapors have shown that all of the alkali vapors sodium, potassium, rubidium and cesium, have absorption bands in the spectral region between 1 micron and 2.5 micron. The possibility that some of these bands might be useful for the construction of infrared excimer lasers is being investigated. GRA

RADAR BACKSCATTER STUDY OF SEA ICE
R. G. Onstott, George J. Dome, Clifford V. Delker, Javed S. Patel, and R. K. Moore. Feb. 1980. 273 p. refs.
(Contract N00014-76-C-1105)
(AD-A087032; CRINC/RSL-TR-331-14) Avail: NTIS
HC A12/MF A01. CSCL 17/9

The ability to use radar to discriminate ice types has been investigated. Radar backscatter measurements were made of shorefast sea ice near Point Barrow, Alaska in May 1977 and April 1978, with a surface-based FM-CW scatterometer that swept from 1-2 GHz and from 8.5-17.5 GHz. The 1-2 GHz measurements showed that thick first-year and multiyear sea ice cannot be distinguished at 10 deg-70 deg incidence angles, but that undeformed sea ice can be discriminated from pressure-ridged thick first-year sea ice and lake ice. Results also indicate that frequencies between 8-18 GHz have the ability to discriminate between thick first-year sea ice, multiyear sea ice, and lake ice. The lowest frequency, 9 GHz, was found to provide the greatest separation between these ice categories with significant levels of separation existing between angles of incidence from 15 deg to 70 deg. The radar cross-sections for the like polarizations, VV and HH, were very similar in absolute level and angular response. The radar cross-sections for VV-polarization were usually the highest in absolute level. Cross-polarization provided a slightly greater separation between these categories of ice. GRA

HC A05/MF A01. CSCL 20/14

A study has been made of extremely low frequency (ELF) wave propagation anomalies as related to energetic particle precipitation, principally during solar particle events (SPE). Based on calculation of the predicted signal strengths at Tromso for transmissions from the Wisconsin Test Facility (WTF) a criterion has been selected for possible use in a field test operation. If the ion pair production rates at 40 km are equal to or greater than 1 x 1000/cc/sec then it is probable that a 3 dB or larger reduction in signal strength would occur for such an event. Since this preliminary criterion is based on ELF signal strength computation assuming no local time variations along the propagation path, more detailed calculations of the local time ionospheric effects should be performed. A study was made of the expected effect of local time variations during solar particle events on the ELF propagation over the path from WTF to Tromso. Electron and ion density profiles for the various segments of the test path were calculated with the ion chemistry model, taking into account the local time for each segment. In a comparison of conditions measured and calculated for SPE72 on 4 August 1972 near the peak of the event and conditions measured and calculated for a similar case assuming a season of 21 December, very little difference in signal strength attenuation over the path was found. (Contract DOT-FA78WAI-942)
(AD-A087243; FAA-RD-80-51) Avail: NTIS
HC A20/MF A01. CSCL 17/7

The capability of the ARTS 3A to support future air traffic growth and functional enhancements through 1990 is examined. The approach used is to investigate a few high traffic density sites which are representative of the three current terminal system configurations: single sensor sites (Detroit); dual sensor sites (Chicago, Los Angeles); and Metroplexes (New York). Loading factors are determined for each model site. These factors include the number and type of sensors and displays, the instantaneous traffic counts, and functional capability. The loading parameters are then used as inputs to a processing model, developed in this study, in order to determine if the ARTS 3A can provide adequate processing capacity. The loading parameters are also used to develop estimates of memory requirements. The results of the study indicate that processing capacity limitations, if not overcome, will likely constrain functional growth at Metroplex facilities but will present no problems for single and dual sensor sites. Current memory capacity limitations are shown to present significant problems for both Metroplexes and dual sensor sites. GRA

STUDIES ON THE REDUCTION OF INTERMODULATION GENERATION IN COMMUNICATIONS SYSTEMS. Final Report
G. H. Stauss, G. C. Bailey, C. D. Bond, C. A. Carosella, and A. C. Ehrlich. 7 Jul. 1980. 94 p. refs.
(AD-A086995; AD-E000492; NRL-MR-42) Avail: NTIS
HC A05/MF A01. CSCL 17/2

Potential means of intermodulation generation in multiplex systems are reviewed and evaluated theoretically. The dominant mechanisms involve nonohmic junctions and ferromagnetic components. Junctions through aluminum oxide films have been studied experimentally and a possible means of improvement is described. Experimental tests of ferromagnetic components show the need to exclude them entirely from multiplex and high performance systems. With care in the choice and assembly of components, it is concluded that intermodulation signals can be kept to the level of thermal noise in most configurations. GRA

STUDY AND DEVELOPMENT OF A SLOTTED WAVEGUIDE ELEMENT IN AN ANTENNA ARRAY Final Report [ETUDE ET DEVELOPPEMENT D'UN ELEMENT D'ANTENNE RESEAU A GUIDES A FENTES]

Nov. 1979 183 p refs In FRENCH

(Contract ESA-3692/78-NL-AK(SC))

(ESA-CR(P)-1286) Avail: NTIS HC A09/MF A01

A configuration for an antenna waveguide array to be incorporated into a satellite synthetic aperture radar is presented. Different types of slot antennas are evaluated for their radio and electrical characteristics. A vertical slot waveguide is chosen and the testing of a simplified scale model of the antenna is reported. A mathematical performance prediction method is shown to be both comprehensive and valid. A final radar panel design is proposed, while its performance is caclulated for the 50 MHz frequency band. Author (ESA)

FUNDAMENTALS OF A THEORY FOR CONFORMAL ANTENNAS

C. von Winterfeld Mar. 1979 22 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium der Verteidigung

(Rept-2-79) Avail: NTIS HC A02/MF A01

A fundamental matrix theory leading to the parameterization of conformal antenna radiation patterns of the horn radiator or thick dipole type is developed. It can be used as the basis for numerical investigations of conformal arrays or radar targets. The electromagnetic behavior of an antenna is represented by a scattering matrix. This matrix is derived from matrices, the elements of which are antilinear forms of mode functions corresponding to spherical waves of bounded regions or free space. The generalized nature of this approach is emphasized especially for implementation in a computer program. Author (ESA)

N80-30628# Forschungsinstitut fuer Hochfrequenzphysik, Werthhoven (West Germany).

A MAXIMUM LIKELIHOOD ESTIMATOR FOR THE EXTENT OF RADAR OR SONAR TARGETS USING HIGH RESOLUTION SIGNALS

F. Dommermuth Jul. 1979 32 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium der Verteidigung

(Rept-3/79) Avail: NTIS HC A03/MF A01

A maximum likelihood estimator for the length of a highly resolved radar or sonar target is introduced. Simplified assumptions concerning the statistics of echo and background noise make it possible to analyze its efficiency analytically. The time discrete output of the receiver is described as an exponential integral of a distributed random amplitude signal, the noise variable of which has the same distribution, thus reducing the variable echo plus noise. After optimization, the accuracy and sensibility of the exponentially distributed estimators was evaluated using computer simulation. Results show a signal to noise ratio of 10 dB with 50% confidence. Author (ESA)

N80-30629# Forschungsinstitut fuer Hochfrequenzphysik, Werthhoven (West Germany).

WIDEBAND BEAMFORMER TO CONTROL A 38 ELEMENT SONAR ANTENNA

L. P. Wengert Sep. 1979 37 p refs In GERMAN; ENGLISH summary

(Rept-5/79) Avail: NTIS HC A03/MF A01

A brief description of the functional characteristics of charge transfer devices is given and various beamformer designs using these components are studied. A sonar beamformer (for a line array of 32 beams) operating in real time in the frequency range from 30 Hz to 2.3 KHz was built based on the 'series parallel structure' concept. A simulator for the generation of signals for twin independent wave fronts was used to measure beamformer performance. Results indicate that this beamformer design is comparable with alternative digital signal processing systems, while the beamformer presented remains ten times less expensive to build. Author (ESA)

N80-30630# Forschungsinstitut fuer Hochfrequenzphysik, Werthhoven (West Germany).

MEASURING APPARENT TARGET LENGTH USING TARGET RESOLVING SIGNALS

J. Ziegenbein and F. Dommeruth Sep. 1979 30 p refs In GERMAN; ENGLISH summary

(Rept-6/79) Avail: NTIS HC A03/MF A01

Four algorithms for determining the duration of target resolving sampled echo signals are examined. Two algorithms are derived from maximum likelihood considerations, while the two other procedures are based on maximizing the detection index. Assuming target fluctuation statistics to be Gaussian and double Gaussian, the deviation between estimated apparent target length and true apparent target length was determined by computer simulations in terms of mean value deviation and variance. Results show that the maximum likelihood algorithms perform better if the signal to noise ratio is smaller than 10 dB, otherwise all of the algorithms are comparable. Author (ESA)

INTRODUCTION TO THE STUDY OF NOISE IN CHARGED COUPLED DEVICES [INTRODUCTION A L'ETUDE DU BRUIT DANS LES DISPOSITIFS A COUPLAGE DE CHARGES]

Guy Rolland Jul. 1979 78 p refs In FRENCH; ENGLISH summary

(CNES-NT-90) Avail: NTIS HC A05/MF A01

Noise phenomena in charge coupled devices (CCD's) and in their associated circuitry are reviewed. The physics of CCD's operation, covering the mechanism of charge transfer, input circuit, output circuits, and photosensor principles, are explained. The description, localization, and analysis of different sources of noise are detailed. Emphasis is on photosensor signals, transfer register noise, and noise in distributed floating gate amplifiers as well as in floating diffusion amplifier. A noise measurement system designed to separate sources of noise in CCD's is then presented. Author (ESA)

TREND ANALYSIS. SPACE COMMUNICATIONS SYSTEM TECHNOLOGY. PHASE 1: DEFINITION OF USER NEEDS Final Report

Malcolm H. Ross and Arthur Solomon 3 Dec. 1979 122 p refs

(Contract ESA-3789/78-F-FC(SC))

(ADL-82871F; ESA-CR(P)-1308) Avail: NTIS HC A06/MF A01

In order to specify and rank the technical goals for ESA space communication missions in the 1985-1995 period, the future development of telecommunication needs of countries was identified and the suitability of implementation by space systems was assessed. For countries other than in Western Europe the demand for telecommunication services for the 1985-1995 period was estimated for each country by consideration both of the status and plans of the existing networks and of the expected economic parameters for the period. A model was constructed to compare the costs of the different terrestrial and space communication systems that would meet the projected needs. For no country was a single service space communication system cost competitive with terrestrial systems. To have a chance of

being cost competitive with terrestrial systems some additional services need to be included in the space segment, or the space segment should serve more than one country in a region. Also, for Western Europe, it was concluded that a space implementation is not cost effective for communication services on a stand alone basis. Author (ESA)

MULTI-USER TIME DIVISION MULTIPLE ACCESS (TDMA) AND SPREAD SPECTRUM (SS)-TDMA
G. B. Alaria, R. DeBassa, P. Destefanis, F. Pattini, and R. Pretti Feb. 1980 122 p refs
(Contract ESTEC-3657/78-NL-AK(SC))
(ESA-CR(P)-1324) Avail: NTIS HC A06/MF A01

An assessment was made of the feasibility and performance of equipment for a regenerative satellite which could accommodate users with nonuniform bit-rate requirements. Evaluation topics were dealt with in terms of band width, number of repeaters onboard, ground stations, and satellite fill factor as a function of the different user bit-rates. A semi empirical model was the basis for this analysis. An analysis was made of three possible solutions for the implementation of the bit-rate conversion process. A conceptual design of onboard hardware is presented, technologies to be used are identified, and circuit complexity and power requirements estimated. Author (ESA)

SIMULATION MODELS FOR MICROWAVE POWER TRANSISTORS UNDER LARGE SIGNAL OPERATING CONDITIONS. PART 1: THEORETICAL AND EXPERIMENTAL RESULTS Final Report
S. Benedetto, M. Biey, E. Biglieri, C. Naldi, U. Pisani, V. Pozzolo, G. P. Bava, F. Filicori (Bologna Univ.), and V. Monaco (Bologna Univ.) Dec. 1979 169 p refs
(ESA-CR(P)-1336-Pt-1) Avail: NTIS HC A08/MF A01

The problem of measuring, modeling, and analyzing class-C transistor amplifiers at high signal levels was studied. Transistor models were reviewed, and measurements of their parameters described. Computer simulation of microwave transistor amplifiers is then considered, and three solutions are proposed including: a harmonic-balance technique; a Volterra-series analysis technique; and a technique based on S-parameters. Results of the measurements performed on the amplifier are presented and compared with those obtained from simulation. Author (ESA)

STUDY OF INTERFERENCES IN SATELLITE COMMUNICATION SYSTEMS. VOLUME 4: EXECUTIVE SUMMARY
K. Allsebrook Jul. 1979 22 p refs 2 Vol.
(Contract ESTEC-3647/78-NL-AL(SC))
(ESS/CCG-67-Vol-4; ESA-CR(P)-1338-Vol-4) Avail: NTIS HC A02/MF A01

A computer library of calculation techniques was established, forming the basis of a reference set of procedures for determining the effects of an interfering signal on a wanted link. The programs were designed in an expandible, modular form. The literature was searched for appropriate methods of computing the baseband degradation for the particular wanted and interfering modulation types. The merits and difficulties in implementing each calculation method were assessed and the accuracy of the results produced were considered. Author (ESA)

UHF TASK FORCE: EXECUTIVE OVERVIEW AND SUMMARY Final Report
Raymond M. Wilmotte Jan. 1980 14 p refs
(PB80-177280; FCC/PRB/PDD/6) Avail: NTIS HC A02/MF A01 CSCL 17B

Estimates were made of the spectrum required for the operation of viable television stations up to the year 1990. Estimates of the spectrum needs of the civil maritime and aeronautical services were a fraction of those estimated by these industries because the task force took into account the expected and possible improvements in spectrum efficiency. In connection with land mobile, a development contract was granted leading

to an amplitude compandored single sideband system requiring a bandwidth of 5 KHz compared with 20-30 KHz of the current frequency modulation system. Consideration was given to using the forces of the marketplace instead of regulation for introducing spectrum saving technologies. GRA

MONOLITHIC INTEGRATION OF GALLIUM ARSENIDE OPTOELECTRONIC DEVICES Ph.D. Thesis
Israel Ury 1980 103 p
Avail: Univ. Microfilms Order No. 8021028

The examples of the monolithic integration of optical and electronic devices on seminsulating GaAs substrates are described. In the first example, an injection laser was integrated with a Gunn oscillator to yield a high frequency modulated optical source. In the second example, an injection laser was integrated with a metal semiconductor field effect transistor (MESFET) which was used to modulate the current through the laser. In the third example, an integrated optical repeater was demonstrated which consisted of a MESFET optical detector, a current source, a transistor driver, and an injection laser all fabricated on a single chip. The repeater displayed an optical gain of 10 dB. A method was sought to form a laser cavity which did not occupy the entire width of a chip. The result was the demonstration of whispering gallery lasers which take the shape of quarter and half rings. The performance of the curved laser was reduced from that of the straight lasers due to optical scattering at imperfections along the curve. A general theory is developed which describes mode conversion in perturbed dielectric resonaters and is applied to the case of the whispering gallery laser and its predictions are compared with experiment. Dissert. Abstr.

SUPERCONDUCTIVITY IN Th-Nb COMPOSITES Ph.D. Thesis
Loren Frederick Goodrich 1980 143 p
Avail: Univ. Microfilms Order No. 8019631

Heat capacities, critical temperatures, and critical currents were measured for directionally solidified eutectic Th-Nb wires in order to determine whether superconductor normal metal boundary is a strong pinning center for quantized vortices. The heat capacity data show that there is a large change in pair potential at the super normal boundaries as predicted by de Gennes boundary length b, and to show that Ginsburg-Landua predicts the changes in the superconductors rather well. The equilibrium thermodynamical properites are predicted from the filament size and spacing rather well. Critical currents seem to be independent of the density of super normal boundaires and some other factors must control J sub c. The magnetic field dependence of C sub p and J sub c tend to confirm this conclusion. A field as small as 20 mT will decrease the pair potential in the normal metal by factors of 100 with no apparent change in J sub c. The critical current data was insensitive to Nb filament diameter over the range of 8 to 116 nm indicating that the superconductor normal metal interfaces were not effective pinning centers. Dissert. Abstr.

SUPERCONDUCTING DIAMAGNETISM IN SAMPLES OF SN(X), TaSe(3) AND NbS Ne(3) Ph.D. Thesis
Clifford Marc Bastuscheck 1980 157 p
Avail: Univ. Microfilms Order No. 8020793

The highly anisotropic metals (SN)x, TaSe3 and NbSe3 have shown low temperature behavior which could be associated with unusual superconducting properties. The present susceptibility measurements, made using a very sensitive SQUID magnetometer, were undertaken to add to the understanding of these new materials and to investigate the nature of superconductivity in the unusual systems which these materials present. The primary results of the investigation of samples TaSe3, and NbSe3 is the observation of superconducting diamagnetism and flux trapping indicating long range, stable superconducting phase coherence in the samples. However, the unusual dependence of the susceptibilities at very low tempertures (below 0.5 K) suggests that the samples contain a large fraction of normal meta. It seems possible that NbSe3 and TaSe3 are in fact not superconducting above 20 mK. Dissert. Abstr.

ANALYSIS OF ELECTRICAL TRANSIENTS CREATED BY LIGHTNING Final Report
J. E. Nanevicz and E. F. Vance Hampton, Va. NASA. Langley Research Center Jul. 1980 107 p refs
(Contract NAS1-13792; SRI Proj. 4026)
(NASA-CR-159308) Avail: NTIS HC A06/MF A01 CSCL 09C

A series of flight tests was conducted using a specially-instrumented NASA Learjet to study the electrical transients created on an aircraft by nearby lightning. The instrumentation included provisions for the time-domain and frequency-domain recording of the electrical signals induced in sensors located both on the exterior and on the interior of the aircraft. The design and calibration of the sensors and associated measuring systems is described together with the results of the flight test measurements. The results indicate that the concept of providing instrumentation to follow the lightning signal from propagation field, to aircraft skin current, to current on interior wiring is basically sound. The results of the measurement indicate

that the high frequency signals associated with lightning stroke precursor activity are important in generating electromagnetic noise on the interior of the aircraft. Indeed, the signals produced by the precursors are often of higher amplitude and of longer duration that the pulse produced by the main return stroke.

SUPERCONDUCTIVE DEVICES FOR MILLIMETER WAVE DETECTION MIXING AND AMPLIFICATION
P. L. Richards and T-M Shen. 1980. 48 p. refs
(Contract N00014-75-C-0496)
(AD-A086443) Avail: NTIS HC A03/MF A01 CSCL 20/3

Single particle (quasiparticle) tunneling through an insulating barrier between two superconductors or between a superconductor and a normal conductor is used to make very low noise detectors and mixers for millimeter wavelengths. The nonlinearity of the I vs. V curve obtained from tunneling between two superconductors can be so strong that classical theory breaks down and photon assisted tunneling theory must be used to understand device performance. Quantum theory predicts that a quasiparticle tunnel junction can be operated as a microwave photon detector with quantum efficiency close to unity or as a heterodyne mixer with conversion gain and with mixer noise temperature comparable with the quantum noise limit. Both of these predictions are experimentally realized using superconductor insulator superconductor junctions.

HIGH VOLTAGE SWITCH USING EXTERNALLY IONIZED PLASMAS Final Technical Report, 26 Jun. 1978 - 21 Dec. 1979
John Dzimianski and Laurence E. Kline. Wright-Patterson AFB, Ohio. AFWAL. Apr. 1980. 80 p. refs
(Contract F33615-78-C-2010; AF Proj. 2301)
(AD-A086761; DYD-55585-AA; AFWAL-TR-80-2041) Avail: NTIS HC A05/MF A01 CSCL 09/1

A physical model was developed and the performance parameters were studied for high voltage high current on/off switches which use the low energy secondary electrons in an electron beam (e-beam) sustained discharge as the conducting medium. The model equations are presented and described along with the underlying physical assumptions. Electron transport data and static breakdown voltages were calculated for N2, Ar, a N2:Ar = 1:9 mixture and CH4 by numerically solving the Boltzmann equation to find the energy distribution. Study of steady state performance for N2, Ar, N2:Ar = 1:9 and CH4 indicated that the N2:Ar = 1:9 and CH4 were both good candidate gases; hence transient switch performance was studied for these two gases. The performance of the e-beam plasma switches was mapped in a regime where the power delivered to the load is much greater than the e-beam power. Study of e-beam sources pointed to the thin film field emission cathode as offering a means of controlling e-beam plasma switches with very high control power gain. A switch geometry was suggested using such an e-beam source. The comparison of different switch types with on/off capability indicated that the e-beam externally ionized plasma switches have the potential to be developed into devices that would be competitive or superior in size and capability with any other approach providing equivalent electrical performance.

SECOND BREAKDOWN SUSCEPTIBILITY OF SILICON-ON-SAPPHIRE DIODES HAVING SYSTEMATICALLY DIFFERENT GEOMETRIES Final Report, 1 Jun. 1977 - 31 Dec. 1979
Paul P. Budenstein, Aradhana Baruah, Edward R. Knight, and Fu-Tai Kiou. 30 May 1980. 524 p. refs
(Grants DAAG29-78-G-0111; DAAG29-77-G-0189)
(AD-A086345; ARO-15840.3-A-EL) Avail: NTIS HC A22/MF A01 CSCL 09/1

Experiments were performed on thin films silicon-on-sapphire (SOS) diodes (p(+) - n - n(+)) to determine the roles of geometry and doping level (ten to the 15th power to ten to the 17th power atoms/cubic centimeters) on current configurations, second breakdown susceptibility, and damage morphology. Geometric parameters varied including diode width, n-region length, n-region doping density, diffusion spikes of different sizes and configurations on the n(+)n or p(+)n interfaces, contact spikes at the n(+)-metal and p(+)-metal interfaces, and a variety of other current concentration geometries. Prior to the present study, the effectiveness of junction defects in reducing resistance to second breakdown was not known. However, it was suspected that such defects might result in 'maverick' devices, that is, devices which fail much below their rated electrical parameters. SOS diodes, specially fabricated by Rockwell International, were tested using Sunshine's stroboscopic technique. This method exploits the decrease of the optical transmittancy of silicon with increasing temperature.

SURFACE ACOUSTIC WAVE MICROWAVE OSCILLATOR AND FREQUENCY SYNTHESIZER Interim Report, 1 Oct. 1979 - 1 Apr. 1980
D. J. Dodson and M. Y. Huang. Jun. 1980. 52 p.
(Contract DAAB07-78-C-2992)
(AD-A086336; DELET-TR-78-2992-3; IR-3) Avail: NTIS HC A04/MF A01 CSCL 09/5

The objective of the program is the development of Surface Acoustic Wave (SAW) oscillator and synthesizer technology. The two year effort is planned as follows: Task 1 - Development of SAW devices for oscillator applications at microwave (L-band) frequencies. Emphasis to be placed on achieving wideband tuning capabilities, improved oscillator stability performance and reduced power requirements. Task 2 - Investigate UHF surface acoustic wave devices which can best impact on synthesizer performance parameters such as: switching speed, minimum frequency step size, total achievable bandwidth, short, medium and long term stability as well as maximum suppression of spurious mode level. Concurrently promising new synthesizer designs will be studied on the basis of these designs to arrive at target specification in a package providing a significant reduction in size, weight and power consumption. Since Task 1 was completed prior to this reporting period, during the third six months of the program design of the synthesizer circuitry was largely completed. SAW delay line/filters to be used in both the injection locked SAW oscillators and in the SAW Filter Bank have been designed and are being fabricated. The design of the delay lines was based partially on an investigation of the injection locking properties of SAW oscillators. RF/LSI circuitry has been processed and is currently being tested.

ESTIMATION OF CONFIDENCE LIMITS FOR TESTING LARGE LOGIC NETWORKS Final Report
John L. Fike, C. H. Kapadia, B. Peikari, and K. Kavipurapu. May 1980. 85 p. refs
(AD-A086281; AFOSR-80-0504TR) Avail: NTIS HC A05/MF A01 CSCL 09/3

This report describes a methodology and means for accurately determining confidence limits for the reliability of large digital networks, without exhaustively exercising all possible input sequences or simulating all logic faults in the network. The report is divided into two parts. In the first part, some mathematical models to estimate the reliability of digital circuits are presented. A heuristic method of assigning weights to faults depending on their 'importance' in a given circuit is described. The models presented can be used to: (1) predict the reliability of a circuit, (2) evaluate test sequences and (3) develop more accurate reliability models of (redundant) fault tolerant computers. The second part of the report deals with the statistical methods of estimating confidence limits.

The devices chosen for this study were the TI MSX802

and laboratory devices, Dexcel 3615A-P100F, MSC 88002, and NEC 868196. All are hermetically packaged GaAs power FETs with approximately 0.5 W output power. The study includes device physical, electrical (CW and pulsed), and environmental characterization, electrical (CW and pulsed) and environmental stress tests, and failure analysis. The device physical characterization has been completed and the data are presented. The CW electrical characterization is almost complete, and detailed data are shown for a typical device. No device had significant changes in electrical parameters following operation for 1000 hours at room temperature. The environmental characterization has just begun, and no results are available yet. The results from the cw electrical stress tests, which have been completed, are presented. There are some correlations between the various device structures and the results from different manufacture's devices. The environmental stress tests have begun, and preliminary results are presented. Most of the effort for the remainder of the program will be spent on completing these tests. The pulse characterization and stress tests have not yet begun. The failure analyses are described along with the test causing the failure. GRA

INTEGRATED THIN FILM dc SQUIDS Final Report, Nov. 1976 - 31 Oct. 1979
G. B. Donaldson Oct. 1979 27 p refs
(Grant DA-ERO-76-G-079; DA Proj. 1T1-61102-BH-57)
(AD-A086466) Avail: NTIS HC A03/MF A01 CSCL 20/3

A new thin film low temperature facility has been developed and used for work on three aspects of DC SQUIDS. First, ellipsometric studies have been made of the process of RF sputter etch oxidation of Pb-In alloys and of Nb. Second, structures based on Nb-NbOx-Pb/In Josephson junctions have been produced and successfully operated as planar SQUIDs with a flux noise of 0.000085 Phi sub o sq rt Hz. Finally, all Nb structures, based on Nb-NbOx/Au-Nb junctions, have been operated as SQUIDs though so far with inferior noise performance (0.05 Phi sub o sq rt Hz). Work is proceeding on the production of integrated magneometric structures using photolithographic techniques to etch planar flux transformers and the associated components. GRA

ARTWORK ANALYSIS TOOLS FOR VLSI CIRCUITS M.S. Thesis
Clark Marshall Baker Jun. 1980 78 p refs
(Contract N00014-75-C-0661)
(AD-A087040; MIT/LCS/TP-239) Avail: NTIS HC A05/MF A01 CSCL 09/5

Current methods of designing Very Large Scale Integrated (VLSI) chips do not insure that the chips will perform correctly when manufactured. Because the turnaround time on chip fabrication varies from a few weeks to a few months, a scheme other than try it and see if it works is needed. Checking of chips by hand simulation and visual inspection of checkplots will not catch all of the errors. In addition, the number of transistors per chip is likely to increase from ten thousand to over a million in the next few years. This increase in complexity precludes any manual verification methods; some better method is needed. A series of programs that use the actual mask descriptions for input are described. These programs perform various levels of checks on the masks, yielding files suitable for simulation. Some of the checks are the usual 'design rule' checks of looking for minimum line widths and adequate spacing between wires. However, there are many more constraints in VLSI circuits than are expressed by usual design rules. The programs check these constraints using the mask descriptions as input. All of the errors mentioned so far can be classified as syntactic errors; in addition, certain errors are detected. The detection of semantic errors requires various levels of simulation. The input to the simulators is derived from the artwork. GRA

RESEARCH AND DEVELOPMENT OF CONCEPT LEADING TO AN AUTOMOTIVE ALTERNATOR WITH SIGNIFICANTLY IMPROVED EFFICIENCY AND WEIGHT Final Report, 1 Feb. 1979 - 31 Jan. 1980
Ray C. Noddin 5 Jan. 1980 26 p
(Contract DE-AC02-79CS-50042)
(COO-50042-1) Avail: NTIS HC A03/MF A01

A 20 to 25 percent improvement in both output/pound and efficiency relative to control performance of a present production Delco #1102848 alternator was achieved by substitution of a redesign stator of equal or smaller weight and size and in a configuration lending to low cost and manufacturability. Analysis of bench tests on the subject alternator incorporating the redesigned stator reveals an output/pound improvement of 30 percent thereby exceeding the design goal, and an average efficiency improvement of 25 percent easily equalling, and at most points of the performance curve, exceeding the design goal. This was achieved in a design employing proven, low-cost, high volume manufacturing techniques. The redesigned stator also lends itself to direct interchangeability with stators in production alternators. DOE

EDDY CURRENT HEATING OF IRREGULARLY SHAPED PLATES BY SLOW RAMPED FIELDS
Lawrence Dresner 1979 5 p refs Presented at 8th Symp. on Eng. Probl. of Fusion Res., San Francisco, 13 Nov. 1979
(Contract W-7405-eng-26)
(CONF-791102-167) Avail: NTIS HC A02/MF A01

Theorems are presented for estimating eddy current heating of irregularly shaped plates by a perpendicular ramped field. The theorems, derived from two complementary variational principles, give upper and lower bounds to the eddy current heating. Illustrative results are given for rectangles, isosceles triangles, sectors of circular annuli, rhombuses, and L shaped plates. A comparison is made with earlier work. DOE

(Contract W-7405-eng-36)
(LA-8323-PR; FPR-24) Avail: NTIS HC A12/MF A01

Plans for the development of a high capacity, underground dc superconducting power transmission line (dc SPTL) that uses Nb3Sn superconducting wires cooled to 12 K by gaseous helium are discussed. The dc SPTL offers a number of potential advantages including: no system stability or load flow constraints, lower short circuit current levels than any other transmission system; reactive compensation is not needed; no dielectric losses are exhibited; conductor losses are negligible; and the dc SPTL cable has the highest efficiency and current density capability of all cables. The requirement for such high power transmission capability is still several decades in the future and the SPTL technology is considered a high risk undertaking. Activities in electrical engineering, cryogenic engineering, and superconductor design are summarized. E.D.K.

COMPRESSED MAGNETIC FLUX AMPLIFIER WITH CAPACITIVE LOAD
O. M. Stuetzer Mar. 1980 27 p refs
(Contract EY-76-C-04-0789)
(SAND-79-2339) Avail: NTIS HC A03/MF A01

The operation of a compressed magnetic flux (CMF) transducer into an inductive-resistive load is discussed. A second order theory for this combination is considered with repect to the variation of skin depth with time, and flux trapping by wire shape and by two contact delay phenomena. An attempt to extend this second-order theory directly to the capacitive load case proved anaytically unfeasible. DOE

KEYBOARDS AND TOUCH CONTROLS: AN EVALUATION OF RELIABILITY AND CONSTRUCTIONAL PRINCIPLES FOR 11 DIFFERENT TYPES
E. Johansen, S. T. Olesen, and A. Willumsen. Oct. 1979. 45 p. refs. Sponsored by Sammenslutningen for Paalidelighedsog Miljoeteknik (SPM) and Danish Council of Technology
(ECR-90) Avail: NTIS HC A03/MF A01

A 'performance quality' evaluation of 11 different varieties of keyboards and touch controls was made. The devices tested include seven keyboards of the push button type, two plane design keyboards, a Hall-element switch, and a capacitive touch control. The same test procedures were used on all the devices, regardless of their quality or price class, as only real performance is of interest. The tests covered mechanical endurance, thermal exposure, humidity exposure, H2S and SO2 exposure, a solder examination, a vibration test, and the measurement of contact bounce. In the case of destructive testing, contact resistance serves as the control factor. All test results are related to an analysis of construction design. Author (ESA)

STUDY AND DEVELOPMENT OF PRINTED CIRCUIT ELEMENTS FOR SYNTHETIC APERTURE RADAR ARRAY ANTENNAS. Final Report
J. Barbero Sanchez, F. Jimenez Asenjo, R. Villar Gomez, M. Peralta Bellido, J. Torres Riera, and F. Vila Castelar. Oct. 1979. 234 p. refs. Prepared in cooperation with Instituto Nacional de Tecnica Aeroespacial, Esteban Terradas, Torrejan de Ardoz (Spain)
(Contract ESTEC-3683/78-NL-AK(SC))
(ESA-CR(P)-1303) Avail: NTIS HC A11/MF A01

A general presentation of the state-of-the-art on planar array antennas is combined with a technical discussion and selection of the best suited elements for circular patch and slot-stripline radiators. The mutual coupling between radiators in several types of 1 X 8 arrays with circular patch elements was examined to optimize the distances between them in the complete SAR array antenna. A simple microstrip feeding network with low permittivity substrate, easy to realize by photoetching was designed and measured. The impedance and radiation pattern of a 2 x 8 subarray fed by the preceding network was measured. The performance of elementary radiators concerning resonant frequency, impedance, bandwidth, radiation pattern, polarization, and efficiency were studied. The advantages and disadvantages and the influence of mechanical tolerances on their electromagnetic behavior was investigated. Author (ESA)

EVALUATION OF RADIATION EFFECTS IN THE MA328 CCD IMAGE SENSOR. Final Report
D. J. Purll, B. T. Meggitt, R. A. A. Freeman (Fulmer Research Inst. Ltd.), and A. G. Holmes-Siedle (Fulmer Research Inst. Ltd.). Jan. 1980. 146 p. refs
(Contract ESTEC-3748/78)
(Sira-6/5309/00; ESA-CR(P)-1317) Avail: NTIS HC A07/MF A01

Information specifically useful to the ESA Polaris Sensor development was obtained by irradiating several CCD's with gamma radiation to a maximum dose of 20 krad, compared with the estimated 5 year geostationary dose of 5 krad. The clearest results were those concerning trapped charge and interface state build-up in the charge transfer areas of the devices. Operation of the shift registers in the space radiation environment would appear to present no problem. Changes in both response and dark current nonuniformities show the necessity for dynamic rather than prelaunch calibration in high accuracy applications. The output circuitry, comprising a number of MOS transistors, was more sensitive, and the complex nature of interdependences between bias voltages in this region is indicated. Optimum operation was restored in one device after a dose of 20 krad by a small adjustment of substrate voltage alone. Other problem areas are the incidence of catastrophic failures even in the absence of radiation damage, and of major defects which appeared in initially good devices after relatively small doses of radiation. STUDY AND EVALUATION OF MODULAR PACKAGING TECHNIQUES FOR ON BOARD DATA HANDLING: TECHNOLOGY ASSESSMENT. Final Report
J. Perry, comp. Nov. 1979. 64 p. refs
(Contract ESTEC-2840/76-NL-HP(SC))
(ESS/SS-918; ESA-CR(P)-1327) Avail: NTIS HC A04/MF A01

The detailed design and the manufacture of a test model for environmental testing of a Modular Packaging Scheme for use with the On Board Data Handling System was completed. During the development/testing phase, redesign and modifications were implemented to meet the severe vibration levels imposed. This phase was completed by successful vibration testing to the worst case envelope covering Ariane, Shuttle and Thor-Delta. The unit design was mass optimized and the manufacturing tolerances were finalized. A representative OBDH configuration unit was again manufactured and vibration tested. Author (ESA)

FURTHER FABRICATION STUDIES OF DRY LUBRICATED SLIP RING BRUSH MATERIALS FOR SATELLITE APPLICATIONS
K. T. Scott and K. R. J. Cottell. Nov. 1979. 47 p. refs
(Contract ESTEC-3284/77-NL-PP)
(AERE-G-1480; ESA-CR(P)-1331) Avail: NTIS HC A03/MF A01

A vacuum hot pressing technique was developed for the fabrication of slip ring brush material consisting of 10, 7.5 and 5W/o MOS2 dispersions in an Ag-3.0W/o CU matrix. The densities (96-97%) theoretically obtained with the new mixtures were slightly lower than those reached in previous work. Microstructural investigation revealed the MOS2 to be predominantly distributed at the grain boundaries by with incomplete coverage at the lowest sulphide loading. There was a definite pressing texture but also some evidence that the pressing parameters might be near a limit beyond which rapid grain growth in the metal matrix would take place. A processing procedure for the production of slip ring brush material was written. Author (ESA)

STABILITY OF BOUNDARY-LAYER FLOWS OVER CURVED WALLS Ph.D. Thesis
Jerzy Maciej Floryan 1980 175 p
Avail: Univ. Microfilms Order No. 8020206

The formal analysis of the Gortler-type instability is presented. The boundary layer equations and the disturbance equations are formulated in a general, orthogonal, curvilinear system of coordinates constructed from the inviscid flow over a curved surface. Effects of the curvature of the wall on the boundary layer flow are analyzed and are shown to be insignificant for the intended stability analysis. The basic approximation for the disturbance equations is presented and solved numerically. Previous analyses are discussed and compared with the present one. Results show the importance of the boundary layer growth and are in a good agreement with the experimental data. Effects of suction are introduced and are shown to stabilize the boundary layer. Dissert. Abstr.

THE SHEAR VISCOSITY FOR THE SOFT SPHERE LIQUID VIA DISCRETE CELL HYDRODYNAMICS Ph.D. Thesis
Salma Begum 1980 154 p
Avail: Univ. Microfilms Order No. 8018847

The shear viscosity and the longitudinal momentum transfer for the soft sphere liquid was calculated numerically by computer simulation using a discrete cell hydrodynamics method. It is based on a formulation which is discrete in space and time. For the soft sphere viscosity, there is good agreement between the nonequilibrium molecular dynamics calculation and the discrete cell hydrodynamics results. The discrete cell hydrodynamics method is also over 50 times more efficient than previous methods because the discrete method is not sensitive to large scale fluctuations as other methods. Thus, the discrete cell hydrodynamics method is more useful for calculating fluid transport properties. Dissert. Abstr.

N80-30670 Idaho Univ., Moscow.
SIMILITUDE MODELING OF NATURAL CONVECTION HEAT TRANSFER THROUGH AN APERTURE IN PASSIVE SOLAR HEATED BUILDINGS Ph.D. Thesis
Dennis David Weber 1980 123 p
Avail: Univ. Microfilms Order No. 8019798

An experimental study of natural convection heat transfer through a doorway in a two room passive solar heated building is described. Similitude modeling was the method used to measure natural convection heat transfer coefficients in a model geometrically scaled down by a factor of five. Freon gas was used as the working fluid to obtain dynamic similarity within the model. A temperature difference was maintained between the two rooms by a heated vertical wall which simulated a thermal storage wall in the other room. Heat transfer through the doorway was measured as a function of a characteristics temperature differential and the geometry of the doorway. A comparison of the results of this work with previous full scale studies and with the theory shows good correlation. Deviation of the Grashof number dependence from the theoretical predictions were caused by errors in assumptions of the relationship between the characteristic temperature differential and the temperature differences in the doorway. Velocity and temperature profiles measured in the doorway allowed a critical examination of these assumptions. Dissert. Abstr.

N80-30671 Minnesota Univ., Minneapolis.
FLUX-SPLINE METHOD FOR HEAT, MASS AND MOMENTUM TRANSFER Ph.D. Thesis
Luciano Magno Costalonga Varejao 1980 257 p
Avail: Univ. Microfilms Order No. 8019584

A more accurate numerical method was developed for heat, mass, and momentum transfer. In the method, called Flux-Spline Method, the discretization equation for the dependent variable is obtained by assuming that its associated total (convection + diffusion) flux is linear within the control volume. The method was applied to several test problems where it is shown that its accuracy and order of accuracy are much higher than those of the conventional exponential methods. Dissert. Abstr.

N80-30672 Auburn Univ., Ala.
A THEORETICAL STUDY OF DEVELOPING GAS-LIQUID FLOWS IN VERTICAL PIPES Ph.D. Thesis
Hany Mahmoud Fahmy Aly 1980 139 p
Avail: Univ. Microfilms Order No. 8019883

The current theory of two phase flow was evaluated with emphasis on the mathematical modeling of two phase flow. The mathematical formulation of the two phase flow is generally associated with many constitutive relations as well as uncertainty in specifying the interaction terms between phases. The flow of two dispersed phases can best be described by the mixture theory. Some possible mixture models are described and discussed. The problem of developing, axisymmetric, laminar flow of gas liquid mixtures in circular pipes was formulated in terms of the single phase (or homogeneous flow) model and the diffusion model. The resulting set of non linear partial differential equations was solved numerically by using the step-by-step marching integration technique. The effect of the relevant parameters were investigated. The flow field was found to be affected by both

the void fraction and the void-fraction profile which is affected by the diffusion as the flow continues to develop. Dissert. Abstr.

N80-30673 California Inst. of Tech., Pasadena.
THE TRANSLATIONAL MOTION OF PARTICLES IN A VISCOELASTIC LIQUID. Ph.D. Thesis.
Grant Fred Tiefenbruck. 1980. 260 p.
Avail: Univ. Microfilms. Order No. 8020434.

The translation motion at low Reynolds number of a slender rod near a vertical wall was studied. When the rod is not too near the wall, its motion is found to be in qualitative agreement with theoretical solutions for the motion of a rod in an unbounded second-order fluid. When the rod is nearer to the wall its motion is shown to correspond qualitatively to a simple superposition of the motion in an unbounded second-order fluid and the motion in a Newtonian fluid near a vertical wall. The equations governing the motion of a solid sphere and a spherical bubble in a viscoelastic fluid of infinite extent were solved numerically. The computed solutions were compared with analytic solutions obtained by asymptotic theory considerably beyond the expected range of validity. Many features of the flow can be described by the model fluid behavior in shear and extensional flows. Dissert. Abstr.

N80-30674 Lehigh Univ., Bethlehem, Pa.
THE ANNULAR HEAT PIPE OPERATING LIMIT EQUATIONS AND CHEMICAL REACTOR APPLICATION. Ph.D. Thesis.
Yves Parent. 1980. 205 p.
Avail: Univ. Microfilms. Order No. 8019722.

Capillary limit predictions based on the bi-dimensional liquid pressure distribution were compared using a simplified unidimensional model which is suggested by a conventional axial heat pipe design procedure. The possibilities of integration of the AHP device to a chemical reactor system were investigated using a simplified one dimensional tube wall reactor model with the catalytic partial oxidation of Naphthalene kinetics. The behavior of this system with and without the AHP was compared for a range of operating reactor temperature and also feed temperature. Although operational parameters chosen were optimal in relation to the system without AHP, the system incorporating the AHP device suggests interesting advantages. The analysis also shows some inconsistencies in the reactor behavior beyond a given operating reactor temperature. It is believed that such a situation stems from a multiplicity of solutions inherent to the model chosen. The relative important of final heat sink coupling is demonstrated and various design options, suitable for application to the system at hand, are presented and discussed. Dissert. Abstr.

N80-30675 Polytechnic Inst. of New York.
LAMINAR NATURAL CONVECTION ALONG VERTICAL CORNERS AND RECTANGULAR DUCTS. Ph.D. Thesis.
K. Ramakrishna. 1980. 243 p.
Avail: Univ. Microfilms. Order No. 8019411.

The flow along a vertical right angle corner formed by the intersection of two vertical semi-infinite flat plates whose surface temperature varies according to the relation T(w) - T(infinity) = Nx sub n was analyzed by an asymptotic expansion procedure. The interaction of the boundary layers developing on the two plates or the corner results in a three dimensional flow in the corner region. A similarity solution is found to exist for the nonuniform surface temperature at the corner plates defined by T(w) - T(infinity) = Nx sub n. The resulting flow equations are numerically solved by a strongly implicit finite difference procedure using Stone's algorithm. The governing equations of flow in rectangular ducts were nondimensionalized by different dimensionless parameters for isothermal and constant heat dissipation conditions at the duct walls. The simultaneous development of velocity and temperature in the entrance length of isothermal and constant heat flux square ducts are calculated using a marching procedure and a strongly implicit finite difference procedure using Stone's algorithm in the cross plane. Dissert. Abstr.

N80-30676 Princeton Univ., N. J.
A COMPARISON AMONG VARIOUS THEORIES FOR TURBULENT, REACTING, PLANAR MIXING LAYERS. Ph.D. Thesis.
Stephen Flanders Parker. 1980. 216 p.
Avail: Univ. Microfilms. Order No. 8019825.

The planar, turbulent, mixing layer was analyzed for both nonreacting, variable density flows and reacting flows. A coordinate transform was employed to remove the singularity at the mixing layer edge, which appears when the laminar diffusivity is neglected where the turbulent diffusivity goes to zero. An iterative quazilinearized implicit finite difference scheme was used to solve the governing set of equations. For the nonreacting flows similarity solutions were obtained. Comparisons were made among the computational results and with existing experimental data. The major differences between the models and types of averaging were in the predicted spreading parameter. For reacting flow, two different approaches to the calculation of the ignition length were analyzed. In both approaches several different kinetic models were employed. Comparisons among the models indicated significant sensitivity to the form of averaging and the choice of kinetic remodeling with a lesser sensitivity to the choice of turbulence modeling. Dissert. Abstr.

N80-30677 Polytechnic Inst. of New York.
BUBBLE DYNAMICS IN STRUCTURAL FOAM PROCESSING. Ph.D. Thesis.
Hee Ju Yoo. 1980. 211 p.
Avail: Univ. Microfilms. Order No. 8019419.

The stress distribution of viscoelastic polymer melts in a converging channel were determined by measuring wall normal stress and stress birefringence. The Coleman-Noll second order fluid was used to derive theoretical expressions for the wall normal stress, and shear, and shear and normal stresses in the converging flow field. Bubble dynamics in foam extrusion through a converging die was studied by recording bubble dynamics in the flow channel on movie films as a gas charged molten polymer was extruded. A theoretical analysis was made of bubble dynamics in which a threadlike bubble was assumed to flow along the center line of the die and the Coleman-Noll second fluid model was assumed to described the rheological behavior of the gas charged molten polymer. Bubble growth during mold filling was recorded on a movie film as gas charged molten polymer was injected into a mold cavity. A theoretical study of bubble growth in foam injection molding was conducted in which a spherical bubble was assumed to grow after the injection nozzle was closed and the DeWitt models assumed to describe the rheological behavior of gas charged molten polymers. The cell size and distribution of molded specimens as affected by processing variables was investigated by employing short-shot molding process under isothermal conditions. Dissert. Abstr.

N80-30678 Carnegie-Mellon Univ., Pittsburgh, Pa.
NONSYMMETRIC SPLIT OF FLOW DURING COCURRENT UPFLOW AT AIR-WATER MIXTURES THROUGH SYMMETRIC BIFURCATIONS. Ph.D. Thesis.
Mark Daniel Frewer. 1980. 179 p.
Avail: Univ. Microfilms. Order No. 8020154.

In order to approximate the flow channels in a packed bed, the bifurcations were either U-tubes of small diameter, 4 - 8 mm, or a knife edge, which splits a 1/4 inch I.D. tube into two semicircular channels. The length of the parallel tubes or channels was varied between 10.0 and 100.0 cm. At low air and water flowrates the flow splits nonsymmetrically. Nonsymmetric flow occurs because the symmetric becomes unstable to perturbations in air split, at low air flow. The negative slope of the pressure drop versus air flowrate curves in this region indicates that an increase in air flow in one tube will lead to a pressure decrease, which will cause more flow to enter that tube. Opposing this transition is the pressure drop required to accelerate the flows in the one tube. The transition from symmetric flow is predicted based on the balance of these two pressure drops. The agreement between actual and predicted air flowrates at which the transition will occur is reasonable. A model was developed to estimate the response of the water in the slow flowing tube. It was found that most transitions occurred at calculated amplitudes of response of between 2.5 and 4.0 cm. Dissert. Abstr.

INTERACTING INVISCID AND LAMINAR VISCOUS FLOW, AND SOME ASPECTS OF THEIR STABILITY. Ph.D. Thesis.
Saad Aly M. Ragab. 1979. 207 p.

Avail: Univ. Microfilms Order No. 8020226

The method of matched asymptotic expansions is used to obtain a second order triple deck solution for the case of constant wall temperature. It includes the problem of an adiabatic wall as a special case. A second order accurate finite difference scheme is developed for solving the lower deck equations. The theory is applied to supersonic flows past compression ramps and incompressible flows over small humps with small bubble separation. Also a numerical method for integrating the interacting boundary layer equations for incompressible flows is developed. For incompressible flows over small humps the first order theory is in good agreement with the interacting boundary layer. By including the second order terms in the triple deck theory, better agreement is obtained. For supersonic flows past corners, the agreement between the triple deck theory and solutions of the full Navier-Stokes equations is improved only in the free interaction region for an adiabatic wall. The second order theory breaks down for cold walls. Dissert. Abstr.

NON-NEWTONIAN MIGRATION OF A DEFORMABLE DROP IN SHEARING FLOWS Ph.D. Thesis
Paul Chun-Ho Chen 1979 126 p
Avail: Univ. Microfilms Order No. 8019697

The lateral migration of a deformable drop suspended in a unidirectional shearing flow of a slightly nonnewtonian fluid was considered both theoretically and experimentally. Analytical expressions for the migration velocity due to the separate effects of drop deformation and fluid viscoelasticity were obtained for a two dimensional flow and then extended to the case of a general quadratic flow. The direction and magnitude of the migration velocity was calculated for the particular cases of Poiseuille flow in a tube and linear shear flow, and compared with experimental data. The Couette flow problem was studied experimentally. The size of the inner rotor of the Couette device was varied systematically to assess the role of velocity profile curvature on drop migration. Both deformation and nonnewtonian effects were considered. Significant observations not reported in previous studies include the migration of a deformable Newtonian drop to an equilibrium position between the centerline and the inner rotor and the close competition between normal stress and shape deformation contributions for the case of a Newtonian drop in a nonnewtonian fluid. SYMMETRY MAPPINGS AND CONSERVATION LAWS IN RELATIVISTIC FLUIDS Ph.D. Thesis
Davis Regault Oliver 1979 165 p
Avail: Univ. Microfilms Order No. 8020503

Certain matter symmetries, which may not coincide with geometric symmetries are described in relation to investigations of conservation laws admitted by certain relativistic fluids. In particular, the role matter symmetries in investigations of this kind is elaborated and further developed in relation to the following: (1) hydrodynamic descriptions of relativistic fluid; (2) the Cauchy problem for general relativistic fluid; (3) thermodynamic and kinetic theory models for relativistic fluid and;(4) certain relativistic charged fluids. Only symmetries which can be described by point mappings on the space-time manifold or tangent bundle are considered. Symmetries of this type can be naturally defined in terms of Lie deformations of various physical and geometric objects. Dissert. Abstr.

MARANGONI BUBBLE MOTION IN ZERO GRAVITY Ph.D. Thesis
Robert Lloyd Thompson 1979 417 p
Avail: Univ. Microfilms Order No. 8019363

The Marangoni phenomenon is proposed as the primary mechanism for the movement of gas bubble in a nonisothermal liquid in a low gravity environment. In such a two-phase flow system, local variations in surface tension at the bubbles surface can be caused by a temperature gradient in the liquid. Shearing stresses thus generated at the bubble surface lead to convection in both media, as a result of which the bubble begins to move. A mathematical model consisting of the Navier-Strokes and thermal energy equation, together with the appropriate boundary conditions for both media is presented. Parameter perturbation theory is used to solve this boundary value problem, with the expansion parameter being the Marangoni number. The zeroth, first and second order approximation for the velocity, temperature and pressure distribution in the liquid and in the bubble, and the deformation and terminal velocity of the bubble are determined. Comparison of the zeroth-order analytical results for the bubble terminal velocity showed good agreement with the experimental measurements. Dissert. Abstr.

TURBULENT HEAT TRANSFER AND FLUID FLOW CHARACTERISTICS FOR AIR FLOW IN AN UNSYMMETRICALLY HEATED TRIANGULAR DUCT Ph.D. Thesis
Carlos Alberto Carrasco Altemani 1980 191 p
Avail: Univ. Microfilms Order No. 8014507

Experiments were performed to obtain the heat transfer and friction factor characteristics for an asymmetrically heated triangular duct. Two of the walls were heated so as to obtain axially uniform heat flux and circumferentially uniform temperature. The third wall was made of an insulator plastic material and was not directly heated. Another triangular duct, with identical inner geometry, was positioned upstream of the heated duct and served as the hydrodynamic development duct. The experimentally determined thermally developed values of the Nusselt number were compared to correlations found in the literature for turbulent heat transfer in uniformly heated circular tubes. The predicted values were at least 15 per cent higher than the measured ones. A modification of the Petukhov-Popov equation, using the actual measured values of the friction factor for the heating runs, predicts values of the Nusselt number within 5 per cent of the measured values. The measured values of the Stanton numbers were within 4 per cent of those from a numerical finite-difference solution from the literature. Dissert. Abstr.

NATURAL CONVECTION FILM BOILING ON A VERTICAL SURFACE Ph.D. Thesis
David C. Sherman 1980 213 p
Avail: Univ. Microfilms Order No. 8020429

Experimental results are presented for an investigation of free convection film boiling heat transfer to saturated ethanol, saturated Freon 113, and saturated distilled water from a vertical cylinder. High speed motion pictures of the vapor-liquid interface in film boiling were obtained. All tests were conducted at atmospheric pressure over a range of heat flux between 9000 and 37000 BTU hr sq ft. A study of the stability of the vapor-liquid interfaces is performed and the results are compared to the photographic data. Parameters influencing the heat transfer process are developed and the experimental data is used to determine their proper relationship. The heat transfer coefficient in natural convection film boiling of saturated liquids on moderately long vertical surfaces at constant heat flux is shown to be insensitive to vertical position, and to be dependent only on the temperature differential and the fluid properties. A strong possibility of liquid droplet entrainment in the vapor flow is indicated by the presence of a rough, wavy interface, and relatively high speed vapor-flow, and by the unexpectedly strong dependence of the heat transfer on the latent heat of vaporization. Dissert. Abstr.

THE EFFECT OF SUSPENDED SOLIDS ON THE VISCOUS DRAG ON AN OSCILLATING DISK Ph.D. Thesis
Chun-Hsun Rin 1980 134 p
Avail: Univ. Microfilms Order No. 8019920

The problem of a rigid, neutrally buoyant sphere above an infinitely long flat plate oscillating in its own plane in an incompressible viscous fluid was studied. An approximate solution of the unsteady Stokes equation is obtained for the fluid velocity, the translational and the rotational velocities of the sphere by the method of reflections up to the first reflection. The formulae for the drag and the torque on the sphere, the shear stress on the plate, the energy dissipation of the plate motion were derived. The solution is valid in a region within the boundary layer but not too close to the wall, i.e., for small ratio of sphere radius to distance of its center from the wall. The results were compared with the classical solution of an infinite flat plate oscillating in a viscous fluid and were discussed in terms of the physical

parameters of the problem. Applying the single particle results to an assembly of particles in a dilute suspension, the formula for suspension viscosity was derived. The result is in close agreement with Einstein's formula for suspension viscosity. The theoretical result indicates that the viscous drag on the oscillating disk increases when solid particles are present in the fluid. Dissert. Abstr.

NUMERICAL ANALYSIS OF NATURAL CONVECTION IN TWO-DIMENSIONAL SQUARE AND CIRCULAR CONTAINERS IN LOW GRAVITY Interim Report
S. J. Robertson, L. W. Spradley, and M. P. Goldstein Aug. 1980 39 p refs
(Contract NASw-3281)
(NASA-CR-163487; LMSC-HREC-TR-D697821) Avail: NTIS HC A03/MF A01 CSCL 20D

A numerical study of natural convection in circular cylinder and square enclosures shows that the analytic low Rayleigh number theory of previous investigators is valid for Rayleigh numbers up to 1000. For a Rayleigh number of 5000, steady state values of maximum fluid velocity differ by 20 percent. This deviation between analytic theory and numerical results increases for higher Rayleigh numbers. In addition, the low Rayleigh number theory is shown to be valid for higher Rayleigh numbers for a portion of the transient phase before significant deviation becomes apparent. It is also shown that square shaped experimental configurations may be analytically approximated with good accuracy by circular cylinders of equal cross sectional area for the prediction of convection velocities and flow patterns at low Rayleigh number. DETAILED INVESTIGATION OF A VAPORISING FUEL SPRAY. PART 1: EXPERIMENTAL INVESTIGATION OF TIME AVERAGED SPRAY Progress Report
A. J. Yule, C. Ah Seng, R. Boulderstone, A. Ungut, P. G. Felton, and N. A. Chigier Jul. 1980 36 p refs
(Grant NsG-7517)
(NASA-CR-163483; CARL-IM-80-3) Avail: NTIS HC A03/MF A01 CSCL 20D

A laser tomographic light scattering technique provides rapid and accurate, high resolution measurements of droplet sizes, concentrations, and vaporization. Measurements using a computer interfaced thermocouple are presented and it is found that the potential exists for separating gas and liquid temperature measurements and diagnosing local spray density by in situ analysis of the response characteristics of the thermocouple. The thermocouple technique provides a convenient means for measuring mean gas velocity in both hot and cold two phase flows. The experimental spray is axisymmetric and has carefully controlled initial and boundary conditions. The flow is designed to give relatively insignificant transfer of momentum and mass from spray to air flow. The effects of (1) size-dependent droplet dispersion by the turbulence, (2) the initial spatial segregation of droplet sizes during atomization, and (3) the interaction between droplets and coherent large eddies are diagnosed. FLOW VISUALIZATION STUDY OF SECONDARY FLOW IN A CORNER Final Report, 1 Jan. 1978 - 30 Jun. 1979
Frank G. Collins Dec. 1979 55 p refs
(Grant AF-AFOSR-3537-78; AF Proj. 2307)
(AD-A082634; AFOSR-80-0257TR) Avail: NTIS HC A04/MF A01 CSCL 20/4

An experimental investigation has been made of secondary flow in a 90 degree corner. The tests were run in a water tunnel at low speed (approximately 0.3 ft. per sec.) with emphasis on an attempt to visualize the embedded vortices in the laminar flow. The Reynolds number range was 11,000 to 52,500 per foot; the corner model was 9.75 in. wide by 48 in. long. The model was aligned in the tunnel so that no streamwise pressure gradient was present. Flow visualization was by means of hydrogen bubbles and dye. None of the streak-line examined with either the bubbles or the dye showed any indication of the presence of secondary motion in the first 18 inches of the corner. This is not believed to be conclusive since the vortices may exist at other distances along the corner (the limit here was imposed by the flow visualization apparatus used) or may be poorly developed in the initial length examined. GRA

APPLICATIONS OF RAYLEIGH SCATTERING TO TURBULENT FLOWS WITH HEAT TRANSFER AND COMBUSTION Final Report, 1 Mar. 1978 - 29 Feb. 1980
L. Talbot 6 May 1980 71 p refs
(Contract F44620-76-C-0083)
(AD-A086660; AFOSR-80-0535TR) Avail: NTIS HC A04/MF A01 CSCL 71/2

Rayleigh scattering has been developed as a diagnostic technique and used in conjunction with Laser Doppler Anemometry to study two reacting flows; the interaction of a Karman vortex street with a flame, and the interaction of grid-produced turbulence with a flame. It was found that one of the dominant effects of heat release and flow dilatation is to decrease turbulent kinetic energy, and to increase the integral scales of the turbulence. Flame holder drag is found to have a major effect on the flow-field behind the flame. The Markstein model for the effect of wrinkling on flame stability appears to be in qualitative agreement with the results of the vortex interaction experiments. GRA

ANALYSIS OF NUMERICAL METHODS FOR THE EQUATIONS OF FLUID DYNAMICS Final Report
C. A. Hall and T. A. Porsching Jun. 1980 6 p refs
(Contract F49620-79-C-0100)
(AD-A086659; AFOSR-80-0543TR) Avail: NTIS HC A02/MF A01 CSCL 20/4

During the last twenty-five years, the published literature on computational fluid dynamics has grown enormously. However, there are few papers dealing with the analysis of computational methods for time dependent multidimensional flow. There also seems to be a polarization of investigators into two groups: advocates of finite difference methods and advocates of finite element methods. It is our contention that an 'ideal' computational model for fluid flow problems may in fact draw on the strengths of both schools of thought. For example, we have recently implemented a frontal solution technique, originally devised for finite element analyses, in a finite difference model of two-phase fluid flow. GRA

THE STABILITY OF A COMPRESSIBLE FREE SHEAR LAYER Final Technical Report, Jan. - Sep. 1978
David F. Roscoe and Wilbur L. Hankey Oct. 1979 50 p refs
(Contract F33615-76-C-3145; AF Proj. 2307)
(AD-A086664; AFWAL-TR-80-306) Avail: NTIS HC A03/MF A01 CSCL 20/4

Inviscid flows with an inflection point in the velocity profile have been identified by Lord Rayleigh (1880) to be unstable. Michalke (1964) computed the amplification factors of the instability for a shear layer in incompressible flow. This report extends this work to include compressible flows. The results indicate large amplification rates occur through the transonic range but reduce drastically for supersonic flows. GRA

ON THE SPREADING RATE AND STRUCTURE OF A TURBULENT SPOT Final Report, 1 Mar. 1979 - 29 Feb. 1980
I. Wygnanski and J. Haritonidis (Univ. of Southern California, Los Angeles) 19 Mar. 1980 47 p refs Prepared for European Office of Aerospace Research and Development, London
(Grant AF-AFOSR-3275-77; AF Proj. 2307)
(AD-A086445; AFOSR-80-0472TR) Avail: NTIS HC A03/MF A01 CSCL 20/4

Velocity measurements in the plane of symmetry of a turbulent spot are reported. The number of data points taken at various streamwise locations was adequate to map the ensemble averaged flow field in a spot at a given instance. These results are compared to velocity taken in laboratory coordinates (i.e., at a given station with variable time), whereupon it is shown that the flow field in

the spot depends either on its distance from its origin or on the time elapsed from its initiation. The two variables are not independent, so the flow may be transformed into a time (space) independent problem. The dependence of the spot on the Reynolds number and on the surrounding laminar boundary layer is established. The effects of these parameters on the shape of the ensemble averaged spot, its size, characteristic celerities, and relative rate of entrainment, are discussed. GRA

(AD-A086713; TR-48A; AFOSR-80-0499TR) Avail: NTIS
HC A03/MF A01 CSCL 19/4

The report is intended to provide Institute members with a concise discussion on the computation of the flow behind a shock leading to detonation in a one dimensional system. The computation would be performed using the method of characteristics, and this reduction would also be used later for our investigation of the stochastic initiation of detonations. Stochastic effects might be introduced either as white noise or as variations in material properties such as so-called 'hot spots'. Mathematically these effects would appear as part of the 'driving terms' in the characteristic formulation. Consequently the purpose of the present report is to be viewed primarily as a supportive document for our research effort on the stochastic initiation of detonation. GRA

SIMULATION OF VISCOUS STEADY FLOW PAST AN ARBITRARY TWO-DIMENSIONAL BODY Final Report, Aug. 1979 - Jan. 1980
Michele Napolitano. Wright-Patterson AFB, Ohio. AFFDL. Feb. 1980. 46 p. refs.
(Contract F33615-76-C-3145; AF Proj. 2307)
(AD-A086799; AFWAL-TR-80-3038) Avail: NTIS
HC A03/MF A01 CSCL 20/4

A numerical technique is developed for solving laminar steady flow past an arbitrary two-dimensional body. A system of body oriented coordinates is first generated numerically by means of the transformation of Thompson et al. The vorticity-stream function Navier-Stokes equations are then solved by the Alternating Direction Implicit procedure of Douglas and Gunn. A relaxation-like time derivative is added to the stream function equation and the vorticity equation is linearized in time so that only the converged steady solution has physical meaning. Numerical results are presented for two model problems (a one dimensional Poiseuille flow and the driven cavity problem) and for flow past a NACA 0012 airfoil for moderate to high values of the Reynolds Number. Finally, advantages and limitations for the proposed algorithm are briefly addressed. GRA

HC A05/MF A01 CSCL 20/4

This study sought to formulate a working theory with which the performance of two phase nozzles can be analyzed parametrically over a wide range of flow conditions and fluid properties. As a basis for formulating the theory, the technical status of two phase nozzles was assessed, the governing flow parameters were identified, and the flow domains classified with the previously available theory. A working theory of two phase nozzles suitable for parametric analyzes and optimization was then formulated, incorporating the significant interphase effects of velocity slip, droplet breakup, and droplet heat transfer. Liquid/gas combinations for two phase nozzles, and suitable combinations for marine propulsion and other selected applications were discussed. Single phase (or homogeneous) theory was reviewed from the viewpoints of energy conversion in a nozzle and was compared with models applicable to separate phases in terms of their flow domains. Finally, a working theory of two phase nozzles was formulated based on the governing flow parameters and on six basic equations that described the two phase flow. From this theory, a computer model was developed which includes the significant interphase effects of velocity slip, droplet beakup, and heat transfer and which is suitable for parametric analysis and optimization. Preliminary parametric calculations based on use of this model were compared with results from previous two phase nozzle models and with available experimental data. GRA

HC A07/MF A01 CSCL 20/4

The objective of the investigation is to acquire fundamental understanding of a phenomenon characterized by violent fluctuations occurring in swirling air flows in aircraft engines: this flow instability, dubbed here as 'vortex whistle', is known to be capable of causing severe fatigue failure in gas turbine components. In the present report period, the analysis started from the compressible unsteady Navier-Stokes equations; this was necessary in order to assess the importance of the so-called higher order effects in the boundary layer upon the streaming. Resorting to the apparatus of a matched asymptotic expansion, the analytical representation of the acoustic streaming was derived anew. The results are in essential agreement with our previous conclusions and we were able to confirm, on firmer ground, the existence of the threshold swirl beyond which the free vortex distribution changes into a forced vortex type; these are written up in a paper form appended to this report. Second, based upon the analytical results, a test rig with two different tangential injection manifolds was designed, constructed and installed; the acquisition of the data from them will form the central effort of the next, Phase 2 activity. FINITE ELEMENT MODELING FOR CONVECTION-DIFFUSION PROBLEMS Interim Report
George A. Keramidas. 15 May 1980. 81 p. refs.
(RR023141)
(AD-A086777; AD-E000466; NRL-MR-4225) Avail: NTIS
HC A05/MF A01 CSCL 20/13

The scope of this study is to develop the basic equations for deriving a finite element formulation which can be used to solve problems related to convection and diffusion dominated flows. The formulation is based on the introduction of a generalized quantity defined as heat displacement. The governing equation is expressed in terms of this quantity and a variational formulation is developed which leads to an equation similar in form to

Lagrange's equation of mechanics. This equation may be solved by any numerical method, though it is of particular interest for application of the finite element method. The developed formulation is used to derive two finite element models for solving convection-diffusion boundary value problems. The performance of the two element models is investigated and numerical results are given for different cases of conversion and diffusion with three types of boundary conditions. The numerical results obtained show not only the efficiency of the numerical models to handle pure convection, pure diffusion and mixed convection-diffusion problems but also good stability and accuracy. The applications of the developed numerical models is not limited to diffusion-convection problems but can also be applied to other types of problems such as mass transfer, hydrodynamics and wave propagation. VISUALIZATION STUDY OF TURBULENT SPOTS Interim Technical Report, 1 May 1978 - 30 Apr. 1980
Mohamed Gad-El-Hak and James J. Riley 1 May 1980 60 p refs
(Contract F49620-78-C-0062; AF Proj. 2307)
(AD-A086831; FLOW-RR-162; AFOSR-80-0473TR) Avail: NTIS HC A04/MF A01 CSCL 20/4

An investigation of turbulent spots evolving in a laminar boundary layer has been conducted during the period 1 May 1978 - 30 April 1980. A flat plate was towed through an 18 m water channel. The plate was mounted under a carriage that was towed at a constant velocity. The carriage rides on a continuously replenished oil film giving a vibrationless tow. Turbulent spots were initiated by a solenoid valve that ejected a small amount of water through a hole located downstream from the leading edge. A novel visualization technique has been employed that utilizes fluorescent dye excited by a sheet of laser. Some aspects of entrainment and structure of turbulent spots were inferred from the present experiments. In particular, the present results strongly suggest that another mechanism, in addition to entrainment, is needed to explain the lateral growth characteristics of the turbulent zone defining the spot. This mechanism, termed growth by destabilization, appears to be a result of the turbulence in the spot destabilizing the unstable laminar boundary layer in the neighborhood of the spot. Two additional tasks were carried out as part of this investigation. The first, a theoretical study of three-dimensional wave packets, and the second an investigation of the effects of drag reducing polymers and stratification on turbulent spots. GRA

THE CONVERGENCE OF PERIODIC WAVES TO SOLITARY WAVES IN THE LONG WAVE LIMIT Technical Summary Report
J. F. Toland Mar. 1980 53 p refs Sponsored in part by United Kingdom Science Research Council
(Contract DAAG29-75-C-0024)
(AD-A086370; MRC-TSR-2054) Avail: NTIS HC A04/MF A01 CSCL 20/4

It is shown that large amplitude solitary water waves arise as the limit of periodic waves whose wavelengths increase indefinitely. This result is obtained after a new version of the Nekrasov integral equation for periodic waves has been derived. Its resemblance to the equation for solitary waves (1) leads to this convergence result once the global existence proof for solitary waves given in (1) has been taken into account. GRA

RATE MEASUREMENT IN SHOCK WAVES WITH THE LASER-SCHLIEREN TECHNIQUE
J. H. Kiefer and J. C. Hajduk 1979 14 p refs Presented at 12th Intern. Symp. on Shock Tubes and Waves, Jerusalem, Aug. 1979
(Contract ER-78-S-02-4759)
(COO-4759-2; CONF-7908112-1) Avail: NTIS HC A02/MF A01

The laser schlieren or narrow laser beam deflection technique is discussed with particular reference to its application to very fast processes. The optics of the beam shock wave interaction is then examined by use of the scalar formulation of Huygens' principle (Kirchoff integral), with the shock density profile introduced as a transmission coefficient. The accuracy with which the signal generated by a differential detector will reproduce the variation of the refractive index gradient in a reactive shock is discussed in terms of this formulation. The response of such a detector to passage of a curved shock in a rare gas is also determined with the aid of the shock curvature theory of de Boer. These calculations are in good agreement with experiment and locate the time origin, coincidence of shock leading edge and beam center, on the positive portion of the signal near zero-crossing, an assignment that is in disagreement with the earlier calculations of Dove and Teitelbaum. DOE

THERMODYNAMIC RELATIONS BETWEEN SELECTED PARAMETERS DESCRIBING UNSATURATED FLOW
Clinton M. Case May 1980 47 p refs
(Contract DE-AC08-76DP-01253)
(DOE/DP-01253/18; DRIP-45018) Avail: NTIS HC A03/MF A01

The first law of thermodynamics is applied to unsaturated flow by replacing the usual PdV term (P is pressure and V is volume) for a chemical system which appears there by phi d theta sub s (phi is matric suction and theta sub s is the degree of saturation). If the assumption is made that hysterectic behavior of the moisture characteristic can be ignored, all the usual thermodynamic relations can be derived in which P is replaced by phi and V is replaced by theta sub s and the various thermodynamic potentials, internal energy, U, entropy, S, and so on, are understood to be normalized to unit void volume of the soil being considered. This leads to a thermodynamically derived theoretical expression for the slope of the teristic in terms of theta sub s temperature, T, and the thermal expansivity of water, beta sub 1. DOE

A COMPUTER PROGRAM FOR TRANSIENT AND AXISYMMETRIC ABLATION, CONDUCTION AND RADIATION
L. Fusade and A. Rives 1979 11 p Presented at Intern. Conf. on Numerical Methods in Thermal Probl., Swansea, England, 2-6 Jul. 1979
(SNIAS-792-422-120) Avail: NTIS HC A02/MF A01

Multidimensional characteristics of heat conduction and ablation, associated with high thermal fluxes encountered by heat shielding on space vehicles and ballistic missiles during atmospheric reentry, are modeled theoretically, then implemented in a computer program. This program allows analysis and design of axisymmetric bodies, taken into account two input parameters (for the heat shielding material), mass transfer coefficient and heat of ablation, as functions of pressure and temperature. Thermo-mechanical erosion is computed empirically, including surface roughness effects. Author (ESA)

FUNDAMENTAL INVESTIGATION OF INTERACTION FORCES IN BUBBLE SWARMS AND APPLICATION TO THE DESIGN OF CENTRIFUGAL SEPARATORS Ph.D Thesis
R. Wisman May 1979 349 p refs
(WTHD-115) Avail: NTIS HC A15/MF A01

Rotating gas-liquid flows were investigated, both experimentally and during the development of a numerical description. The interaction forces in bubble swarms were observed, resulting in correlations for the drag force and virtual mass coefficients. The validity of these correlations was verified using first, atmospheric air-water mixtures, then high pressure steam water mixtures. Applicability to the numerical solution of the momentum balances is shown. A computer procedure (ANALEST) for computation of rotating gas liquid flows, based on differential mass and momentum balances, was developed. Eight flow variables were identified but only seven could be computed. The results were used in the design and testing of a venturi separator for nuclear boiling water reactors. Design rules were provided to translate the separating effect obtained with this reduced scale separator to an upscaled version. Author (ESA)

TRANSFORMATION OF A DROP FALLING ON THE SURFACE LAYER OF A LIQUID IN A VORTEX RING [UMBILDUNG EINES FALLENDEN TROPFENS AN DER OBERFLAECHE EINER FLUESSIGKEITSSCHICHT IN EINEN RINGWIRBEL]
Peter E. M. Schneider Aug. 1979 128 p refs In GERMAN
(MPIS-15/1979; ISSN-0436-1199) Avail: NTIS HC A07/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 35.30

The vortex which is formed when a drop falls on the surface layer of a liquid was studied. The factors involved in the formation of this vortex were examined with particular emphasis on drop radius, height of the drop fall, depth of the liquid, and the physical qualities of the drop and of the liquid. OSCILLATIONS OF A LIQUID WITH A FREE SURFACE IN A WEDGE SHAPED CONTAINER [FLUESSIGKEITS-SCHWINGUNGEN MIT FREIER OBERFLAECHE IN KEIL-FOERMIGEN BEHAELTERN]
Helmut F. Bauer 1979 62 p refs In GERMAN
(HSBW-FB-LRT-WE-9-4-79) Avail: NTIS HC A04/MF A01

The natural frequencies of a frictionless and incompressible liquid with a free surface in a wedge shaped containers with a small opening angle are determined. Results indicate that it is possible to determine the pressure distribution, surface distortion, liquid forces and moments from the speed potential. The natural frequencies of several containers measured in the experiment confirm the theoretical values. Author (ESA)

DIODE BEHAVIOR Final Report
Dec. 1979 88 p refs
(Contract ESA-3737/78)
(ESA-CR(P)-1319) Avail: NTIS HC A05/MF A01

The diode behavior of a gas controlled variable conductance heat pipe (VCHP) was studied. A literature search was made covering the various heat pipe control functions and techniques, along with the state-of-the-art for diode operation. The diode operation limits and characteristics were predicted for the AH95 type VCHP and a technique evolved to extend the diode operation limit. One AH95 VCHP was tested and improved to obtain a better diode capability. A comparison was made between the liquid trap and gas blockage diode techniques. Author (ESA)

CALCULATIONS OF FREE TURBULENT SHEAR FLOW WITH A THREE EQUATION TURBULENCE MODEL BY J. C. ROTTA
Eberhard Meineke Apr. 1980 65 p refs Transl. into ENGLISH of "Berechnung Freier Turbulenter Scherstroemungen mit einem 3-Gleichungs-Turbulenzmodell von J. C. Rotta", Rept. DLR-FB-77-60 DFVLR, Goettingen, West Germany
(ESA-TT-525; DLR-FB-77-60) Avail: NTIS HC A04/MF A01; DFVLR, Cologne DM 26.10

Calculations were made using a system of partial differential equations which describe plane and axisymmetric turbulent flows at high Reynolds numbers. This system includes three equations to describe turbulent field quantities in addition to the two equations for the longitudinal and cross flow component of the mean flow. These are the equation for the kinetic energy of fluctuations, the equation for a characteristic length scale, and the transport equation for the Reynolds shear stress. After the necessary closure assumptions, which contain only empirically determinable coefficients, the equations form Rotta's turbulent model. The equations were numerically solved for three cases of free shear flow and the influence of the coefficients of the shear stress transport equation on the solution was studied. A single set of coefficients is given, for which the calculated flow cases are found in satisfactory agreement with experimental results. Author (ESA)

FLOW PHENOMENA IN GRAVITATIONLESS MELTING ZONES IN THE PRESENCE OF ELECTROMAGNETIC FIELDS
Chung-Hwang Chun Jan. 1980 63 p refs Transl. into ENGLISH of "Stroemungsvorgaenge in Schwerelosen Schmelzzonen bei Anwesenheit Elektromagnetischer Felder", Rept. BMFT-FB-W-77-42 Technische Univ., Hanover, Dec. 1977 Original report in GERMAN previously announced as N79-30528
(ESA-TT-592; BMFT-FB-W-77-42) Avail: NTIS HC A04/MF A01; ZLDI, Munich DM 14.70

Under the condition of zero-gravity the convection in a melting zone, caused by the gradient of surface tension

(Marangoni-convection), influences substantially the process of crystal growth. It may be influenced by application of electromagnetic fields. An analysis of the significant forces leads to the characteristic number of similarity and to the classification of the melting flow with regard to the efficiency of the electromagnetic forces. The Marangoni-convection and its influence by means of magnetic fields in the cylindrical melting zone of silicon were studied numerically. From the results the temperature and velocity fields with and without the magnetic field can be predicted and compared. The basis is provided for systematic studies of the optimal flow and temperature conditions for crystal growth.

OPTIMIZATION OF A ROTATING THERMALLY CONDUCTING JOINT AND INCORPORATION IN A LABORATORY MODEL DEPLOYABLE RADIATOR Final Report
B. Hinderer Mar. 1980 113 p
(Contract ESTEC-3765/78-NL-PP)
(DS-190-0-78; ESA-CR(P)-1337) Avail: NTIS
HC A06/MF A01

A thermal and mechanical optimization of a thermally conducting joint and an attached heat pipe radiator was performed. A thermal node model was established to calculate different design configurations. The sealing-bearing concept was redesigned to minimize torque. Axially grooved heat pipe profiles were established for the design goal of this deployable radiator model. An engineering model deployable radiator was constructed and submitted to a thermal-vacuum test. Temperature drops from feeder to radiator closely met predictions, but measured torque exceeded expectations but was within an acceptable range for space applications. The heat pipe network comprising the heat pipes of the radiator and those integrated in the rotor profile was not entirely satisfactory. Evaluation of the results of thermal-vacuum test and previous heat pipe tests led to no definite explanation for the problems with some of the radiator heat pipes.

A HOLOGRAPHIC INTERFEROMETRIC STUDY OF THE TEMPERATURE DEPENDENCE OF DIFFUSION OF AQUEOUS SODIUM CHLORIDE IN WATER, FROM 32 C TO 50 C Ph.D. Thesis
Gray Gabelmann 1980 67 p
Avail: Univ. Microfilms Order No. 8021033

The detection of an apparent second order phase transition in bulk water structure in tetramethylammonium chloride solutions by proton nuclear magnetic resonance spectroscopy was reported. Measurements indicated that the entropic increase with temperature is continuous but a discontinuity appears in the first derivative at about 42 C. This discontinuous behavior of the chemical shift of bulk water protons suggests the existence of a second order phase change in the water structure (a biphasic change). Such a phase change must be characterized by changes in the structure of the liquid. The thermodynamic variables that show a discontinuity during such a phase change are monitored directly. A change in volume, for example, will cause a change in density which will alter the vaporization energy of a liquid. The diffusion constant is closely related to the vaporization energy, so as the diffusion constant is monitored, changes in the density are detected. Any biphasic behavior should be seen as a change in the temperature dependence of the diffusion constant for the system. The diffusion constant for the diffusion of aqueous NaCl into H2O over the temperature range 32 C to 50 C using holographic interferometry was measured. The interferograms were analyzed using a method recently developed.

MARS 1414 RECORDER ENVIRONMENTAL TESTS
David Langjahr Aug. 1980 31 p
(NASA-TP-1709; Rept-80F5124) Avail: NTIS
HC A03/MF A01 CSCL 14E

Environmental testing is described and the data of the Modular Airborne Recording System (MARS) 1414 is presented. The preliminary data marks a starting point for more complete thermal testing in the future. The unit was operated at +/-55 C at one atmosphere, -10 C at 75,000 feet (28 mm Hg)at the other. Temperatures at 13 locations on the unit were monitored and plotted against elapsed time. From the test results, some estimation can be made of ambient temperatures in which the heaters will operate and shut off. This data is sufficient to complete a preliminary analysis of the MARS 1414 Recorder, and to design further tests.

DIAL WITH HETERODYNE DETECTION INCLUDING SPECKLE NOISE: AIRCRAFT/SHUTTLE MEASUREMENTS OF O3, H2O, AND NH3 WITH PULSED TUNABLE CO2 LASERS
Philip Brockman, Robert V. Hess, Leo D. Staton, and Clayton H. Bair Aug. 1980 14 p refs Presented at Intern. Conf. on Heterodyne Systems and Technol., Williamsburg, Va. 25-27 Mar. 1980 Submitted for publication
(NASA-TP-1725; L-13876) Avail: NTIS HC A02/MF A01
CSCL 20E

Atmospheric trace constituent measurements with higher vertical resolution than attainable with passive radiometers are discussed. Infrared differential absorption lidar (DIAL), which depends on Mie scattering from aerosols, has special advantages for tropospheric and lower stratospheric applications and has great potential importance for measurements from shuttle and aircraft. Differential absorption lidar data reduction involves comparing large amplitude signals which have small differences. The accuracy of the trace constituent concentration inferred from DIAL measurements depends strongly on the errors in determining the amplitude of the signals. Thus, the commonly used SNR expression (signal divided by noise in the absence of signal) is not adequate to describe DIAL measurement accuracy and must be replaced by an expression which includes the random coherent (speckle) noise within the signal. A comprehensive DIAL computer algorithm is modified to include heterodyne detection and speckle noise. Examples for monitoring vertical distributions of O3, H2O, and NH3 using a ground-, aircraft-, or shuttle-based pulsed tunable CO2 laser DIAL system are given.

THE MODE LOCKED DYE LASER, 1. PICOSECOND PHOTOCONDUCTIVITY OF SEMI-INSULATING GALLIUM-ARSENIDE, 2 Ph.D. Thesis
Richard Harrison Moyer 1980 135 p
Avail: Univ. Microfilms Order No. 8020426

The principles and practice of the passive mode locking of a CW dye laser are discussed with emphasis on the dynamics of picosecond pulse production as well as the techniques of high resolution pulse width measurement. The characterization of the mode locked dye laser through real time temporal and spectral measurements is also described. The development and applications of the opto-electronic semiconductor switch are considered. Design considerations of the high speed photoconductive device and results of experiments in which picosecond pulses activate the devices are discussed. The experimental results are interpreted to yield numerical estimates of carrier recombination rates. An experimental technique for determining these parameters through ultrafast magnetophotoconductivity is introduced as well. Results show good agreement with the steady state measurements. Dissert. Abstr.

THEORY OF THE LONGITUDINAL FREE ELECTRON LASER, 1. A THEORETICAL MODEL OF THE LINEAR ELECTROOPTIC EFFECT, 2 Ph.D. Thesis
Chun-Ching Shih 1980 202 p
Avail: Univ. Microfilms Order No. 8019907

A proposed longitudinal free electron laser is described in which simulated by a relativistic electron beam passing through a periodically corrugated waveguide. The wavelength of the radiation is widely tunable by changing the electron energy. Theoretical investigations are based on the single electron analysis. Both linear and nonlinear treatments of the laser mechanism in a free electron laser are carried out analytically. The phenomena of homogeneous and inhomogeneous interactions lossy gain, space charge effect, large signal behavior, large gain amplification, and electron dynamics are discussed. A one energy gap model, dielectric theory, and the concept of bond charge were used to investigate the linear Pockel's effect. A general expression is obtained for the electrooptic coefficient of a crystal and is applied to the calculation for diatomic and ternary compounds. The results are generally in good agreement with the measured values for nearly all the crystals in which the electrooptic coefficient had been determined. Dissert. Abstr.

N80-30724 Southern Methodist Univ., Dallas, Tex.
MODELING, SIMULATION, AND CONTROL OF A CLOSED CYCLE LASER GAS SUPPLY SYSTEM Ph.D. Thesis
Stephen Kent Vernon 1980 120 p
Avail: Univ. Microfilms Order No. 8019073

Patel's concept of passing laser gas through a cavity to prevent a heat build up is studied. The flow system used is the closed cycle or circulator type where the gas is contained in a ductwork system to be circulated by a turbine and cooled by heat exchangers. The first step in solving this problem is to model the system, which is done with component models and conservation equations. Once the model is complete, the system can be simulated on a digital computer. Two different models are presented with the first a fourteenth order model and the second a fifth order model. Simulation results for both models are given. The heat exchanger controller is designed using the heat exchanger model in stand alone fashion. The pressure controller is designed using an eighth order linearized circuit model. The control system designs are then tested using the fourteenth order simulation program. Dissert. Abstr.

N80-30725 Polytechnic Inst. of New York.
ANALYSIS OF THE COPPER VAPOR LASER AND DEVELOPMENT OF A GENERAL LASER PLASMA MODEL Ph.D. Thesis
George Michael Kull 1980 156 p
Avail: Univ. Microfilms Order No. 8019401

Excellent qualitative and quantitative agreement between modeled and experimental results clarified the important processes involved in the copper vapor laser. These processes are: radiation trapping, stepwise excitation, cavity loss factors, and electron collisional excitation of the lower and upper laser levels. To accomplish this comparison a general model for a pulsed gas discharge laser was developed and applied to the copper vapor laser. An iterative implicit method of solution is used. All nonlinear coefficients are represented as rational functions. The lowest five levels and three higher excited levels of neutral atomic copper plus the singly ionized copper ground level were included in the model as well as the neutral and singly ionized ground states of the buffer gas. When the three higher excited levels were removed, the output laser pulse widened indicating that stepwise excitation to these additional levels plays a role in the laser kinetics. Semiclassical excitation cross sections of the Gryzinski-type were compared with impact parameter cross sections. Dissert. Abstr.

NUCLEAR ISOMER SUITABLE FOR GAMMA RAY LASER Final Technical Report, 15 Jan. 1977 - 31 May 1979
Shacheenatha Jha 31 May 1979 16 p refs
(Grant NsG-3091)
(NASA-CR-163482) Avail: NTIS HC A02/MF A01 CSCL 20E

The operation of gamma ray lasers (gasers) are studied. It is assumed that the nuclear isomers mentioned in previously published papers have inherent limitations. It is further assumed that the judicious use of Bormann effect or the application of the total external reflection of low energy gamma radiation at grazing angle of incidence may permit the use of a gaser crystal sufficiently long to achieve observable stimulated emission. It is suggested that a long lived 0(+) isomer decaying by low energy gamma ray emission to a short lived 2(+) excited nuclear state would be an attractive gaser candidate. It is also suggested that the nuclear isomer be incorporated in a matrix of refractory material having an electrostatic field gradient whose principal axis lies along the length of the medium. This results in the preferential transmission of electric quadrupole radiation along the length of the medium. E.D.K.

OPTICALLY PUMPED FAR INFRARED MOLECULAR LASERS Final Report, 1 Feb. 1976 - 31 Jan. 1980
Paul D. Coleman Apr. 1980 138 p refs
(Grant AF-AFOSR-2988-76; AF Proj. 2301)
(AD-A086495; UILU-ENG-80-2540; AFOSR-80-0441TR) Avail: NTIS HC A07/MF A01 CSCL 20/5

This report summarizes studies on optically pumped far infrared molecular gas lasers. The research has been concerned with the general subjects of far infrared integrated optics and technology, the discovery of new optically pumped molecular laser systems, and the study and analysis of nonlinear processes (Raman and hyper-Raman) that can occur in optically pumped systems. The theoretical density matrix analysis of the gain spectra of nonlinear systems and the first detailed experimental measurements of these systems are presented. It is demonstrated that third and fifth order nonlinear processes can exceed first order laser processes. An experimental study of the generation of a 22.653 GHz signal (the largest wavelength yet reported) in optically pumped NH3 is described. The frequency tunability and single shot spectral characteristics of the signal were measured with precision. A single laser pump in a four-level system can yield two laser signals, which in the linear case are not coupled together. However, with stronger pumping, nonlinear effects can couple the two laser signals with the result that the behavior of one laser signal is determined by the other and vice versa. The self-consistent analysis of this problem is described. GRA

A STUDY OF LOW-TEMPERATURE PROCESSES IN NON-EQUILIBRIUM ELECTRONIC STATES Final Report, Feb. 1978 - Jan. 1980
T. C. Wang, T. J. Magee, J. Peng, and R. A. Armistead Apr. 1980 58 p refs
(Contract F49620-78-C-0010; AF Proj. 2301)
(AD-A086494; AFOSR-80-0467TR) Avail: NTIS HC A04/MF A01 CSCL 20/5

Primary focus was directed to experimental studies of the electrical behavior of weakly-coupled superconductors. Two types of superconducting devices were used, Josephson tunnel junctions and superconducting thin-film microbridges. The experiments showed that non-equilibrium states created by microwave irradiation and quasiparticle injection will change the current voltage characteristics of Josephson devices. Experiments were also conducted to determine if the grain size of superconducting niobium (Nb) films could be controlled using scanning laser annealing. Initial (as deposited) grain sizes were dependent upon the deposition technique. Regardless, laser annealing resulted in substantial modifications to the structure of the Nb films. With proper laser annealing techniques, relatively fine-grained polycrystalline films were converted to large polycrystalline grains with an average size of 5 by 10 micrometers. GRA

STUDIES OF LASER SELECTIVE EXCITATION OF ATOMS
Norbert Drewell Dec. 1979 152 p refs
(Grant AF-AFOSR-2902-76)
(AD-A086497; UTIAS-229; AFOSR-80-0507TR) Avail: NTIS HC A08/MF A01 CSCL 17/4

Sample preparation through laser ablation of a solid target under vacuum has been combined with short-pulsed laser selective excitation to create a new and convenient experimental technique for measuring atomic radiative lifetimes. The lifetimes of the three resonance states of chromium determined in this way compare very favourably with those found through other experimental means. In addition, the technique has been extended to demonstrate experimentally the potential for plasma diagnostics using two-wavelength selective excitation with short laser pulses. The ratio of population densities of two energy states of chromium atoms has been measured as a function of time during the expansion of the ablation plasma. Extended saturation pumping of the resonance transition in sodium vapour has been investigated theoretically. Rate equations for 20 energy levels in the sodium atom, and the rate equations for the free electrons, were integrated numerically. It has been found that multiphoton ionization, combined with superelastic heating of free electrons can account for the rapid and complete ionization of an un-ionized vapour, as reported in the literature. The detailed theoretical results have led to the development of a simple model which accurately predicts the temporal variation of electron density. GRA

INVERSION OF SPECTRAL LINESHAPES TO YIELD COLLISIONAL RATE CONSTANTS Status Report, 1 Sep. 1978 - 31 Aug. 1980
J. Gelfand, H. Rabitz, and R. B. Miles 1 Jun. 1980 13 p refs
(Contract N00014-78-C-0721)
(AD-A086347; SR-1) Avail: NTIS HC A02/MF A01 CSCL 07/4

State-to-state collisional energy transfer rates are being obtained by the inversion of pressure broadened linewidth data. Measurements of linewidths in overtone vibration-rotation transitions have yielded information rotationally elastic and inelastic collision rates for vibrationally excited HCl. Work is continuing in acquiring similar information for vibrationally excited HF and DF using tunable laser photoacoustic spectroscopy. GRA

INFLUENCE OF WALL IMPEDANCE ON THE ELECTRON CYCLOTRON MASER INSTABILITY Final Report
Han S. Uhm 1 Mar. 1980 50 p refs
(ZR01109)
(AD-A086401; NSWC/TR-80-131) Avail: NTIS HC A03/MF A01 CSCL 20/5

The influence of finite wall impedance effects on the cyclotron maser instability of a hollow electron beam is investigated. The stability analysis is carried out within the framework of the linearized Vlasov-Maxwell equations, assuming that the beam thickness is much less than the radius of the beam. The formal dispersion relation for azimuthally symmetric electromagnetic perturbations is obtained, including the influence of an arbitrary value of wall impedance. One of the most important features of this analysis is that, for a purely resistive wall, the growth rate of instability is substantially reduced by allowing even a very small amount of resistivity. Moreover, the range of axial wave-numbers corresponding to instability increases rapidly as the wall resistivity is increased. Cyclotron maser stability properties in a dielectric loaded waveguide is also investigated. It is shown that by an appropriate choice of the dielectric constant epsilon and thickness of dielectric material, the bandwidth of instability can be increased more than twice of that for a plain conducting waveguide. HIGH POWER SUBMILLIMETER AND INFRARED RADIATION FROM INTENSE RELATIVISTIC ELECTRON BEAMS Final Report, 1 Jan. 1975 - 31 Dec. 1979
S. P. Schlesinger, T. C. Marshall, and P. Diament Mar. 1980 11 p refs
(Contract F44620-75-C-0055; AF Proj. 2301)
(AD-A086688; AFOSR-0545-80TR) Avail: NTIS HC A02/MF A01 CSCL 20/5

A series of experiments was performed to test the dependence of superadient power generated by stimulated Raman backscattering (at 2 mm wavelength) upon ripple-field amplitude and length. Experiments were also performed to understand the possibility of using distributed feedback in a collective mode free electron laser. A theoretical study was completed to understand the growth of circular waveguide modes by parametric coupling to cold beam waves, with field gradients included. This is similar to free electron laser configurations to be studied in upcoming experiments. GRA

SHORT PULSE UV-VISIBLE WAVEGUIDE LASER Final Technical Report, 15 May 1979 - 14 May 1980
Leon A. Newman 1 Jul. 1980 72 p refs Submitted for publication
(Contract N00014-79-C-0309)
(AD-A086856; UTRC/R80-924636-1) Avail: NTIS HC A04/MF A01 CSCL 20/5

The operation of a N2(-) ion waveguide laser (4278 A) excited by charge transfer from He2(-) created in a capacitively coupled self-sustained discharge is described. In addition, the results of an experimental diagnostic program and a computer modeling program, conducted to explain the general operations of the discharge pumped He-N2 system, are presented. The results of this program indicate upper laser level electron quenching and lower level pumping may be seriously limiting the achievable laser efficiency of this system. GRA

MODEL LS-2X LASER SOURCE DETECTOR TEST SYSTEM Final Report
May 1980 27 p refs
(Contract DAAB07-78-C-2465)
(AD-A086540) Avail: NTIS HC A03/MF A01 CSCL 17/5

Proper, characterization of infrared photodiodes requires a series of optical tests that include blackbody response, spatial uniformity, pulse response, and wavelength sensitivity measurements. The results of these optical tests will depend upon many fundamental properties of the detector crystal, namely absorption depth of the radiation, bulk lifetimes of injected carriers, surface recombination effects, carrier drift and diffusion effects, trapping effects and other mechanisms. Some of these effects are not clearly understood but may play important roles in such application as high speed pulse detectors, laser heterodyne receivers, or large area high resolution detector arrays. Spears has shown that proper spatial and temporal characterization of HgCdTe CO2 laser heterodyne receivers must be done at the operating frequencies. A realistic characterization of the pulse response of an infrared detector must be made at the operating wavelength, generally that of peak detector response. Certain fixed frequency gas lasers such as CO2, CO, or HF can provide sufficient power and speed for detector characterization but they have limited wavelength coverage and are often cumbersome to use. On the other hand, Pb-salt tunable diode lasers can provide more than 100 micro w of power emitted from nearly a point source, subnanosecond risetime pulses and wavelength selectability between 2.8 and 30 micrometers. These characteristics make diode lasers an ideal source for pulse spatial response measurements of infrared detectors. GRA

UNSTEADY THERMAL BLOOMING OF INTENSE LASER BEAMS Final Report, 1975 - 1977
J. T. Ulrich and P. B. Ulrich 31 Jan. 1980 19 p refs
(AD-A087207; AD-E000476; NRL-8352) Avail: NTIS HC A02/MF A01 CSCL 20/5

A four dimensional (three space plus time) computer program has been written to compute the nonlinear heating of a gas by an intense laser beam. Unsteady, transient cases are capable of solution and no assumption of a steady state need be made. The transient results are shown to asymptotically approach the steady-state results calculated by the standard three dimensional thermal blooming computer codes. The report discusses the physics of the laser-absorber interaction, the numerical approximation used, and comparisons with experimental data. A flowchart is supplied in the appendix to the report. LASER PHYSICS AND LASER TECHNIQUES Final Technical Report, 1 Jan. 1977 - 31 Dec. 1979
A. E. Siegman and R. L. Byer Feb. 1980 98 p refs
(Contract F49620-77-C-0092; AF Proj. 2301)
(AD-A087245; GL-3093; AFOSR-80-0551TR) Avail: NTIS HC A05/MF A01 CSCL 20/5

A three-year program research in laser physics and techniques has been carried out to help meet Air Force mid- and long-term requirements. Development of an optically pumped atomic mercury laser was completed. Picosecond spectroscopy experiment led to measurements of ultrafast relaxation and diffusion times in solids. Work on efficient numerical methods for optical resonator calculations resulted in a Fast Hankel Transform for calculations in cylindrical coordinates. Improvements to the FHT algorithm have been made and a two-stage algorithm developed. An efficient procedure for analyzing nonlinear beam interactions has been developed; also several fundamental questions on aspects of laser resonators have been resolved. A diffraction-biased ring resonator was invented, and an analysis of phase conjugate mirror resonators carried out. Studies of optically pumped lasers including mercury dimer as a potential laser mechanism were carried out. A number of two photon laser systems were investigated, and studies of four-wave mixing as a frequency conversion process completed. Improvements in the growth of lithium niobate crystals led to higher power tunable infrared and visible sources. Finally, stimulated rotational Raman scattering was demonstrated for efficient frequency conversion in the infrared. GRA

RESONANT INTERACTION BETWEEN AN ACTIVE MOLECULAR MEDIUM AND A FREE ELECTRON LASER
H. Wilhelmsson Dec. 1979 19 p refs
(Contract N00014-80-C-0050)
(AD-A087056; PUB-80-116; TR-80-068) Avail: NTIS HC A02/MF A01 CSCL 20/5

The system of a relativistic electron beam and an active molecular (maser) medium in the presence of a ripple magnetic field is studied theoretically. The tunability of the free electron laser could be used to reach different lines of such a molecular medium. We use a Lorentz model to describe the molecular transitions, a hydromagnetic model for the beam, and formulate the resonance condition for the two cases where (1) the coupling occurs at a common interface, e.g., cylindrical, between the beam and the molecular medium, and (2) the beam and the molecules fill the same volume in space. The coupling between the beam and the molecules offers possibilities of enhanced radiation and improved coherence. In the case where the free electron laser acts as a pump of the molecules stimulated radiation could in principle be obtained at a new wavelength, i.e., the coupled system acts as a frequency transformer. MID-TERM PROGRESS REPORT ON THE DEVELOPMENT OF ARMY CLOSED CYCLE CIRCULATOR (CCC) SYSTEM
Myron W. Cole and Cornelius C. Shih 20 Sep. 1979 110 p refs
(AD-A087219; AD-E950001; DRCPM-HEL-79-5) Avail: NTIS HC A06/MF A01 CSCL 14/2

A closed cycle circulator system was developed for recirculating the laser gas through the cavity in order that problems of acoustic attenuation, thermal control, gas contamination, and power gain may be investigated for various pulsed energy inputs at the cavity. The circulator was assembled and tested for its performance evaluation. Its instrumentation subsystem was developed and calibrated to a reasonable accuracy. For safety, standard operating procedures have been established for review and approval. The instruments calibrated include hot wire anemometers for velocity and temperature, piezoelectric transducers for pressure, flowmeter for mass flow rate, and interferometer for medium homogeneity. A series of trial tests of the closed cycle circulator system resulted in an experimental analysis of performance data providing a better control of flow conditions in the cavity through the control mechanism. SEMICONDUCTOR LASER TECHNOLOGY: STRIPE STRUCTURE Final Report [TECHNOLOGIE LASER SEMICONDUCTEUR, STRUCTURE RUBAN]
J. C. Carballes, E. Duda, and J. Apruzzese Jan. 1978 48 p refs In FRENCH; ENGLISH summary
(Contract DGRST-76-7-0686)
(LCR-34-078/R/G5) Avail: NTIS HC A03/MF A01

Different types of stripe geometry lasers were analyzed and fabricated by the following methods: shallow proton implantation (no proton penetration in the active layer); deep proton implantation (proton penetration in the active layer); mesa etching (stripe obtained by chemical etching); and oxide isolation (local oxidation on the P side layer). The P.I characteristic (light power versus current intensity), near and far field diagram, astigmatism and thermal resistance of lasers were studied. The properties of the different types of lasers was made were examined, and their potential applications were determined. It is shown that shallow proton implantation is feasible for optical communication applications. Oxide isolation is relevant to fabrication of high light power emitting lasers. Author (ESA)

SENSOR FAILURE ANALYSIS AND MULTIVARIABLE CONTROL FOR AIRBREATHING PROPULSION SYSTEMS Ph.D. Thesis
Khosrow Behbehani 1979 244 p
Avail: Univ. Microfilm Order No. 8019360

A sensor/actuator failure analysis technique for turbofan jet engines is developed. The technique utilizes redundant information

embedded in the engine model residual and does not require multiple hardware redundancy. Three phases of failure analysis, namely detection, isolation, and accommodation are considered. Failure detection and isolation techniques are developed by utilizing the concept of generalized likelihood ratio (GLR) tests. These techniques are applicable to both time-varying and time-invariant systems. Three GLR detectors are developed for: (1) hard-over sensor failure; (2) hard-over actuator failure; (3) brief disturbances in the actuators. The probability distribution of the GLR detector and the detectability of sensor/actuator failures are established. Failure type is determined by the maximum of the GRL detectors. Failure accommodation is accomplished by extending the multivariable nyquest array control design techniques to nonsquare system design. Dissert. Abstr.

THE EFFECTS OF TITANIUM ON SUBMERGED-ARC WELD METAL Ph.D. Thesis
James P. Snyder, III 1980 108 p
Avail: Univ. Microfilms Order No. 8019728

The effects of titanium on the mechanical properties and microstructure in the submerged arc weld deposit of high strength, low alloy, silicon aluminum killed, low sulfur steels containing various amounts of titanium were determined. The titanium was introduced into the weld via dilution from the base plate. The nominal carbon, manganese, silicon, and titanium ranges in the weld deposits were 0.05 to 0.15, 1.0 to 1.4, 0.35 to 0.60, and 0.0 to 0.15% respectively. Generally, yield and tensile strengths correlated well with carbon, manganese, silicon, and titanium. Yield strength ranged from 449 to 535 MPa and tensile strengths ranged from 570 to 648 MPa. As titanium increased, both the yield and tensile strengths increased. The toughness was strongly dependent on titanium and manganese content, while carbon and silicon had smaller effects. Toughness ranged from 5J at -46 C to 106J at +52 C. Titanium reduced toughness by increasing the maximum weld hardness through solid solution hardening and also by increasing the amount of ferrite veining at low manganese levels. Manganese improved toughness by reducing the amount of ferrite veining and by refining the microstructure. Although titanium is detrimental to the toughness of submerged arc welds, its deleterious effects can be offset by proper selection of welding consumables. Dissert. Abstr.

HC A05/MF A01 CSCL 13I

The design of a propulsion and steering control system for the Rensselaer Polytechnic Institute prototype autonomous Mars roving vehicle is presented. The vehicle is propelled and steered by four independent electric motors. The control system must regulate the speeds of the motors so they work in unison during turns and on irregular terrain. An analysis of the motor coordination problem on irregular terrain, where each motor must supply a different torque at a different speed is presented. A procedure was developed to match the output of each motor to the varying load. A design for the control system is given. The controller uses a microprocessor which interprets speed and steering commands from an off-board computer, and produces the appropriate drive voltages for the motors. T.M.

Design charts and tables have been developed for the elastic torsional stress analyses of free prismatic shafts, splines and spring bars with virtually all commonly encountered cross sections. Circular shafts with rectangular and circular keyways, external splines, and milled flats along with rectangular and X-shaped torsion bars are presented. A computer program was developed at the U.S. Army ARRADCOM, Dover, N.J. site which provides a finite difference solution to the governing (POISSON's) partial differential equation which defines the stress functions for solid and hollow shafts with generalized contours. Using the stress function solution for the various shapes and Prandtl's membrane analogy, the author is able to produce dimensionless design charts (and tables) for transmitted torque and maximum shearing stress. The design data have been normalized for a unit dimension of the cross section (radius or length) and are provided in this report for solid shapes. The eleven solid shapes presented, along with the classical circular cross section solution, provides the means for analyzing 144 combinations of hollow shafts with various outer and inner contours. Hollow shafts may be analyzed by using the computer program directly or by using the solid shape charts in this report and the principles of superposition based on the concept of parallel shafts. (FE-1806-79) Avail: NTIS HC A03/MF A01

Fabrication of the hot gas path development test stand is completed and the mixing chamber and the three combustion

chambers were delivered. Successful casting for the second stage nozzle was made. Ultrasonic nondestructive evaluation of the composite water-cooled nozzle was completed. No unbonding of the composite materials was detected. A plan for sectioning the nozzle for further evaluation is being prepared. Heat transfer testing on the flat plate specimen in the shock tunnel is continuing. Testing of radial cooling passages in the motorized rig continues. The effects of channel tilt, rotational speed, and channel diameter on the heat transfer performance of the passage were evaluated. Results continue to validate the design adequacy of this bucket cooling approach. Fired stability testing of the combustor fuel nozzle on test fuel (propane/steam) in the atmospheric test stand was completed. All configurations tested demonstrated adequate flame stability. Detailed status of the combustor development is reported. DOE

DESIGN AND DEVELOPMENT OF STIRLING ENGINES FOR STATIONARY POWER APPLICATIONS IN THE 500 TO 3000 HP RANGE. SUBTASK 1A REPORT: STATE-OF-THE-ART CONCEPTUAL DESIGN
1 Mar. 1980 363 p.
(Contract DE-AC02-79ET-15209)
(DOE/ET-15209-T1) Avail: NTIS HC A16/MF A01

Reliable cost data for a stationary Stirling engine capable of meeting future needs for total energy/cogeneration systems were obtained and a pragmatic and conservative base design for a first generation hardware was established. Four engine types, V-type crank engine, radial engine, swashhplate engine, and rhombic drive engine, and three heat transport systems, heat pipe, pressurized gas heat transport loop, and direct gas fired system, were selected. After a preliminary layout cycle, the rhombic drive engine was eliminated due to intolerable maintenance difficulties on the push rod seals. The V, radial and swashplate engines were taken through a detailed design/layout cycle, to establish all important design features and reliable engine weights. After comparing engine layouts and analyzing qualitative and quantitative evaluation criteria, the V-crank engine was chosen as the candidate for a 1985 hardware demonstration. DOE

HYDROGEN ENGINE PERFORMANCE ANALYSIS PROJECT Annual Report
Robert R. Adt, Jr., Michael R. Swain, and John M. Pappas. Jan. 1980 469 p. refs. Prepared in cooperation with Hawthorne Research and Testing, Inc., Coral Gables, Fla.
(Contract EC-77-C-03-1212)
(SAN-1212-T1; AR-2) Avail: NTIS HC A20/MF A01

Baseline data for throttled and unthrottled, carburetted and timed hydrogen induction, IVC hydrogen-fueled engine configurations, with and without exhaust gas recirculation and water injection, were obtained. These data, along with descriptions of the test engine and its components, the test apparatus, experimental techniques, experiments performed and the results obtained, are given. Analyses of other hydrogen-engine project data are also presented and compared with the results of the present effort. The unthrottled engine vis-a-vis the throttled engine is found, in general, to exhibit higher brake thermal efficiency. The unthrottled engine also yields lower No sub x emissions, which were found to be a strong function of fuel-air equivalence ratio. DOE

ASSEMBLY AND TESTING OF A CATALYTIC HYDRAZINE GAS GENERATOR Final Report
E. O. Breves. 22 Feb. 1980 194 p.
(Contract ESTEC-3450/77-NL-AK(SC))
(VB-0421-011-B; ESA-CR(P)-1322) Avail: NTIS HC A09/MF A01

A standard OTS 2N catalytic hydrazine thruster was modified for use as a gas generator and life tested in a gas generator plenum system for a period of 1 year. The plenum system comprised a 7 liter tank, feeding two 0.1 N thrusters via a 5 micron filter. The thrusters were operated in a pulsed mode at a duty cycle of 0.1 s ON/1 s OFF. The plenum tank pressure was maintained between 1.9 and 2.1 bar by automatic cycling of the gas generator. The operating frequency of the gas generator was typically every 45 minutes. The operating duration per cycle was a function of the hydrazine inlet pressure. The pre-heat holding temperature of the gas generator was 180/C. The gas generator performed flawlessly during the test. However, X-ray examination of the catalyst bed at the end of test revealed that about 25% of the catalyst had been lost and that the second catalyst retainer screen had incurred a weld failure, becoming detached and displaced on one side of the chamber wall. This mechanical degradation had no influence on the performance of the gas generator. During the tests problems were encountered involving metallic cyanide deposits which blocked the thruster values. The scaleup of the rich-burn/quick-quench (RB/QQ) model to a full scale gas turbine combustor is described and test results from the full scale evaluations are documented. Test results were very positive, showing that the RB/QQ concept can reduce NOx to approximately 45 ppm for clean distillate oil and to approximately 75 ppm for a distillate oil doped to 0.5% nitrogen, as pyridine. Carbon monoxide emissions below the 100 ppm program goal were also demonstrated. These tests also indicate that this combustor concept may be capable of low emission performance on petroleum residual oil and synthetic liquid fuels such as SRC 11 or shale oil. GRA

SOME TOPICS IN RELIABILITY THEORY Ph.D. Thesis
Nader Baradaran Ebrahimi. 1980. 122 p.
Avail: Univ. Microfilms Order No. 8019629

Various notions of multivariate negative dependence are introduced and their interrelationship is studied. Examples are given to illustrate these concepts. Applications of the results in statistics and probability are given. A partial ordering is developed among negative quadrant dependent distributions with fixed marginals. Basic properties and closure under certain statistical operations are derived. Applications of the results in statistics and probability are given. Various definitions of multivariate new better than used (NBU) and new better than used in expectation (NBUE) life distributions are introduced and their interrelationship is studied. Examples are given to illustrate these concepts. Various closure properties of multivariate NBU and NBUE distributions are proved. It is shown how shock models governed by a general counting process satisfying certain conditions can generate multivariate NBU and NBUE distributions. Dissert. Abstr.

IMPERFECT REPAIR Interim Report
Mark Brown and Frank Proschan. Apr. 1980. 16 p. refs
(Contract F49620-79-C-0157; Grant AF-AFOSR-3678-78; AF Proj. 2304)
(AD-A086845; FSU-Statistics-M546; AFOSR-78-108TR; AFOSR-80-0533TR) Avail: NTIS HC A02/MF A01 CSCL 12/1

A device is repaired at failure. With probability p, it is returned to the 'good as new' state (perfect repair); with probability 1 - p it is returned to the functioning state, not is only as good as a device of age equal to its age at failure (imperfect repair). Repair takes negligible time. We obtain the distribution F sub p of the interval between successive good as new states in terms of the underlying life distribution F. We show that if F is in any of the life distribution classes: IFR, DFR, IFRA, DFRA, NBU, NWU, DMRL, or IMRL, then F sub p is in the same class. Finally, a number of monotonicity properties for various parameters and random variables of the stochastic process is obtained. The results obtained are of interest in the context of stochastic processes in general, as well as being useful in the particular imperfect repair model studied. GRA

ORIENTATION OF MEASUREMENT SENSORS FOR OPTIMUM END-OF-LIFE PERFORMANCE Final Report
P. K. Mazaika. 25 Jun. 1980. 28 p. refs
(Contract F04701-79-C-0080)
(AD-A086280; TR-0080-5901-03-1; SD-TR-80-41) Avail: NTIS HC A03/MF A01 CSCL 14/4

Relative orientations of on-board measurement sensors are found that ensure the best possible measurement accuracy in the end-of-life situation when all but three sensors have failed. For five and six sensors, the optimum orientations are, respectively, the single cone and dodecahedron configurations. For seven and eight sensors, new configurations are found that are, respectively, 25 and 20% more accurate than previously proposed configurations. In general, there is a tradeoff between performance at end-of-life and performance earlier in a configuration's lifetime. GRA

The use of an electron beam for the contactless probing of hybrid substrates is discussed. The injection of an electrical charge using the electron beam results in a surface field which enhances the generation of secondary electrons which a second electron probe is directed at a substrate probe position. The discussion of the theoretical basis and experimental findings are correlated. The results of this study indicate that a new method of substrate probing exists. However, careful interpretation of the results must be performed. The applicability to multilayer thick film substrates suggest future adaptation as an in-line manufacturing or test technique. GRA

DESIGN GUIDELINES AND OPTIMIZATION PROCEDURES FOR TEST SUBSYSTEM DESIGN Final Report, May 1978 - May 1979
Donald N. Lord, George A. Walz, and Stan Green. Apr. 1980 267 p. refs
(Contract F30602-78-C-0167; AF Proj. 2338)
(AD-A087059; RADC-TR-80-111) Avail: NTIS HC A12/MF A01 CSCL 14/2

This study provides guidelines and procedures to optimize the design of built-in-test equipment. The procedures are applicable to the design of both avionic and ground electronic systems. Optimization of the test subsystem is achieved by properly specifying three key design parameters (test effectiveness, mean corrective maintenance time, and test subsystem production costs) during the Conceptual Phase. These parameters then form the 'design to' criteria for optimization during the System, Subsystem, and Detail Design Phases. The report provides straightforward mathematical tools, algorithms, and trade-off procedures to assist the designer during each design phase. GRA

HIGH PERFORMANCE VCHP LIFE TEST Final Report
Dec. 1979 60 p. refs
(Contract ESA-3007/76)
(ESA-CR(P)-1321) Avail: NTIS HC A04/MF A01

A one year aging test was conducted on stainless steel, ammonia filled, 9.5 mm diameter variable conductance heat pipes (VCHP). The VCHP's are capable of transporting 100 watt meter and of achieving a temperature control range of 8 C when operated passively. One year aging was completed without degradation of the maximum heat transport or temperature control range. Several parameters influencing the temperature control range were further investigated. Aging will continue for two more years under the same conditions. Author (ESA)

THE APPLICATION OF OPTICAL INTERFEROMETRY TO TIME DEPENDENT UNBONDING, PARTS 1, 2, AND 3 Ph.D. Thesis
Kenneth MacDougall Liechti. 1980 155 p.
Avail: Univ. Microfilms Order No. 8020424

The local crack front deformation is measured to examine the limits of the validity for the linear theory and to provide a basis for future modelling. Within this framework, particular attention is paid to the aspects of local failure mode interaction and the time dependence of the unbonding process. The small displacements in the crack front region require a resolution on the order of a wavelength of light. The experimental techniques used are therefore based on optical interferometry. The displacements applied to the adherends are controlled to the same order by a thermally actuated servoloading device. The development of the experimental techniques used to measure the unbound profiles as well as to measure and control the displacements applied to the adherends are discussed. For stationary cracks, experiments are described which examine the extent of the nonlinearity in the crack front deformation field while fracture criteria are developed and compared for unbonding rates in steadily propagating cracks. Proposals for improvement of the experimental techniques and further experiments are discussed. Dissert. Abstr.

ON THE DYNAMIC ENERGY RELEASE RATE IN ELASTIC CRACK PROPAGATION Ph.D. Thesis
Chikayoshi Yatomi. 1980 52 p.
Avail: Univ. Microfilms Order No. 8020172

A unified treatment of the dynamic energy release rate, epsilon, for a sharp, straight crack in a hyperelastic body undergoing finite strain is presented. Epsilon is decomposed into the usual quasi static energy release rate plus a nonpositive dynamic contribution. Thus, for a dynamic solution the energy release rate computed using the classical quasi static formula is larger than the actual dynamic energy release rate. Dissert. Abstr.

ON THE THERMOMECHANICAL RESPONSE OF 3.5 Ni-Mo-V ALLOY STEEL AND TYPE 304 STAINLESS STEEL UNDERGOING CYCLIC UNIAXIAL INELASTIC DEFORMATION Ph.D. Thesis
Steven Lester Adams. 1980 208 p.
Avail: Univ. Microfilms Order No. 8020394

The rise in temperature technique was used to measure the thermomechanical responses of 3.5 Ni-Mo-V low alloy steel and type 304 stainless steel subjected to fully reversed strain controlled cyclic uniaxial deformation. The nominal total mechanical strain

range was equal to 0.01 and the test frequency was 1.0 hz. Both materials exhibited significant self-heating with maximum specimen temperatures increasing 55 C after one hundred seconds. A comparison of measured temperatures with predicted temperatures which had been calculated assuming the complete convertibility of the mechanical plastic work into heat shows that it is necessary to postulate a structural power response in order to completely match the measured temperature response. The structural power response exhibited a transient and a quasi steady-state component. Both the 3.5 Ni-Mo-V and the type 304 stainless possessed cumulative energy stored or released responses similar to torsionally deformed OFHC copper.

LINEAR-NONLINEAR INTERFACE FOR FINITE ELEMENT TRANSIENT IMPACT DAMAGE ANALYSIS Ph.D. Thesis
Kenneth William Brown 1980 105 p
Avail: Univ. Microfilms Order No. 8020397

A nonlinear transient finite element structural model is interfaced with a linear finite element representation. This analysis technique, which allows local nonlinear modeling of a predominantly linear structural response, is shown to be particularly applicable to impact damage analysis of jet engine fan blades, due to the relatively local nature of blade nonlinear response to impact events, coupled with the large area where linear theory is sufficient for blade impact response definition. Analysis efficiency is enhanced through elimination of stiffness recomputation over the regions of the structure where linear theory is appropriate. Additional enhancement is obtained through the application of problem size reduction procedures to the linear analysis region. Using the present techniques run time reductions of greater than seventy per cent were attained. Comparisons are made between test and the present analysis technique for three test cases. Very good correlations are noted between test and analysis for deflections of an explosively loaded flat plate and a gelatin ball impacted flat panel. Dynamic strain comparisons are shown, with good agreement between test and analysis.
Dissert. Abstr.

TECHNIQUES OF ANALYSIS OF LOAD-DISPLACEMENT RECORDS BY J-INTEGRAL METHODS Ph.D. Thesis
Hugo Alejandro Ernst 1979 215 p
Avail: Univ. Microfilms Order No. 8019161

Exact methods are used to obtain J from a single load displacement record for different configurations based on dimensional analysis and deformation theory of plasticity to imply the dependence of the load on crack length and displacement. The methods also permit the evaluation of the crack length increment delta a and hence complete J-R curves can be constructed. Formulae for T sub mat and T sub app are presented as well. Conditions for the existence of the so called eta factor are stated, and subsequent simplifications of the general method by its use are shown. Results of analysis of experimental work for different configuration material combinations are presented showing the adequacy of the general methodology.
Dissert. Abstr.

N80-30779 California Inst. of Tech., Pasadena.
ON THE PROPAGATING BUCKLE AND ITS ARREST Ph.D. Thesis
Stelios Kyriakides 1980 198 p
Avail: Univ. Microfilms Order No. 8019894

If an offshore pipeline locally buckles in the presence of sufficiently large external pressure, a propagating buckle is initiated. The buckle propagates along the pipeline until it encounters a region of adverse conditions-low pressure or an arresting device. The lowest pressure at which a buckle propagates is defined as the propagation pressure. An experimental study of this quantity is presented and a semi-empirical expression derived by examining various models of the phenomenon. The dynamics of the propagating buckle are also examined and a parametric study of the steady state velocity of propagation is carried out. A systematic way of empirically deriving the parametric dependence of arresting devices is included and experimental results of two such arrestors are discussed. A 'flip-flop' mode of propagation was discovered and studied. An explanation of the phenomenon is attempted.
Dissert. Abstr.

GENERAL SHEARING SPECKLE INTERFEROMETRY AND NUMERICAL BOUNDARY-INTEGRAL TECHNIQUES IN EXPERIMENTAL MECHANICS Ph.D. Thesis
Faissal Abdel Haleem Moslehy 1980 102 p
Avail: Univ. Microfilms Order No. 8020306

Laser speckle interferometry is used as an experimental technique to measure in-plane surface displacement components of a deformed solid. A general theory of laser speckle interferometry which includes both the contributions of in-plane and out of plane deformation is developed and verified through several experimental examples. The basic information consists of a double exposure photographic record of a sheared wavefront of the image of the surface points of a body in a reference and deformed configurations. Several examples are presented to illustrate the application of the coupled laser speckle interferometry and boundary integral solution technique to two dimensional elasticity problems. This coupled technique between laser speckle interferometry and the numerical boundary integral equation method proved to be an accurate and efficient procedure for solving significant engineering problems.

LARGE DEFLECTION RESPONSE OF AN ELLIPTICAL SECTION RING TO DISTURBED AXIAL LOAD Ph.D. Thesis
Lawrence Alan Nattrass 1980 155 p
Avail: Univ. Microfilms Order No. 8020725

The behavior of a circular ring with an elliptical cross-section was studied to determine its suitability as a spring. The design parameters for a spring system to support and axial load included an annular configuration of fixed diameter and minimum volume. The load and deflection range were specified. Since the spring supported a mass, the natural frequency of the system was also a consideration. Considering the need to store a fixed amount of energy in a minimum volume, the optimum spring appeared to be one which had a flat load-deflection curve. The load-deflection characteristics of the ring proved to meet most of the system parameters. The uniqueness and originality of the concept necessitated the development of an analytical model, prediction of performance and failure parameters and experimental verification of the design. An analytical model was developed to predict the force-deflection and stress-deflection characteristics of a given ring. The effects of friction were considered and the useful range of the ring was described in terms of critical angles for self-locking. The model agreed with the experimental results.
Dissert. Abstr.

NONLINEAR BEHAVIOR OF GUYED TOWERS Ph.D. Thesis
Chi-Yuan Ling 1980 160 p
Avail: Univ. Microfilms Order No. 8019476

The large deflection, elastic behavior of guyed towers subjected to both vertical and horizontal loads at the top is investigated. The exact governing nonlinear equations are derived using variational calculus and solved by means of the Newton-Raphson method. Postbuckling paths for systems with or without pretension in the cables are obtained. The collapse loads of systems with vertical loads as well as vertical and horizontal loads are determined. The effect of a distributed wind load on the tower is also studied. Both cables with and without the effect of sag due to wind and weight are considered. Numerical results are presented. Only relatively short towers, approximately 100 ft. tall, that are supported by a single set of guy wires are discussed. Both three and four cable guys as well as fixed and hinged mast bases are considered.

NUMERICAL OPERATIONAL METHODS IN STRUCTURAL DYNAMICS Ph.D. Thesis
Ganapathy Venkata Narayanan 1980 298 p
Avail: Univ. Microfilms Order No. 8019552

A general and systematic discussion on the use and importance of the operational method of Laplace transform for determining the response of large linear dynamic systems governed by partial or ordinary differential equations of the second order with respect to time is presented. The Laplace transform technique,

when applied on these equations with respect to time, reduces the dynamic problem to a state one, which can be solved in the transform plane by any covenient numerical method such as the finite element, finite difference or boundary integral method. The final solution or response of the dynamic system is obtained by a numerical inversion of the transformed solution. Various existing methods of numerical inversion of Laplace transform, selected on the basis of their generality, accuracy and computational efficiency, are reviewed and critically discussed in great detail. Two groups of numerical examples from the area of structural vibrations are presented in detail to illustrate the application of these numerical operational methods.

APPLICATION OF A ROOT LOCUS TECHNIQUE TO MULTILOOP VELOCITY OUTPUT FEEDBACK VIBRATION SUPPRESSION CONTROLLERS Ph.D. Thesis
Daniel Croel Herrick 1980 150 p
Avail: Univ. Microfilms Order No. 8018660

This technique is a generalization of the classical single input single output root locus. Formulas are developed for the root behavior of the structural equation when the damping matrix is either small or large. Low gain root behavior termed departure rates in the neighborhood of the natural frequencies of vibration, are given by a matrix perturbation equation. Formulas for high gain behavior describe the possible limiting migration patterns for damped structural poles called finite zero, infinite zero asymptotes and origin zero arrival directions. The predictability of root behavior for intermediate levels of gain based on the root locus formulas is examined. Some matrix prescription based on the root locus formulas are tested. The root locus approach is tested with several sample structures, the most complicated comprising twelve resonant modes. Some of the mathematical techniques that underlie the root locus technique are applied to the calculation of frequency response fixed points. Dissert. Abstr.

MINITWIST, A SHORTENED VERSION OF TWIST
H. Lowak, J. B. de Jonge, J. Franz, and D. Schuetz 1 May 1979 27 p refs Prepared in cooperation with Lab. fuer Betriebsfestigkeit, Darmstadt, West Germany
(NLR-MP-79018-U; ICAF-1147; LBF-TB-146) Avail: NTIS HC A03/MF A01

A description of the shortened version of the Transport Wing Standard Program (TWIST) is given. In all cases where testing time is a prohibitive factor to use TWIST, it is proposed to use this shortened program. The user of this shortened program should be aware that in most cases the load cycles with high frequency and low amplitude omitted in MINITWIST would contribute to damage; thus the results will overestimate the fatigue life. LOCALIZED IMPACT DAMAGE IN CERAMICS. LOCALIZED IMPACT DAMAGE IN ZINC SULFIDE CRACK GROWTH FROM SMALL FLAWS IN LARGER GRAINS IN ALUMINA Technical Report, 1 Feb. 1979 - 31 Jan. 1980
H. P. Kirchner, T. J. Larchuk, and J. M. Ragostra Feb. 1980 104 p
(Contract N00014-74-C-0241)
(AD-A085874; TR-8) Avail: NTIS HC A06/MF A01 CSCL 11/2

The following topics are covered in this report (1) localized impact damage in zinc sulfide, and (2) crack growth from small flaws in larger grains in alumina. Zinc sulfide specimens were damaged by static and impact loading using glass spheres. The various types of cracks were identified and their size were measured. The maximum impact loads were estimated by several methods including an experimental method based on the assumption that static and impact loads are equal at equal indentation radii, a semiempirical method previously developed on this program and a method suggested by Hutchings. Crack growth in alumina was simulated for the case of small flaws in larger surface crystals to determine the range of crystal sizes and loading rates in which single crystal fracture energies would be expected to control fracture. This should be expected only for large crystals and very high loading rates. GRA

HC A04/MF A01 CSCL 11/6

Three separate investigations were undertaken to determine the applicability of the short rod fracture toughness measurement method to materials such as HF1 fragmentation steel, which is of particular interest to the Army. In the first study, short rod fracture toughness (K sub Ic SR) measurements were compared with ASTM E 399 measurements of toughness (K sub Ic) in a number of metallic materials. Very good agreement was found. In the second study, the methods of fabricating and testing ultrasmall short rod specimens (6.35 mm diameter) were developed and used in measurements of HF1 material taken from actual shell casings. The agreement of the ultrasmall short rod measurements with the toughness as measured by precracked charpy specimens of the same material was rather poor. The third study was made to determine the sensitivity of the short rod toughness measurement to the size of the specimen used in the test. Short rods of various sizes of 4340 steel and two heat treatments of HF1 steel were tested. The specimen size independence of the 4340 steel was marginal, but it was excellent for the HF1 steel. A trend toward an increasing scatter in K sub IC SR data with decreasing specimen size was noted. Recommendations for decreasing the data scatter and automating the test are made. GRA

TORSIONAL WAVES IN A BIMETALLIC CYLINDER. PART 1: AXIALLY HOMOGENEOUS CASE

R. K. Kaul, R. P. Shaw, and W. Muller. Oct. 1979. 43 p. refs.

(Contracts N00014-75-C-0302; N00014-71-C-0108)

(AD-A085822; Rept-107) Avail: NTIS HC A03/MF A01 CSCL 20/11

The dispersion spectrum is found for axially symmetric torsional waves in an elastic, bimetallic rod with cylindrical core and concentric outer casing. Plotting of the various branches of the spectrum is simplified by the presence of discrete invariant points which are independent of the material properties, and through which the spectral lines must pass. The slope and curvature of the spectral lines at cutoff frequencies, the asymptotic approximations at high frequency, the nonexistence of complex branches, the problem of coexistence and the concept of energy flow are also studied. A COMPARATIVE STUDY ON THE ELASTIC-PLASTIC COLLAPSE STRENGTH OF INITIALLY IMPERFECT DEEP SPHERICAL SHELLS

Robert Kao. Feb. 1980. 42 p. refs.

(Contract N00014-75-C-0946)

(AD-A086006) Avail: NTIS HC A03/MF A01 CSCL 13/13

A finite-difference method for the large deformation elastic-plastic analysis of spherical caps is applied to predict the collapse strength of initially imperfect deep spherical shells. Twelve uniformly loaded hemispherical shell models with flat spots at their apex are analyzed. For each model, a number of shallow spherical regions containing the flat spot are selected from its domain. One of these selected shallow regions yields a minimum buckling pressure; this minimum value is taken as the theoretical buckling load for the shell model under consideration. Present solutions are in good agreement with existing experimental and empirical results. The good comparison suggests that initially imperfect deep spherical shells may be analyzed by using a much simpler mathematical model - the spherical cap, and thus the analytical cost may be greatly reduced. This also demonstrates that the collapse of imperfect spherical shells is primarily a local phenomenon and therefore dependent on local geometry. Consequently, the presence of initial imperfections must be fully taken into consideration in any large deformation inelastic buckling analysis before such analysis can be expected to quantitatively predict the collapse strength of practical shell structures. A REVIEW OF NONLINEAR FRACTURE RELATIVE TO FATIGUE Final Report, Sep. 1978 - Sep. 1979

T. Weerasooriya, J. P. Gallagher, and H. C. Rhee. 30 Sep. 1979. 85 p. refs.

(Contract F33615-78-C-5184; AF Proj. 2418)

(AD-A086671; UDR-TR-79-99; AFML-TR-79-4196) Avail: NTIS HC A05/MF A01 CSCL 20/11

This report reviews currently available parameters, methodology, and data that support further developments in elastic-plastic fracture mechanics (EPFM) technology for modeling fatigue crack growth rate (FCGR) behavior. In general, it can be stated that linearly elastic fracture mechanics (LEFM) parameters can be used to model FCGR behavior except when the zone of cyclic plasticity accompanying the crack process is large with respect to crack length and other structural length parameters. The literature provides two types of EPFM parameters which are available for modeling FCGR behavior when the limitations of LEFM are exceeded: one type is based on the characterization of the intensity of the crack tip stress-strain field; the other is based on the determination of a specific mechanical parameter which is evaluated at a point close to the crack tip. FATIGUE AND FRACTURE OF ULTRAHIGH STRENGTH STEEL AND TITANIUM ROLL BONDED AND DIFFUSION BONDED LAMINATES Final Report, 25 Sep. 1978 - 25 Mar. 1980

L. E. Sloter and D. H. Peterson. May 1980. 79 p. refs.

(Contract N00019-78-C-0491)

(AD-A086511; ATC-R-9200/OCR-31) Avail: NTIS HC A05/MF A01 CSCL 11/6

The results of the fabrication by roll bonding of metal-metal laminates and the fatigue and fracture toughness testing of these laminates are reported and discussed. Laminate panels have been prepared from layers of steel alloy 300M interleaved with thin layers of two carbon steels and an ultrahigh carbon steel and from Ti-10V-2Fe-3Al interleaved with Ti-15V-3Cr-3Al-3Sn by roll bonding and from Ti-6Al-4V interleaved with commercially pure titanium by diffusion bonding. Both the steel and titanium alloys were heat treated such that their maximum strengths were obtained. Through proper selection of interleaf alloys (thin layers of material bonded between primary layers of the principal alloy) and heat treatment, critical frcture toughness properties were improved by over 100% over the monolithic values at ultimate strength levels of 290 ksi (1999 MPa) for the 300M steel and 190 ksi (1310 MPa) for the Ti-10V-2Fe-3Al. This improvement brought the toughness at these strength levels to values acceptable for damage tolerant service in aerospace structures or other structures requiring high fracture toughness at high strength levels. Furthermore, the fatigue strength of simulated flawed structural items machined from laminated plate was demonstrated to be superior to the equivalent monolithic material for both the steel and titanium alloys. A DECOMPOSITION PROCEDURE FOR LARGE SCALE OPTIMAL PLASTIC DESIGN PROBLEMS Technical Summary Report
Ikuyo Kaneko and Cu Duong Ha. May 1980. 30 p. refs.
(Contracts DAAG29-75-C-0024; DAAG29-80-C-0041)
(AD-A086560; MRC-TSR-2075) Avail: NTIS HC A03/MF A01 CSCL 12/1
A decomposition procedure is proposed in this paper for solving a class of large scale optimal design problems for perfectly plastic structures under several alternative loading conditions. The conventional finite element method is used to cast the problem into a finite dimensional constrained nonlinear programming problem. Structures of practically meaningful size and complexity tend to give rise to a large number of variables and constraints in the corresponding mathematical model. The difficulty is that the state-of-the-art Mathematical Programming theory does not provide reliable and efficient ways of solving large scale constrained nonlinear programming problems. The natural idea to deal with the large scale structural problem is to somehow decompose the problem into an assembly of small size problems each of which represents an analysis of the behavior of each finite element under a single loading condition. This paper proposes one such way of decomposition based on the duality theory and a recently developed iterative algorithm. GRA

THE SURFACE SINGULARITY OF CRACKS Interim Report
Zdenek P. Bazant and Luis F. Estenssoro. Oct. 1979. 162 p. refs. Submitted for publication.
(Grant AF-AFOSR-2859-75; AF Proj. 2307)
(AD-A086491; Struct-Eng-79-10/2515; AFOSR-80-0457TR) Avail: NTIS HC A08/MF A01 CSCL 20/11
The three dimensional singular stress field near the terminal point 0 of the crack front edge at the surface of an elastic body is investigated. The variational principle governing the displacement distribution on a unit sphere about point 0 is derived from the differential equations of equilibrium, and more directly, from the potential energy. By energy flux arguments it is found that the front edge of a propagating crack must terminate at the surface obliquely at a certain angle, whose dependence upon the inclination of a crack plane is also solved. The angle is the same for Modes 2 and 3, but different for Mode 1. For Mode 1, the surface point trails behind the interior of the propagating crack, while for Modes 2 and 3 it moves ahead. Consequently, a combination of Mode 1 with Modes 2 and 3 is impossible at the surface terminal point of a propagating crack whose plane is orthogonal. When the plane is inclined, the three intensify factors can combine only in certain fixed ratios. The crack edge angle is a function of the angle of the crack plane. Some results are also presented for notches and for cracks that intersect a two material interface. E.D.K.

ON THE CHARACTERIZATION OF STRAIN-HARDENING IN PLASTICITY
J. Casey and P. M. Naghdi. May 1980. 47 p. refs.
(Contract N00014-75-C-0148; NR Proj. 064-436)
(AD-A086551; UCB/AM-80-5) Avail: NTIS HC A03/MF A01 CSCL 20/11
In the context of a purely mechanical, rate-type theory of elastic-plastic materials and utilizing a strain space formulation, this paper is concerned mainly with developments pertaining to strain-hardening behavior consisting of three distinct types of material response, namely hardening, softening and perfectly plastic behavior. It is shown that such strain-hardening behavior may be characterized by a rate-independent quotient of quantities occurring in the loading criteria of strain space and the corresponding loading conditions of stress space. With the use of special constitutive equations, the predictive capability of the results obtained are illustrated for strain-hardening response and saturation hardening in a uniaxial tension test. AN INTEGRAL BOUND ON THE STRAIN ENERGY FOR THE TRACTION PROBLEM IN NONLINEAR ELASTICITY WITH SMALL STRAINS
Joseph J. Roseman (Tel-Aviv Univ.). Apr. 1980. 20 p. refs.
(Contracts DAAG29-75-C-0024; DAAG29-80-C-0041; Grant DAAG29-76-G-0102)
(AD-A086377; MRC-TSR-2060) Avail: NTIS HC A02/MF A01 CSCL 20/11
For the traction boundary value problem in nonlinear elastostatics for a body which is convex in its undeformed reference state and with the assumption of sufficiently small strains (but not necessarily small displacement gradients), an upper bound is obtained for the elastic strain energy in terms of the L sub 2-integral norms of the surface tractions and body forces with the constant depending only upon the ratio of the outer and inner diameters and the physical constants of the material. This result extends previous known results in linear elasticity (infinitesimal displacement gradients) and finite elasticity (small but finite displacement gradients) into the small strain theory of nonlinear elasticity. CURING STRESS FIELDS IN INVOLUTE EXIT CONES Final Report, 1 Nov. 1979 - 15 Feb. 1980
N. J. Pagano. Feb. 1980. 58 p. refs. Prepared in cooperation with Prototype Development Associates, Inc., Santa Ana, Calif.
(AF Proj. 2419)
(AD-A086404; AMFL-TR-79-4191) Avail: NTIS HC A04/MF A01 CSCL 20/11
A procedure is developed for determining the unusual distribution of ply material in an involute exit cone and then it is used in an analysis of the curing stresses in an IUS exit cone billet. The ply pattern analysis produces three Euler angles at each material point that are used to define properties for a finite element model of the billet. Attention is focused on the delamination failure mode observed during post cure and large regions of cross-ply tension are shown to occur during cool down. Comparisons with autopsy data show that the predicted ply fiber distribution is in good agreement with that observed in the IUS billet, while the finite element stress pattern seems to correlate with observed cracking patterns. Finally, a sensitivity study shows a striking dependence of the interlaminar normal stress on the orientation of the ply pattern on the cloth. GRA

OPTIMALITY CRITERION TECHNIQUES APPLIED TO STRUCTURES COMPOSED OF DIFFERENT ELEMENT TYPES Technical Report, Sep. 1978 - May 1980
M. I. Syed, K. D. Willmert, and M. R. Khan. 1980. 10 p. refs. Presented at the 21st AIAA/ASME Struct., Structural Dyn. and Mater. Conf., Seattle, 12-14 May 1980.
(Contract N00014-76-C-0064)

(AD-A086644; MIE-059) Avail: NTIS HC A02/MF A01 CSCL 11/4

The optimality criterion design method, developed by Khan, Willmert and Thornton which exploits the concept of one most critical constraint, has been extended in this paper to handle more complex structures, specifically ones composed of several different types of elements. The elements considered were the truss, and two different plane stress elements: a constant strain triangular element and a rectangular symmetric shear panel. The optimality criterion method treats multiple load conditions and stress and displacement constraints. A wing-box structure is considered as an example to demonstrate the efficiency and simplicity of the method. GRA

(AD-A084445; ETS-52; ESD-TR-79-328) Avail: NTIS
HC A06/MF A01 CSCL 03/1

At various times during the development of the GEODSS system it became clear that a common, technical vocabulary could be a useful thing. There are many precisely defined astronomical quantities one needs to intelligently discuss star catalogs, optical data reduction, orbital analysis, photometry, etc. Partially as an outgrowth of this need, but mostly through the impetus of a forthcoming reference work, this Glossary was assembled. Its orientation is heavily toward astrometry, rather than astronomy or astrophysics. Also, it is frequently difficult to give precise and concise definitions. In some cases, it is impossible to provide the precise meaning without complicated formulas and much discussion. Nevertheless, sometimes sacrificing clarity for brevity and with a minimum of mathematics, the following 800 items are presented. GRA

LAMINATED BEAMS OF ISOTROPIC OR ORTHOTROPIC MATERIALS SUBJECTED TO TEMPERATURE CHANGE
Shun Cheng and T. Gerhardt (Westvaco Corp., Covington, Va.)
Jun. 1980. 31 p. refs.
(AD-A087230; FSRP-FPL-375) Avail: NTIS
HC A03/MF A01 CSCL 13/13

This paper considers laminated beams with layers of different isotropic or orthotropic materials fastened together by thin adhesives. The stresses that result from subjecting each component layer of the beam to different temperature or moisture stimuli which may also vary along the length of the beam, are calculated. Two dimensional elasticity theory is used so that a wide range of problems, such as that of beams composed of layers of orthotropic materials like wood, can be studied, and accurate distributions of normal and shear stresses obtained. The stress intensity along the bearing surfaces of the layers of the beam is of particular importance because it is responsible for delamination failures of laminated structural elements. The distributions of interlaminar normal and shear stresses measured along the longitudinal axis of the beam indicate that high stress intensity occurs in the end zones of the beam. Thus, delamination failure, when it occurs, will start at the end of the beam. GRA

A THREE-DIMENSIONAL STABILITY ANALYSIS/DESIGN PROGRAM (3DSAD). REPORT 1. GENERAL GEOMETRY MODULE
Fred T. Tracy. Jun. 1980. 47 p.
(AD-A087074; WES-INSTRUCTION-K-80-4) Avail: NTIS
HC A03/MF A01 CSCL 13/13

This module of the three dimensional stability analysis/design program (3DSAD) enables the engineer to describe the geometry of a three dimensional structure, to interactively plot the desired structure, and then to obtain volume, weight, and centroid information for the structure. The general ways in which geometry is described are (a) two dimensional cross sections extended in the third dimension, (b) eight-node brick elements, and (c) clusters of planar polygonal patches. Curved segments can be either circular, elliptical, or quadratic. Hidden lines in a view can be either deleted or dashed. GRA

HC A08/MF A01 CSCL 01/5

A procedure is developed for determining the allowable load carrying capacities and the required overlay thicknesses of airport pavements. A layered elastic theory approach is used with vibratory nondestructive tests supplying the dynamic responses of pavements. For a given pavement, a computer program SUBE is used to determine the value of the subgrade Young's modulus from the measured dynamic responses, and a computer program PAVEVAL, which is based on the layered elastic theory, is used to calculate the allowable load carrying capacity and the required overlay thickness. Limiting subgrade strains and horizontal stresses in pavement layers are used as criteria for determining load carrying capacities and overlay thickness requirements. Single and multiple wheel loadings are considered. Volume 2 of this report presents a validation of these procedures for three airport sites. GRA

OBSERVATIONS ON THE GENERALITY OF THE GRAIN-SIZE EFFECT ON FATIGUE CRACK GROWTH IN ALPHA PLUS BETA TITANIUM ALLOYS Final Report
G. R. Yoder, L. A. Cooley, and T. W. Crooker. 19 May 1980. 13 p. refs.
(RR0220148)
(AD-A087215; AD-E000479; NRL-MR-4232) Avail: NTIS
HC A02/MF A01 CSCL 20/11

Results obtained through analysis of the literature agree with those of our own as regards the effect of grain size (l) on region-II fatigue crack growth rates (da/dN) of alpha - beta titanium alloys in ambient air, viz. that for a given value of stress intensity range (delta kappa), da/dN decreases as (l) is increased. The analysis indicates that when microstructural modification of a given alloy affects a reduction in da/dN, the reduction appears attributable to an increase in l. Conversely, when microstructural modification fails to affect a significant

change in da/dN, the result appears attributable to a negligible change in I. Comparison of fatigue crack growth behavior at stress intensity ranges of 15, 21 and 40 MPa square root m indicates a diminution of the grain size effect with increased delta kappa. As elucidated in terms of the reversed plastic zone size model, diminution of the grain size effect follows as a consequence of the reduced portion of the structure sensitive mode of crack growth present as delta kappa is increased. THE PREDICTION OF RESPONSE OF SOLIDS TO THERMAL LOADING USING THE FINITE ELEMENT CODE AGGIE 1 Interim Report
David H. Allen and Walter E. Haisler 30 May 1980 53 p refs
(Contract N00014-76-C-0150; NR Proj. 064-534)
(AD-A087042; TR-3275-80-1) Avail: NTIS HC A04/MF A01 CSCL 20/11

In previous work the authors have proposed a theory of predicting the response of elastic plastic solids subjected to thermal loads. The theory was cast in a finite element framework and has now been placed in the finite element code AGGIE I. In this paper several example problems will be compared to experimental and other theoretical results. It will be shown that the model in its current form is adequate for modelling the response of many solids composed of temperature dependent materials. GRA

FRACTURE PROBLEMS IN POWER LAW VISCOELASTIC MATERIALS Final Report, 1 Jun. 1979 - 30 Jun. 1980
Arje Nachman Jun. 1980 25 p refs
(Contract F49620-79-C-0076; AF Proj. 2304)
(AD-A087244; AFOSR-80-0562TR) Avail: NTIS HC A02/MF A01 CSCL 20/11

Two papers were completed during the contract year. They are appended to this report. The first has been accepted for publication the International Journal of Solids and Structures. The second has recently been submitted to the same journal. Both papers concern themselves with the general issue of debonding. In each paper loading criteria were exhibited under which an interface edge crack between dissimilar elastic media would propagate. It was felt that these questions must be settled for the elastic case before an intelligent approach to the viscoelastic case could be possible. Moreover, several very interesting viscoelastic debonding problems have recently been formulated by the author, so the general program outlined in the contract will be carried forward. GRA

NONLINEAR CREEP BUCKLING ANALYSIS OF INITIALLY IMPERFECT SHALLOW SPHERICAL SHELLS
Robert Kao Jul. 1980 51 p refs
(Contract N00014-75-C-0946)
(AD-A087017) Avail: NTIS HC A04/MF A01 CSCL 20/11

Creep buckling times and creep deformations are obtained for axisymmetric shallow spherical shells with and without initial imperfections. For nonlinear creeps, both strain hardening and time hardening rules are employed in the analysis; results indicate that strain hardening yields better estimates of shell life than time hardening. Results also show that the initial imperfection plays an important role in shortening shell creep buckling times. GRA

ACCURATE NUMERICAL SOLUTIONS FOR ELASTIC-PLASTIC MODELS
H. L. Schreyer, R. F. Kulak, and J. M. Kramer Mar. 1980 27 p refs
(Contract W-31-109-eng-38)
(ANL-80-31) Avail: NTIS HC A03/MF A01

The accuracy of two integration algorithms is studied for the common engineering condition of a von Mises, isotropic hardening model under plane stress. Errors in stress predictions for given total strain increments are expressed with contour plots of two parameters: an angle in the pi plane and the difference between the exact and computed yield surface radii. The two methods are the tangent predictor/radial return approach and the elastic predictor/radial corrector algorithm originally developed by Mendelson. The accuracy of a combined tangent predictor/radial corrector algorithm is also investigated. DOE

USE OF ENDOCHRONIC PLASTICITY FOR MULTI-DIMENSIONAL SMALL AND LARGE STRAIN PROBLEMS
B. J. Hsieh Apr. 1980 103 p refs
(Contract W-31-109-eng-38)
(ANL-CT-79-19) Avail: NTIS HC A06/MF A01

The endochronic plasticity theory, proposed in its general form by K. C. Valanis, is investigated. The explicit forms of the constitutive equation resemble closely those of the classical theory of linear viscoelasticity. Excellent agreement between the predicted and experimental results is obtained for some metallic and nonmetallic materials for one dimensional cases. Explicit constitutive equations are derived that are consistent with the general theory for one dimensional (simple tension or compression), two dimensional plane strain or stress, and three dimensional axisymmetric problems. STUDY OF THE INTERACTIONS BETWEEN FRICTION, WEAR AND SYSTEM RIGIDITY Progress Report, 1 Jul. 1979 - 30 Jun. 1980
V. Aronov, A. F. DSouza, S. Kalpakjian, and I. Shareef Mar. 1980 52 p refs
(Contract DE-AC02-79ER-10471)
(DOE/ER-10471/1) Avail: NTIS HC A04/MF A01

Progress in friction and wear studies is reported. After an extensive study of various possible systems for friction, wear and vibration measurements, a pin and disk sliding system was designed to be used on a rigid lathe bed. This versatile design has the capability of controlling the applied load, rigidity and damping of the total frictional system. The design and construction of the pin holding assembly were completed with certain features to render it suitable for acquisition of appropriate data such as forces and displacements. Special instrumentation was obtained; the major components of which are a tri-axial quartz piezoelectric force transducer, a tri-axial ceramic piezoelectric accelerometer for measurements of vibrations of the slider, charge preamplifiers with dc power supply, and monitoring equipment such as a spectral analyzer and an oscillograph. Preliminary experiments indicate that the system is appropriate for the type of study undertaken. Some preliminary experimental results are included. DOE

DYNAMIC MEASUREMENTS OF MICROPOLAR ELASTIC CONSTANTS
W. E. Jahsman (Colorado Univ., Boulder) and R. D. Gauthier (Colorado School of Mines) 1979 47 p refs
(OUEL-1291/91) Avail: NTIS HC A03/MF A01

A series of dynamic tests utilizing a compression type Kolsky apparatus was conducted. Short cylindrical specimens machined from bulk composite material were subjected to short duration compressive pulses. Similar tests were conducted on specimens of the constituent materials of the composite. Differences are observed between the records for the constituent materials and for the composite specimen. The records for the constituents are smooth and compared well with predictions based on one dimensional wave propagation through homogeneous isotropic elastic solids. The record for the composite materials exhibit high frequency ripples which no reasonable adjustment in the averaged material properties can explain. Analysis shows that in addition to the classical Rayleigh-Lamb frequency equations, an independent set of micropolar frequency equations is generated. By associating the fundamental and first harmonic of the micropolar frequencies with the high frequency ripples appearing on the measured signal for the composite, it is possible to calculate two of the four micropolar elastic constants for the material. On the basis of these results, it is concluded that for certain composites dynamic measurements can provide the resolution needed to determine at least some of the micropolar elastic constants. AN OPTIMAL STATE ESTIMATION ALGORITHM FOR TERRAIN-RANGING SYSTEMS Ph.D. Thesis
Won Teh Hwang 1980 95 p
Avail: Univ. Microfilms Order No. 8020831

A simple recursive algorithm for continuous dynamic positional state estimation referenced to a moving vehicle equipped with the above image mapping systems is developed by making use of optimal and suboptimal Kalman filters and minimization techniques of the least squares loss function subject to constraints of budget simplicity, and survivability in hostile environment. The applied theories are mainly the theories of system and optimal control with some broad understanding of navigation and electrooptics. The general objective of the algorithm are to make selected measurements of the outputs of the image mapping systems to minimize the trace of the resulting error covariance matrix of the state estimates and also to make selections such that the error covariances of the estimates of unmeasured quantities be small. A performance index for use in the algorithm is developed and evaluated. Dissert. Abstr.

DEGRADATION OF PICTURE QUALITY BY SPECKLE IN COHERENT MAPPING SYSTEMS Ph.D. Thesis
Vuaya Narayan Korwar 1980 183 p
Avail: Univ. Microfilms Order No. 8019904

The problem of specifying the extent of the degradation caused by speckle in pictures meant to be examined by a human observer was investigated. A plausible theoretical model was developed for the decision process used by the observer in the detection or discrimination task. This model was used to relate the probability of making a correct decision to the relevant picture parameters such as contrast ratio between the reflectivities of various parts of the picture, number of looks per pixel, picture size, and dimension of the features of lines. Calculations for the reasonable SAR parameters of 1 dB contrast ratio and 12 looks per pixel show that, in order to achieve a probability of correct decision of 0.95, (1) a small square in a 100 by 100 pixel background needs to be about 7 pixels on a side; (2) a 100 by 100 pixel grating of line pairs needs to have lines about 2 pixels wide; and (3) a simple geometrical form (a specific one) needs to be at least 12 pixels on a side to be distinguished from another (specific) form of the same size, when these two forms are the only possible alternatives. Dissert. Abstr.

THE DEVELOPMENT OF A STEPPED FREQUENCY MICROWAVE RADIOMETER AND ITS APPLICATION TO REMOTE SENSING OF THE EARTH Ph.D. Thesis
Richard Harrington 1980 188 p
Avail: Univ. Microfilms Order No. 8020139

The design, development, application, and capabilities of a variable frequency microwave radiometer are described. This radiometer has demonstrated the versatility, accuracy, and stability required to provide contributions to the geophysical understanding of ocean and ice processes. The design technique utilized a closed loop feedback method, whereby noise pulses were added to the received electromagnetic radiation to achieve a null balance in a Dicke switched radiometer. Stability was achieved through the use of a constant temperature enclosure around the low loss microwave front end. Remote sensing experiments were conducted from an aircraft platform using this radiometer. Four significant scientific observations were accomplished during these experiments. These observations consisted of the first radiometric mapping of an ocean polar front, exploratory experiments to measure the thickness of lake ice, first discrimination between first year and multiyear ice below 10 GHz, and the first known measurements of frequency sensitive characteristics of sea ice. Dissert. Abstr.

The author has identified the following significant results. The class of reforestation (Pinus, Eucalyptus, Araucaria) was defined using iterative image analysis (1-100) and LANDSAT MSS data. Estimates of class area by 1-100 were compared with data supplied by the forestry institute in Sao Paulo. LANDSAT channels 4 and 5 served to differentiate the Pinus, Eucalyptus, and Araucaria from the other trees. Channels 6 and 7 gave best results for differentiating between the classes. A good representative spectral response was obtained for Auraucaria on these two channels. The small relative differences obtained were +4.24% for Araucaria, -7.51% for Pinus, and -32.07% for Eucalyptus.

The author has identified the following significant results. Multispectral scanner data for Brasilia were corrected for atmospheric interference using the LOWTRAN-3 computer program and the analytical solution of the radiative transfer equation. This improved the contrast between two natural targets and the corrected images of two different dates were more similar than the original ones. Corrected images of MSS data for Ribeirao Preto gave a classification accuracy for sugar cane about 10% higher as compared to the original images.

INVESTIGATION OF THE APPLICATION OF HCMM THERMAL DATA TO SNOW HYDROLOGY Progress Report, Apr. - Jun. 1980

James C. Barnes, Principal Investigator. Jul. 1980 7 p Sponsored by NASA HCMM

(E80-10297; NASA-CR-163351) Avail: NTIS HC A02/MF A01 CSCL 08L

The author has identified the following significant results. Comparison of the thermal IR band temperatures over the rapidly melting snowcover in a number of locations in the Salt-Verde Arizona watershed by the U-2 high altitude multispectral scanner, with temperatures for these same locations measured by the corresponding HCMM pass, indicate that the U-2 temperatures are typically 5 C higher than the values analyzed from the HCMM infrared digital printout. Results tend to substantiate findings of other investigators that with the offset that has been applied to all HCMM data, the HCMM temperature values may, in fact, actually be 5 C too low. Analysis of differences between the HCMM day and night temperatures for selected snowcovered areas in the Sierra Nevada Mountains, derived from the daytime and nighttime printouts, show greater delta tau values for the sparsely vegetated higher elevations than for the lower elevation, more densely forested terrain. The differences for the 12 hour sequence are also greater in most instances than the 36 hour difference.

SOIL MOISTURE IN RELATION TO GEOLOGIC STRUCTURE AND LITHOLOGY, NORTHERN CALIFORNIA

Ernest I. Rich, Principal Investigator. 21 Jul. 1980 2 p HCMM

(Contract NAS5-24479)

(E80-10298; NASA-CR-163352) Avail: NTIS HC A02/MF A01 CSCL 08M

The author has identified the following significant results. Structural features in the Norther California Coast Ranges are clearly discernable on Nite-IR images and some of the structural linears may result in an extension of known faults within the region. The Late Mesozoic marine sedimentary rocks along the western margin of the Sacramento Valley are clearly defined on the Nite-IR images and in a gross way individual layers of sandstone can be differentiated from shale. Late Pleistocene alluvial fans are clearly differentiated from second generation Holocene fans on the basis of tonal characteristics. Although the tonal characteristics change with the seasons, the differentiation of the two sets of fans is still possible.

R. K. Lennington and K. M. Abotteen, Principal Investigators. May 1980. 17 p. refs. Sponsored by NASA, USDA, Dept. of Commerce, Dept. of Interior and Agency for International Development. ERTS.
(Contract NAS9-15800; Proj. AgRISTARS)
(E80-10304; NASA-CR-160753; SR-LO-00453; LEMSCO-14355; JSC-16361) Avail: NTIS. HC A02/MF A01. CSCL 05B.

The author has identified the following significant results. A total of ten Large Area Crop Inventory Experiment Phase 3 blind sites and analyst-interpreter labels were used in a study to compare proportional estimates obtained by the Bayes sequential procedure with estimates obtained from simple random sampling and from Procedure 1. The analyst error rate using the Bayes technique was shown to be no greater than that for the simple random sampling. Also, the segment proportion estimates produced using this technique had smaller bias and mean squared errors than the estimates produced using either simple random sampling or Procedure 1.

(E80-10309; NASA-CR-163378) Avail: NTIS. HC A02/MF A01. CSCL 08B.

The author has identified the following significant results. Fine orogenic sediments, not detectable on the images recorded within the visible wavelength region, can be clearly recognized on all night IR-images. The area of glaciation in the northern foreland of the Alps can be partially identified on the basis of night-IR data. The terminal moraine of various glacierization phases can be mapped and the relative dry and unsorted moraine material consisting of crystalline components can be located through the vegetation cover. The eastern part of the glaciation area can be traced because of reverse temperature effect. In addition to the upper Bavarian lakes, the night-IR images clearly indicate the distribution of high soil moisture areas such as swamps and bogs. The geological border of the upper fresh water molasse in the northern part of the basin north of Munich is identifiable on night IR-imagery. Drift peat areas can be located on day-IR images of the dry season of the year.

THE CONTRIBUTION OF THE DIFFUSE LIGHT COMPONENT TO THE TOPOGRAPHIC EFFECT ON REMOTELY SENSED DATA
Chris Justice and Brent Holben. Jun. 1980. 45 p. refs. Submitted for publication.
(NASA-TM-80728) Avail: NTIS. HC A03/MF A01. CSCL 20F.

The topographic effect is measured by the difference between the global radiance from inclined surfaces as a function of their orientation relative to the sensor position and light source. The short wave radiant energy incident on a surface is composed of direct sunlight, scattered skylight, and light reflected from surrounding terrain. The latter two components are commonly known as the diffuse component. The contribution of the diffuse light component to the topographic effect was examined and the significance of this diffuse component with respect to two direct radiance models was assessed. Diffuse and global spectral radiances were measured for a series of slopes and aspects of a uniform and surface in the red and photographic infrared parts of the spectrum, using a nadir pointing two channel handheld radiometer. The diffuse light was found to produce a topographic effect which varied from the topographic effect for direct light. The topographic effect caused by diffuse light was found to increase slightly with solar elevation and wavelength for the channels examined. The correlations between data derived from two simple direct radiance simulation models and the field data were not significantly affected when the diffuse component was removed from the radiances. Radiances from a 60 percent reflective surface, assuming no atmospheric path radiance, the diffuse light topographic effect contributed a maximum range of 3 pixel values in simulated LANDSAT data from all aspects with slopes up to 30 degrees. MONITORING THE USE OF RIVERWAYS WITH AERIAL PHOTOGRAPHY: THE DEVELOPMENT, TESTING, AND EVALUATION OF A COMPUTER ASSISTED METHODOLOGY Final Report
R. H. Becker, William A. Gates, and Bernard J. Niemann, Jr. 31 Mar. 1980. 363 p.
(Contract DACW25-79-C-0008)
(AD-A086471) Avail: NTIS. HC A16/MF A01. CSCL 14/5

The objectives of this investigation were to develop, test and evaluate a recreational monitoring methodology using aerial photography and computer assisted data capture with auxiliary equipment. To meet these objectives, photography was flown, interpretation techniques were developed and utilized, hardware was assembled, software was written and recreational monitoring results were obtained. Section 1, includes a statement of objectives, how the report is organized, a summary of available photography, a brief summary of methods employed, and some conclusions. Section 2, Pool 16 Users Results, includes the results obtained from applying the methodology for six flights over Pool 16. It also includes discussion of the results and provides graphic

examples of results. Section 3, Evaluation of the Methodology, includes equipment and personnel requirements, the time utilized developing and testing the methodology, and the costs incurred. The reliability of the methodology, error control and error discovery are discussed. Section 4, Aerial Photographic Methods, includes a detailed discussion of the methods and equipment employed to purchase, obtain and process the aerial photography for the riverway. Section 5, Interpretative methods, discusses the methods employed to interpret, locate and encode targets from the photography. Section 6, Handbook/Codebook, includes a detailed description of each variable encoded as part of the methodology. It also includes the rules used to interpret each of the target types. GRA

MULTI-SOURCE IMAGE ANALYSIS Final Report
David D. Steller, Michael R. Mel, Debra J. Shiroma, William Muir, and Julie A. Sowma. Dec. 1979. 157 p. refs.
(Contract DAAK70-78-C-0180)
(AD-A086332; ETL-0208) Avail: NTIS HC A08/MF A01 CSCL 08/6

For the purposes of this study, multi-source image analysis is defined as the utilization of imagery from panchromatic photography, radar and thermal infrared systems for providing military geographic information. The imagery was limited to sets available from a variety of governmental and commercial sources. Effort was made to obtain images from all three sensor systems, but at some test sites only one or two types were utilized. Sensor characteristics were evaluated in relationship to the targets of interest and sensor keys determined. Several useful enhancement techniques were utilized to emphasize feature parameters. Comparison interpretation using all three image types provided valuable complementary target information. GRA

RADIO-ECHO SOUNDING IN THE ALLAN HILLS, ANTARCTICA, IN SUPPORT OF THE METEORITE FIELD PROGRAM Special Report
Austin Kovacs. May 1980. 12 p. refs.
(Grant NSF DPP-77-19565)
(AD-A086858; CRREL-SR-80-23) Avail: NTIS HC A02/MF A01 CSCL 08/12

Radio-echo sounding measurements made on Ross Island and in the Allan Hills Antarctica indicate that radio-echo sounding may offer the unique possibility of detecting a buried meteorite in glacial ice. The results also revealed internal layering within the snow on Ross Island and in the snow filling an ice depression west of Allan Nunatak. Radio-echo sounding also gave the depth to bedrock near the west side of Allan Nunatak. The greatest ice depth measured was 310 m. GRA

CORRELATION OF UNDER-ICE ROUGHNESS WITH SATELLITE AND AIRBORNE THERMAL INFRARED DATA
Leonard A. LeSchack. May 1980. 46 p. refs.
(Contract N00014-76-C-0757)
(AD-A085512; TR-2) Avail: NTIS HC A03/MF A01 CSCL 08/12

This report, based on empirical data, concludes that a correlation has been found between easily obtainable sea ice surface temperature and under-ice roughness data which are obtainable only at great expense. Under-ice roughness is valuable in evaluating acoustic attenuation beneath the Arctic ice and is expressed in terms of either root-mean-square (RMS) ice depth or standard deviation about the mean ice depth, both of which are closely correlated. By showing a functional relationship between the skewness of the surface temperature distribution as derived from NOAA VHRR Satellite thermal infrared data and the under-ice roughness, the way appears clear to make a chart of Arctic under-ice roughness for Arctic acoustic programs and for nuclear submariners. In a second study, under ice data recorded in April 1976 by the SSN GURNARD was correlated with the skewness of temperature distributions derived from NOAA VHRR IR data recorded in March 1976 over nominally the same area of the Beaufort Sea. A third study was then conducted that shows, perhaps more graphically than the others, the correlation of under-ice data recorded by the British nuclear submarine HMS SOVEREIGN between 16-21 October 1976 with airborne IR data recorded during the same period over the submarine track by a Canadian Forces Argus aircraft. In all three examples, when the RMS ice depth range was between 4 and 8 m, corresponding to a standard deviation of ice depth ranging between 2 and 6 m, there is a strong, negative linear correlation between the skewness of the temperature distributions, whether measured from satellites or aircraft, and the under-ice roughness measured by submarine upward-looking sonar. GRA

AERIAL GAMMA RAY AND MAGNETIC SURVEY: RATON BASIN PROJECT. THE RATON AND SANTA FE QUADRANGLES OF NEW MEXICO Final Report
Dec. 1979. 324 p. refs.
(Contract EY-76-C-13-1664)
(GJBX-9(80)-Vol-2) Avail: NTIS HC A14/MF A01

The Santa Fe quadrangle in central New Mexico lies principally within the Southern Rocky Mountains and Great Plains Provinces. The west is dominated by the Sangre de Cristo Mountains. The eastern and southern regions contain portions of the Sierra Grande Arch and the Las Vegas and Tucumcari Basins. These structures primarily contain permian, triassic, cretaceous, and tertiary sediments. Many areas of the quadrangle are covered by cretaceous through quaternary igneous rocks of a variety of types. Magnetic data reflect both deep and shallow sources. The basins show as regions of low frequency/low amplitude wavelengths except where significant amounts of igneous rocks are exposed. The Santa Fe quadrangle has been unproductive in terms of uranium. All known uranium occurrences to date have proven uneconomic. Two goups of anomalies in the Sangre de Cristo Mountains appear to be most significant in terms of their peak count rates. DOE

INDUSTRIAL APPLICATION AND ASSESSMENT OF WASTE ENERGY RECOVERY TECHNOLOGIES. Ph.D. Thesis
Michael John Koluch. 1980. 319 p.
Avail: Univ. Microfilms Order No. 8019349

Nine generic waste energy recovery technologies were examined for potential applications in industry. These were heat exchangers, Rankine power cycles, Brayton power cycles, Stirling power cycles, heat pumps, absorption cooling systems, expanders, burner, and cogeneration systems. Several industries were examined. A methodology was developed to assess waste energy recovery technologies. It comprises an industry waste flow/technology compatibility prescreen computer model, prescreen evaluation, specific technology application computer model and technology application assessment. Technology limitations were incorporated into a computer model to prescreen potential applications in 87 industrial processes. Results of that prescreen indicated that heat exchangers, heat pumps, Rankine cycles and cogeneration systems ranked highest in the utilization of waste streams. Numerous specific waste stream, technology, end use applications were examined in detail. Performance technology models were used to simulate applications. M.G.

SOLAR THERMAL ENERGY STORAGE USING A PARAFFIN WAX PHASE CHANGE MATERIAL. Ph.D. Thesis
Arthur Bart Shapiro. 1980. 134 p.
Avail: Univ. Microfilms Order No. 8018904

A shell tube thermal energy storage (TES) unit is proposed with the shell side containing a paraffin wax. The physical system is mathematically modelled by the two dimensional transient heat conduction equation in cylindrical coordinates. This equation is solved by an explict finite difference algorithm. A numerical marching method is used in the z direction to preserve the three dimensional nature of the physical system. The numerical solution uses temperature dependent thermodynamic and transport properties. Values for the density thermal conductivity, and enthalpy for the solid and liquid phase were determined by experimental methods and extrapolation of published property data. Results from a parametric study are presented in graphs of percent storage capacity versus time and tube side fluid temperature drop versus time. The parameters varied were tube side fluid mass flow rate, tube length, tube diameter, and tube spacing. The results present valuables insight into operational trends and acceptable operating ranges of the TES unit. A design example using these results is presented. Dissert. Abstr.

About fifty industrial processes from the largest energy consuming sectors were used as a basis for matching a similar number of energy conversion systems that are considered as candidate which can be made available by the 1985 to 2000 time period. The sectors considered included food, textiles, lumber, paper, chemicals, petroleum, glass, and primary metals. The energy conversion systems included steam and gas turbines, diesels, thermionics, stirling, closed cycle and steam injected gas turbines, and fuel cells. Fuels considered were coal, both coal and petroleum based residual and distillate liquid fuels, and low Btu gas obtained through the on site gasification of coal. Computer generated reports of the fuels consumption and savings, capital costs, economics and emissions of the cogeneration energy conversion systems (ECS's) heat and power matched to the individual industrial processes are presented. National fuel and emissions savings are also reported for each ECS assuming it alone is implemented. Two nocogeneration base cases are included: coal fired and residual fired process boilers. T.M.

SOLAR POWER SATELLITE OFFSHORE RECTENNA STUDY Final Report
May 1980 284 p refs Prepared in cooperation with Brown and Root Development, Inc., Houston, Tex. and Little (Arthur D.), Inc., Cambridge, Mass.
(Contract NAS8-33023)
(NASA-CR-161543) Avail: NTIS HC A13/MF A01 CSCL 10A

Offshore rectennas are feasible and cost competitive with land rectennas but the type of rectenna suitable for offshore use is quite different from that specified in the present reference system. A nonground plane design minimizes the weight and greatly reduces the number of costly support towers. This perferred design is an antenna array consisting of individually encapsulated dipoles with reflectors or traps supported on feed wires. Such a 5 GW rectenna could be built at a 50 m water depth site to withstand hurricane, winter storm, and icing conditions for a one time cost of $5.7 billion. Subsequent units would be about 1.3 less expensive. More benign and more shallow water sites would result in substantially lower costs. The major advantage of an offshore rectenna is the removal of microwave radiation from populated areas. L.F.M.

SOLAR ENERGY SYSTEM PERFORMANCE EVALUATION REPORT FOR SOLARON-DUFFIELD, DUFFIELD, VIRGINIA Seasonal Report, Oct. 1979 - Mar. 1980
Jul. 1980 90 p refs Prepared for DOE
(Contract NAS8-32036)
(NASA-CR-161507) Avail: NTIS HC A05/MF A01 CSCL 10A

The Solaron Duffield Solar Energy System was designed to provide 51 percent of the space heating, and 49 percent of the domestic hot water (DHW) to a two story 1940 square foot area residence using air as the transport medium. The system consists of a 429 square foot collector array, a 265 cubic foot rock thermal storage bin, heat exchangers, an 80 gallon DHW preheat tank, pumps, blowers, controls, air ducting and associated plumbing. A air-to-liquid heat pump coupled with a 1,000 gallon water storage tank provides for auxiliary space heating and can also be used for space cooling. A 52 gallon electric DHW tank using the solar preheated water provides domestic hot water to the residence. The solar system, which became operational July 1979, has the following modes of operation: First Stage: (1) collector to storage and DHW; (2) collector to space heating; (3) storage to load. Second Stage: (4) heat pump auxiliary direct; (5) auxiliary heat from heat pump storage. Third Stage: (6) electrical resistance (strip) heat. Author

SOLAR ENERGY SYSTEM PERFORMANCE EVALUATION REPORT FOR IBM SYSTEM 4 AT CLINTON, MISSISSIPPI Seasonal Report, Oct. 1978 - Mar. 1980
Jul. 1980 91 p refs Prepared for DOE
(Contract NAS8-32036)
(NASA-CR-161509) Avail: NTIS HC A05/MF A01 CSCL 10A

The IBM System 4 Solar Energy System is described and evaluated. The system was designed to provide 35 percent of the space heating and 63 percent of the domestic hot water preheating for a single family residence located within the United States. The system consists of 259 square feet of flat plate air collectors, a rock thermal storage containing 5 1/2 ton of rock, heat exchangers, blowers, a 52 gallon preheat tank, controls, and associated plumbing. In general, the performance of the system did not meet design expectations, since the overall design solar fraction was 48 percent and the measured value was 32 percent. Although the measured space heating solar fraction at 32 percent did agree favorably with the design space heating solar fraction at 35 percent, the hot water measured solar fraction at 33 percent did not agree favorably with the design hot water solar fraction of 63 percent. In particular collector array air leakage, dust covered collectors, abnormal hot water demand, and the preheat tank by pass valve problem are main reasons for the lower performance. M.G.

SOLAR ENERGY SYSTEM ECONOMIC EVALUATION FINAL REPORT FOR SEMCO-LOXAHATCHEE, LOXAHATCHEE NATIONAL WILDLIFE REFUGE, PALM BEACH COUNTY, FLORIDA Final Report
Jul. 1980 98 p refs Prepared for DOE
(Contract NAS8-32036)
(NASA-CR-161512) Avail: NTIS HC A05/MF A01 CSCL 10A

Economic analysis of the solar energy system installed at Loxahatchee, was developed for Loxahatchee and four other sites typical of a wide range of environmental and economic conditions in the continental United States. This analysis was accomplished based on the technical and economic models in the f Chart design procedure with inputs based on the characteristics of the installed system and local conditions. The results are expressed in terms of the economic parameters of present worth of system costs over a projected twenty year life, life cycle savings, year of positive savings and year of payback for the optimized solar energy system at each of the analysis sites. The sensitivity of the economic evaluation to uncertainties in constituent system and economic variables was also investigated. The results demonstrate that the solar energy system is economically viable at all of the five sites for which the analysis was conducted. T.M.

SOLAR HEATING AND DOMESTIC HOT WATER SYSTEM INSTALLED AT KANSAS CITY, FIRE STATIONS, KANSAS CITY, MISSOURI Final Report
Jul. 1980 170 p Sponsored by NASA
(Contract EX-76-C-01-2373)
(NASA-CR-161513) Avail: NTIS HC A12/MF A01 CSCL 10A

The solar system was designed to provide 47 percent of the space heating, 8,800 square feet area and 75 percent of the domestic hot water (DHW) load. The solar system consists of 2,808 square feet of Solaron, model 2001, air, flat plate collector subsystem, a concrete box storage subsystem which contains 1,428 cubic feet of 0.5 inch diameter pebbles weighing 71.5 tons, a DHW preheat tank, blowers, pumps, heat exchangers, air ducting, controls and associated plumbing. Two 120 gallon electric DHW heaters supply domestic hot water which is preheated by the solar system. Auxiliary space heating is provided by three electric heat pumps with electric resistance heaters and four 30 kilowatt electric unit heaters. There are six modes of system operation. R.K.G.

SPS SALVAGE AND DISPOSAL ALTERNATIVES Final Report
30 Jun. 1980 90 p refs
(Contract NAS8-33783)
(NASA-CR-161548; Rept-80-1489) Avail: NTIS HC A05/MF A01 CSCL 10A

A wide range of salvage options exist for the satellite power system (SPS) satellite, ranging from use in and beyond geosynchronous orbit to use in low Earth orbit to return and use on Earth. The satellite might be used intact to provide for various purposes, it might be cannibalized, or it might be melted down to supply materials for space- or ground-based products. The use of SPS beyond its nominal lifetime provides value that can be deducted from the SPS capital investment cost. It is shown that the present value of the salvage value of the SPS satellites, referenced to the system initial operation data, is likely to be on the order of five to ten percent of its on-orbit capital cost. (Given a 30 year satellite lifetime and a four percent discount rate, the theoretical maximum salvage value is 30.8 percent of the initial capital cost). The SPS demonstration satellite is available some 30 years earlier than the first full-scale SPS satellite and has a likely salvage value on the order of 80 percent of its on site capital cost. In the event that it becomes desirable to dispose of either the demomstration or full-scale SPS satellite, a number of disposal options appear to exist for which intact disposal costs are less than one percent of capital costs. SOLAR SITE TEST MODULE
Ralph R. Kissel and Donald R. Scott Jul. 1980 32 p Sponsored in part by DOE
(NASA-TM-78291) Avail: NTIS HC A03/MF A01 CSCL 10A

A solar site test module using the Rockwell AIM 65 microcomputer is described. The module is designed to work at any site where an IBM site data acquisition system (SDAS) is installed and is intended primarily as a troubleshooting tool. It collects sensor information (temperatures, flow rates, etc.) and displays or prints it immediately in calibrated engineering units. It will read one sensor on demand, periodically read up to 10 sensors or periodically read all sensors. Performance calculations can also be included with sensor data. Unattended operation is possible to, e.g., monitor a group of sensors once per hour. Work is underway to add a data acquisition system to the test module so that it can be used at sites which have no SDAS. Author

(Contract DAAK70-78-C-0103)
(AD-A086579; ERC-6154-I) Avail: NTIS HC A03/MF A01 CSCL 10/2

Subscale hydrogen-air fuel cells were successfully operated with 6M TFMSA as the electrolyte at temperatures as high as 60 C. The fuel cell performance was enhanced over similarly loaded electrodes in H3PO4 due to the apparent improved kinetics for the oxygen reduction reaction. A variety of unsupported and supported Pt electrocatalysts could be effectively utilized. TFMSA fuel cells could be operated stably for periods as long as 3000 hours if water balance was maintained. Activity coefficients calculated by the van Laar equations were utilized to predict water partial pressures of dilute TFMSA solutions. GRA

The Li/SOCl2 inorganic electrolyte system is the highest energy density system known to date. It consists of an Li anode, a carbon cathode and SOCl2, which acts both as a solvent and cathode active material. The electrolyte salt that has been used most extensively is LiAlCl4, but salts such as Li2B10Cl10 and Li2O(AlCl3)2 have also been used successfully in this system for improving the shelf life characteristics. The main objective of this program is to develop high rate Li/SOCl2 cells and batteries for portable applications of the U.S. Army. The cells and batteries must deliver higher energy densities than are presently available and must be safe to handle under field conditions. GRA

ROCKY FLATS SMALL WIND SYSTEMS TEST CENTER ACTIVITIES. VOLUME 1: ATMOSPHERIC TEST DATA COLLECTED FROM SMALL WIND ENERGY CONVERSION SYSTEMS Interim Report, 1 Jul. 1978 - 30 Jun. 1979
Jul. 1979 122 p 2 Vol.
(Contracts EY-76-C-04-3533; DE-AC04-76DP-03533)
(RFP-3004-Vol-1; IR-2-Vol-1) Avail: NTIS HC A06/MF A01

The wind system data of various tests of small wind energy conversion system (SWECS) are presented. Much of the data are not final, but are believed to present an accurate representation of the performance of each system. Because of operating problems and failures experienced by some of the machines (and at times by the data collection system) the amount of data available for analysis varies widely from system to system. Data are presented on a total of 16 machines, including updated data on nine machines which were presented in the first semiannual report. Vibration, controlled velocity testing and plans for a dynamometer test facility (which is under construction) are described. The description of each system under test includes information on design output, output type, rotor configuration, and other basic design features. The condition under which each SWECS was tested are described. Graphic plots of quantitative data and narrative accounts of qualitative data collected on each SWECS are provided. DOE

COAL PROCESSING FOR FUEL CELL UTILIZATION. TASK 11: FLUIDIZED BED COAL GASIFICATION MODEL; DATA ANALYSIS AND PREDICTIONS
Michael L. Finson Jan. 1980 69 p refs
(Contract EW-78-A-21-8450)
(METC-8450-T1; TR-209) Avail: NTIS HC A04/MF A01

Development and application of a computational model for fluidized bed gasification of coal is described. A two phase bubbling bed reactor model accounts for the development of bubbles, clouds, and emulsion, with a new statistical treatment to predict bubble size. Coal char reactivity is described in detail, using models for carbon heterogeneous chemistry, pore structure, and mass transport previously developed. Volatile release is handled in a semiempirical manner, and potential gas phase reactions between fuel and oxygen in the bubbles are allowed. The data imply larger gas by passing and particle carry over than predicted, and the computed performance exceeds that observed. The computer program was exercised to map out gasifier performance over a range of conditions. It is shown that proper fluidization often requires more gas flow than can be accommodated chemically, due to limited kinetics and mass transport. DOE

SOLAR PHOTOVOLTAIC MODULE DEGRADATION FROM ELECTRO-MIGRATION
C. F. Hornig, E. S. Wainwright, S. E. Forman, M. S. Hsu, and M. P. Themelis 15 Apr. 1980 27 p refs
(Contract EY-76-C-02-4094)
(COO-4094-64) Avail: NTIS HC A03/MF A01

The effects of outdoor weathering on both encapsulated and unencapsulated solar photovoltaic modules are discussed. Degradation modes that result from exposure in a terrestrial environment and which influence long term module performance are identified. Two modules, stripped of their protective RTV coating, and a third encapsulated module were placed in the open circuit mode and monitored for five months. The encapsulated module showed no evidence of degradation during the five months of this investigation. The unencapsulated modules showed signs of both physical and electrical degradation. Auger analysis of these unencapsulated cells disclosed the migration of Sn between positive and negative surfaces on the same cell and the migration of Sn from the cell's negative grid (when this negative grid is adjacent to a cell row at lower potential or the metal module edge). This migrating Sn, combined with the SiOx antireflective film, altered the coating structure and appearance. Both degradation modes depend on the presence of moisture, and will thus reduce module peak power by 8 to 11 percent. DOE

THIN FILMS OF InP FOR PHOTOVOLTAIC ENERGY CONVERSION: Quarterly Technical Progress Report, 29 Sep. - 28 Dec. 1979
Harold M. Manasevit, R. P. Ruth, L. A. Moudy, J. J. J. Yang, and R. E. Johnson Jan. 1980 45 p refs
(Contract DE-AC02-79ET-23004)
(COO-3004-2; QTPR-2) Avail: NTIS HC A03/MF A01

Growth parameters are established using triethylindium, diethylzinc (DEZn), and PH3 sources for the formation of Zn doped p type InP films. The properties of grains and grain boundaries in polycrystalline InP films are investigated using several polycrystalline film/substrate combinations, including tungsten (W) layers produced by roller coating and screen printing on polycrystalline alumina, and mechanically abraded surfaces of single crystal bulk InP:Fe wafers. The use of GaP as an alternative intermediate layer material to GaAs on low cost substrates for subsequent growth of InP films is also examined. Auger electron spectroscopy analysis done on a group of specially prepared Zn treated films of polycrystalline InP indicates the presence of Zn at surfaces of InP:Zn films grown on Al and/or heat treated in high concentrations of DEZn at 600 C. However, no Zn is detected in polycrystalline films grown under deposition conditions that would be expected to produce highly doped p type epitaxial films if single crystal substrates were used. DOE

CLIMATE AND ENERGY: A COMPARATIVE ASSESSMENT OF THE SATELLITE POWER SYSTEM (SPS) AND ALTERNATIVE ENERGY TECHNOLOGIES
David A. Kellermeyer Jan. 1980 69 p refs
(Contract W-31-109-eng-38)
(DOE/ER-0050) Avail: NTIS HC A04/MF A01

The potential effects of five energy technologies on global, regional, and local climate are assessed. The energy technologies examined are coal combustion, light water nuclear reactors, satellite power systems, terrestrial photovoltaics, and fusion. The assessment focuses on waste heat rejection, production of particulate aerosols, and emission of carbon dioxide. The current state of climate modeling and long range climate prediction introduces considerable uncertainty into the assessment, but it may be concluded that waste heat will not produce detectable changes in global climate until world energy use increases 100 fold, although minor effects on local weather may occur now; that carbon dioxide from coal combustion in the US alone accounts for about 30% of the current increase in global atmospheric CO2 which may, by about 2050 increase world temperature 2 to 3 C, with pronounced effects on world climate; and that rocket exhaust from numerous launches during construction of a satellite power system may affect the upper atmosphere, with uncertain consequences. DOE

COMPARATIVE ASSESSMENT OF ENVIRONMENTAL WELFARE ISSUES ASSOCIATED WITH THE SATELLITE POWER SYSTEM (SPS) AND ALTERNATIVE TECHNOLOGIES
E. P. Levine, M. J. Senew, and R. R. Cirillo Apr. 1980 99 p refs
(Contract W-31-109-eng-38)
(DOE/ER-0055) Avail: NTIS HC A05/MF A01

Environmental deterioration and associated welfare effects from two mature electric power generation systems (combustion of coal and light water nuclear reactors) are compared with those expected from a conceptual satellite power system. Each activity within the energy pathway for each power system is examined to determine the potential welfare effects it imposes on a community. The severities of these effects are compared. On the basis of this comparison and the state of knowledge concerning specific environmental impacts and welfare effects, key environmental issues are identified for subsequent, in-depth analyses. DOE

N80-30916# Argonne National Lab., Ill. Energy and Environmental Systems Div.
COMPARATIVE ANALYSIS OF NET ENERGY BALANCE FOR SATELLITE POWER SYSTEMS (SPS) AND OTHER ENERGY SYSTEMS
R. R. Cirillo, B. S. Cho, M. R. Monarch, and E. P. Levine Apr. 1980 143 p refs
(Contract W-31-109-eng-38)
(DOE/ER-0056) Avail: NTIS HC A07/MF A01

The net energy balance of seven electric energy systems is assessed: two coal-based, one nuclear, two terrestrial solar, and two solar power satellites, with principal emphasis on the latter two systems. Solar energy systems require much less operating energy per unit of electrical output. However, on the basis of the analysis used here, coal and nuclear systems are two to five times more efficient at extracting useful energy from the primary resource base than are the solar energy systems. The payback period for all systems is less than 1.5 years, except for the terrestrial photovoltaic (19.8 yr) and the solar power satellite system (6.4 yr), both of which rely on energy-intensive silicon cells. DOE

CONTROLLED CADMIUM TELLURIDE THIN FILMS FOR SOLAR CELL APPLICATIONS (EMERGING MATERIALS SYSTEMS FOR SOLAR CELL APPLICATIONS) Quarterly Progress Report, 9 Oct. 1979 - 8 Jan. 1980
K. Vedam, M. B. Das, and S. V. Krishnaswamy Feb. 1980 28 p refs
(Contract DE-AC04-79ET-23013)
(DOE/ET-23023/T3; QPR-3) Avail: NTIS HC A03/MF A01

Emphasis during the third quarter of the program was on the improvement of the quality of sputtered films, their characterization and use in the fabrication of Schottky barrier type diodes and solar cell structures. Films prepared under different conditions and on different substrates were examined showing modular growths under certain conditions. I-V, C-V, and photovoltaic characteristics were measured on numerous samples based on n- and p-type films on Ni substrates having top metallization of either evaporated Au and Al. The n-type samples showed up to 200 mV V/sub oc/and small short-circuit currents. The characteristics observed are indicative of the presence of interfacial layer and surface states. Surface state's capacitance were measured on p-type samples metalized with Au. DOE

REPORT OF THE 6TH OCEAN THERMAL ENERGY CONVERSION CONFERENCE. OCEAN THERMAL ENERGY FOR THE 1980'S
Gordon L. Dugger, ed. 1979 543 p refs Conf. held in Washington, D.C., 19 Jun. 1979 Prepared in cooperation with the Applied Physics Lab., Johns Hopkins Univ., Laurel, Md.
(CONF-790631-1) Avail: NTIS HC A23/MF A01

For the United States, four ocean energy technologies offer significant promises: Ocean Thermal Energy Conversion (OTEC) (using heated surface waters), wave power, ocean currents, and salinity gradients. An overview of the DOE program for these four technologies is presented in terms of plans, concept descriptions, projected market penetration, and potential institutional barriers to implementation. The OTEC program presently receives about 95% of the total ocean energy systems funds. Up to 2 Quads (2 x 1,000,000,000,000,000 Btu/yr fuel equivalent or approximately 22 GW(e) of average OTEC power output) is practically achievable by the year 2000, dependent only on the commercialization strategy employed after the demonstration plant. PHOTOVOLTAIC SYSTEMS AND APPLICATIONS PERSPECTIVE
Gary J. Jones 1980 8 p refs Presented at the Am. Sect. of the Intern. Solar Energy Soc. Conf., Phoenix, Ariz., 2 Jun. 1980
(Contract EY-76-C-04-0789)
(SAND-80-0926C; CONF-800604-14) Avail: NTIS HC A02/MF A01

The National Photovoltaic Program is currently in the proccess of increasing emphasis on full scale system experiments in the potential user environment. At this point large amounts of design information are available and need to be brought together in usable form to support this effort. The state of understanding in the system definition area for the major applications is reviewed, and the remaining issues, especially as they impact the field test activities, are indicated. DOE

DEVELOPMENT OF SOLAR DRIVEN ABSORPTION AIR CONDITIONERS AND HEAT PUMPS
K. Dao, M. Wahlig, E. Wali, J. Rasson, and E. Molishever Mar. 1980 3 p refs Presented at the DOE Active Solar Heating and Cooling Contractors Rev. Meeting, Lake Tahoe, Nev., 26 Mar. 1980
(Contract W-7405-eng-48)
(LBL-10771; CONF-800340-6) Avail: NTIS HC A02/MF A01

The development of absorption refrigeration systems for solar active heating and cooling applications is discussed. The approaches investigated are those using air-cooled condenser-absorber and those leading to coefficient of performances (COP) that increase continuously with heat source temperature. This is primarily an experimental project, with the emphasis on designing, fabricating and testing absorption chillers in operating regimes that are particularly suited for solar energy applications. It is demonstrated that the conventional single-effect ammonia-water absorption cycle can be used (with minor modifications) for solar cooling. DOE

DEVELOPMENT OF ADVANCED BATTERIES AT ARGONNE NATIONAL LABORATORY Summary Report, 1979
Apr. 1980 46 p
(Contract W-31-109-eng-38)
(ANL-80-32) Avail: NTIS HC A03/MF A01

The batteries being developed are for electric vehicle propulsion and stationary energy storage applications. The principal cells under investigation at present are of a vertically oriented, prismatic design with one or more inner positive electrodes of FeS or FeS2 facing negative electrodes of Li-Al alloy, and molten LiCl-KCl electrolyte; the cell operating temperature is 400 to 500 C. A small effort on the development of a calcium/metal sulfide cell is also being conducted. A 40 kWh electric vehicle battery was fabricated and delivered for testing. During heat-up, one of the modules failed due to a short circuit. A failure analysis was conducted and the Mark IA program completed. Development work on the next electric vehicle battery (Mark 11) was initiated. Work on stationary energy storage batteries consisted primarily of conceptual design studies. DOE

PROCESSES TO INCREASE UTILIZATION OF POWER SOLID WASTES
M. J. Murtha and G. Burnet 1979 18 p refs Presented at the ASCE Power Res. Council/Elect. Power Res. Inst. Workshop, San Diego, Calif., 23 Apr. 1979
(Contract W-7405-eng-82)
(ISM-245; CONF-790499-3) Avail: NTIS HC A02/MF A01

Two processes are being developed for extracting metals from fly ash, limestone, and soda ash is sintered and the alumina extracted from the clinker using a dilute sodium carbonate solution. Recoveries of over 90% are obtained from both bituminous and subbituminous coal ashes, and the calcium silicate residue can be used as a raw material for cement. The second metals recovery method involves high temperature chlorination of the ash in the presence of a reductant in an equilibrium fixed bed or fludized bed reactor. Several metals are recovered as chlorides. Ash feed preparation for both processes includes magnetic separation of an iron-rich fraction which shows promise as a heavy media material or an iron ore. It is expected that at least one of the processes will work on other coal wastes such as fluidized bed combustion residue, coal gasification and liquefaction wastes, and limestone scrubber sludge. SENCENBAUGH: MODEL 1000-14 WIND TURBINE GENERATOR Performance Report
K. K. Higashi Jul. 1979 13 p
(Contract DE-AC04-76DP-03533)
(RFP-3034/3533/79-5) Avail: NTIS HC A02/MF A01

Data are provided which give an accurate picture of the performance of the Sencenbaugh Model 1000-14 under conditions approximating normal use. Every effort was made to ensure that the data provided are accurate and the calibration of all instruments was continuously maintained. The tests were designed to develop a power curve for a known load (application) and determine the ability of the machine to survive high winds (85 mph or greater). The Sencenbaugh was tested under a variety of tail assembly adjustment modes. In none of the tests did the test data match the manufacturer's performance curve; however, changing the tail orientation resulted in proved performance. The model tested is no longer in production, and was replaced by a model with a redesigned tail assembly. L.F.M.

NEW PROCESSING FOR DEB POWDER FOR THERMAL BATTERIES
R. Szwarc and R. D. Walton Jun. 1980 9 p refs Presented at the 29th Power Sources Conf., Atlantic City, 9 Jun. 1980
(Contract EY-76-C-04-0656)
(GEPP-OP-486; CONF-800612-4) Avail: NTIS HC A02/MF A01

The electrochemical batteries employed are primary reserve batteries which employ a pelletized cell design. Each cell consists of an electrolyte-depolarizer pellet sandwiched between an anode and a heat pellet. The depolarizer-electrolyte, commonly referred to as DEB, is composed of CaCrO4, LiClKC1 eutectic and SiO2 binder powder, which has been blended and pressed into pellets. The DEB pellet serves as electrolyte and as active cathode when the salt becomes molten upon battery activation. The heat pellet serves the dual purpose of providing the heat necessary to activate the battery and as the cathode current collector. The heat pellet is composed of iron powder and KC104. Since activated life requirements for batteries vary from seconds up to one hour, the battery must be well insulated to conserve the heat produced by the ignition of the heat pellets to maintain the electrolyte in a molten state and to protect sensitive electronic components in contact with the battery case. Because the electrolyte, particularly LiCl, is hygroscopic, the baterries are hermetically sealed in stainless steel cans, and are manufactured in dryrooms maintaned at 3% relative humidity or better. PERFORMANCE DATA FOR A LITHIUM-SILICON/IRON DISULFIDE, LONG-LIFE, PRIMARY THERMAL BATTERY
Rod K. Quinn, Arlen R. Baldwin, and James R. Armito 1980 18 p refs Presented at the 24th Power Sources Conf., Atlantic City, 9 Jun. 1980
(Contract EY-76-C-04-0789)
(SAND-79-2148C; CONF-800612-3) Avail: NTIS HC A03/MF A01

The effects of various environmental tests on battery performance are reported. In order to simulate possible nuclear ordnance environments, batteries were subjected to shock, rhythmic and random vibration, and longitudinal and lateral acceleration in the unactivated and activated state. The level and duration of these tests varied, but the performance remained good. The effects of variation in current density from open circuit to 1 A/sq cm as well as various pulse loads were examined. Also presented are results of stabilizing the batteries at temperatures in the range of -54 C to +70 C as reflected in

various performance parameters. The Li(Si)/LiCl.KCl/FeS2 electrochemical system was also applied to two new Sandia designed batteries requiring rugged, medium life performance, i.e., activated lives of 2.5 and 4 minutes. Encouraging initial results of this application are included here. DOE

FEASIBILITY STUDY FOR INDUSTRIAL COGENERATION FUEL CELL APPLICATION
15 Nov. 1979 67 p refs
(Contract ET-78-C-03-1889)
(SAN-1889-T1) Avail: NTIS HC A04/MF A01

A study of the feasibility of using a first generation, phosphoric acid fuel cell as a cogenerating, total energy system for aluminum processing is presented. The objectives of the study were to: (1) determine the technical, institutional, and economic factors which would make the first generation fuel cell attractive; (2) identify modifications of fuel cell technology which would enhance fuel cell attractiveness in an industrial climate; and (3) define institutional and economic changes which might enhance fuel cell attractiveness. The study incorporated a number of tasks, involving site selection, thermal and electrical load characterization, definition of fuel cell fuel supply options, evaluation of environmental impacts, and consideration of ownership options. POWER INDEPENDENT IGNITION ENERGY MEASUREMENTS
J. Mohler 1980 11 p ref Presented at the 7th Intern. Pyrotechnics Seminar, Vail, Colo., 14 Jul. 1980
(Contract DE-AC04-76DP-00005)
(MLM-2709(OP); CONF-800713-7) Avail: NTIS HC A02/MF A01

A procedure for establishing the minimum, power independent ignition energy is described. Integration of the power pulse from start until ignition yields the ignition energy. Repetition of this procedure at different power levels permits one to plot energy versus firing time. Since conduction losses are time dependent, extrapolation of the resulting curve to zero time yields an ignition energy value that is independent of losses due to thermal conduction. A key to the success of the procedure is accurate observation of ignition time. It was found that the reaction energy released at ignition causes a discernible deflection in the firing current record. By comparison of light emission and current traces, it was found that the onset of deflagration occurs at the inflection point of the current trace deflection. This procedure has been successfully applied to hot pressed thermite samples, yielding ignition energies that are in qualitative agreement with the expected sensitivities of the samples. DOE

FUEL CELLS FOR ELECTRIC UTILITY AND TRANSPORTATION APPLICATIONS
S. Srinivasan 1980 30 p refs Presented at the Seminar on Electrochem. Systems: Batteries and Fuel Cells, Fortaleza-Ceara, Brazil, 2 Mar. 1980
(Contract EY-76-C-02-0016)
(BNL-27452; CONF-800324-2) Avail: NTIS HC A03/MF A01

The status of fuel cell development is reviewed. For terrestrial electric utility applications, the most promising are phosphoric acid, molten carbonate and solid electrolyte fuel cells. The first will be coupled with a reformer (to convert natural gas, petroleum derived and biomass fuels to hydrogen) while the second and third with a coal gasifier. As ground transportation power sources, the promising systems are phosphoric (or alternate acid) and alkaline electrolyte fuel cells. In the first case, methanol is most attractive while in the second, it will be hydrogen stored as a compressed gas or as a hydride. A technoeconomic assessment of a 'Regenerative Hydrogen-Halogen Energy Storage System' demonstrates the prospects of its use for load leveling when coupled with nuclear, solar or wind power plants. EXPERIMENTAL STUDY OF THE STORAGE OF THERMAL ENERGY IN CONFINED AQUIFERS Final Report, 1 Jul. 1977 - 31 Dec. 1979
F. J. Molz, A. David Parr, and Peter F. Andersen May 1980 51 p refs
(Contract W-7405-eng-26)
(ORNL/Sub-7338/1) Avail: NTIS HC A04/MF A01

A two cycle experiment was performed in which heated water was stored in a confined aquifer and then recovered. During the first cycle, 54,784 cubic meters of water were pumped from a shallow supply aquifer, heated to an average temperature of 55 C, and injected into a deeper confined aquifer where the ambient temperature was 20 C. After a storage period of 51 days, 55, 345 cubic meters of water were produced from the confined aquifer. Throughout the first cycle, which lasted approximately six months, ground water temperatures were recorded at six depths in each of ten observation wells, and hydraulic heads were recorded in five observation wells. During the 41 day production period, the temperature of the produced water varied from 55 C to 33 C, and 66 percent of the injected thermal energy was recovered. The second cycle injection began on 9/23/78 and continued until 11/25/78 when 58,010 cubic meters of water had been recovered. The major problem experienced during the first cycle, a clogging injection well, was reduced by regular backwashing. DOE

ADVANCED PHOTOVOLTAIC CONCENTRATOR CELLS Quarterly Technical Progress Report, 28 Aug. - 30 Nov. 1979
S. W. Zehr, H. T. Yang, and J. S. Harris, Jr. Dec. 1979 43 p refs Prepared for Midwest Research Inst., Golden, Colo.
(Contract EG-77-C-01-4042)
(DSE-4042-T30) Avail: NTIS HC A03/MF A01

Activities demonstrating the technical feasibility of advanced high efficiency concentrator solar converters are described. The approach is to fabricate two cell, non-lattice matched, monolithic stacked converters using optimum pairs of cells having bandgaps in the range of 1.6 to 1.7 eV and 0.95 to 1.1 eV. The low bandgap cells are to be fabricated from AlGaSb(As) compositions by LPE. These subcells are then to be joined into a monolithic structure by an appropriate thermal bonding technique which will also form the needed transparent intercell ohmic contact between the two subcells. The activities this quarter were focused on the development and study of low bandgap cell structures and attempts to develop suitable techniques for the thermal bonding operation. DOE

STATIC INVESTIGATION OF ROTOR BLADES AT REST AND UNDER QUASI-STATIONARY LOADING [STATISCHE UNTERSUCHUNG VON ROTORBLAETTERN UNTER EIGENGEWICHT UND IM STATIONAEREN BETRIEB]
J. H. Argyris, K. A. Braun, and B. Kirchgaessner 1979 57 p refs In GERMAN; ENGLISH summary Prepared in cooperation with Bundesministerium fuer Forschung und Technologie, Bonn (West Germany)
(ISD-243; ISSN-0170-6071) Avail: NTIS HC A04/MF A01

The rotor blades of a horizontal axis wind energy converter which have flap and lead-lag freedom as well as a flap-pitch coupling, were dimensioned and studied under both nonoperating deadweight and quasi-stationary loading at constant forces rated operation. With a suitable mass distribution it is possible to drastically reduce the blade bending moments in the flap direction. Materials well known in aircraft construction were considered, among which carbon fiber reinforced plastic is shown to be the most suitable. Most of the blade models were investigated without a lead-lag hinge. Conical oscillation at rated operation was assumed for the layout of these rotor blades. It is reduced considerable for the same blade models when lead-lag freedom is incorporated while maintaining sufficient centrifugal stiffness in the lag direction. Author (ESA)

STABILITY AND DYNAMIC RESPONSE TO GRAVITATIONAL FORCES OF THE FLAPPING AND LEAD-LAG

HINGES ON A RIGID ROTOR BLADE WITH THE LEADING-EDGE ANGLE OF ATTACK AND FLAPPING BEING COUPLED [STABILITAET UND SCHWERKRAFTRESPONSE DER SCHLAG-SCHWENKBEWEGUNG EINES STARREN ROTORBLATTES MIT BLATTWINKELRUECKSTEUERUNG]
J. H. Argyris and B. Kirchgaessner 1979 53 p refs In GERMAN; ENGLISH summary Prepared in cooperation with Bundesministerium fuer Forschung und Technologie, Bonn (West Germany)
(ISD-244; ISSN-0170-6071) Avail: NTIS HC A04/MF A01
The coupled flapping and lead-lag motion of a single, rigid rotor blade of a wind energy converter with flapping and lead-lag hinges as well as a coupling of the angle of attack with the flapping motion is investigated. The equations of motion are developed under the assumption of linearized quasi-stationary aerodynamic forces. Static and dynamic stability of the coupled flapping and lead-lag motion are investigated. The equations are integrated for different cases under cyclic gravitational forces to get an estimate of the influence of force terms and of the error from the linearization of the conservation expressions.

DYNAMIC ANALYSIS OF A ROTOR BLADE WITH LEAD-LAG FREEDOM, FLAPPING FREEDOM, AND VARIABLE-CONTROLLED BLADE PITCH ANGLE [DYNAMISCHE ANALYSE EINES ROTORBLATTES MIT SCHLAGFREIHEIT, SCHWENKREIHEIT UND BLATTWINKERLUECKSTEUERUNG]
J. H. Argyris, K. A. Braun, and B. Kirchgaessner 1979 95 p refs In GERMAN; ENGLISH summary Prepared in cooperation with Bundesministerium fuer Forschung und Technologie, Bonn (West Germany)
(ISD-258; ISSN-0170-6071) Avail: NTIS HC A05/MF A01
The dynamic behavior of the rotor blades of a wind energy converter with flapping and lead-lag hinges as well as coupling of flapping and blade pitch is investigated. Under the assumption of rigid support of the hub and of constant rotational speed, a linearized system of differential equations of motion is developed using finite element idealization given linearized quasi-stationary aerodynamic forces. For two rotor blade models, which differ only in their stiffness in the lead-lag direction, the complex eigenfrequencies are calculated. Further, the dynamic response of the rotor blades in computed for cyclic gravity loads at rated operation, for a gust, and for the case of tower wake. From the deformation of the structure the stresses at selected points along the blade are derived, while for one version of the rotor blade, torque and rotor thrust are also determined. Author (ESA)

REGENERATIVE ENERGY SOURCES FOR THE PRODUCTION OF LOW TEMPERATURE HEAT: ENERGY SOURCES, ENERGY TYPES, AND ENERGY CONVERSION; RESULTS AND APPLICATIONS; MEASURES TO PROMOTE USE [REGENERATIVE ENERGIEQUELLEN ZUR ERZEUGUNG VON NIEDERTEMPERATURWAERME. ENERGIEQUELLEN, ENERGIEFORMEN UND ENERGIEUMWANDLUNG; ANWENDUNGEN UND ERFAHRUNGEN; FOERDERUNGSMASSNAHMEN]
Gerhard Faninger and Manfred Bruck 1979 123 p refs In GERMAN; ENGLISH summary
(ISBN-3-7041-0038-2) Avail: NTIS HC A06/MF A01; Austrian Solar and Space Agency, Vienna Sch 25
The experience gained so far concerning the utilization of regenerative energy sources is summarized. Advantages and disadvantages of various systems for the production of low temperature heat are analyzed and recommendations are made for applications regarding hot water production, heating of swimming pools, and space heating. The mechodology of the planning of solar facilities is presented, in addition to a description of the basics of solar technologies. The importance of the utilization of regenerative energy sources is underlined through the presentation of the development of energy management in Austria. The necessity of pursuing measures to accelerate market introduction of solar technology is stressed. A survey of the present measures undertaken for the promotion of solar techniques is given. PILOT SCALE COMBUSTION EVALUATION OF WASTE AND ALTERNATE FUELS, PHASE 3 Final Report, Feb. - Aug. 1978
R. A. Brown and C. F. Busch Mar. 1980 227 p refs (Contract EPA-68-02-1885)
(PB80-177413; EPA-600/7-80-043) Avail: NTIS HC A11/MF A01 CSCL 13B
The results of three studies which evaluated the combustion of waste products and alternate fuels are presented. The first evaluated a distributed air staging concept for NOx control in pulverized coal fired systems. The second evaluated combustion control techniques and NO emissions when firing coal/oil mixtures. The third evaluated emissions and combustion characteristics of refuse derived fuel (RDF) cofired with either natural gas or pulverized coal. GRA

EVALUATION OF UNCERTAINTIES IN SELECTED ENVIRONMENTAL DISPERSION NEEDS
Craig A. Little and Charles W. Miller 1979 4 p refs Presented at Am. Nucl. Soc. Meeting, San Francisco, 12 Nov. 1979
(Contract W-7405-eng-26)
(CONF-791103-108) Avail: NTIS HC A02/MF A01

Compliance with standards of radiation dose to the general public has necessitated the use of dispersion models to predict radionuclide concentrations in the environment due to releases from nuclear facilities. Because these models are only approximations of reality and because of inherent variations in the input parameters used in these models, their predictions are subject to uncertainty. Quantification of this uncertainty is necessary to assess the adequacy of these models for use in determining compliance with protection standards. The capabilities of several dispersion models to predict accurately pollutant concentrations in environmental media are characterized. Three types of models are discussed: aquatic or surface water transport models, atmospheric transport models, and terrestrial and aquatic food chain models. Using data published primarily by model users, model predictions are compared to observations. DOE

USERS MANUAL FOR DWNWND: AN INTERACTIVE GAUSSIAN PLUME ATMOSPHERIC TRANSPORT MODEL WITH EIGHT DISPERSION PARAMETER OPTIONS
David E. Fields and Charles W. Miller May 1980 39 p refs
(Contract W-7405-eng-26)
(ORNL/TM-6874) Avail: NTIS HC A03/MF A01

The computer code DWNWND is an interactive implementation of the Gaussian plume model. It allows the user to specify any one of eight different sets of the empirically determined dispersion parameters. Using the selected dispersion parameters, ground-level normalized exposure estimates are made at any specified downwind distance. Computed values may be corrected for plume depletion due to deposition and for plume settling due to gravitational fall. With this interactive code, the user chooses values for ten parameters which define the source, the dispersion and deposition process, and the sampling point. DWNWND is written FORTRAN for execution on a PDP 10 computer, requiring less than one second of central processor unit time for each simulation. DOE

DELIQUESCENCE PROPERTIES AND PARTICLE SIZE CHANGE OF HYDROSCOPIC AEROSOLS
Ignatius N. Tang 1979 23 p refs Presented at the Symp. on Biol. Studies of Environ. Pollutants: Aerosol Generation and Exposure Facilities, Honolulu, Hawaii, 1 Apr. 1979
(Contract EY-76-C-02-0016)
(BNL-27094; CONF-7904123-1) Avail: NTIS HC A02/MF A01

The deliquescent properties of pure and mixed salt aerosols and the particle size change as a function of relative humidity are discussed. Experimental results are presented for the growth of mixed chlorides (NaCl-KCl), mixed sulfates (H_2SO_4-$(NH_4)_2SO_4$), and mixed $(NH_4)_2SO_4$-NH_4NO_3 aerosol systems. It is shown that the behavior of the mixed salt aerosols in a moist atmosphere can be predicted from phase diagrams and pertinent thermodynamic properties of the bulk solutions. The evaporation of a saline droplet in an atmosphere of decreasing humidities is also investigated experimentally. For each deliquescent salt aerosol, there is a threshold humidity below which the solution droplets will quickly evaporate to become crystalline particles. The information is useful in the selection of a suitable humidification procedure to generate test aerosols for exposure studies. DOE

TOTAL PARTICULATE MASS EMISSION SAMPLING ERRORS. Final Report, Nov. 1976 - Apr. 1977
E. F. Brooks. Jul. 1979. 52 p. refs.
(Contract EPA-68-02-2165)
(PB80-181910; EPA-600/7-79-155) Avail: NTIS
HC A04/MF A01 CSCL 13B

A first cut estimate of sampling errors in the measurement of total particulate mass emissions from stationary sources is given. Measurement errors are divided into two general categories: sampling errors and analysis errors. Total particulate mass sampling errors are evaluated within the framework of a system error analysis. The evaluation leads to a ranking of individual error sources and estimates of total system error. Analysis results show that a Level 1 should have a sampling accuracy of better than a factor of + or - 2, with a confidence of 95%, except at a control device outlet where the accuracy is more likely to be a factor of + or - 3, especially if the control device is an electrostatic precipitator. PHOTOCHEMICAL STUDY OF NOx REMOVAL FROM STACK GASES. Final Report, Jan. 1977 - Mar. 1979
John R. Richards and Donald L. Fox. Mar. 1980. 202 p. refs.
(Grant EPA-R-804740)
(PB80-181274; EPA-600/7-80-038) Avail: NTIS
HC A10/MF A01 CSCL 07E

The technical feasibility of a photochemical pretreatment system for NOx control at coal fired boilers is evaluated. The approach utilizes reaction mechanisms similar to those responsible for photochemical oxidant incidents. The reactions are initiated under controlled conditions while the pollutants are at high concentration and while the reaction products can be removed. Results indicate that, under time and light limited conditions, it is possible to quench the photochemical reactions at the NO2 peak and prior to the formation of ozone, aerosols, and other secondary products. Photochemical oxidation of NO was insensitive to SO2 concentration and CO2 concentration. The photochemical system appears compatible with conditions resulting from combustion modifications to suppress NOx generation. GRA

HC A10/MF A01 CSCL 13B

A single ended laser radar (LIDAR) system was designed, built, and successfully operated to measure range resolved concentrations of NO2, SO2, and O3 in the atmosphere using a Differential Absorption of Scattered Energy LIDAR technique. For the NO2 measurements, the dye laser output was used directly in a novel simultaneous two wavelength output mode in which two wavelengths, one on and one off the resonance absorption of NO2 molecules are transmitted simultaneously and the relative attenuation determined for the two backscattered signals detected. For the SO2 and O3 measurements, it was necessary to frequency double the output of the dye laser to match the absorption spectra of the SO2 and O3 molecules. GRA

SURVEY ANALYSIS OF PHENOLIC COMPOUNDS IN INDUSTRIAL EFFLUENTS BY GAS CHROMATOGRAPHY MASS SPECTROMETRY
W. M. Shackelford and R. G. Webb. 1979. 15 p. refs. Submitted for publication.
(PB80-177793; EPA-600/J-79-056) Avail: NTIS
HC A02/MF A01 CSCL 07D

Use of continuous liquid-liquid extractor improved the recovery of phenolic compounds from those effluents that formed intractable emulsions during liquid-liquid extraction by shake-out. Tenax GC and SP1240 DA proved to be the best general purpose gas chromatographic column packings for a broad range of phenolic compounds. Derivatization procedures using diazomethane and pentafluorobenzyl bromide were found to be successful only under rigorously controlled conditions. For survey work, it appears that derivatization is of questionable value for initial qualitative analysis because, in many cases, the character of the matrix is not known. GRA

HC A03/MF A01 CSCL 07D

Techniques used in the source test method for acid mist and sulfur dioxide emissions from sulfuric acid plants are evaluated. Evidence is shown that trace amounts of peroxides in isopropyl alcohol (IPA) result in the conversion of sulfur dioxide to sulfate and cause positive errors in acid mist values. Methods for measuring and purifying IPA are described. Collection efficiencies of train components are described and two alternate indicators are evaluated. Solid ammonium sulfates's use as audit samples is discussed. Field testing is also described in which paired probe techniques were employed. Both ammonia and dimethyl analine, which are employed as gas scrubbers, cause sulfur dioxide to be retained in the isopropyl alcohol and result in large positive interferences in acid mist values. Ferric oxide, present in the effluents of steel pickling operations, causes a large negative interference in acid mist values. GRA

MICROCHARACTERIZATION OF INTERPLANETARY DUST COLLECTED IN THE EARTH'S STRATOSPHERE Ph.D. Thesis

Philip Bernard Fraundorf 1980 352 p

Avail: Univ. Microfilms Order No. 8018727

The internal structure of thirteen 10 micrometer aggregates were examined using selected techniques from the field now known as analytical electron microscopy. The aggregates were collected in the Earth's stratosphere at 20 km altitude by impactors mounted on NASA U-2 aircraft. Eleven of them exhibited relative major element abundances similar to those found in chondritic meteorities. For this and other reasons, these eleven particles are believed to represent relatively unaltered interplanetary dust. Interplanetary dust is thought to be of cometary origin, and comets in turn provide the most promising reservoir for unaltered samples of materials present during the collapse of the solar nebula. It is shown that the chondritic aggregates probably contain important information on a wide range of processes in the early solar system. The observations are consistent with the hypotheses that: (1) the particles represent fragments of interplanetary dust; (2) some of them have not been significantly altered by thermal or radiation processes since their assembly; (3) interplanetary dust is of cometary origin; and (4) the dust parent materials consist of a wide range of relatively unaltered leftovers from the collapse of the solar nebula. Dissert. Abstr.

STUDY OF SEISMIC WAVE EXCITATION FOR TWO EARTHQUAKES IN NORTHERN BAHA, CALIFORNIA Ph.D. Thesis

Nava Pichardo 1980 293 p

Avail: Univ. Microfilms Order No. 8018794

Two earthquakes of comparable local magnitude from different regions of northern Baja California are studied to explore possible causes for the observed stronger excitation of surface waves by earthquake from the Delta region (relative to earthquake of comparable local magnitude in the Peninsular Ranges region). Consideration of how the magnitude and moment determinations are related to the spectra of the two earthquakes exemplifies how departure from the implicit spectral and time similarity makes the corrections (or implied corrections) for period in the magnitude definitions inconsistent in relation to other scaling parameters. Also illustrated is how short period measurements, like Ml and mb will sample longer periods for an earthquake with a longer source time function, and how the time window implicit in the determination of magnitudes (and in some methods of moment determination in the time domain) may represent only part of the seismic energy contributing to the seismogram. Dissert. Abstr.

A REPORT ON THE GRAVITATIONAL REDSHIFT TEST FOR NON-METRIC THEORIES OF GRAVITATION Final Report, 1 Feb. - 31 Aug. 1980

Aug. 1980 55 p refs

(Grant NsG-8059)

(NASA-CR-163496) Avail: NTIS HC A04/MF A01 CSCL 08E

The frequencies of two atomic hydrogen masers and of three superconducting cavity stabilized oscillators were compared as the ensemble of oscillators was moved in the Sun's gravitational field by the rotation and orbital motion of the Earth. Metric gravitation theories predict that the gravitational redshifts of the two types of oscillators are identical, and that there should be no relative frequency shift between the oscillators; nonmetric theories, in contrast, predict a frequency shift between masers and SCSOs that is proportional to the change in solar gravitational potential experienced by the oscillators. The results are

consistent with metric theories of gravitation at a level of 2%. T.M.

Theoretical and numerical analyses were made of planar, cylindrical and spherical electrode time-of-flight mass spectrometers in order to optimize their operating conditions. A numerical analysis of potential barrier gating in time-of-flight spectrometers was also made. The results were used in the design of several small mass spectrometers. These were constructed and tested in a laboratory space simulator. Detailed experimental studies of a miniature cylindrical electrode time of flight mass spectrometer and of a miniature hemispherical electrode time of flight mass spectrometer were made. The extremely high sensitivity of these instruments and their ability to operate at D region pressures with an open source make them ideal instruments for D region ion composition measurements. T.M.

EXPERIMENTS ON THE JUNCTION OF RELATIVISTIC ELECTRON BEAMS INTO PREFORMED CHANNELS IN THE ATMOSPHERE: A FEASIBILITY STUDY Interim Report
M. Raleigh, J. D. Sethian, R. B. Fiorito, L. Allen, R. F. Fernsler, and J. R. Greig 13 May 1980 49 p refs
(RR0110901)
(AD-A086732; AD-E000452; NRL-MR-4220) Avail: NTIS HC A03/MF A01 CSCL 04/1

A study was made of the interaction of an intense relativistic electron beam (REB) with a preformed reduced density channel in the atmosphere. The channel was designated by laser induced, aerosol initiated air breakdown and was heated by passage of an electric current. However, at the time the REB was injected into the channel no externally applied heating current remained. By varying the time between creation of the hot channel and injection of the REB, we were able to observe interactions of the beam with both high conductivity and low conductivity channels. In the former case the beam did not propagate in the channel, whereas in the latter case the beam did propagate in the channel. These results are discussed in terms of the residual conductivity in the channel, and in terms of the radius of the return current distribution compared to that of the beam. GRA

COMPARISON OF RESULTS FROM THE S3-2 SATELLITE AND THE CHATANIKA RADAR IN AN EARLY MORNING AURORA Interim Report
Roger P. Vancour and Bertram M. Shuman 22 Oct. 1979 18 p refs
(AF Proj. 2311)
(AD-A086861; AFGL-TR-79-0254; AFGL-ERP-680) Avail: NTIS HC A02/MF A01 CSCL 04/1

During orbit 6352, the Air Force satellite S3-2 passed by the Chatanika radar in a trajectory that was only 12 deg off from the geomagnetic meridian along which the radar scanned. This report presents the analysis of the data for this orbit from the triaxial fluxgate magnetometer, the electrostatic analyzer aboard the satellite, and the radar data. These data were obtained simultaneously during a morning active aurora. Comparisons of current densities determined by these experiments are made, and the agreement between the electrostatic analyzer precipitating electron fluxes and the electron densities determined from the radar data is shown. GRA

INFLUENCE OF MAGNETIC SHEAR ON THE CURRENT CONVECTIVE INSTABILITY IN THE DIFFUSE AURORA
J. D. Huba and S. L. Ossakow 16 Apr. 1980 21 p refs
(RR0330244)
(AD-A086789; AD-E000443; NRL-MR-4219) Avail: NTIS HC A02/MF A01 CSCL 04/1

The influence of magnetic shear on the current convective instability is investigated for conditions typical of the high latitude F region during the diffuse aurora. It is found that magnetic shear (1) reduces the growth rate of the instability (although it does not stabilize the mode); and (2) substantially localizes the mode structure parallel to the density gradient. CONDENSED STORAGE OF DIFFUSION EQUATION SOLUTIONS FOR ATMOSPHERIC DENSITY MODEL COMPUTATIONS
James N. Bass 25 Jan. 1980 13 p refs
(Contract F19628-78-C-0209; AF Proj. 9993)
(AD-A086868; AFGL-TR-80-0038; SR-1) Avail: NTIS HC A02/MF A01 CSCL 04/1

It is shown that all neutral thermospheric component densities in diffusive equilibrium can be derived from a single function of height. This is used to permit considerable savings in storage of Jacchia 1977 model densities compared to storing the solution for each component, which requires use of external random access files. The single solution can be built into the computer code, making it more transportable to different computers. A subroutine has been developed implementing this method, including the latest results for atomic nitrogen and the non-diffusive equilibrium solution for atomic hydrogen. GRA

A FAST ESTIMATION ALGORITHM FOR TWO-DIMENSIONAL GRAVITY DATA, GEOFAST
Kevin S. Tait 15 Nov. 1979 83 p refs
(Contract F19628-77-C-0152; AF Proj. 3204)
(AD-A086835; TASC-TR-868-1-1; AFGL-TR-80-0016; SR-2) Avail: NTIS HC A05/MF A01 CSCL 08/5

This report describes an algorithm for the efficient computation of minimum variance estimates from large amounts of two dimensional gravity data. The method (called GEOFAST for 'geodetic fast estimation') is based on the fast Fourier transform and takes advantage of the underlying structure of the statistical models in the frequency domain. An approximate solution is obtained in a number of computer operations proportional to N log sub 2, where N is the number of data points and the proportionality constant is controlled by the desired level of accuracy. Results are presented from two test cases, using GEOS-3 radar altimeter data to estimate mean gravity anomalies, which verify the efficiency and accuracy of the algorithm. GRA

ROCKET MEASUREMENT OF TOROIDAL MAGNETIC FIELDS IN AN EQUATORIAL ELECTROJET: METHOD OF EVALUATION [RAKETENMESSUNGEN TOROIDALER MAGNETFELDER IM AEQUATORIALEN ELEKTROJET: AUSWERTUNGS METHODE]
Guenter Musmann 1979 75 p refs In GEORGIAN
(GAMMA-34) Avail: NTIS HC A04/MF A01

A rocket experiment was conducted in 1970 in Brazil to demonstrate the existence of the toroidal magnetic fields of the equatorial electrojet by means of Sun sensors, azimuth sensors and magnetometers. The calculation of the Earth's magnetic field with the D component (declination), I (inclination), and the position of the Sun (zenith distance and azimuth) are useful for the exploitation of the results. An evaluation method is proposed which allows the determination of the rotation of the declination due to the toroidal magnetic field. Author (ESA)

(Grant NSF ATM-78-12631)
(PB80-181753; AS-PAPER-322; ISSN-0067-0340) Avail: NTIS HC A04/MF A01 CSCL 04A

An instrument designed to measure the angular variation of radiance field in the .3 to 1.1 micrometers spectral bandpass is described. The instrument consists of thirteen photodiode detectors mounted in fixed positions. Data analysis procedures designed to produce a continuous depiction of the radiance field over a 2 pi steradian solid angle from the thirteen discrete observations are described. These analysis procedures utilize spherical harmonics basis functions as a means of interpolation between the thirteen discrete radiance observations. An analysis procedure used to infer the direct component of the solar configuration selected upon the the basis of satisfying the analytical procedures.

sampling a 2 pi steradian field of view and minimizing sensor overlap, is given. GRA

AN INVESTIGATION OF SATELLITE-RADAR CORRELATION FUNCTIONS Ph.D. Thesis
Louis Arthur Hembree, Jr. 1980 210 p
Avail: Univ. Microfilms Order No. 8018924

A multivariate optimal interpolation objective analysis which combines satellite, radar, and gage data to give improved results in estimating surface rainfall is developed. The problems of combining the radar and satellite data sets through the use of space time correlation fields are discussed. These correlation fields represent the storm structure as implied by the observed data. The correlation fields are modeled using a four dimensional Gaussian damped cosine function whose parameters reflect the storm characteristics. The function fitting also gives an estimate of the noise present in the data. The parameters of the model correlation function can also be used to classify storms with respect to their structural characteristics. The correlations between the satellite data and radar derived rain rates were found to range from an order of 0.2 to 0.53 at the space time lags appropriate to maximizing the correspondence between patterns; consequently, the potential value of using the multivariate objective analysis methodology is established. FORECAST WORKSHEET: A NEW APPROACH Final Report
Thomas L. Rich and Ronald G. Shaw 1 May 1980 22 p refs
(AD-A086151; Rept-WW/TN-80/001) Avail: NTIS HC A02/MF A01 CSCL 04/2

Forecasters are given mixtures of centralized forecasting guidance for various models, techniques, and data bases; valid for varying times or time intervals; and presented in many different ways. But to produce an operationally sound forecast, they must logically assemble the various bits and pieces, resolve all inconsistencies, and visualize the interactive changes that will be taking place in the atmosphere. This report describes the results of a study of worksheets normally used by Air Weather Service units to prepare forecasts. It identifies weaknesses that exist in many worksheets and describes a new worksheet format which provides a more logical step-by-step process for preparing forecasts. GRA

THE DESCRIPTION OF THE ROBIN PROGRAM AND ITS CONVERSION TO THE INTERDATA 7-32 COMPUTER SYSTEM
M. Don Merrill and Donald Elwell May 1980 140 p refs
(Contract DAAD07-76-C-0115; DA Proj. 1P6-65702-D-127)
(AD-A086810; ERADCOM/ASL-CR-80-0115-1) Avail: NTIS HC A07/MF A01 CSCL 09/2

ROBIN (the operational program for computation of upper atmosphere density and other parameters from a passive inflatable falling sphere) was developed for the Air Force Cambridge Research Laboratory by the University of Dayton Research Institute in the 1960's. Its utilization was limited to the Meteorological Rocket Network ranges that had high precision radars and large capacity computers. The development of minicomputers and the deployment of Nike Hercules tracking radars at several Army meteorological rocket sites made it possible to expand the use of the ROBIN sphere to remote locations. The only remaining barrier was the adaptation of the ROBIN program to a minicomputer. This report describes the conversion of the ROBIN-UNIVAC 1108 program used by the Atmospheric Sciences Laboratory at White Sands Missile Range, New Mexico, to the Interdata 7-32 minicomputer. GRA

OBJECTIVE QUALITY CONTROL OF ARTILLERY COMPUTER METEOROLOGICAL MESSAGES
Ernest B. Stenmark Apr. 1980 44 p refs
(DA Proj. 1L1-62111-AH-71)
(AD-A086554; ERADCOM/ASL-TR-0055) Avail: NTIS HC A03/MF A01 CSCL 09/2

Artillery computer meteorological (CM) messages are susceptible to having errors introduced into them during preparation at the Meteorological Section, during transmission to the user unit, and during entry into the Fire Direction Center computer. Quality control during preparation of the CM message is largely a manual function and thus subject to human error. At the Fire Direction Center, in the case of the most advanced computerized tactical fire direction control system, TACFIRE, quality control of the CM message is limited to superficial automated checks that relate primarily to message format, not content, and to reliance upon visual screening by the TACFIRE operator before acceptance, storage, and usage of the message. No quality control checks of the contents of the message are made during movement of the CM message from the preparer to the user. This report documents the development of procedures for objectively performing meteorologically consistent quality control checks on the contents of single CM messages that would require only very limited automatic data processing resources to implement at either the preparer or user end, or both, and that would improve upon the validity checks currently implemented in the TACFIRE system. GRA

A CLIMATOLOGICAL STUDY OF THE FORCING OF THE NORTH PACIFIC OCEAN BY SYNOPTIC STORM ACTIVITY M.S. Thesis
Michael Scott Risch Mar. 1980 67 p refs
(AD-A086841) Avail: NTIS HC A04/MF A01 CSCL 04/2

Synoptic storm activity over the North Pacific Ocean is investigated by using a special series of six-hourly surface wind analyses prepared by Fleet Numerical Oceanographic Center (FNOC) covering the period 1969-1978. Temporal variance of the surface wind components at each grid point is 'high pass' filtered, thereby removing all temporal variability except that having time scales less than ten days. Both the total and the filtered wind components were used to calculate the cube of the friction velocity and the wind stress curl. Monthly 'climatologies' are calculated by computing ten-year averages of monthly mean cube of the friction velocity and wind stress curl from total and filtered

wind components for each month of the year. It was found that while climatological maps of cube of the friction velocity calculated from filtered data show spatially coherent patterns that are clearly associated wtih monthly storm tracks, similar maps of wind stress curl do not show such coherent patterns. Maps of anomalous storm activity, as given by the difference between the monthly value and the climatological value for that month, are also prepared and qualitatively compared to observations of large scale sea surface temperature (SST) anomalies. GRA

SHORTRANGE FORECASTING THROUGH EXTRAPOLATION OF SATELLITE IMAGERY PATTERNS. PART 2:. TESTING MOTION VECTOR TECHNIQUES Final Report
H. Stuart Muench 10 Dec. 1979 30 p refs
(AF Proj. 6670)
(AD-A086862; AFGL-TR-79-0294; AFGL-ERP-685) Avail: NTIS HC A03/MF A01 CSCL 04/2

An effort is underway at Air Force Geophysics Laboratory to develop automated procedures to make short-range (0-6 hr) terminal weather forecasts using GOES imagery data. A simple approach is to extrapolate the cloud patterns using motion vectors derived from a comparison of successive images. This report describes a test of candidate motion vector techniques using twelve cases of six successive images in a variety of weather conditions. Included in the techniques were two that track brightness centers, three that use cross-covariance, and two using winds aloft. All were compared against persistence (no motion, no change). For all time periods and all thresholds, a binary covariance technique had the highest scores but the techniques using winds aloft were very close. Also, no technique was much better than persistence. There is evidence that most (perhaps 75 percent) of the total changes occurring are not due to simple motion of the cloud patterns but due to more complex processes. GRA

PLANETARY BOUNDARY LAYER PARAMETERIZATION FOR TROPICAL CYCLONES BASED ON GENERALIZED SIMILARITY THEORY
Simon Wei-Jen Chang and Rangarao V. Madala 20 May 1980 35 p refs
(ZF52551001)
(AD-A086781; AD-E000460; NRL-MR-4235) Avail: NTIS HC A03/MF A01 CSCL 04/2

A planetary boundary layer (PBL) parameterization based on the generalized similarity theory (GST) was developed for tropical cyclone models. This parameterization, with only one layer, is necessary in modeling tropical cyclones for computational speed. The momentum, sensible heat and moisture fluxes are mutually dependent in this parameterization through nondimensional gradient equations. The internal structure of the PBL is determined implicitly through universal functions. In comparison with a complex, one dimensional, multiyear PBL model, the GST parameterization yields accurate moisture fluxes, but slightly overestimates the momentum flux and underestimates the sensible heat flux. The GST parameterization produces very realistic dynamics, energetics and thermal structure in an axisymmetric tropical cyclone model. This GST parameterization is judged superior to drag coefficient parameterization and is a good alternative to the more expensive, multilayer parameterization. GRA

OPTICAL TURBULENCE FORECASTING: A TUTORIAL Environment Research Paper
Edmond M. Dewan 22 Jan. 1980 69 p refs
(AF Proj. 6687)
(AD-A086863; AFGL-TR-80-0030; AFGL-ERP-694) Avail: NTIS HC A04/MF A01 CSCL 04/1

This report is a tutorial on the effects of atmospheric turbulence upon systems which rely upon the propagation of laser beams. In addition to providing a simplified presentation of turbulence theory and optical effects, it describes the state of the art of the new technique of radiosonde estimation of index of refraction fluctuations. Suggestions are given for future research which will help to answer current Air Force needs. The feasibility of some laser systems will depend upon the value of r sub o, the coherence length (which is related to C sub n sq which in turn is related to the degree of turbulence). At present, the statistics of r sub o are inadequate. GRA

AEROSOLS AND CLIMATE
William W. Kellogg 1980 18 p refs Presented at the Intern. Workshop on the Energy/Climate Interactions, Munster, West Germany, 3 Mar. 1980 Prepared in cooperation with the Aspen Inst. for Humanistic Studies, Boulder, Colo.
(Contract DE-AC02-79EV-10281)
(CONF-800309-5) Avail: NTIS HC A02/MF A01

The atmospheric burden of particles, or aerosols, produced by human activities, especially in industrialized regions and those where slash-burn agricultural practices are followed, are discussed. Sources of aerosols discussed include burning of fossil fuels or other materials, photochemical reactions involving organic molecules, oxides of nitrogen, and sunlight, and the oxidation of sulfur dioxide, produced when sulfur-bearing fuel is burned, to sulfuric acid thereby forming sulfate particles or droplets. Emphasis is placed on the way in which the aerosols influence the atmospheric heat balance. DOE

PRECIPITATION ESTIMATIONS FROM SATELLITE MEASUREMENTS OF HEAT RADIATION AT 19.35 AND 37 GHz [NIEDERSCHLAGSRATEN AUS SATELLITENMESSUNGEN DER WAERMESTRAHLUNG BEI 19.35 UND 37 GHZ]
H. J. Jung Jun. 1979 125 p refs In GERMAN
(Contract DFG-195/17)
(Mitt-26) Avail: NTIS HC A06/MF A01

A method to measure rain rates (0.1 to 50 mm/hr) from satellites (Nimbus 5/6) at 19.35 GHz and at 37 GHz was developed. The calculation of radiation transfer for polarized and unpolarized radiation is utilized. In the spectrum field the radiation transfer is observed for different values of the absorption in gas (H2O and O2), of the extinction in hydrometers (clouds, raindrops, hail and ice particles) and of the emission and reflection possibilities on the ground and water surface. A study of 2 hurricanes shows that it is possible to give a rain rate independent from cloud type and precipitation type. The accuracy of the determination is of 30-40% for rain rates between 0.1 and 7 mm/hr and of 30-100% for rain rates superior to 7 mm/hr. Author (ESA)

STUDY OF A PULSED COHERENT LIDAR FOR CROSSWIND SENSING
S. F. Clifford, T. R. Lawrence, G. R. Ochs, and T-I. Wang Mar. 1980 53 p refs Sponsored in part by Army Electronics Research and Development Command, White Sands Missile Range
(PB80-181027; NOAA-TM-ERL-WPL-48) Avail: NTIS HC A04/MF A01 CSCL 04B

A work undertaken to assess the validity and impact of particular assumptions made in deriving the system signal to noise ratio (SNR) expression utilized in an investigation of the expected performance of a system for remote wind measurements in the troposphere is documented. The analysis indicates that the independent turbulence assumption strongly overestimated the effects of turbulence, that the quadratic power wave structure function assumption was wholly inadequate, and that neglecting the apodization effects amounted to an SNR overestimation at the range where the lidar is focused. An automatic condensation nuclei counter has been operating continuously at the Amundson-Scott South Pole station since 1974 as part of the Geophysical Monitoring for Climatic Change (GMCC) program. This instrument (calibrated by a Pollak nuclei counter standard), with its high sensitivity and fast response, can provide continuous aerosol climatology and identify periods of contamination from local sources. The annual variation of nuclei concentration is apparent and is repeatably consistent over the five year period. Nuclei concentrations occasionally reach values as low as 7/cu cm during the austral winter (April through September), begin to increase near the time of astronomical sunrise, and reach values as high as about 240/cu cm during summer months. COMPARISON OF ESTIMATED AND OBSERVED VALUES FOR SOLAR RADIATION AT THE SURFACE OF THE AFRICAN CONTINENT
J. K. Nimira Jan. 1980 51 p refs
(Grant NSF ATM-78-15529)
(PB80-180417; NOAA-TM-ERL-ARL-83; NOAA-80041601)
Avail: NTIS HC A04/MF A01 CSCL 04B

Solar radiation fluxes at the surface of the African continent were estimated by three methods. The methods used cloud data derived from satellite measurements, observed sunshine hour data, and data on several other parameters measured at 57 ground stations throughout Africa. The estimated values were then compared with actual observed global solar radiation values from 10 selected stations. The percentage deviation between estimated and observed values was generally less than plus or minus 15%. GRA

THE USE OF THE CLIMATIC WATER BUDGET TO EVALUATE THE VALIDITY OF A PRECIPITATION RECORD
John R. Mather and Clinton M. Rowe, Jr. Aug. 1979 43 p refs Submitted for publication
(Contract DI-14-34-0001-9008)
(PB80-182157; CONTRIB-28; W80-04877; OWRT-A-040-DEL(5); TR-6) Avail: NTIS HC A03/MF A01 CSCL 04B

From 1927 to 1963 the precipitation recorded at La Porte, Indiana, about 30 miles southeast of the Chicago-Gary industrial complex was significantly higher than the precipitation found at any nearby station. Two reasons were suggested for this anomaly. The first assumes that the record is correct and suggests that industrial pollution has resulted in increased downwind precipitation amounts. The second assumes that the record is incorrect and is merely the result of instrumental or observer error. The use of the climatic water budget to determine the more likely conclusion is described. Values of runoff were computed from climatic data from La Porte as well as from South Bend, and Plymouth, Indiana, the stations nearest to LaPorte. GRA

GATE PHASE 3 MEAN SYNOPTIC-SCALE RADIATIVE CONVERGENCE PROFILES
Steven A. Ackerman and Stephen K. Cox Apr. 1980 135 p refs Sponsored in part by NOAA
(Grants NSF ATM-78-05743; NSF ATM-78-12631)
(PB80-180797; AS-PAPER-324; ISSN-0067-0340) Avail: NTIS HC A07/MF A01 CSCL 04B

Tropospheric radiative convergence profiles are derived for an easterly wave composite during Phase 3 of the GATE. The easterly waves observed were generally well developed. The profiles also represent the magnitude and the spatial distribution of the Intertropical Convergence Zone (ITCZ) in the GATE area. The 12 hour mean daytime and nighttime profiles are presented. Cloud top pressure distributions, as a function of wave position, are also presented. Day-night differences in the cloud top pressure distributions and radiative convergence profiles are discussed. MODELS OF THE EQUATORIAL OCEAN CIRCULATION Ph.D. Thesis
Michael James McPhaden 1980 121 p
Avail: Univ. Microfilms Order No. 8018789

The steady circulation is examined using a linear equatorial beta plane formulation in which continuous density stratification is a key element. The basin is horizontally unbounded and forced by either winds or a surface temperature boundary conditions. Two vertically diffusive models are proposed to examine the effects of different turbulence parameterizations. One is characterized by temperature dissipation proportional to temperature itself, the other has biharmonic friction proportional to a fourth derivative of velocity. Both lead to equations for the steady state that are in many ways analogous to the well known equations governing equatorial wave motion. The analogies are exploited both in obtaining analytical solution and in describing the flow dynamics. Dissert. Abstr.

LONG-TERM MEASUREMENT OF ABYSSAL CURRENTS IN THE NORTH PACIFIC Final Report, 1 Jul. 1973 - 30 Sep. 1979
Bruce A. Taft 10 Jan. 1980 33 p refs
(Contract EY-76-S-06-2225)
(DOE/EV-71030/1; RLO-2225-TA-30) Avail: NTIS HC A03/MF A01

Current measurements were made over a 19 month period in the deep Pacific in a region centered at 30 deg 30 min N, 158 deg W. Current meters were moored at 100 and 1100 m off the bottom in two arrays of six moorings. Each mooring had a meter at 100 m above the bottom, and two moorings included an additional meter at the 1100 m level. Most records showed higher eddy kinetic energies than the mean kinetic energy. The time space average eddy kinetic energy is compatible to the lowest values yet measured in the western North Atlantic. The mean vector speed varied from 0.4 to 3.6 cm/s; the directions were variable and showed little consistency. Spectral peaks occurred at the two semidiurnal tidal frequencies M2 and S2 and at the diurnal/inertial frequency. In the low frequency band, there were energetic periods near 70 and 150 days as well as periods that were longer than the period of measurement. The M2 semidiurnal tidal currents were coherent and appear to be consistent with a position of M2 amphidrome at 25 N, 135 W. DOE

A PARABOLOIDAL FLOW CYTOMETER FOR IMPROVED FLUORESCENCE ANALYSIS OF SINGLE CELLS Ph.D. Thesis
Mary Jane Skogen Hagenson 1980 161 p
Avail: Univ. Microfilms Order No. 8019634

A flow cytometer featuring a paraboloidal flow chamber for optical collection was designed to improve fluorescence analysis of single cells. The improvement is achieved by increasing the fluorescence collection efficiency permitting measurement of weakly fluorescent particles and by improving fluorescent intensity resolution, thereby making it possible to differentiate cells with smaller differences in fluorescence intensity. The paraboloidal flow system was evaluated with standard spheres, mouse testicular cells and nuclei, and weakly fluorescent cells. It was demonstrated that the paraboloid; (1) improves fluorescence intensity resolution relative to orthogonal systems by nearly 20% for standard particles and round spermatid nuclei; (2) increases the fluorescence signal to noise ratio, allowing measurement of fluorescence which was not resolved from background noise in orthogonal systems; and (3) is relatively insensitive to particle orientation with respect to illumination and collection optics. Dissert. Abstr.

THERMOREGULATION IN RATS: EFFECTS OF VARYING DURATION OF HYPERGRAVIC FIELDS Annual Report, 1 Jul. 1979 - 31 Aug. 1980
J. M. Horowitz and B. A. Horwitz Aug. 1980 28 p refs
(Grant NsG-2234)
(NASA-CR-163481) Avail: NTIS HC A03/MF A01 CSCL 06C

The effects of hypergravitational fields on the thermoregulatory system of the rat are examined. The question underlying the investigation was whether the response of the rat to the one hour cold exposure depends only upon the amplitude of the hypergravic field during the period of cold exposure or whether the response is also dependent on the amplitude and duration of the hypergravic field prior to cold exposure. One hour of cold exposure applied over the last hour of either a 1, 4, 7, 13, 19, 25, or 37 hr period of 3G evoked a decrease in core temperature (T sub c) of about 3 C. However, when rats were subjected concurrently to cold and acceleration following 8 days at 3G, they exhibited a smaller fall in T sub c, suggesting partial recovery of the acceleration induced impairment of temperature regulation. In another series of experiments, the gravitational field profile was changed in amplitude in 3 different ways. Despite the different gravitational field profiles used prior to cold, the magnitude of the fall in T sub c over the 1 hr period of cold exposure was the same in all cases. These results suggest that the thermoregulatory impairment has a rapid onset, is a manifestation of an ongoing effect of hypergravity, and is not dependent upon the prior G profile. M.G.

THE EFFECT OF PHYSICAL CONDITIONING ON +Gz TOLERANCE Ph.D. Thesis
William Lewis Epperson 1980 86 p
Avail: Univ. Microfilms Order No. 8018968

The influence of physical conditioning on tolerance to a centrifugation profile of alternating 15 second plateaus at 4.5 and 7.0 +Gz--called Simulated Aerial Combat Maneuvering (SACM)--was determined using 24 young men as subjects. These subjects were assigned to groups as controls (C) (no physical training), runners (R), and weight trainers (W); and followed a 12 week protocol of specified physical training. Tolerance to centrifugation, maximum oxygen consumption, muscle strength, and body composition were periodically determined. The +Gz tolerance of the runners and controls increased at an average rate of 4 seconds per week during the course of the experiment. The weight trainers increased their G tolerance at an average rate of 15 seconds per week. Fatigue scores indicate that group W subjects take longer to reach a given level of fatigue than did the subjects of the other groups. It appears therefore that a physical conditioning program of weight training will improve human tolerance to repeated and prolonged exposure to high +Gz loads. Dissert. Abstr.

N80-31032 Drexel Univ., Philadelphia, Pa
AN INVESTIGATION OF CARDIAC THRESHOLD VARIABILITY RELATIVE TO STIMULUS SHAPE AND RESPIRATORY CYCLE Ph.D. Thesis
Leonid Hrebien 1980 168 p
Avail: Univ. Microfilms Order No. 8019351

To study threshold relative to stimulus shape, energy strength duration relationships were determined for three different stimulating waveforms: the standard rectangular, the sawtooth (ramp), and the exponential. Stimulus threshold energies were determined at pulse durations ranging from 0.4 to 3.0 milliseconds for each waveform and the results were plotted as energy strength duration curves. It was found that threshold energy requirements for sawtooth stimuli were 3-27% lower than for standard rectangular stimuli at the same pulse widths. Also, exponential stimuli showed energy reductions of 2-30% from the rectangular stimuli. Threshold determinations were made once a minute for 20 to 30 minutes using rectangular pulses, 1 millisecond in duration. It was found that threshold energies varied as much as 37% above the mean to 19% below the mean value for the 20-30 minute run of the experiment. It was found that during certain portions of the respiration cycle pacemaker pulses of a given amplitude would elicit cardiac response whereas these same pulses failed to pace during other phases of the breathing cycle. Dissert. Abstr.

N80-31033 California Univ., San Diego, La Jolla.
TOPOGRAPHICAL SIMULATION OF THE BLOOD VESSELS OF THE HUMAN BULBAR CONJUNCTIVA AND APPLICATION TO PRESSURE-FLOW RELATIONSHIPS Ph.D. Thesis
Bruce Miles Fenton 1980 175 p
Avail: Univ. Microfilms Order No. 8018778

A preliminary study was performed in which length of conjunctival vessels per unit area tissue (vascular density) was measured for two categories of patients: diabetics and nondiabetics. It was assumed that the conjunctiva represents a nonspecialized tissue whose microcirculatory network, in the presence of chronic disease, in some way reflects a generalized trend manifest to a varying degree in other vascular beds. Specifically, it was demonstrated that there were significant differences in length per unit area values between diabetic and nondiabetic cohorts. In addition, age was seen to exert a dramatic influence on overall vascularity. In order to more fully explore the influence of these quantitative variations on blood-tissue exchange properties of the system, a much more detailed type of analysis was required, namely a complete topographical mapping of the conjunctival vasculature. By applying an approach developed by the geomorphological sciences, it was shown that changes in vessel lengths, numbers, and diameters could be related to order number by applying three basic mathematical relationships.
Dissert. Abstr.

ANALYSIS OF HUMAN AUDITORY BRAINSTEM RESPONSES FOR COMPLEX STIMULI Ph.D. Thesis
Paul Joseph Ainslie 1980 207 p
Avail: Univ. Microfilms Order No. 8020148

The results of the application of an analysis technique to separate responses of the auditory brainstem responses (ABRS) are reported for three types of complex click stimuli: monaural clicks with contralateral masking noise, monaural click trains of 1 to 4 clicks with interclick times of 2 to 61.5 msec, and binaural clicks with interaural time delays of 0 to 7 msec of interaural intensity differences of 0 to 30 dB. Responses recorded for monaural clicks without and with contralateral broadband masking noise were combined to estimate a masking effect waveform. The derived waveform resembled an ABR for direct monaural stimulation at 35 dB lower stimulus magnitude. Control experiments showed this derived masking effect waveform to be due to acoustic crosstalk evoking an ABR in the ear contralateral to the monaurally stimulated ear. Responses for monaural click train stimuli were analyzed by deriving a waveform estimating the response to each click of the click train. These derived responses showed little change after the response to the third click. Responses to binaural stimuli were obtained and compared to the sum of the responses for the constituent monaural stimuli.

INSTRUMENT SCANNING AND CONTROLLING: USING EYE MOVEMENT DATA TO UNDERSTAND PILOT BEHAVIOR AND STRATEGIES Final Report
A. O. Dick Washington, D.C. NASA Sep. 1980 89 p refs (Contract NAS1-14793)
(NASA-CR-3306; BRAG-TR-79-2) Avail: NTIS HC A05/MF A01 CSCL 05I

Eye movement data and other parameters including instrument readings, aircraft state and position variables, and control maneuvers were recorded while pilots flew ILS simulations in a B 737. The experiment itself employed seven airline pilots, each of whom flew approximately 40 approach/landing sequences. The simulator was equipped with a night visual scene but the scene was fogged out down to approximately 60 meters (200 ft). The instrument scanning appeared to follow aircraft parameters not physical position of instruments. One important implication of the results is: pilots look for categories or packets of information. Control inputs were tabulated according to throttle, wheel position, column, and pitch trim changes. Three seconds of eye movements before and after the control input were then obtained. Analysis of the eye movement data for the controlling periods showed clear patterns. The results suggest a set of miniscan patterns which are used according to the specific details of the situation. A model is developed which integrates scanning and controlling. Differentiations are made between monitoring and controlling scans.

THE PSYCHOMOTOR PERFORMANCE OF MEN AND

WOMEN WEARING TWO TYPES OF BODY ARMOR
Carolyn K. Bensel, Darrell S. Fink, and Sirvart A. Mellian Mar. 1980 115 p refs
(DA Proj. 1L1-62723-AH-98; DA Proj. 1G4-64713-DL-42)
(AD-A086742; NATICK/CEMEL-195; NATICK/TR-80/014) Avail: NTIS HC A06/MF A01 CSCL 19/4

This study was conducted to determine the effects of load carrying equipment (LCE) and two types of fragmentation protective armor vests, Standard B Fragmentation Protective Body Armor (STD B) and the Personnel Armor System for Ground Troops (PASGT), on body flexibility, rate of movement, psychomotor coordination, manual dexterity, and effort exerted for task performance. Twelve men and twelve women, outfitted in utilities, performed the battery of 16 tasks under each of the following clothing conditions: utilities alone, STD B armor, PASGT armor, LCE, STD B armor - LCE, and PASGT armor - LCE. In general, performance levels were highest when the utilities were worn without any additional items and lowest when the STD B vest was worn in conjunction with the LCE. The STD B armor impaired certain aspects of psychomotor performance, particularly body flexibility, to a greater extent than the PASGT vest did. The collar and shoulder designs seemed to be the critical features responsible for the superior performance achieved with the PASGT vest. After the data had been transformed to remove effects accounted for by difference in the basic capabilities of men and women, two tasks which required arm movements were found to be significantly affected by the sex variable. The women's performance of these movements was impaired relative to the men's because of the excessive length of the armor across the women's shoulders. GRA

HUMAN OPERATOR INTERFACE WITH FLIR DISPLAYS
Final Report, Jun. 1977 - Sep. 1979
Larry G. Goble, L. G. Williams, P. D. Pratt, J. Wald, G. Rubin, and T. Hanson Wright-Patterson AFB, Ohio AMRL Mar. 1980 251 p refs
(AD-A086284; Doc-79SRC54; AMRL-TR-79-114) Avail: NTIS HC A12/MF A01 CSCL 17/5

This report presents an extensive review of factors which limit performance of forward-looking infrared (FLIR) systems. Two critical variables of system performance, modulation transfer function (MTF) and noise equivalent delta temperature (NE delta T), were chosen for further experimental analysis. The experiment used a digital simulation of minimum resolvable temperature (MRT) paradigm to test two modeled FLIR systems. Detection and recognition data were collected for two targets (four-bar and square) in trials with varying levels of size, contrast, noise, and MTF. The test results were compared with the NVL predictive model(Ratches, et al., 1975) used to evaluate FLIR system performance. GRA

AN INVESTIGATION OF THE DUAL TASK PERFORMANCE RELATIONSHIP TO HEMISPHERIC SPECIALIZATION
Interim Report
Christopher D. Wickens and Diane Lynn Sandry Jun. 1980 41 p refs
(Contract N00014-79-C-0658; NR Proj. 196-158)
(AD-A086808; EPL-80-1/ONR-80-1) Avail: NTIS HC A03/MF A01 CSCL 05/10

The efficiency of dual task performance may be influenced by a number of variables such as the level of practice of the individual, the difficulty of the task, and the particular processing resources or capacities for which the two tasks compete. The current research investigates the relation between the capacities employed in two tasks--a verbal processing resource inferred to reside in the left cerebral hemisphere, and a spatial resource in the right--and the controlling hand. Specifically a condition of task-hemispheric integrity is defined when the processing and responding of each task is carried out in a single cerebral hemisphere. In the experiment, this condition occurs when a tracking task, inferred to be spatial right-hemispheric in its processing is controlled with the left hand, while a Sternberg memory search Reaction Time task with the letter stimuli, inferred to be verbal left-hemispheric, is responded to with the right hand. A 'mixture' condition is created with the opposite hand assignment, so that each hemisphere processes the information associated with one task, while responding to the other (i.e., Sternberg Task-left hand, Tracking-right). GRA

DIFFERENTIALLY WEIGHTING LINEAR MODELS OF BEHAVIOR: AN EMPIRICAL COMPARISON OF SIX METHODS
Charles K. Parsons (Georgia Inst. of Technology, Atlanta) and Charles L. Hulin Jun. 1980 35 p refs Sponsored in part by Illinois National Guard
(Contract N00014-75-C-0904; NR Proj. 170-802)
(AD-A086876; TR-80-4) Avail: NTIS HC A03/MF A01 CSCL 12/1

Six methods of estimating regression weights for a linear model of behavior were compared in 51 samples of National Guardsmen. Ordinary least squares, Bayesian m-group regression, ridge regression, equal weighting, and two related methods were used. Weights were estimated in one-half of each sample and then applied to data in the other half. Ratios of observations to predictors ranged from 4:1 to 19:1. Cross validation R sq was used as the index of model or equation stability. Results support earlier findings that least squares weights are relatively unstable in small samples, but do not indicate the superiority of any one other method. Future research and implications for using these regression techniques in testing behavioral models are discussed. GRA

ADVANCED FLIGHT DESIGN SYSTEMS SUBSYSTEM PERFORMANCE MODELS. EXECUTIVE SUMMARY
K. C. Parker and J. G. Torian Jun. 1980 17 p
(Contract NAS9-15793)
(NASA-CR-160768; TRW-34902-H001-R0-00) Avail: NTIS HC A02/MF A01 CSCL 06K

Subsystem performance analysis required in flight design to assess the capability of the environmental control and life support system (ECLSS) to support the flight requirements and define operational procedures under contingency flight conditions is described. Current ECLSS modeling techniques are limited in the variety of configurations and they employ batch mode computer programs execution methods. Improvements in the variety of configurations that are modeled and a reduction in effort required for modeling and analysis is accomplished by developing a modular computer program which operates interactively. T.M.

FLAME TESTING OF TWO SAMPLES OF EXPOSURE SUIT MATERIAL Final Report
Frank H. Jacobson 9 May 1980 16 p refs
(W0606SL00)
(AD-A086739; NADC-80097-60) Avail: NTIS
HC A02/MF A01 CSCL 11/5

Reported deficiencies in authorized quick-donning ship-abandon type exposure suits has prompted use of other suits made of materials with unknown flame and heat retardant properties. Therefore, tests were requested to be addressed first to the question of flammability of the material, and second to the question of heat retardation by the material. The materials tested may provide better protection against standard 3 second exposures to fuel fires than any fabrics previously tested in this laboratory. However, the protection falls off sharply as the exposure is continued. GRA

THERMAL INSULATION MATERIALS FOR DIVER'S UNDERWEAR GARMENT Final Technical Report, 1977 - 1978
Norman F. Audet, George M. Orner, and Zelig Kupferman Feb. 1980 31 p refs Presented at Ann. Winter Meeting of ASME, Ocean Eng. Div., San Francisco, 12-15 Dec. 1978
(TF51523003)
(AD-A086743; NCTRF-139; Rept-2-78) Avail: NTIS
HC A03/MF A01 CSCL 06/17

The Navy Clothing and Textile Research Facility (NCTRF) conducted studies on commercially available foam and fibrous thermal insulating materials to determine those which would be effective in a diver's dry-suit underwear garment. An effective insulation had to allow the pressurized gaseous environment existing within the diver's dry suit to permeate the insulation, have good compressional resistance at hydrostatic pressures up to 2 psi (13.8 kPa), and provide an intrinsic thermal insulation value of 1.0 to 1.5 clo. Evaluations of candidate materials and comparisons with existing materials used in diver's dry-suit underwear indicated that a fine pore open cell foam and the polypropylene microfiber batt material having densities of approximately 0.12 gr/c cm and 0.05 gr/c cm and thermal insulation resistance of 1.8 and 2.11 clo/cm at 2 psi (13.8 kPa), respectively, would meet the thermal requirements for the underwear garment and would be superior to those presently being used. The foam compressed less than 30% at 2 psi (13.8 kPa). The fibrous material compressed 60% at 2 psi (13.8 kPa) but had such a high specific clo value incompressed (2.27 clo/cm) that thermal resistance at 2 psi (13.8 kPa) was still estimated to be 2.11 clo/cm. GRA

LASER PROTECTIVE EYEWEAR PROGRAM AT THE LOS ALAMOS SCIENTIFIC LABORATORY
D. C. Winburn 1980 24 p refs Presented at Ind. Hyg. Conf., Houston, Tex., 18-23 May 1980
(Contract W-7405-eng-36)
(LA-UR-80-1038; CONF-800531-1) Avail: NTIS
HC A02/MF A01

The proliferation of lasers focused considerable attention on providing adequate eye protection for experimenters involved in the use of a wide variety of nonionizing radiation. Experiments with fast/pulsed lasers (Nd:YAG, HF, and CO2) were performed to gain biological threshold data on ocular damage. In parallel, eye protection devices were evaluated, which resulted in the development of lightweight, comfortable spectacles of colored glass filters that can be ground to prescription specifications. Goggle styles are employed in specific applications. DOE

THE DESIGN AND IMPLEMENTATION OF A HIERARCHICAL MULTICOMPUTER Ph.D. Thesis
Devesh Bhatt 1980 187 p
Avail: Univ. Microfilms Order No. 8019737

System organization, communication, control, and fault tolerance are in the context of a hierarchical multicomputer. The hardware design of the hierarchical multicomputer is presented. The system is uniformly extensible to a very large number of processors without a significant increase in the complexity of the hardware and software subsystems. Particular attention is paid to the design of the interprocessor links, and the implications of the support required. The issues of task distribution, scheduling, and interprocess communication are addressed. It is noted that considerable simplification can be achieved by dedicating a processor to one user task at a time without much penalty in typical utilization figures. The emphasis is on designing a facility which does not impose any unwanted non-causal synchronization on the client processes. The design of a level structured kernel to implement these functions is presented. Finally, the issues of error detection, localization and confinement, dynamic reconfiguration, recovery, diagnostics, and interactive debugging are addressed. Dissert. Abstr.

A STATEMENT ORIENTED DATA FLOW PROCESSOR Ph.D. Thesis
Robert Wayne Heller 1980 107 p
Avail: Univ. Microfilms Order No. 8019072

A computer architecture is investigated which is based on the separation of programs into three distinct classes of items: data, operations, and control structures incorporating facets from both the classical von Neumann and data flow organizations. The resulting hybrid architecture solves some of the problems inherent in data flow designs, while retaining the parallelism in executions of expressions present in such designs. Furthermore, since the design is based upon the structure of programs, the design has many of the desirable properties of the language directed architectures. Dissert. Abstr.

FUNCTIONAL DESIGN FOR AN AUTOMATED DATA BASE ERROR DETECTION SYSTEM Final Report
Gerald A. Wilson, Sandra B. Salazar, and Kathryn L. Heninger 15 May 1980 87 p refs
(XF21244103)
(AD-A086811; AD-E000448; NRL-MR-4223) Avail: NTIS HC A05/MF A01 CSCL 09/2

This report documents the design proposed for an automated system for data base error detection. The system, called COPE, will be a front end to the data base management system to catch errors before they enter the data base. It will check for errors in each user's updates and prevent errors due to undesirable interactions between users. It should be invisible to the users during normal processing when an error is detected, it will operate interactively to inform the user and to request correction. GRA

RANDOM PROCESS GENERATION Final Report, 1 Jun. 1977 - 30 Sep. 1979
Bruce W. Schmeiser Jun. 1980 13 p refs
(Contract N00014-77-C-0425; NR Proj. 277-236)
(AD-A086758) Avail: NTIS HC A02/MF A01 CSCL 09/2

'Random process generation' includes all aspects of modeling and generating (pseudo) random variates for driving probabilistic simulations on digital computers. Topics include the selection of appropriate statistical distributions, parameter determination, diagnostic checking, and generation of random variables. The research performed under the auspices of this contract emphasized the use of general four parameter families of distribution during the first year. The second year concentrated on generation of random vectors from multivariate distributions. Several other topics were considered as well. A brief summary of the principal investigator's thoughts on the future of random process generation concludes the report. GRA

A SURVEY OF SYNCHRONIZATION PROBLEMS
George Holober Sep. 1980 55 p refs
(Contract N00014-75-C-0752)
(AD-A086509; TR-181/80) Avail: NTIS HC A04/MF A01 CSCL 09/2

Decreased hardware costs will facilitate the use of parallel computation in the near future. Synchronization primitives will be needed to implement concurrent algorithms. Many such primitives have been proposed to date. Unfortunately, their power can only be accurately measured in terms of their ability to solve a particular set of synchronization problems. A correspondingly large number of such problems have been proposed along with the primitives. We present some of these synchronization problems and outline their parameters, variations, and histories. GRA

DESIGN CONSIDERATIONS FOR DATA-FLOW DATABASE MACHINES
Haran Boral and David J. DeWitt Mar. 1980 36 p refs
(Contracts DAAG29-79-C-0165; DAAG29-75-C-0024; Grant NSF MCS-78-01721)
(AD-A086374; MRC-TSR-2058) Avail: NTIS HC A03/MF A01 CSCL 09/2

This paper presents a discussion of the application of data-flow machine concepts to the design and implementation of database machines which execute relational algebra queries. We analyze the performance of multiprocessor nested-loops and sort-merge join algorithms and show that the nested-loops algorithm is generally superior. Three levels of operand granularity for data-flow database machines are introduced and compared using the nested-loops join algorithm. We demonstrate that relation-level granularity is too coarse and that tuple-level granularity is too fine. The third level of granularity, a page of a relation, is shown to be the best choice from both hardware and software viewpoints. Finally a preliminary design for a data-flow database machine which utilizes page-level granularity and supports distributed control of instruction execution is presented. GRA

THE COMPUTER MODERN FAMILY OF TYPEFACES
Donald E. Knuth Jan. 1980 210 p Sponsored in part by the NSF, IBM and Xerox Corp.
(Contract N00014-76-C-0330)
(AD-A086359; SU-STAN-CS-80-780) Avail: NTIS HC A10/MF A01 CSCL 09/2

This report gives machine-independent definitions of all the styles of type planned for use in future editions of The Art of Computer Programming. Its main purpose is to provide a detailed example of a complete family of font definitions using METAFONT, so that people who want new symbols for their own books and papers will understand how to incorporate them easily. The fonts are intended to have the same spirit as those used in earlier editions of The Art of Computer Programming, but each character has been redesigned and defined in the METAFONT idiom. It is hoped that some readers will be inspired to make similar definitions of other important families of fonts. The bulk of this report consists of about 400 short METAFONT programs for the various symbols needed, and as such it is pretty boring, but there are some nice illustrations. GRA

REAL-WORLD PROPERTIES IN THE REQUIREMENTS FOR EMBEDDED SYSTEMS
Pamela Zave 1979 17 p refs
(Contract N00014-77-C-0623)
(AD-A086867) Avail: NTIS HC A02/MF A01 CSCL 09/2

This paper addresses a central issue in the specification of requirements for embedded systems: How can the ragged and open-ended properties of the 'real world' be usefully included in a coherent, closed requirements specification. Certainly the term 'embedded system' is closely associated with the physical properties of computing environments, such as time and hardware reliability. Section 2 argues that emphasis on real-world, or physical, properties defines embedded systems, so that the role of these properties in requirements specification for embedded systems is indeed central. Section 3 sketches an approach to the requirements problem which should be well suited to the inclusion of physical attributes, but explains that a nagging problem remains. Section 4 presents a trial solution to this problem GRA

HANDBOOK OF PROCEDURES FOR ESTIMATING COMPUTER SYSTEM SIZING AND TIMING PARAMETERS. VOLUME 1: PROCEDURES AND TECHNIQUES Final Technical Report, 16 May 1979 - 15 Feb. 1980
William B. Humphrey and John N. Postak 15 Feb. 1980 157 p refs
(Contract F19628-79-C-0106)
(AD-A086444; DAI-TR-235-Vol-1; ESD-TR-80-115-Vol-1) Avail: NTIS HC A08/MF A01 CSCL 09/2

This first volume of the handbook presents procedures that provide a structured approach for estimating computer system sizing and timing parameters during the acquisition life-cycle of Embedded Computer Systems (ECS). The procedures were designed for use by the Electronic Systems Division's Computer Systems Engineering Directorate (ESD/TOI). Based on engineering discipline, the procedures provide a step-by-step program to assist ESD/TOI engineers and computer scientists in evaluating

or conducting initial sizing and timing estimates, updates, or developmental monitoring. Procedural steps are discussed with emphasis on actions that should be taken, risks that should be considered, constraints that may be encountered, and factors that may affect the quality of the estimate at various stages of the acquisition. Techniques that can be used in estimating sizing and timing parameters are also discussed, including data requirements, assumptions, and levels of confidence. In addition, this volume also contains a reference listing, bibliography, glossary, and an index. GRA

(ESS/SS-935-Vol-2; ESA-CR(P)-1329-Vol-2) Avail: NTIS
HC A05/MF A01

An engineering model of highly reliable semiconductor memory was developed, which has a storage capacity of 16K words of 16 bits/word. The method of error correction used to improve reliability is the Single Error and Erasure Correction (SEEC) scheme. Modular packaging was used. The memory component used in the design was the CMOS 6508 type of 1K X 1 static random access memory. A set of test equipment was surveyed comprising a Texas 990/4 computer, silent 700 terminal, interface unit, console and looms. Functional tests on the memory used specially developed test software, and included write-read checks on the memory in fault free conditions and under several conditions of simulated faults. Thermal testing was also performed. Author (ESA)

COMMAND PROCEDURES FOR MANIPULATING TAPE DATA FILES: A SET OF PROCEDURES DEVELOPED FOR USE WITH THE COMNET ALPHA TIME SHARING SYSTEM Final Report, Jun. 1978 - Mar. 1979
R. A. McCrory and L. R. Williams. Mar. 1980. 32 p. refs.
Prepared in cooperation with EPA, Las Vegas, Nev.
(PB80-177546; EPA-600/8-80-013) Avail: NTIS
HC A03/MF A01 CSCL 09B

The lack of simple terminal commands to manipulate tape data files is discussed. It enabled relatively inexperienced programmers or scientists to maintain large infrequently used data sets on magnetic tape. A set of terminal command language procedures which greatly simplify the maintenance of data files on magnetic tape is documented. The command procedures are invoked by entering a single work at the computer terminal. The computer queries the user for specific information and then submits a job to accomplish the actual data transfer. Ancillary procedures are included to facilitate the housekeeping requirements of tape management. The storage of large infrequently used data sets on magnetic tape saves ADP funds and frees system resources for other applications. Such savings lessen capital investment requirements as the agency's ADP needs expand. Disk storage charges are cut by 50 percent by the use of these procedures. GRA

REVERSIBLE IMAGE COMPRESSION Ph.D. Thesis
Larry Bernard Grim. 1980. 180 p.
Avail: Univ. Microfilms Order No. 8018551

Algorithms which are reversible and can be used to encode images for storage are examined. These algorithms make use of spatial redundancy found in the original in both the X and Y direction and also temporal redundancy between images in a sequence. It deviates from the standard approach to encoding in that it uses only computer length words and half words for the basic unit of storage and not the bit as was done by previous techniques. The images are first mapped into bit planes. The compression is then done on the individual bit planes. The use of bit planes provides significant advantage over compressing the original pixels. Dissert. Abstr.

N80-31066 Vanderbilt Univ., Nashville, Tenn.
AUGMENTED PREDICTIVE PARSING Ph.D. Thesis
Joseph Lovell Linn. 1980. 99 p.
Avail: Univ. Microfilms Order No. 8018887

An Augmented Predictive parser which extends the Recursive Descent technique by making available more state information than is available in Recursive Descent parsers is described. The extra state information gives the Augmented Predictive parsers considerably more power. After providing a suitable formalism to describe the parsers it is shown that these Augmented Predictive parsers are just as powerful as the LR(k) parsers. A method by which an Augmented Predictive parser may be obtained from a deterministic context free grammar is given. Last, it is demonstrated that there are many cases where the parsers have considerable size advantages over parsers produced by other current techniques. Dissert. Abstr.

N80-31067 Idaho Univ., Moscow.
KL: A WELL-STRUCTURED BEGINNING COMPUTER LANGUAGE Ph.D. Thesis
Van Houten. 1980. 90 p.
Avail: Univ. Microfilms Order No. 8019797

A programming language, KL, designed and developed specifically for use in introductory computer science courses is described. The structure of KL requires that each statement begin with a keyword and end with a semicolon. This decreases the implementation effort and adds to the simplicity of the language. This form also eliminates the necessity for reserved words which often cause difficulty for the user. The keywords have been chosen to be meaningful and, when possible, short. The tools needed for abstraction are included in KL. User defined data types are available in KL. Procedures and functions are also available for dividing a computer problem into subtasks. KL requires structured programming techniques because no other constructs are available. This should start good programming habits. The concepts of structured programming can be learned using KL and later applied to other less structured languages. Dissert. Abstr.

N80-31068 Massachusetts Univ., Amherst.
PATH SELECTION FOR SYMBOLIC EXECUTION SYSTEMS Ph.D. Thesis
John Lowe Woods. 1980. 192 p.
Avail: Univ. Microfilms. Order No. 8019505

A path generation method that may be used in conjunction with a symbolic execution system to analyze programs is described. This path generation method attempts to generate sets of paths that satisfy user selected program coverage goals. This method differs from previous attempts at path generation in that it uses a dynamic goal oriented approach in which paths are generated one statement at a time during the symbolic execution process. As each path is generated information is stored about the path and the area of the program it covers. Information from the current path and from previous paths is used at each step of the path generation process. Three different path situations are identified--branch selection, loop processing, and path generation in invoked procedure--and a different technique is developed to handle each of these situations. The method was implemented and tested. The test results indicate that the techniques developed are successful in producing paths that achieve a high degree of program coverage. Dissert. Abstr.

N80-31069 Rensselaer Polytechnic Inst., Troy, N. Y.
QUISP: A COMPUTER PROCESSOR FOR THE DESIGN AND DISPLAY OF QUADRIC-SURFACE BODIES Ph.D. Thesis
Joshua Zev Levin. 1980. 126 p.
Avail: Univ. Microfilms. Order No. 8020408

Quadric-surface bodies are useful for modelling manmade objects, and it is important that any computer aided design system be able to work with such bodies. The QUISP processor was designed to accept descriptions of quadric-surface bodies in either character string form (via the QUADRIL language), or through interactive input. The QUADRIL has a mixture of English-like and algebraic syntax. It may be used to specify quadric-surface bodies and then to display them on a variety of media. The interactive input allows commands to be entered by push buttons to accomplish anything that QUADRIL can do. The QUISP outputs line drawings of the quadric-surface bodies, with optional removal of hidden curves. All the lines in the drawings are projections of quadric-surface intersection curves, which are calculated using parametric methods. Dissert. Abstr.

SCHEDULER SOFTWARE FOR TRACKING AND DATA RELAY SATELLITE SYSTEM LOADING ANALYSIS: USER MANUAL AND PROGRAMMER GUIDE
Ray Craft, Christel Dunn, Janet McCord, and Louis Simeone. 13 Jun. 1980. 101 p.
(NASA-TM-78290) Avail: NTIS HC A06/MF A01 CSCL 09B

A user guide and programmer documentation is provided for a system of PRIME 400 minicomputer programs. The system was designed to support loading analyses on the Tracking Data Relay Satellite System (TDRSS). The system is a scheduler for various types of data relays (including tape recorder dumps and real time relays) from orbiting payloads to the TDRSS. Several model options are available to statistically generate data relay requirements. TDRSS time lines (representing resources available for scheduling) and payload/TDRSS acquisition and loss of sight time lines are input to the scheduler from disk. Tabulated output from the interactive system includes a summary of the scheduler activities over time intervals specified by the user and overall summary of scheduler input and output information. A history file, which records every event generated by the scheduler, is written to disk to allow further scheduling on remaining resources and to provide data for graphic displays or additional statistical analysis. Author

A HILL SLIDING STRATEGY FOR INITIALIZATION OF GAUSSIAN CLUSTERS IN THE MULTIDIMENSIONAL SPACE
John K. Park, Yung H. Chen, Daryl B. Simons, and Lee D. Miller. Jul. 1980. 29 p. refs. Presented at the Joint Soil and Machine Process. of Remotely Sensed Data Symp., West Lafayette, Ind., 3-6 Jun. 1980.
(NASA-TM-80721; Rept-80F4508) Avail: NTIS HC A03/MF A01 CSCL 09B

A hill sliding technique was devised to extract Gaussian clusters from the multivariate probability density estimate of sample data for the first step of iterative unsupervised classification. Each cluster was assumed to posses a unimodal normal distribution. A clustering function proposed distinguished elements of a cluster under formation from the rest in the feature space. Initial clusters were extracted one by one according to the hill sliding tactics. A dimensionless cluster compactness parameter was proposed as a universal measure of cluster goodness and used satisfactorily in test runs with LANDSAT multispectral scanner data. The normalized divergence, defined by the cluster divergence divided by the entropy of the entire sample data, was utilized as a general separability measure between clusters. An overall clustering objective function was set forth in terms of cluster covariance matrices, from which the cluster compactness measure could be deduced. Minimal improvement of initial data partitioning was evaluated by this objective function in eliminating scattered sparse data points. The hill sliding clustering technique developed herein has the potential applicability to decomposition any multivariate mixture distribution into a number of unimodal distributions when an appropriate distribution function to the data set is employed. R.K.G.

COMPUTER PROGRAMMING AND CODING STANDARDS FOR THE FORTRAN AND SIMSCRIPT II.5 PROGRAMMING LANGUAGES Final Report
Robert T. Bevan and John H. Reynolds. Apr. 1980. 78 p. refs.
(AD-A086499; NSWC/TR-3878) Avail: NTIS HC A05/MF A01 CSCL 09/2

Contemporary studies of the software development process have shown definitively that an 'ad hoc' attempt at developing large and complex programming systems yields software that is too expensive, too difficult to maintain, inefficient, and, often, incorrect. Worse, it is very difficult to assure oneself that it is correct. This report deals with standards that make the

development of programs a more precise process. This does not mean to imply that use of a rigorous set of programming standards is a panacea for computer programming. On the contrary, use of standards merely reduces the number of errors introduced. Using standards such as those documented in this report will be seen to require more effort on the part of the programming staff than heretofore. This effort is not in vain, however, since the additional effort consists of tasks that were simply not done in the approaches of the past. Additionally, standards greatly improve the reliability, maintainability, and transportability of the resultant programs. GRA

DISCRETE/CONTINUOUS SIMULATION LANGUAGE
T. J. Packer, J. R. Coleby, and T. J. Galvin Jun. 1979 92 p
(AD-A086487; WSRL-0104-TR) Avail: NTIS
HC A05/MF A01 CSCL 09/2

This report takes the form of a user guide for the Discrete/Continuous Simulation Language (DCSL). This language has been developed to allow the convenient setting-up of simulations based directly upon models formulated in a graphical modelling language referred to here as GML. The DCSL System Program is written in FORTRAN and hence DCSL is easily implemented on most modern machines. GRA

We prove that if the second-order sufficient condition and constraint regularity hold at a local minimizer of a nonlinear programming problem, then for sufficiently smooth perturbations of the constraints and objective function the set of local stationary points is nonempty and continuous; further, if certain polyhedrality assumptions hold (as is usually the case in applications) then the local minimizers, the stationary points and the multipliers all obey a type of Lipschitz condition. Through the use of generalized equations, these results are obtained with a minimum of notational complexity. GRA

(AD-A086354; AFAPL-TR-78-90) Avail: NTIS
HC A05/MF A01 CSCL 09/2

This technical report describes a computer program 'graph' which supplies a capability to do efficient plotting of all types of analytical data in a manner suitable for direct substitution into technical papers and articles. DISPLA, a prepackaged set of subroutines from Integrated Software Systems Corporation was used in creation of 'graph'. Input is designed for the TEK4010 on-line computer terminal. Style and format of the created plot is specified by the user through interactive questions and answers. Options include special alphabets, curve fitting procedures, axis labeling and scaling, and the use of multi-curves. GRA

HC A06/MF A01 CSCL 09/2

This report documents the research performed under RADC Contract by Northwestern University in the area of developing effective techniques for large scale software maintenance, including those for the design, implementation, validation, and evaluation of reliable and maintainable software systems with a high degree of automation. During this contract period, research in the areas of ripple effect analysis, testing during software maintenance, specification for program modifications, quality factors for software maintainability, and dynamic monitoring of program behavior was conducted. In this report, the software maintenance process is first described. The research results which have been presented in previous papers and interim technical reports are summarized, and unfinished work is presented. GRA

SELF-METRIC SOFTWARE. VOLUME 2: A HANDBOOK. PART 1: LOGICAL RIPPLE EFFECT ANALYSIS Final Technical Report, Aug. 1976 - Jan. 1980
Steven S. Yau, James S. Collofello, and Ching-Chu Hsieh Griffiss AFB, N.Y. RADC Apr. 1980 41 p refs 3 Vol.
(Contract F30602-76-C-0397; AF Proj. 5581)
(AD-A086291; RADC-TR-80-138-Vol-2-Pt-1) Avail: NTIS
HC A03/MF A01 CSCL 09/2

This handbook consists of two parts on ripple effect analysis for large-scale software maintenance. In part 1, a ripple effect analysis technique for software maintenance from the logical or functional perspective is presented. In a separate volume, part 2 of the handbook, a ripple effect analysis technique for software maintenance from the performance perspective is presented. The purpose of this handbook is to present ripple effect analysis techniques to assist software maintenance personnel to do a better job in large-scale software maintenance. The material presented in this handbook is organized in three levels. At the first level, the software maintenance process is described and the need for effective ripple effect and techniques for large-scale software maintenance is given. The capabilities and restrictions of the logical ripple effect analysis technique, as well as how this technique is interfaced with the user, are presented. At the second level, the logical ripple effect analysis technique is outlined in two phases: the lexical analysis phase and the tracing phase. At the third level, the steps of the logical ripple effect analysis technique are given in detail. However, the detailed theory behind this technique is not presented in ths handbook, but contained in other reports. GRA

USER'S MANUAL FOR NEMESIS AND PLMODE
Ruth Gonzalez and Susan G. Payne 1 May 1980 132 p
(Contract N00014-79-C-0263)
(AD-A087254; ARL-TM-80-6) Avail: NTIS HC A07/MF A01 CSCL 09/2

The normal mode model, NEMESIS, was designed and implemented at the Applied Research Laboratories, The University of Texas at Austin ARL'S (UT), to aid in the investigation of low frequency, range invariant, acoustic propagation effects. The mathematical basis and numerical scheme of this model are described by Gonzalez and Hawker (1980). NEMESIS computes the eigenvalues and normal modes of the depth separated acoustic wave equation. Group velocities and modal attenuation terms are also computed. Propagation loss and velocity potential for a source and receiver at a given range can be calculated from these quantities (Gonzalez and Hawker, 1980). A computer model, PLMODE, was designed to perform these computations, and the computer code for both NEMESIS and PLMODE was prepared for export to other research laboratories. This report is designed to accompany this software and to assist persons who wish to use it. The contents include descriptions of the modeled environment, the input data and their format, and the output produced by the models. An explanation of the diagnostic messages that may arise during execution of the models is also included. Estimates of memory requirements and execution times are given along with sample data sets and their resulting output. GRA

HLYWD: A PROGRAM FOR POST-PROCESSING DATA FILES TO GENERATE SELECTED PLOTS OR TIME LAPSE GRAPHICS
J. K. Munro, Jr. May 1980 65 p refs
(Contract W-7405-eng-26)
(ORNL/CSD/TM-109) Avail: NTIS HC A04/MF A01

The program HLYWD is a post processor of output files generated by large plasma simulation computations or of data files containing a time sequence of plasma diagnostics. It is intended to be used in a production mode for either type of application; i.e., it allows one to generate along with the graphics sequence, segments containing title, credits to those who performed the work, test to describe the graphics, and acknowledgement of funding agency. The current version is designed to generate 3D plots and allows one to select type of display (linear or semilog scales), choice of normalization of function values for display purposes, viewing perspective, and an option to allow continuous rotations of surfaces. This program was developed with the intention of being relatively easy to use, reasonably flexible, and requiring a minimum investment of the user's time. DOE

RELIABILITY OF SOFTWARE GENERATED BY LANGUAGE PROCESSORS
Konrad F. Kreuter Jul. 1979 192 p refs
(Contract ESA-3490/78-D-JS(SC))
(SESA-P35532; ESA-CR(P)-1333) Avail: NTIS HC A09/MF A01

The elements which a programming language must provide to allow a homologous mapping of different levels of problem formulation are identified. An example problem is formulated at six different levels of refinement to demonstrate aspects to be considered between the first draft of an algorithm down to a complete machine dependent implementation with minimum storage requirements for data. For all these levels, ALGOL 68 is used as a notational tool. This was done to show that it is not necessary to use different languages when describing a problem and its solution on different levels of abstraction, provided the language has enough expressive power. There are other programming languages with equal behavior. A comparison of the languages ALGOL 68, PL/1, CPL1, HAL/S, PEARL, and the requirements for the language ADA are given. Author (ESA)

USER'S GUIDE FOR A COMPUTER SIMULATION PROGRAM FOR MULTI-RIGID-BODY SYSTEMS
P. Boland (ESTEC, Noordwijk, Netherlands) Feb. 1980 74 p refs
(ESA-STM-216) Avail: NTIS HC A04/MF A01

The FORTRAN 4 program provides the solution to large rotations of arbitrary, joint connected, rigid body systems. Relative rotations are described by Tait-Bryan angles in a 1-2-3 sequence. The interface between the main core of the program and the user consists of subroutines that make it possible to accommodate external perturbations, connection torques or prescribed motions. System modelling and input and output procedures are explained in detail. Several explicit examples are given, to illustrate the versatility of the program. The complete list of instructions is provided. Author (ESA)

THROUGHPUT CALCULATIONS FOR MULTIPROCESSOR COMPUTER SYSTEMS Ph.D. Thesis
Mehmet Ulema 1980 225 p
Avail: Univ. Microfilms Order No. 8019418

Approximate analytic methods for evaluating the performance of multiprocessor systems are described. A processor oriented approach is developed to calculate the throughput of a multiprocessor system by building a Markov chain model taking the state as the number of processors working (active) at a unit time interval. The assumption is made that a processor may be active using a memory module or active without using a memory module, or may not be active waiting for a memory module to become free. To simplify the computations for systems with large numbers of processors, queued processors will be permitted to make (possibly) new requests at the end of a cycle. Asymptotic expressions are also derived for the systems with large numbers of processors. In describing the importance of bus communication techniques, it is demonstrated how the analysis can be used for the synchronous and asynchronous type bus communication techniques in a time shared/common bus interconnection structure which is an example of the partially connected topology. AFFECT UNITS AND NARRATIVE SUMMARIZATION. Research Report.
Wendy S. Lehnert. May 1980. 58 p. refs.
(Contract N00014-75-C-1111; Grant NSF IST-79-18463)
(AD-A086735; RR-179) Avail: NTIS HC A04/MF A01 CSCL 05/7

The analysis of narrative text involves various levels of description. On the lowest level are word meanings and syntactic structure within single sentences. On a higher level there are problems of generating inferences and integrating information into memory. At the highest level is the notion of a macro-structure or narrative plot. The identification of high-level narrative structures is central to the problem of narrative summarization. But the intuitive notion of a plot is useless for a process model of summarization unless we can specify the hierarchical representations that allow us to analyze input and produce plots as output. A representational strategy has been developed for high-level structural analysis in conjunction with the BORIS system (a narrative text understanding system). The structures produced effectively encode plot lines in terms of connected graph structures where graph nodes correspond to specific affect units. An affect unit is an abstraction of affective causality which is recognized in a bottom-up manner at the time of understanding. Simple manipulations of these graph structures yield the conceptual basis for narrative summaries, but the actual process of summarization depends on certain connectivity properties in the graph structure. TIGHT ROUNDS ON THE RESPONSE OF MULTIVARIABLE SYSTEMS WITH COMPONENT UNCERTAINTY.
Michael G. Safonov. 31 Aug. 1979. 10 p. refs.
(Contract F44620-76-C-0061; Grant NSF ENG-78-05628)
(AD-A086580) Avail: NTIS HC A02/MF A01 CSCL 12/2

For Multi-Input-Multi-Output (MIMO) feedback systems having internal components that are subject to parameter variations, nonlinearity, or unmodeled dynamics within given 'conic sector' bounds, tight bounds (which also turn out to take the form of 'conic sector' bounds) are derived for the input-output relation of the closed-loop system. In the case of linear-time invariant systems, the 'conic sector' bounds are interpretable in terms of the maximal singular values of certain frequency-response matrices. GRA

FOUNDATIONS OF FEEDBACK THEORY FOR NONLINEAR DYNAMICAL SYSTEMS.
C. A. Desoer and Y. T. Wang. 31 Aug. 1979. 83 p. refs.
Submitted for publication.
(Contract F44620-76-C-0100; Grant NSF ENG-78-84522)
(AD-A086578) Avail: NTIS HC A05/MF A01 CSCL 09/3

We study the fundamental properties of feedback for nonlinear, time-varying, multi-input, multi-output, distributed systems. The classical Black formula is generalized to the nonlinear case. Achievable advantages and limitations of feedback in nonlinear dynamical systems are classified and studied in five categories: desensitization, disturbance attenuation, linearizing effect, asymptotic tracking and disturbance attenuation, linearizing effect, asymptotic tracking and disturbance rejection, stabilization. Conditions under which feedback is beneficial for nonlinear dynamical systems are derived. Our results show that if the appropriate linearized inverse return difference operator is small, then the nonlinear feedback system has advantages over the open-loop system. Several examples are provided to illustrate the results. GRA

STABILITY OF POWER SYSTEMS AND OTHER SYSTEMS OF SECOND ORDER DIFFERENTIAL EQUATIONS. Ph.D. Thesis.
Sherwin James Skar. 1980. 147 p.
Avail: Univ. Microfilms Order No. 8019664

Analytic criteria are developed to predict the stability or instability of equilibrium points of systems of second order differential equations. The results are applied to the swing equations for electric power systems. It is shown that the trivial solution is exponentially stable if and only if the linearization matrix is stable. This rapid rate of convergence ensures that the asymptotic stability of a certain subsystem will imply the stability of the whole system. In the case of uniform damping, stability results proved by linearization allow one to classify equilibrium points as either stable or unstable, except for a certain critical case. To help implement these and related results, an algorithm is developed to determine whether all eigenvalues of a matrix are real and nonpositive. Other stability criteria are proved using invariance theory and an extension of the concept of Hamilton-

can systems. A sufficient condition for a nonlinear map being one to one in a convex region is proved. A simple analytic criterion for the existence of stable equilibrium states is proved for the swing equations with negligible transfer conductances.

N80-31095 Rensselaer Polytechnic Inst., Troy, N. Y.
AN ADAPTIVE GRID FINITE ELEMENT METHOD FOR INITIAL-BOUNDARY VALUE PROBLEMS Ph.D. Thesis
Stephen Francis Davis 1980 225 p
Avail: Univ. Microfilms Order No. 8020401

A finite element method is developed to solve initial boundary value problems for vector systems of parabolic partial differential equations in one space dimension and time. The methods adapt the computational mesh as the solution progresses in time and are thus able to follow and resolve such sharp transitions as boundary layers, shock layers, or wave fronts. This permits an accurate solution to be calculated with fewer mesh points than would be necessary with a uniform mesh. The overall method contains two parts, a solution algorithm and a mesh selection algorithm. The solution algorithm is a finite element-Galerkin method on trapezoidal space time elements, using either piecewise linear or cubic polynomial approximations. The mesh selection algorithm builds upon variable knot spline interpolation. Error estimates are obtained for the solution algorithm. The mesh selection algorithm is shown to produce a mesh which minimizes the L sq error of the solution for a given number of mesh points. A computer code implementing these algorithms has been written and applied to a number of problems.

ALGEBRAIC CODING THEORY Ph.D. Thesis
Robert Calderbank 1980 75 p
Avail: Univ. Microfilms Order No. 8019886

Quadratic residue codes, quasicyclic binary codes, and symmetry codes are investigated. It is shown how to regard such a code as an ideal in an algebra generated by a group of automorphisms of the code. The algebra is then used to establish a square root bound on the minimum weight of the code. The extended quadratic residue codes of length (q + 1), where q is an odd prime power, are constructed from representations of the special linear group, SL sub 2 (q). A square root bound is established on the minimum weight in quasi-cyclic binary codes. The construction of symmetry codes is extended to fields other than GF(3). Given an odd prime power q, and a finite field F of odd characteristic containing the square root of -q, a (2q + 2, q + 1) symmetry code over F is constructed. A square root bound is established on the minimum weight in this enlarged family of symmetry codes. When q is identical to -1 (mod 4) this bound is tight and is achieved by an (8,4,4) code over GF(7). Additional results are presented.

HC A03/MF A01 CSCL 12/1

In this paper, we study certain semidiscrete methods for approximating the solutions of initial boundary value problems, with homogeneous boundary conditions, for certain kinds of parabolic equations. These semidiscrete methods are based upon the availability of several different Galerkin-type approximation methods for the associated elliptic steady-state problem. The properties required of the spacial discretization methods are listed and estimates of the error made by the resulting semidiscrete approximations and of its time derivatives are given. In particular, estimates are given that require only weak smoothness assumptions on the initial data. Verifications of the required properties for various Galerkin-type methods are also given.

HC A04/MF A01 CSCL 12/1

This report considers the equation d/dt (mu lambda delta mu)-delta mu--0 in a cylindrical domain. Unlike the heat equation, the positivity of the boundary data is not sufficient to insure that the solution is nonnegative. It is desirable to identify those boundary data for which the above property is true. One reason is that, since the above equation is a model for heat conduction and for fluid flow in fractured porous media, it is of interest to locate those boundary data that make the correspondent physical process meaningful. In this paper several boundary value problems associated with the above equation are studied and necessary and sufficient conditions on the data are given to insure the nonnegativity of the solution.

So called 'differential inclusions', in which the rate of change x(dot) of the state variable x is restricted to lie in a specified set F(x) (and not given exactly) arise naturally in economics, control theory and other fields. As with differential equations, one is interested in the existence of stationary points. Here it is shown that if F is tangent to a compact convex set (in a sense made precise), then the differential inclusion has a stationary point within this set. Moreover, a discrete implicit difference scheme which approximates the inclusion will also be solvable when the tangency condition holds and the initial data is chosen from the set. GRA

HC A02/MF A01 CSCL 12/1

Diced systems are defined as autonomous systems governed by ordinary differential equations having discontinuities (in R to the nth power) on submainfolds where one or more of the state variables takes an integer value. Such systems may be regarded as approximations of continuous systems or as representative models of a class of discontinuous systems. Trajectories of such systems (for a given initial state) are readily calculated and may exhibit complex sliding-mode segments. Asymptotic properties of such trajectories are discussed and classified. Motivation is given in terms of observed properties of interconnected power systems. GRA

HC A02/MF A01 CSCL 12/1

In this paper we shall indicate some of the current directions in the study of the analytic continuation of solutions to partial differential equations. Our intended audience is not only those mathematicians working in the area of partial differential equations, but also complex analysts interested in seeing how a major topic in the theory of analytic functions can be extended to include certain classes of linear partial differential equations. Our specific aim is to provide a survey of the general area of the analytic continuation of solutions to partial differential equations and their application. GRA

HC A03/MF A01 CSCL 12/1

A computer system serving both batch and interactive jobs is modeled as a single server queue, with an infinite source of ordinary customers and a finite source of priority customers. The stability condition and the stationary probability distribution are determined. For a stable system, it is shown how the distribution and moments, of the waiting time, the sojourn time, the completion time, and the busy period, may be efficiently computed. GRA

HC A08/MF A01 CSCL 09/3

This study investigates the application aspect of the Volterra series method to nonlinear system analysis, with special emphasis on nonlinear circuits. The contents are organized into five parts: (1) important aspects of Volterra series method; (2) characterization of multiple nonlinearity circuits (systems) using Volterra series; (3) response on nonlinear systems from Volterra series system characterization; (4) Computer-aided analysis of mildly nonlinear circuits using Volterra series; and (5) concrete examples from the application of Volterra series method to nonlinear circuit problems. Algorithms for adapting the Volterra series method for the computer-aided distortion and zero-state transient analysis of mildly nonlinear circuits are developed next. A symbolic approach is used which not only improves the computational efficiency but also provides a link to the earlier ideas on convergence, etc. An overview of the digital computer program PRANC, which uses the Volterra series method, is also given. It is well known that solving the initial-value problem for the heat equation forward in time takes a 'rough' initial temperature into a temperature which is smooth at later times t = greater than 0. One aspect of this is the validity of certain estimates on tut when u is a solution of the heat equation. In this paper we prove related estimates on nonlinear evolution equations which are governed by homogeneous nonlinearities. The results apply to classes of nonlinear diffusion equations and to conservation laws. The results are interesting from the point of view of identifying a new 'regularization' mechanism and the estimates themselves cast new light on the nature of the solutions of some initial-value problems with rough initial data. HC A03/MF A01 CSCL 12/1

This paper begins with an exposition of results of Haddad on the solvability of differential inclusion (in which the rate of change x(dot) of the state variable x is restricted to lie in a specified at F(x) and is not given exactly) for a solution x with x(t) epsilon K for t greater than or = 0 and K a specified set of 'viable states'. Problems of this sort arise naturally in control theory and economics. A main point is the generality of the assumptions under which the theory is successful. Results on monotone trajectories and the convergence of a generalized Newton method to a rest state are also presented. GRA

CLASSIFICATION TECHNIQUES FOR MULTIVARIATE DATA ANALYSIS M.S. Thesis
Jin Ki Lee 28 Mar. 1980 121 p refs
(AD-A086521) Avail: NTIS HC A06/MF A01 CSCL 12/1

The multivariate analysis techniques of cluster analysis, principal components analysis, and discriminant analysis are examined in this thesis. The theory and applications of each of the techniques are discussed. Computer software available at the Naval Postgraduate School is discussed and sample jobs are included. A hierarchical cluster analysis algorithm, available in the IMSL software package, is applied to a set of data extracted from a group of subjects for the purpose of partitioning a collection of 26 attributes of a weapon system into six clusters of superattributes. A nonhierarchical clustering procedure, principal components analysis, and discriminant analysis were all applied to a collection of data on tanks consisting of twenty-four observations of ten attributes of tanks. The cluster analysis shows that the tanks cluster somewhat naturally by nationality. The principal components analysis and the discriminant analysis show that tank weight is the single most important discriminator among nationality. GRA

(AD-A086826; NOSC/TR-538) Avail: NTIS
HC A04/MF A01 CSCL 12/1

Analytic forms of a variety of two's-complement multiplication error statistics are derived. An FIR filter structure is used to define the individual error statistics which are used in the calculation of the filter output variance and spectrum. The approach used in deriving the statistics is to show that a regularity exists in the structure of the errors as the multiplier input is stepped through a series of consecutive values. The error structure is a function of coefficient value, number representation, and word lengths. This regular structure allows the use of the Poisson Summation Formula in deriving error statistics based on multiplier inputs obtained from quantized random variables. The error statistics are categorized according to families of coefficient values denoted by the parameter v. This parameter is the effective word length of the error. Specific forms of the statistics are given for Gaussian quantizer inputs. GRA

ON MULTIPLE SOLUTIONS OF SINGULARLY PERTURBED SYSTEMS IN THE CONDITIONALLY STABLE CASE
Robert E. OMalley, Jr. Jul. 1980 23 p refs Presented at the Adv. Seminar on Singular Perturbations and Asymptotics, Madison, Wis., 28-30 May 1980 Sponsored in part by AFOSR, Army Research Office and NSF
(Contract N00014-76-C-0326; NR Proj. 041-466)
(AD-A087049; Rept-29) Avail: NTIS HC A02/MF A01 CSCL 12/1

This paper seeks the asymptotic behavior of solutions to nonlinear singularly perturbed boundary value problems for ordinary differential equations. Presuming a Jacobian matrix has a fixed number of (strictly) stable and unstable eigenvalues, the limiting solution can often be obtained from a reduced problem. Boundary layer behavior will satisfy a conditionally stable system, and multiple solutions will often result. The asymptotic structure of solutions is helpful in developing numerical solution schemes, and is vital in various applications (including some optimal control problems). GRA

MATRIX METHODS FOR DETERMINING SYSTEM POLES FROM TRANSIENT RESPONSE. Electromagnetics Research Report, 1 Sep. 1978 - 30 Apr. 1979
T. L. Henderson May 1980 55 p refs
(Contract N00014-77-C-0362)
(AD-A087204; RR-80-1) Avail: NTIS HC A04/MF A01 CSCL 12/1

The problem treated is that of identifying the poles of a finite order system by observing its transient decay after cessation of input, for a limited time, using (possibly) multiple observation points and experimental repetition. Various approaches are studied, having the common characteristic that a homogeneous matrix equation must be solved. Several techniques that have been given scant attention in the literature are consolidated into the treatment, together with new results including an analytical treatment of the consequences of assuming an excessively high system order, derivation of a statistically unbiased estimate for an intermediate parameter in the solution, new theorems on error effects, a recipe for effective use of the singular value decomposition, a new method for suppression of extraneous poles, an elucidating derivation and extension of the method of Jain, a new form of the problem wherein the system poles are eigenvalues, and a study of the relationship between various pole identification methods. HIGH ORDER TIME SETTING METHODS FOR NONLINEAR EVALUATION EQUATIONS
Joseph E. Pasciak 1980 9 p refs Presented at 2nd Intern. Symp. on Innovative Numerical Analysis in Appl. Eng. Sci., Montreal, 16 Jun. 1980
(Contract EY-76-C-02-0016)
(BNL-27011; CONF-800625-1) Avail: NTIS HC A02/MF A01

How to derive high order time approximation procedures for certain nonlinear evolution equations based on a given high order approximation procedure for the homogeneous linear problem is demonstrated. For L a fixed differential operator, nonlinear evolution equations of the form u/sub t + Lu = J(u) are considered where J(u) is a nonlinear function of u. A stable and high order algorithm for approximating the linear problem v/sub t + Lv = 0 is assumed to be given. It is shown how to use the approximation algorithm to get high order approximation for the evaluation equation. The results of computational experiments are given which illustrate the benefits of the time stepping methods. The Korteweg-deVries equation and a nonlinear Schroedinger equation are considered. The spatial discretization is given by the spectral method with trigonometric polynomials (Fourier method). DOE

CONVENTIONS AND FORMULAS FOR USING THE MUELLER-STOKES CALCULUS IN ELLIPSOMETRY
P. S. Hauge, R. H. Muller, and C. G. Smith Dec. 1979 40 p refs Presented at the 4th Intern. Conf. on Ellipsometry, Berkeley, Calif., 20 Aug. 1979 Prepared in cooperation with Lawrence Berkeley Lab., Calif. and Bell Telephone Lab., Murray Hill, N.J.
(Contract W-7405-eng-48)
(LBL-10172; CONF-790857-3) Avail: NTIS HC A03/MF A01

A sign convention is proposed which specifies the ellipticity angle and the fourth Stokes parameter to be positive when the tip of the instantaneous electric field vector describes a right handed helix in space. Polarization of this type is designed as right handed and represented by a point on the northern half of the Poincare sphere. The consequences of using this convention, along with the previously adopted e/sup i(wt + delta)/ convention for the electric field, are seen in the relation among several representations of polarization state. These include the magnitudes and phases of the electric field components, the Jones vector, coherency matrix, Stokes parameters, Poincare sphere, polarization ratio, ellipsometric parameters psi and delta, and the azimuth and ellipticity of the polarization ellipse. The formalism for converting the Jones matrix into the matrix that transforms the coherency vector or the Stokes vector (Mueller matrix) is described. Mueller matrices for a linear retarder and an isotropic reflecting surface and the description of a compensator analyzer polarimeter are given. DOE

SOME COMMENTS ON THE RATIONAL SOLUTIONS OF THE ZAKHAROV-SCHABAT EQUATIONS
V. B. Matveev 1979 13 p refs
Avail: NTIS HC A02/MF A01
A family of the rational solutions of the Zakharov-Schabat equations is described. This family is characterized by an extremely simple superposition principle which follows directly from the Darboux-invariance of the Zakharov-Schabat equations. An infinite sequence of polynomials P sub n (x, y, t, t sub 4,..., t sub m), m < or = n, is presented so that the developed formula will represent some class of solutions of the Kadomtcev-Petviashvily (K-P) equation. The parameters t sub 4,..., t sub K represent the explicit action of the commuting flows, related with the Zakharov-Schabat operators of the higher order, on the solutions of the K-P equation and can be fixed independently in each P sub i. The polynomials P sub n are closely related with the second Waring formula. This relation imposes some specific constraints on the motion of the n particle Moser-Calodgero system generated by P sub n.

OCCURRENCES IN A BRANCHING PROCESS
Martin Haernqvist 1979 83 p refs
Avail: NTIS HC A05/MF A01
With general convergence theory for branching processes as a basis, two special problems are investigated. In one situation, an extra point process of events during life is assigned to each realized individual and the behavior of the superposition of such point processes in action is studied as the population grows. With the proper scaling and under some regularity conditions the superposition is shown to converge in distribution to a Poisson process. One implication of this result is that the collection of death moments of individuals has an asymptotic Poisson description. In the second situation, rare events among the individuals in the special Bellman-Harris branching process are studied. It is shown that the point process of occurrences of a certain event that may concern life or reproduction of the individual in the population has a mixed Poisson limit as the probability of the event tends to zero. Established weak convergence techniques for point processes are applied. Some recent strong convergence theorems for branching processes are also used. Finally, a result on the asymptotics of the maximal age among existing individuals is derived.

ANTITHETIC VARIATES REVISITED
George S. Fishman and BaoSheng D. Huang Jun. 1980 40 p refs
(Contract N00014-76-C-0302)
(AD-A086114; TR-80-4) Avail: NTIS HC A03/MF A01 CSCL 12/1
This paper extends earlier results in the area of variance reduction techniques applied to simulation on a computer. In particular, it views the antithetic sampling technique as a combination of rotation and reflection sampling on a circle. The covariance structures induced by the techniques separately and together are derived and conditions under which they are optimal sampling plans are described. Rates of convergence for the variance of the sample mean are given for bounded, continuous and discrete random variables and for unbounded continuous random variables with special, although commonly encountered, structure.

COMPUTER ERROR BOUNDS FOR AGGREGATED MARKOV CHAIN
G. W. Stewart May 1980 33 p refs
(Contract N00014-76-C-0391)
(AD-A086193; TR-901) Avail: NTIS HC A03/MF A01 CSCL 12/1
This paper describes a method for computing the steady state probability vector of a nearly completely decomposable Markov chain. The method is closely related to one proposed by Simon and Ando and developed by Courtois. However, the method described here does not require the determination of a completely decomposable stochastic approximation to the transition matrix and hence it is applicable to matrices other than stochastic. An error analysis of the procedure is given which results in effectively computable error bounds.

FAILURE TIME DISTRIBUTIONS: ESTIMATES AND ASYMPTOTOC RESULTS Interim Report
Janos Galambos 1980 24 p refs
(Grant AF-AFOSR-3504-78; AF Proj. 2304)
(AD-A086828; AFOSR-80-0515TR) Avail: NTIS HC A02/MF A01 CSCL 12/1
The paper deals with life distributions for coherent systems of components. Two major questions are discussed: (1) estimation of system life from data, or knowledge, on component lives, and (2) asymptotic models. Both questions are related to extremes of a sequence of random variables through the path set and cut set decomposition of coherent systems, which reduce a

coherent system to either a parallel or series system. Since for these decompositions, the classical theory of extremes of independent and identically distributed random variables does not provide an acceptable approximation, the emphasis is on dependent random variables, or when the random variables are not identically distributed. The inequalities presented when discussing question (i) above are applicable not only to extreme value problems but to an arbitrary multivariate distribution using lower dimensional marginals. The asymptotic models are discussed in the light of hazard rate properties of the limiting distributions of the models. A parametric family of distributions is proposed for approximating life distributions whose hazard rate is bath-tub shaped, this representing a burn-in period, an accidental failure period and a wear-out period. We investigate the power properties of a new goodness-of-fit test proposed by Foutz (1980). This new test is compared with the Chi squared test and the Kolmogorov-Smirnov (K-S) test for normality when the samples come from (1) the family of asymmetric stable distributions, (2) mixture of normal distributions, and (3) the Pearson family. The general conclusion is that the new test performs better than the Chi squared and the K-S test when the parent distribution is heavy tailed. If the hypothesized distribution differs from the true distribution in location only, the new test does not do as well as the other two. GRA

PREPOSTERIOR ANALYSIS OF BAYES ESTIMATORS OF MEAN LIFE, 1
Richard E. Barlow and Alexander S. Wu Feb. 1980 26 p refs
(AD-A086771; CORC-80-4) Avail: NTIS HC A03/MF A01 CSCL 12/1

In considering life test experiments from a behavioristic Bayes point of view, we may speculate on the effect of model misspecification on the posterior mean under alternative stopping rules. Of course, under the life distribution model, we expect the mean of the posterior to equal the mean of the prior. However, if we think the model may have been misspecified, we would no longer expect this equality. We show that for Bayes estimators of mean life under the exponential model and general priors on mean life, we expect, based on a preposterior analysis, that the mean of the posterior will increase with sample size when the true model has an increasing failure rate and certain fixed stopping rules are used. Also, we show that for Bayes estimators of mean life based on the natural conjugate prior for the exponential model and complete samples, the Bayes risk is less when the coefficient of variations is less than for the exponential model. Recommendations relative to use of life test sampling plans based on an exponential model are made. GRA

CUMULATIVE PROCESSES: LINEAR COMBINATIONS OF ORDER STATISTICS AND PERCENTILES
Sue Leurgans Mar. 1980 33 p refs
(Contract DAAG29-75-C-0024; Grants NSF MCS-78-09525; NSF MCS-77-16974)
(AD-A086372; MRC-TSR-2056) Avail: NTIS HC A03/MF A01 CSCL 12/1

Percentiles and linear combinations of order statistics are statistics which are sometimes preferred to averages because they can be less sensitive to the presence of a few wild observations. It is well known that for large samples, both percentiles and linear combinations of order statistics resemble averages in that the appropriately normalized statistic is approximately normally distributed, with parameters which depend on the underlying distributions. This paper shows that percentiles and linear combinations of order statistics resemble averages in a stronger sense. It is well known that if a sequence of averages is plotted against the number of observations contributing to the average, and the resulting plot is rescaled appropriately, then for long sequences the picture will act like a realization of a Brownian motion path. This paper establishes that this is still true if the averages are replaced by percentiles or by linear combinations of order statistics. GRA

CONVERGENCE OF PROGRESSIVELY CENSORED LIKELIHOOD RATIO PROCESSES IN LIFE-TESTING
Joseph C. Gardiner Jun. 1980 19 p refs
(Contract N00014-79-C-0522; Grant BRSG-S07-RR07049-14)
(AD-A087057; RM-391) Avail: NTIS HC A02/MF A01 CSCL 12/1

The weak convergence of certain (randomly stopped) likelihood ratio processes based on the ordered observations corresponding to a random sample is considered in the situation where the hazard rate function of the underlying distribution is separable in its variables. It is shown that under mild conditions on the stopping variables the log likelihood function is locally asymptotically normal. Some remarks pertaining to the general ease and applications of the theorems proved are also discussed. GRA

BOUNDS ON MIXTURES OF DISTRIBUTIONS ARISING IN ORDER RESTRICTED INFERENCE
Tim Robertson and F. T. Wright 10 Jul. 1980 22 p refs
Prepared in cooperation with Missouri Univ., Rolla
(Contracts N00014-80-C-0322; N00014-80-C-0321)
(AD-A087117) Avail: NTIS HC A02/MF A01 CSCL 12/1

In testing hypotheses involving order restrictions on a collection of parameters, distributions arise which are mixtures of standard distributions. Since tractable expressions for the mixing proportions do not, in general, exist even for parameter collections of moderate size, the implementation of these tests may be difficult. It is not necessary to bound the individual mixing proportions in order to obtain a bound for the tail probabilities of the 'mixed' distributions. Bounds for such tail probabilities are derived and their application to several order restricted hypothesis testing situations is discussed. These results are also applied to obtain the least favorable configuration in a two sample likelihood ratio test of the equality of two multinomial populations versus a stochastic ordering alternative. MINIMIZING THE COST OF OPERATING AIRCRAFT ON MULTISTOP TOURS Ph.D. Thesis
Norman Babcock Waite 1980 130 p
Avail: Univ. Microfilms Order No. 8020260

An operationally practical means of informing the pilot on operational decisions during a multistop tour in order to complete the tour feasibly and at minimum expected cost is presented.

The minimum is in the following sense: no means of flying the tour where decisions are made using information available up to the time each decision is made can do better. Optimality is proved. Computational experience and results are included.

MULTIPLE OBJECTIVES AND THE PATH DETERMINATION PROBLEM M.S. Thesis. Final Report
J. E. Thomas, Jr. 3 Jul. 1980 91 p refs
(AD-A086744) Avail: NTIS HC A05/MF A01 CSCL 12/2
The shortests path problem exists as a major component of many network problems. For problems with a single objective, algorithms developed over the past twenty-five years have made the solution of this problem a relatively simple exercise. For multiobjective problems, adaptation of shortest path methodologies to generate noninferior solutions is a complex and difficult task. This thesis introduces an algorithm, based on label-correcting algorithmic techniques, which identifies all noninferior paths from one node in a network to all other nodes in the network in a single computer run. The algorithm, titled the Noninferior Path Labeling Algorithm (NPLA), is shown to be at least four to ten times faster than shortest path labeling algorithms applied multiobjectively for a problem with two objectives. NPLA is judged to be unique in its capability to identify all solutions which lie in duality gaps of the noninferior solution set. NPLA has been found to be easily programmed, efficient, and capable of being used with all network designs. It is readily adaptable to problems of more than two objectives. GRA

HC A04/MF A01 CSCL 12/2
Message routing was studied in a data communication network in which all messages are addressed to the same node of the network. We approach this problem by the minimization of a linear, increasing function of the message flow in the links of the network. In this minimization we consider explicitly the capacities of the links. We present two algorithms which can be executed in a distributed manner, i.e. the data processing facilities at the nodes of the network cooperate in this minimization by interchanging messages and processing them. One of the algorithms is an adaptation of the primal simplex method of linear programming. The other is an adaptation of D. R. Fulkerson's 'out-of-kilter' algorithm. We give simulation results of the performance of the first algorithm, and a bound on the total number of messages required by the second algorithm. GRA

EULER MANIFOLDS AND STIEFEL-WHITNEY HOMOLOGY CLASSES Ph.D. Thesis
Darko Veljan 1979 98 p
Avail: Univ. Microfilms Order No. 8020898
The geometry of Euler manifolds is investigated systematically. Basic properties of Stiefel-Whitney homology classes (combinatorially defined) on Euler manifolds mod 2 are established, and a system of axioms for these classes is given. As a byproduct of this axiomatic description it is shown that the Stiefel-Whitney classes on compact Euler manifolds mod 2 which satisfy mod 2 Poincare duality are homotopy invariants. This is shown by proving that Stiefel conjecture is valid on this class of spaces. The main tools in proving the uniqueness of the axioms are block bundle transversalities and an interpretation of cohomology classes as certain morphisms on bordism groups into the group of coefficients. Dissert. Abstr.

BANACH SPACE SHIFT OPERATORS Ph.D. Thesis
James Earl Robinson 1980 111 p
Avail: Univ. Microfilms Order No. 8020390
Various kinds of shift operators which have been defined on Banach space are investigated along with the interrelationships that exist among these classes of operators. Of particular interest is the connection between Crownover shifts and Gellar Schauder basis shifts. Different kinds of Schauder bases on Banach space are studied. The orthogonality of bases as given through several distinct interpretations are considered. Normal bases, monotone bases, and orthogonal bases are compared. A kind of reverse monotone condition is imposed on a basis to determine its relationship to the other definitions. A necessary and sufficient condition for a Crownover shift on a reflexive space to be a Gellar Schauder basis shift and a technique for approximating Gellar Schauder basis shifts with Crownover shifts on certain spaces are developed. Dissert. Abstr.

LINEAR STATE FEEDBACK, QUADRATIC WEIGHTS, AND CLOSED LOOP EIGENSTRUCTURES M.S. Thesis. Final Report
Peter Murray Thompson Sep. 1980 101 p refs
(Grant NsG-1553)
(NASA-CR-163484; LIDS-FR-1029) Avail: NTIS
HC A06/MF A01 CSCL 12A
Equations are derived for the angles of general multivariable root loci and linear quadratic optimal root loci, including angles of departure and approach. The generalized eigenvalue problem is used to compute angles of approach. Equations are also derived to find the sensitivity of closed loop eigenvalue and the directional derivatives of closed loop eigenvectors. An equivalence class of quadratic weights that produce the same asymptotic eigenstructure is defined, a canonical element is defined, and an algorithm to find it is given. The behavior of the optimal root locus in the nonasymptotic region is shown to be different for quadratic weights with the same asymptotic properties. An algorithm is presented that can be used to select a feedback gain matrix for the linear state feedback problem which produces a specified asymptotic eigenstructure. Another algorithm is given to compute the asymptotic eigenstructure properties inherent in a given set of quadratic weights. Finally, it is shown that optimal root loci for nongeneric problems can be approximated by generic ones in the nonasymptotic region.

(AD-A086349) Avail: NTIS HC A04/MF A01 CSCL 12/1
We investigate the minimal number of matrix-vector multiplications to approximately solve a linear system. The minimal number of multiplications depends on the properties of a class of problems such as symmetry, positive definiteness, and bound on condition number. For different classes of problems we obtain the minimum exactly or almost exactly and establish with algorithms are optimal, that is, attain the minimum. Furthermore, we obtain quantitative results on how the lack of certain properties increases the minimum. GRA

Spline approximation is often most effective when the breakpoint (knot) sequence can be chosen suitably nonuniform. At the same time, standard spline approximation schemes (such as least-squares approximation by splines) are so far only known to be bounded as long as the breakpoint sequence is almost uniform. Any such bound is obtained (explicitly or implicitly) in terms of a bound on the inverse of certain matrices which are banded. Any attempt at establishing bounds for more general breakpoint sequences must therefore come to grips with the inverses of these band matrices. The hope is that Demko's discovery of the exponential decay of band matrix inverses will lead eventually to those desired bounds. GRA

Multipoint boundary conditions arise in the theory of beams or plates with interior point loads, and also the mathematical theory of splines. Interface conditions arise in problems of diffusion through parallel 'slabs' with different properties (e.g., nuclear reactors or the study of shock waves). Adjoints of such differential operators also are encountered when one attempts to derive Euler-Lagrange equations for constrained minimization problems. Our method is very general and is designed to work for partial differential, integral and functional differential operators as well as differential operators. Part 1 presents some of the abstract machinery to solve the problem. Part 2 will apply this machinery to concrete and applied problems of the type mentioned above. GRA

WHAT IS THE MAIN DIAGONAL OF A BIINFINITE BAND MATRIX?
Carl deBoor Mar. 1980 17 p refs
(Contract DAAG29-75-C-0024)
(AD-A086366; MRC-TSR-2049) Avail: NTIS
HC A02/MF A01 CSCL 12/1

How to single out a particular diagonal of a biinfinite band matrix A as its main diagonal, using the decomposition of the solution set of Ax = 0 into those which are bounded at infinity and those which are bounded at - infinity is shown. As an application, it is proved that the inverse of the coefficient matrix for the system satisfied by the B-splines coefficients of the cubic spline interpolant at knots is checkerboard and that, under certain assumptions, the local mesh ratio must be bounded. HC A02/MF A01

Measurements of electron heat flow parallel to B are performed on fully-ionized quiescent plasma column under conditions for which the electron-electron collisional mean free path, 1/sub ee/, is not small relative to the electron temperature-gradient scale-length. Pulsed microwave heating at one location on the column and nonperturbing microwave resonator measurements of temperature at two locations on the column are used to create and to measure the heat flow. Results are compared with the predictions of a 1-D heat diffusion code that has a parameter, alpha, multiplying the Spitzer heat conductivity coefficient, and that also has provision for limiting the heat flux to q/sub L = beta nkT square root of kt/m (where beta is an adjustable parameter) in order to model the transition to larger values of (1/sub ee/T)dT/dx/. COCHLEAR MICROPHONIC EVIDENCE FOR MECHANICAL PROPAGATION OF DISTORTION PRODUCTS (f2-f1) AND (2f1-f2) Ph.D. Thesis
Gary Lee Gibian 1980 150 p
Avail: Univ. Microfilms Order No. 8018729

Cochlear microphonic (CM) data were obtained from the second and third turns of the chinchilla cochlea. Fluid-filled glass micropipettes were used to record from scala media, and nichrome wire electrodes were used to record differentially between scala vestibuli and scala tympani. Validity of our results is supported in part by the sensitivity and sharp tuning of the CM and, in the case of the scala media recordings, by the presence of a normal DC endolymphatic potential. It was observed, with sound pressure levels (SPL) as low as 25 dB, that these distortion products in CM display tuning similar to the single-tone response. The tuning similarities observed in the present CM study are consistent with previous neural studies. From these tuning similarities, it is concluded that our CM data reflect the presence of mechanically propagated distortion products at low SPLs. Dissert. Abstr.

ARRAY GAIN IMPROVEMENT BY SELECTIVE SENSOR EXCLUSION Ph.D. Thesis
Louis Allen Mole 1980 181 p
Avail: Univ. Microfilms Order No. 8018808

The application of the sensor exclusion criteria to real experimental data provides array gain improvement probabilities which compare favorably with the model's calculated values and, in addition, indicate the levels of expected improvement. Specifically, three selected sensor exclusion criteria values are used to process two data sets to indicate their effect on the array gain results. For one data set, the processing results demonstrate average and peak improvement values as great as 2 and 9.5 dB, respectively, whereas, for the second set, these values were as great as 7 and 11.5 dB, respectively. Correspondingly the probability that the application of the criteria will provide array gain improvement varied between 17 and 64 percent for the first data set and between 34 and 92 percent for the second. The results of the study conclusively indicate that selective sensor exclusion criteria may be formulated and

implemented so as to improve array performance and increase array gain. Dissert. Abstr.

ANALYTIC APPROACHES TO ATOMIC RESPONSE PROPERTIES Ph.D. Thesis
Edward Eugene Lamm. 1980. 347 p.
Avail: Univ. Microfilms Order No. 8016432

Analytic asymptotic theories of atomic response properties are constructed that yield results as accurate as those obtained by more elaborate numerical methods. A novel and simple method is used to determine the multipole sum rules S sub L (-k), for positive and negative values of k, of the hydrogen atom and the hydrogen negative ion in the asymptotic approximation. An analytically-tractable extended asymptotic model for the response properties of weakly-bound anions is proposed and the multipole polarizability, multipole sum rules, and photodetachment cross section determined by the model are computed analytically. Dipole polarizabilities and photodetachment cross sections determined from the model for Li-, Na-, and K- are compared with numerical results. Agreement is typically within 15 percent if the pseudopotential is included. A comprehensive and unified treatment of atomic multipole oscillator strengths, dynamic multipole polarizabilities, and dispersion force constants in a variety of Coulomb-like approximations is presented. Dissert. Abstr.

N80-31160 Delaware Univ., Newark.
A ZERO CORE-CONTRIBUTION MODEL FOR PHOTODETACHMENT OF ATOMIC AND MOLECULAR NEGATIVE IONS Ph.D. Thesis
Robert Merrell Stehman. 1980. 213 p.
Avail: Univ. Microfilms Order No. 8019952

A simple model for computing photodetachment cross sections was developed. The model which represents a negative ion by an equivalent one electron system is simple to apply since only the asymptotic behavior of the electron's wave function is required. For atomic negative ions, only the orbital angular momentum, (lambda), of an electron in the outermost shell, the electron affinity and the atomic radius of the parent neutral atom need be known. Comparable information is required for molecular ions. This information is available for many ions from sources independent of photodetachment experiments. The model shows that atomic ions divide into groups according to their value of lambda. Within each group, ions have cross sections sharing common features, with the maximum cross sections being nearly proportional to the square of the atomic radii of the parent atoms. The model is applied to the homonuclear diatomic ions O2(-) and S2(-). In addition to computing the total photodetment cross section, the model gives information about detachment associated with single vibrational transitions. Dissert. Abstr.

ISOBAR PRODUCTION IN HEAVY ION COLLISIONS Ph.D. Thesis
Lawrence Willard Townsend. 1980. 113 p.
Avail: Univ. Microfilms Order No. 8019796

The production of isobars with concomitant giant resonance excitations due to peripheral collisions of relativistic heavy ions is investigated. The interaction is described by a modified form of the one-pion exchange potential where the projectile ordinary spin operator is replaced by a transition spin operator which described the creation of an isobar from a nucleon. The scattering is analyzed using time-dependent harmonic perturbation theory to determine the reaction total cross sections. The results obtained are applied to the specific collision of 2.1 GeV/nucleon O-16 projectiles with C-12 targets at rest. Cross sections are investigated using two different models for the nuclear spin states. In the first, a single isobar is formed in the projectile while the target is excited to one of its isovector excited states near 15 MeV via the collective spin giant resonance mechanism. In the second, the target is excited to this same state again, and the projectile, by analogy, is assumed excited to a collective isobar giant resonance state. The calculations for the two reactions are repeated, with comparable results, for a nuclear spin model where the many-body spin states are described by unsymmetrized products of individual particle spins. Dissert. Abstr.

N80-31162 Michigan State Univ., East Lansing.
A HYDRODYNAMIC THEORY OF HEAVY ION COLLISIONS Ph.D. Thesis
David Carl Mundinger. 1980. 104 p.
Avail: Univ. Microfilms Order No. 8020723

The dynamics of an interacting Fermi liquid formed the basis for a macroscopic description of heavy ion collisions. A computation was done, first of all, for the one dimensional case using a Lagrangian technique. The breakup threshold was calculated for the collision between two semi-infinite slabs of nuclear matter. This one dimensional model contains many of the features of heavy ion collisions. Based on these results a model was made for the collision between spherical nuclei. The degrees of freedom

that we emphasize are the centers of the two nuclei, and the location of two boundaries which separate the nuclear matter into a compressed region and two uncompressed regions. Using the equation of state, along with the conservation laws for mass and momentum, we can generate equations of motion for each of the dynamical variables. The momentum transport between the two nuclei is taken from the theory of a collisionless Fermi gas. Angular distributions, energy loss, and fusion cross sections have been studied. Dissert. Abstr.

N80-31163 California Univ., Riverside
THEORETICAL STUDIES OF MOLECULAR COLLISION PROCESSES. 1: TWO-POTENTIAL APPROACH FOR ELECTRON-MOLECULAR SCATTERING. 2: THREE-DIMENSIONAL QUANTUM MECHANICAL STUDY ON ATOM-MOLECULE REACTIVE COLLISION WITH ROTATIONALLY PRE-EXCITED TARGET MOLECULE Ph.D. Thesis
James Cheng Sun 1980 293 p
Avail: Univ. Microfilms Order No. 8020622

Theoretical studies were carried out on two categories of molecular collision processes: (1) molecule scattering with a light incident particle-electron, and (2) molecule scattering with a heavy incident - particle atom. For the electron-molecule scattering, a two-potential approach was formulated for elastic and vibrational transitions with intermediate- and high-energy impact electrons. In this approach, contributions to the scattering process come from the incoherent sum of two dominant potentials: a short-range shielded nuclear Coulomb potential from individual atomic center, and a permanent/induced long-ranged potential. Applications to e-N2, e-CO2 scatterings from 50-800 eV incident electron energy yielded good agreement with absolutely calibrated experiments. The three dimensional atom-molecule reactive collision was studied quantum-mechanically within the T-matrix formalism with the adiabetic approximation. Application to the D + H2 reaction on the ab initio Liu-Siegbahn-Truhlar--Horowitz surface was made. Scattering cross sections of the rotationally pre-excited target molecule are in general 2 to 3 times smaller than those of the ground state molecule. Dissert. Abstr.

ENERGY TRANSFER AND OPTICAL SPECTROSCOPY OF DIATOMIC MOLECULES IN CHEMICALLY REACTING SYSTEMS. Final Report, 1 Aug. 1976 - 31 Dec. 1979
H. P. Broida and David O. Harris Dec. 1979 8 p. refs
(Grant AF-AFOSR-3138-77)
(AD-A086829; AFOSR-80-0540TR) Avail: NTIS HC A02/MF A01 CSCL 07/4

Increased capabilities in remote sensing, communication and several other areas depend on developments in laser technology. Chemical lasers indicate a high probability of fulfilling these needs through their properties of different wavelengths, high power, high operating efficiency and lower weight. Additionally, optically pumped metal dimers are attractive systems for visible tunable gas lasers. The development of new improved chemical laser systems and optically pumped laser systems requires an increased understanding and knowledge of the properties and characteristics of candidate reactions and molecules. Detailed spectroscopic studies on both CuF and Ca2 have been carried out. Use of laser photoluminescence has produced spectroscopic information previously unobtainable. We have obtained improved molecular constants and dissociation energies, radiative lifetimes, and quenching cross-sections for electronically excited products. In addition previously unknown electronic states have been identified. GRA

ELECTRON IONIZATION CROSS SECTIONS IN THE DISTORTED-WAVE APPROXIMATION. Interim Report
M. Blaha and J. Davis 18 Jun. 1980 51 p. refs
(RR0130143)
(AD-A087210; AD-E000478; NRL-MR-4245) Avail: NTIS HC A04/MF A01 CSCL 20/8

Eight different modifications (A1-A8) of the distorted wave approximation for the calculation of electron ionization cross sections are introduced and results are compared with other theoretical methods and experiment. Non-exchange approximations (A1-A4) are characterized by different orthogonal properties of wave functions and by different choices of asymptotic charges for the ejected electron. Results of these approximations are compared for H, He, He(+), Li(+), and Mg(+). The best approximation (A4) is then used for more complex atomic systems such as Li, C(+3), C(+), N(+), O(+), O, Ne(+), Na(+), and K(+). A4 generally agrees better with experiment than the Born or Coulomb-born approximation. Exchange approximations (A5-A8) are characterized by different choices of asymptotic charges in the exchange amplitude. These approximations have been tested on hydrogen and although a slight improvement over the non-exchange approximations has been obtained in the case of A5, the difference does not appear to be too significant. One of the goals of this research was the measurement of H2(v equal 1) and H2(v equal 2) formed by the reaction of H with HI. The technique used is quantitative absorption spectroscopy on various absorption bands of H2 near 1100 angstroms in the vacuum ultraviolet. Preliminary calculations indicated that features due to HI in this region would be sufficiently weak under the desired operating conditions that quantitative spectroscopy of the transitions from the vibrationally excited H2 could be performed. This proved not to be the case. Pressures on the order of 10 to 100 millitorr of HI obscured the bands in this region. The signal/noise ratio of the original apparatus which employed sodium salicylate to down convert the vacuum ultraviolet photons to near uv-visible ones was inadequate to the task of unraveling the spectrum. Subsequent equipment improvements have reduced the source noise. The spectrometer and pressure gauge have been modified and interfaced to a digital computer. The analysis software determines the equivalent widths of the spectral features and converts these to pressures of H2 in specific (v, J) states. The flow system and reaction cell for the photolytic experiments proposed was constructed and awaits mating with the now operational laser. GRA

RESEARCH PROGRAM IN ELEMENTARY PARTICLE THEORY. Progress Report, period ending 30 Jun. 1980.
1980. 42 p. refs.
(Contracts EY-76-S-02-3533; DE-AS02-65ER-03533)
(COO-3533-161) Avail: NTIS. HC A03/MF A01

Progress was made in the understanding of systems with unusual topological properties. A variational formulation of the equations that govern spinning particles in general relativity was accomplished. Perturbative as well as nonperturbative properties of quantum chromodynamics aspects were investigated. The question concerning gauge fixing in non-Abelian gauge theories was studied. Several new phenomenological aspects of unified electroweak interactions were explored with the object of finding experimental tests for models other than the currently accepted Salam-Weinberg theory. A unified electroweak model was investigated to account for the repeated fermionic generations and to incorporate CP violations and explain the CP violation as well as the Cabibbo-like angles in terms of the quark masses. A unified theory for all interactions was proposed. Finally, axially symmetric multi-instanton solutions were shown to be generated from a set of conformal mappings. DOE

LOW ENERGY ION BEAM SYSTEMS FOR SURFACE ANALYTICAL AND STRUCTURAL STUDIES
G. C. Nelson. 1980. 30 p. refs. Presented at Intern. Conf. on Low Energy Ion Beams, Bath, England, 14 Apr. 1980.
(Contracts EY-76-C-04-0789; DE-AC04-76DP-00789)
(SAND-79-2392C; CONF-800466-2) Avail: NTIS. HC A03/MF A01

The use of low energy ion beam systems for surface analytical and structural studies is addressed. Areas where analytical methods which utilize ion beams can provide a unique insight into materials problems are discussed. The design criteria of ion beam systems for performing materials studies are described and the systems now being used by a number of laboratories are reviewed. Finally, several specific problems are described where the solution was provided at least in part by information provided by low energy ion analysis techniques. DOE

ZERO-POINT ENERGY OF CONFINED FERMIONS
Kimball A. Milton. 1980. 23 p. refs.
(Contract DE-AC02-76ER-01545)
(DOE/ER-01545/274) Avail: NTIS. HC A02/MF A01

A closed form for the reduced Green's function of massless fermions in the interior of a spherical bag is obtained. In terms of this Green's function, the corresponding zero point or Casimir energy is computed. It is proposed that a resulting quadratic divergence can be absorbed by renormalizing a suitable parameter in the bag model (that is, absorbed by a contact term). The residual Casimir stress is attractive, but smaller than the repulsive Casimir stress of gluons in the model. The result for the total zero point energy is in substantial disagreement with bag model phenomenological values. DOE

THEORETICAL ASPECTS OF POSITRON ELECTRON ANNIHILATION AND HYPERON HYPERON COLLISIONS
F. M. Renard. 1979. 57 p. refs. Presented at Intern. School of Elementary Particle Phys., Kupari-Dubrovnik, Yugoslavia, Sep. 1979.
(PM/79/15) Avail: NTIS. HC A04/MF A01

Questions arising in quantum physics, specifically annihilation and particle collision processes, are discussed. General properties of the total cross section of the positron electron reaction which yields hadrons are given. The phenomenological parton model, quantum chromodynamic corrections, and nonperturbative effects are covered. Inclusive and exclusive final states of this annihilation reaction are brought up, leading to the parton jet model, variables for jet analysis, quantum chromodynamic jets, and gluon jets. Hyperon collisions are considered in terms of kinematical factors, leptonic processes, and hadronic production, resonances, and total cross section. These collisions are studied for hadronic production with high particle energies and involving quantum chromodynamic jets. Photon structure functions, deep inelastic processes, and exotic processes are also mentioned. Author (ESA)

ON THE OPTIMALITY OF AXIOMATIC CONSTRAINTS FOR PION PION SCATTERING: THE CASE OF THE LOWER BOUNDS
G. Auberson and G. Mennessier. 1979. 13 p. refs.
(PM/79/16) Avail: NTIS. HC A02/MF A01

A nine parameter family of pion-pion yields pion-pion amplitudes F(s,t) is constructed such that (1) all the analytic and unitary conditions used in the derivation of rigorous absolute bounds are satisfied and (2) F(s,t) can assume negative values in the unphysical region. Within this set the values of F(4/3,4/3) and of the scattering length a (00) = F(4,0) are minimized. Best results realized are F(4/3,4/3) = -1.69 and a (00) = -0.88, whereas the best present lower bounds are F(4/3,4/3) = -8.2 and a(00) = -1.65. Author (ESA)

INTERACTION BETWEEN PARTICLE BEAMS AND NONLINEAR STATES. Ph.D. Thesis.
Philip Lok-Wah Leung. 1980. 115 p.
Avail: Univ. Microfilms. Order No. 8016006

The effect of transit time damping on localized high frequency electric field was investigated. Computer simulation of the particle orbits inside a caviton is presented showing the energy exchange between the caviton and particles. Experiments illustrating various ways of enhancement and suppression of transit time damping are discussed. Results indicate that the rate of transit time damping depends critically on the ambient plasma particle distributions and the particle orbits. The formation of potential double layers in a current carrying plasma was studied. Measurements of particle distributions and the noise spectrum associating with a stationary double layer are presented. Moving double layers were observed when the drift velocity of electrons was approximately twice the thermal velocity. A model developed for double layer formation

can explain the physical mechanism for double layer formation and the existence of moving double layers. Dissert. Abstr.

COLLECTIVE ION ACCELERATION AND ELECTRON BEAM PROPAGATION IN DIELECTRIC GUIDES Annual Report, 1 Feb. 1979 - 31 Jan. 1980
Ward Halverson and Anton C. Greenwald 1 Apr. 1980 35 p refs
(Contract F49620-79-C-0046; AF Proj. 2301)
(AD-A086493; AR-10067-01; AFOSR-80-0465TR) Avail: NTIS HC A03/MF A01 CSCL 20/7

Measurements of front velocity and transported electron beam current are reported for several configurations of dielectric guide. It appears that the ions which determine the speed of beam-front propagation come only from a short section of dielectric near the inlet of the guide. They are accelerated in the potential well of the virtual cathode formed when the space-charge-limited electron beam is injected. Plasma formed by electron bombardment of the downstream guide walls apparently does not influence the beam-front speed, although it is important in determining the efficiency of current transport. Measurements of collective ion acceleration have been deferred until the second year of the program. GRA

TWCP ELECTRON BEAM TESTING PROGRAM: VOLUME 3: MATERIAL RESPONSE INSTRUMENTATION FOR THE BLACKJACK 3 ELECTRON BEAM FACILITY Final Report, Jul. 1977 - Dec. 1978
F. A. Bick, comp. 5 Apr. 1979 47 p refs 4 Vol.
(Contracts DNA001-76-C-0357; DNA001-78-C-0063)
(AD-A086307; AD-E300844; ETI-CR-79-610-Vol-3; DNA-5036F-3-Vol-3) Avail: NTIS HC A03/MF A01 CSCL 11/4

This volume describes the instrumentation developed to characterize the Blackjack III pulsed electron beam facility environment, and to obtain impulse and stress generation data on FM5822A carbon phenolic, and 91-LD phenolic resin. The primary diagnostical contribution was the development of an in situ fluence measurement technique that significantly reduced experimental uncertainties. Impulse data were obtained using a translating Ronchi ruling and fiber optic light guide. Stress data were obtained simultaneously with the impulse measurements using a laser interferometer. This technique increased the amount of data obtained, and also provides a direct correlation between the impulse and stress data. These gages were all designed to operate in the intense radiation environment associated with a pulsed electron beam machine, and also in the magnetic field (25 kG) used to guide the electron beam. SEARCH FOR MAGNETIC DIPOLE STRENGTH AND GIANT SPIN-FLIP RESONANCES IN HEAVY NUCLEI
D. J. Horen 1980 27 p refs Presented at Intern. Symp. on Highly Excited States in Nucl. Reactions, Osaka, 12 May 1980
(Contract W-7405-eng-26)
(CONF-800540-1) Avail: NTIS HC A03/MF A01

A description is given of the use of high-resolution (n,n) scattering and the (p,n) reaction as tools to investigate highly excited states, with emphasis on information pertaining to magnetic dipole strength and giant spin-flip resonances in heavy nuclei. It is shown how the ability to determine uniquely the spins and parities of resonances observed in neutron scattering was instrumental to an understanding of the distribution of M1 strength in Pb(207) and Pb(208). Some recent results of (p,n) studies with intermediate energy protons are discussed. Energy systematics of the giant Gamow-Teller (GT) resonance are presented. It is shown how the (p,n) reaction might be useful in locating M1 strength in heavy nuclei. DOE

WASTE ISOLATION SAFETY ASSESSMENT PROGRAM: TASK 4: COLLECTION AND GENERATION OF TRANSPORT DATA THEORETICAL AND EXPERIMENTAL EVALUATION OF WASTE TRANSPORT IN SELECTED ROCKS Annual Progress Report, 1 Oct. 1978 - 30 Sep. 1979
R. J. Silva, L. V. Benson, A. W. Yee, and G. A. Parks (Stanford Univ., Calif.) 30 Sep. 1979 109 p refs
(Contract W-7405-eng-48)
(LBL-9945) Avail: NTIS HC A06/MF A01

The sorption of cesium on the solid substrates Min-u-sil (quartz) and Belle Fourche clay (montmorillonite) was investigated. Cesium sorption isotherms were obtained for the two substrates at 26 C. Preliminary analysis of the sorption data indicate that while the clay data could be explained by simple mass action expressions, the quartz data could not. Theoretical efforts were aimed at developing and testing an electrolyte binding electrical double layer model to predict sorption isotherms. A computerized version of the model, MINEQL, which simultaneously considers surface and solution chemical equilibria, was brought to operational status. Input parameters required by MINEQL were determined and sorption isotherms for Cs on the Belle Fourche clay were calculated over the same range of parameters as the experimental measurements. Comparisons showed that the model was able to simulate the isotherms quite well except at the lowest pH values for the 0.002M and 0.01M NaCl solutions. DOE

ADVANCED THREE-DIMENSIONAL THERMAL MODELING OF A BASELINE SPENT FUEL REPOSITORY
Thomas J. Altenbach and William E. Lowry 29 Apr. 1980 55 p refs
(Contract W-7405-eng-48)
(UCID-18660) Avail: NTIS HC A04/MF A01

A three dimensional thermal analysis using finite difference techniques was performed to determine the near field response of a baseline spent fuel repository in a deep geologic salt medium. The base case in this thermal analysis considers one 10 year old pressurized water reactor (PWR) spent fuel assembly emplaced to yield a 36 kW/acre (8.9 W/sp m) loading. A unit cell model in an infinite array is used to simplify the problem and provide upper bound temperatures. Boundary conditions are imposed which allow simulations to 1000 years. Variations studied include a comparison of ventilated and unventilated storage room conditions, emplacement packages with and without air gaps surrounding the canister, and room cool down scenarios with ventilation following an unventilated state for retrieval purposes. It was found that at this low power level, ventilating the emplacement room has an immediate cooling influence on the canister and effectively maintains the emplacement room floor near the temperature of the ventilating air. DOE

SCATTERPLATE INTERFEROMETRY Ph.D. Thesis
Lawrence Francis Rubin 1980 142 p
Avail: Univ. Microfilms Order No. 8020324

A description of scatterplate interferometry from both a theoretical and experimental viewpoint is presented. Through the use of Fourier optics and stochastic processes techniques, a formalized theory of scatterplate interferometry is shown particularly in how the flip or inversion symmetry of the scatterplates itself affects the flip symmetry. Also described are the effects on the fringe quality produced by non-laser sources as well as aberrations in the interferometer optics. Experimental verification of these aspects is shown to be in good agreement with the theory. In addition, material is presented on scatterplate fabrication. Additional refinements including null testing with the scatterplate and an infrared scatterplate interferometer are also described. Dissert. Abstr.

N80-31191 Virginia Polytechnic Inst. and State Univ., Blacksburg.
MEASUREMENT OF SURFACE ROUGHNESS AND CORRELATION LENGTH USING DICHROMATIC SPECKLE Ph.D. Thesis
Mitrajyoti Deka 1980 74 p
Avail: Univ. Microfilms Order No. 8020178

A computer simulation study of the dichromatic speckle was conducted and the surface roughness and correlation length of sample surfaces were measured using a stylus instrument and similar measurements with dichromatic speckle. The rms difference of the two speckle intensities was analyzed for spot sizes smaller than, comparable and larger than the correlation length of the surface. The rms roughness of the sample ground glasses was calculated from the data obtained from the stylus instrument. The correlation length was obtained from an online multichannel FFT processor connected to the stylus instrument. The correlation length was estimated from the correlation function. The rms

difference between the speckle intensities of two different wavelengths were measured for various spot sizes. For each intensity 64 K data samples was collected and processed in a PDP 11/40 computer. These data were used to calculate the second moment of the monochromatic speckle, the cross correlation of these and the rms difference. The roughness and the correlation length of the surface were estimated from these results. The results obtained from the dichromatic speckle are in good agreement with the values obtained from the stylus instrument. Dissert. Abstr.

A THEORETICAL STUDY OF TRANSIENT EFFECTS IN ABSORPTIVE OPTICAL BISTABILITY Ph.D. Thesis
James David Fanna 1980 133 p
Avail: Univ. Microfilms Order No. 8019347

A bistable absorber in the good cavity limit and the Fokker-Planck equation that describes the time evolution of the quasi-probability distribution are considered. The existence of two distinct mechanisms of relaxation into steady state is established. The first consists of a local relaxation around the minimum (or minima) of a suitably defined potential. The second stage, which occurs over a much longer time scale, results from tunneling from one minimum to the other across the local maximum. Both mechanisms are considered. A linearization technique generalized for multistable systems is described and tested with numerical solutions of the Fokker-Planck equation. Tunneling is described, using a first passage technique, which is capable of modeling multistable systems. First passage times for optical bistability are calculated numerically and compared to previous tunneling estimates. Dissert. Abstr.

LASER OPTICAL APPRAISAL AND DESIGN OF A PRIME/ROVER INTERFACE
James A. Donaldson Jul. 1980 93 p refs
(Grant NsG-7369; Contract JPL-954880)
(NASA-CR-163508; RPI-TR-MP-68) Avail: NTIS HC A05/MF A01 CSCL 20F

An appraisal of whether to improve the existing multi-laser/multi detector system was undertaken. Two features of the elevation scanning mast which prevent the system from meeting desired specifications were studied. Then elevation scanning mast has 20 detectors, as opposed to the desired 40. This influences the system's overall resolution. The mirror shaft encoder's finite resolution prevents the laser from being aimed exactly as desired. This influences the system's overall accuracy. It was concluded that the existing system needs no modification at present. The design and construction of a data emulator which allowed testing data transactions with a PRIME computer is described, and theory of operation briefly discussed. A full blown PRIME/Rover Interface was designed and built. The capabilities of this Interface and its operating principles are discussed. R.K.G.

ALIGNMENT OF LIQUID CRYSTALS BY SURFACE GRATINGS
David C. Shaver 31 Oct. 1979 71 p refs
(Contract F19628-80-C-0002; ARPA Order 3336)
(AD-A086816; ESD-TR-79-267; TR-538) Avail: NTIS HC A04/MF A01 CSCL 20/6

Square-wave grating structures with periodicities ranging from 3200 A to 12 micrometers were etched into fused quartz substrates, and the effect of such gratings on liquid crystal alignment was studied. Gratings with periodicities below 4 micrometers appear to be required to align typical room temperature nematic liquid crystals. At larger periodicities a pronounced defect texture forms. The defect texture is created during nucleation and growth of the nematic phase as it cools from the isotropic phase. The defect texture is stabilized by adsorption of an oriented molecular layer on the substrate surfaces. This adsorbed layer exerts an orienting torque on the bulk liquid crystal. Experiments were performed to demonstrate the existence of such an adsorbed layer. The tilt angle of the nematic director from the plane of quartz substrates was measured for liquid crystals used in the alignment experiments. M24 and the 'heptyl/butyl mixture' align with the director in the substrate plane. M8BA aligns with a tilt angle of about 23 deg on fused quartz, whether or not a grating structure is present. Surface gratings were also formed by patterning a 'monolayer' of DMOAP. Such patterned organic monolayers, which have no appreciable surface relief, are effective at aligning liquid crystals. This represents a new approach to liquid crystal alignment. High-quality alignment of the smectic A phase of M24 was induced by a 3200-A-period square-wave surface-relief grating. A novel twisted-nematic liquid crystal display which uses metal gratings for polarization of light as well as for liquid crystal alignment was fabricated. GRA

OPTICAL INTERARRAY PROCESSING Final Report, 1 Oct. 1979 - 31 Mar. 1980
Mar. 1980 41 p refs
(Contract N00014-80-C-0216)
(AD-A086665) Avail: NTIS HC A03/MF A01 CSCL 20/6

This project had two major objectives. The first objective was to demonstrate nonreal time generation of ambiguity functions from one dimensional input transducers. The second objective was to design front end and rear end electronics capable of supporting real time operation of the optical processor. Both of these objectives were successfully achieved, and in addition, a new optical architecture was invented (LIPS), and its feasibility and superiority was experimentally demonstrated. The optical system demonstrating the proposed Passive Optical Tau-Shift concept (POTS) was designed with a large f number (~20) for aberration-free performance, and the system length became 12 meters. One dimensional Bragg cell-sized photographic transparencies were used to generate ambiguity functions. The results of processing both analytic V-FM signals and synthetic data from NOSC showed excellent agreement with theoretical predictions in terms of the correlation peak height and resolution. Another optical architecture based on an entirely new concept of a space variant Linear Phase Shifter (LIPS) was independently developed. It generates a tau-shift by a shear operation instead of the rotation used in pots. GRA

THE SPECTRAL CHARACTERISTICS OF METAL FILM BEAM SPLITTERS
J. R. Venning Jan. 1980 56 p refs
(AD-A086419; ERL-0123-TR) Avail: NTIS HC A04/MF A01 CSCL 20/6

The spectral and polarisation characteristics of metallic beam splitters and mirrors made of single films of aluminum, silver, rhodium or nichrome on glass are described. Normal incidence transmission data of each thickness of metal film used in the beam splitter calculations is included for use when measuring or monitoring the deposition of the thin films. The presentation is mostly graphical and intended for the user and maker of simple metal beam splitters. GRA

In this report, experimental material on the absorption coefficients of alkaline Earth halides was searched, compiled, and analyzed. It was found that the bulk of available data was concentrated to the absorption edges of the main transparent region for the four materials calcium fluoride, strontium fluoride, barium fluoride, and magnesium fluoride. An equation was formulated to best describe the absorption data in the infrared multiphonon region as a function of both frequency and temperature. It was noted that the same type of equation is equally valid for both alkaline Earth halides and alkali halides. Although the intrinsic absorption was predicted by the proposed equation, discrepancies might occur in the region where absorption is extremely low and where extrinsic absorptions due to impurities and surface contamination dominate the intrinsic absorption by factors ranging from fractions to multiples of ten. Experience has shown that extrinsic contributions can be reduced through improved crystal growing and surface polishing techniques. The work on the absorption coefficient of silicon and germanium was in progress. It was found that the absorption coefficient is sensitive to the amount and kind of impurities usually being introduced as desirable dopants. Numerous experimental material was made available. Currently the work remained in the stage of data extraction and compilation. GRA

A predesign elaboration is presented of an optical conditioning unit for the data delivered by a multispectral scanner using integrated optics and fiber optics technology. A laboratory model of an integrated optical amplitude modulator was built. The system was selected as a model for a representative optical waveguide system for use on board spacecraft. It consists of an optical data conditioning unit that would be used in conjunction with a multispectral camera to perform sensor signal pre-processing operations, such as: remotely controlled amplitude and dc level adjustments, data multiplexing and analog-to-digital conversion. The implementation described uses hybrid optical waveguide technology. It permits the definition of key optical elements, such as the digitally driven amplitude modulator. Author (ESA)

MEASUREMENT OF OPTICAL FIBER BANDWIDTH IN THE TIME DOMAIN
Douglas L. Franzen and G. W. Day Feb. 1980 72 p refs Sponsored in part by DOD
(PB80-177421; NBS-TN-1019) Avail: NTIS HC A04/MF A01 CSCL 20F

A system for determining optical fiber bandwidth from time domain information is described. A measurement gives the optical fiber transfer function (or frequency response) relating the output waveform to the input. An analysis is given of the variables affecting the measurement. This includes a discussion of such input related topics as launching conditions, mode scramblers, and laser diode sources; output related topics include a discussion of optical detectors. Laser diodes are evaluated with respect to short pulse performance, near field emission, material dispersion limits, and other spectral behavior like chirping; detectors are evaluated with respect to time response, linearity, and uniformity. A number of bandwidth related topics are briefly presented and typical experimental results given. GRA

A SEARCH FOR THE PERSISTENT VELOCITY AUTOCORRELATION IN HYDROGEN BY DENSE PLASMA DECAY Ph.D. Thesis
Hyo Sang Lee 1980 169 p
Avail: Univ. Microfilms Order No. 8019719

A pulsed plasma was produced in very high density neutral hydrogen gas by a 20 ns, 60 KV Blumlein discharge and six simultaneous time resolved diagnostic measurements were carried out during a 3 micron period in order to describe the full plasma evolution. The whole experiment is repeated for various densities between one twelfth and one sixth of the close packing density. A numerical simulation code was developed to independently reproduce all measurable details of the full evolution of the laboratory plasma. The simulation was successful in predicting correctly all measured features of the plasma in the afterglow regime, thus establishing the simulation as a reliable basis for testing the reality of the Alder-Wainwright effect. In regard to the persistent velocity autocorrelation, the question remains unresolved because the experimental uncertainty is slightly greater than the difference between the two results of the simulation one with and the other without the Alder-Wainwright effect in the diffusion coefficient, over the entire range of the gas density covered in the experiment. Dissert. Abstr.

PARTICLE CONFINEMENT AND MAGNETIC FLUCTUATIONS IN TOKAMAK DISCHARGES WITH GAS PUFFING Ph.D. Thesis
Bruce Stephen Levine 1980 193 p
Avail: Univ. Microfilms Order No. 8019905

Particle confinement and magnetic fluctuations associated with short (< 1 msec) gas pulses into a Tokamak discharge are investigated experimentally. The fluctuations are measured with movable pairs of magnetic probes, each containing a poloidal and radial coil and inserted into the outer regions of the plasma. When neutral gas is added and the current channel contracts, the fluctuation spectra are dominated by an m = 2 mode that grows with the classical tearing-mode rate. When the gas feed is terminated, much broader spectra of modes with m up to 15 are observed. The m = 2 mode dominates the poloidal spectra, while the radial spectra have numerous modes of appreciable amplitude. Time-delay measurements suggest that many of the higher order (m > 3) modes originate in deformation of the m = 2 and m = 3 magnetic islands. A strong m = 7 is found to be localized near the limiter in q(a) = 3.8 discharges, hence this mode is identified as an m = 7, n = 2. It is found that the m = 2 mode becomes destabilized for discharges for which the peak puff density approaches the upper limit given by the Murakami scaling relation. Dissert. Abstr.

HIGH ORDER ZIP DIFFERENCING OF CONVECTIVE TERMS Interim Report
Steven T. Zalesak 8 May 1980 39 p refs Sponsored by DNA
(AD-A086725; AD-E000458; NRL-MR-4218) Avail: NTIS HC A03/MF A01 CSCL 20/9

The ZIP flux form for differencing the term (wv) sub x, where w is a convected quantity and v is a convective velocity, is observed to be equivalent to differencing the alternative expression wv sub x - w sub x v using centered second order finite differences. Based on this observation, the extension of the ZIP flux concept to arbitrarily high order accuracy is given. Computational examples show the advantage both of the ZIP flux concept itself and of its higher order forms within the context of flux-corrected transport (FCT) algorithms. GRA

(ARPA Order 3718)
(AD-A086999; AD-E000490; NRL-MR-4247) Avail: NTIS HC A03/MF A01 CSCL 20/13

Real-air thermodynamic properties are included in studies of reduced density channel formation by expansion of a heated cylinder of air. A model for density profile at late times, previously given for a polytropic ideal gas, is extended to the present case. It is shown that a relation between pressure P, density rho, and specific energy epsilon, of the form properties. The variation of f with epsilon, i.e., of specific heat with temperature, can strongly modify the initial pressure profile associated with a given energy density profile. The effects of real-gas thermodynamics during the hydrodynamic expansion, on the other hand, are rather weak. GRA

(Contract W-7405-eng-26)
(CONF-791102-156) Avail: NTIS HC A02/MF A01

The potential for producing a viable long burn Tokamak reactor through enhanced volt-second capability of the ohmic heating transformer by employing high aspect ratio designs was investigated. The plasma physics, engineering, and economic implications of high aspect ratio Tokamaks were accessed in the context of extended burn operation. Plasma startup and burn parameters were addressed using a one dimensional transport code. The pulsed electrical power requirements for the poloidal field system, which have a major impact on reactor economics, were minimized by optimizing the field in the ohmic heating coil and the wave shape of the ohmic heating discharge. A high aspect ratio reference reactor was chosen and configured. DOE

NONLINEAR EVOLUTION OF RESISTIVE INTERCHANGE MODES IN REVERSED FIELD PINCHES
D. D. Schnack and J. Killeen Apr. 1980 6 p refs Presented at RFP Workshop, Los Alamos, New Mex., 28 Apr. - 2 May 1980 Submitted for publication
(Contract W-7405-eng-48)
(UCRL-84301) Avail: NTIS HC A02/MF A01

The results are presented of the application of a two dimensional resistive MHD computer code to the nonlinear evolution of resistive interchange modes in tearing-mode-stable reversed field pinch equilibria. One finds the m = 1 mode is insignificant when the singular surface is outside the field reversal point, and is more active nonlinearly but still fairly localized when the singular surface lies in the inner regions of the plasma. The m = 0 mode, which is not present in Tokamaks, is found to lead to highly distorted flux surfaces and interchange vortices of large radial extent when beta is near the Suydam marginal point. However, if the initial beta is sufficiently small, this mode remains localized allowing significant Ohmic heating of the pinch to occur. DOE

TECHNIQUES OF PLASMA PRODUCTION AND HEAT. 32: PLAN FOR THE PLASMA MICROWAVE-HEATING SYSTEM AT THE T-10M FACILITY
V. A. Flyagin, V. V. Alikaev, S. N. Vlasov, A. G. Luchinin, G. S. Nusinovich, V. G. Usov, and V. I. Khizhnyak Jan. 1980 10 p refs Transl. into ENGLISH from Conf. on Eng. Probl. of Thermonucl. Reactors (USSR) p 3-9 Conf. held in Leningrad, 28 Jun. 1977
(UCRL-Trans-11563; CONF-7706118) Avail: NTIS HC A02/MF A01

A plasma heating technique is proposed which uses an ordinary wave whose electric field during transverse propagation is parallel to the longitudinal magnetostatic field of the chamber. Such a wave can be introduced into the Tokamak from the outside of the torus, where there are large ports in the vacuum chamber of the apparatus. The width of the plasma layer in which microwave energy is absorbed decreases as the angle between the wave vector K vector and the direction of the chamber longitudinal magnetic field H vector approaches 90 deg. To test this assertion experimentally in the T-10M facility, it is proposed to provide adjustment of the angle of injection of microwave radiation into the Tokamak. DOE

PLASMA ROTATION IN REVERSED-FIELD THETA PINCHES
L. C. Steinhauer Feb. 1980 54 p refs
(Contract DE-AC06-76ET-53027)
(MSNW-80-1144-1) Avail: NTIS HC A04/MF A01

Field reversed plasmas were observed to spin up and develop a destructive rotating m = 2 instability. While the instability threshold has been reasonably well characterized, the cause of the rotation remains obscure. Of the several mechanisms proposed, one of the most likely is the following: end shorting on open field lines spins up that portion of the plasma; viscous drag then spins up the plasma on closed field lines. Theoretical models are developed to describe these processes. The predicted behavior falls into three regimes. For low aspect ratio (equal to or less than 2.5) the plasma is highly viscous, rotates as a rigid body and spins up to instability in a few Alfven transit times. At intermediate aspect ratio (2.5 to 4) the plasma is weakly viscous; it reaches instability in the viscous transfer time which lengthens very rapidly for higher aspect ratio. At high aspect ratio (equal to or greater than 4) spin up is slower than the resistive decay of the plasma, and instability should not arise. DOE

VORTEX FORMATION DURING rf HEATING OF PLASMA
R. W. Motley May 1980 50 p refs
(Contract DE-AC02-76CH-03073)
(PPPL-1658) Avail: NTIS HC A03/MF A01

Experiments on a test plasma show that the linear theory of waveguide coupling to slow plasma waves begins to break down if the RF power flux exceeds 30 W/ sq cm. Probe measurements reveal that within 30 microseconds an undulation appears in the surface plasma near the mouth of the twin waveguide. This surface readjustment is part of a vortex, or off-center convective cell, driven by asymmetric RF heating of the plasma column. DOE

N80-31220# California Univ., Livermore. Lawrence Livermore Lab.
ADIABATIC COMPRESSION OF FIELD-REVERSED PLASMA
J. W. Shearer. 28 Apr. 1980. 20 p. refs.
(Contract W-7405-eng-48)
(UCID-18614) Avail: NTIS. HC A02/MF A01

Field-reversed plasma compression occurs in a number of different contexts. Theta pinches are compressed by a time-increasing magnetic field, produced either by a large mirror field supply or by a moving conductor (liner). A moving field-reversed plasma that encounters an increasing magnetic mirror field also experiences compression due to the increase in the local field as seen by the plasma. This interaction occurs at the entrance to the moving ring reactor and in the BETA-II plasma ring injection experiment. The adiabatic compression of the moving ring is considered by means of some dimensional scaling rules. DOE

Results of bonding studies in support of an evaluation of platinum capped anodes and iron cathodes are presented. In addition, an attachment technique has been developed for bonding the indium-doped hafnia current leadout material to a compliant nickel mesh and results are reported. Laboratory electrochemical corrosion tests indicate that major reductions in polarization, electrical resistivity and ionic transference number of the slag can be achieved with moderate additions of cobalt which will produce a significant reduction in the electrochemical stress. Status of design, procurement and modification activities in support of the installation of a conventional three tesla magnet is presented. DOE

COLLISIONAL PLASMA TRANSPORT: TWO DIMENSIONAL SCALAR FORMULATION OF THE INITIAL BOUNDARY VALUE PROBLEM AND QUASI ONE DIMENSIONAL MODELS. Thesis - Utrecht Univ.
J. W. Mugge. Oct. 1979. 242 p. refs. Sponsored by EURATOM and Nederlandse Organisatie voor Zuiver-Wetenschappelijk Onderzoek.
(Rept-79-120) Avail: NTIS. HC A11/MF A01

The collisional plasma transport problem was formulated as an initial boundary value problem for general characteristic boundary conditions. Starting from the full set of hydrodynamic and electrodynamic equations, an expansion in the electron-ion mass ratio together with a multiple timescale method yield simplified equations on each timescale. Through the introduction of potentials a two dimensional scalar formulation in terms of quasilinear integrodifferential equations of second order for a domain consisting of plasma and vacuum subdomains was obtained. For both one dimensional and quasi-one dimensional geometries the initial boundary value problem was reduced to a free boundary problem consisting of a system of four strongly coupled quasilinear second order integrodifferential equations of the parabolic type with plasma boundary conditions of a generalized third type. The local plasma velocity as well as the spatial second order differential structure (diffusion matrix) were explicity derived for both the plane and circular slab (belt) geometry. Author (ESA)

IDEAL MAGNETOHYDRODYNAMIC EQUILIBRIUM OF A WEAKLY TOROIDAL PLASMA WITH ELONGATED CROSS SECTION. PART 1: ELLIPTIC CROSS SECTION
W. Schuurman and E. J. M. VanHeesch. Oct. 1979. 21 p. refs. Sponsored by EURATOM and Nederlandse Organisatie voor Zuiver-Wetenschappelijk Onderzoek.
(Rept-79-121-Pt-1) Avail: NTIS. HC A02/MF A01

Analytic solutions are constructed of the ideal magnetohydrodynamic equations describing the equilibrium of a toroidal plasma with an elliptic cross section and surrounded by vacuum. The method used is a series expansion in the inverse aspect ratio. The toroidal effects considered include the appearance of a toroidal surface current and a shift of the stagnation points in the vacuum towards the major axis of the torus. The demand of negligible second order effects excludes the appearance of a second magnetic axis or any other equilibrium limit on beta. With a metal wall placed arbitrarily on one of the flux surfaces in the vacuum, a formula is derived for the toroidal shift of the plasma column as a function of the compression ratio, the poloidal beta and the ellipticity. Numerical examples show that for high compression ratios the toroidal shift decreases considerably if the ellipticity is increased. At low values of the compression ratio, however, there exists a critical ellipticity where the toroidal displacement has a minimum. Author (ESA)

EFFECTIVE COLLISION FREQUENCY AND ELECTRON TEMPERATURE IN A WEAKLY IONIZED ARGON PLASMA
C.-P. Schneider. 18 Oct. 1979. 23 p. refs.
(MBB-UA-498-79OE) Avail: NTIS. HC A02/MF A01

The effective collison frequency, nu, of a low density, shock heated argon plasma under the influence of a weak electric field which oscillates harmonically with angular frequency sigma was calculated. It is shown that for the high frequency case sigma > nu bar where nu bar is the collision frequency in a Maxwellian gas plasma, one has nu asymptotic to 2 nu bar provided that the imaginary part of the argon plasma conductivity is negligibly small in comparison to the real part. The influence of the theoretical model used to calculate nu on the values of the electron temperature derived from measurements is next compared to results obtained by data reduction in which the hard sphere model for particle encounters was utilized. It is found that a single power law assumption for argon electron cross sections over the temperature range 3000 to 10,000 K leads to appreciable errors. Therefore, a numerically integrated average momentum corss section is considered to yield most accurate results when applied in connection with the hard sphere model. Author (ESA)

INFLUENCE OF JOSEPHSON EFFECT ON PROXIMITY COUPLED SUPERCONDUCTORS. Ph.D. Thesis
Warren Yiu-Cho Lai. 1980. 264 p.
Avail: Univ. Microfilms Order No. 8020423

Experimental investigations to examine the influence of Josephson effect on proximity coupled superconductors are reported. The results are interpreted with a proposed physical model that incorporates spatial gradients in both the phase and the amplitude of the proximity induced energy gap. Calculations based on this model successfully describe and explain most of the experimental observations. This model also indicates the

evolution of weak coupling (Josephson effects with two superconductors) to strong coupling (phase slip in one dimensional superconductor) in superconductivity. A major influence of Josephson effect on proximity coupled superconductors is the distinction between the phase in the current-phase relationship and phase in the voltage-phase relationship in both the stationary and nonstationary situations. This distinction leads to the possibility of multiple states of proximity induced superconductivity. The transition between these states is identified as a phase slip process involving phase change of less than 2 pi. This phase slip in the nonstationary regime results in a supercurrent with an a.c. component and a d.c. component. Dissert. Abstr.

QUANTUM LIMIT MAGNETOCONDUCTIVITY IN THE DILUTE IMPURITY REGIME Ph.D. Thesis
Shamsi-Deen Babatunde Elegba 1980 115 p
Avail: Univ. Microfilms Order No. 8018850

A system containing a low concentration of impurities with short-ranged potentials in the presence of a very strong magnetic field is investigated. Here, fairly realistic potential models such as the Thomas-Fermi potential are considered. These potential models are approximated in a systematic fashion to obtain a potential model for which there is an exact expression for the single site t-matrix. The single site t-matrix is then inserted into a general expression for the static magnetoconductivity tensor. The potential models used are all non-local and their non-locality alters the velocity operator which in turn changes the transport properties of the system. A generalization of the Nozieres result is obtained for the Hall conductivity sigma xy plus a correction term which is very important in the case of strong potential scattering. Thus the Hall conductivity obtained in this work can differ greatly from the usual semiclassical expression for strong scattering. The result obtained for sigma xx in the present work is, however, similar to Noziers' except that the inconsistency in the potential model leads to a different numerical result. Dissert. Abstr.

INELASTIC ELECTRON TUNNELING SPECTROSCOPY INTENSITIES AS A FUNCTION OF SURFACE COVERAGE: EXPERIMENTAL DETERMINATION, PHYSICAL MODEL, AND APPLICATION Ph.D. Thesis
Andrew Arnold Cederberg 1980 152 p
Avail: Univ. Microfilms Order No. 8018531

Inelastic Electron Tunneling (IET) spectra were taken using standard experimental techniques and a liquid doping procedure. The surface coverage determined independently by selecting the dopant solution concentration. The connection between dopant solution concentration and surface coverage is explained by using a statistical mechanical model to derive adsorption isotherms relevant to IETS doping. Using the adsorption isothermal analysis, the binding energy of the benzoate ion on alumina is extracted from published experimental data. Intensities for nine modes of benzoic acid are examined at coverages of 9 percent to 83 percent of full monolayer coverage and one mode of acetic acid is studied at coverages from 25 percent to 95 percent of monolayer coverage. It is found that IETS intensity, defined in the usual way as the normalized change in conductance, is a nonlinear function of surface coverage. A physical model is presented which attributes this behavior to a difference in elastic tunneling conductances for electrons traversing empty or filled regions of the dopant layer in a partially doped IET junction. The intensity results are applied to the study of the reaction which binds the acid to the oxide surface during IETS doping. Dissert. Abstr.

THEORETICAL AND EXPERIMENTAL INVESTIGATION OF BONDING OF SIMPLE LIGANDS TO METAL COMPLEXES AS REFLECTED IN THEIR PHOTOELECTRON SPECTRA Ph.D. Thesis
Guillermo Manuel Loubriel 1980 212 p
Avail: Univ. Microfilms Order No. 8018575

The interaction between small molecules and transition metal atoms is investigated. Nitric oxide adsorbed on clean metal surfaces and transition metal complexes like Cr(NO)4, Cr(CO)6 and Ni(CO)4 were studied. The approach used was to learn as much as possible about the electronic structure and bonding in carbonyls and nitrosyls where the atomic positions were known and use this knowledge to help determine the bonding geometry of NO adsorbed on Ni(100). In addition to the analysis of photoemission, theoretical calculations of electronic structure via the self-consistent field X alpha multiple scattering technique were performed. The bonding of NO to transition metal atoms occurs mainly through the interaction of the levels of the metal atom and the 2 pi level of NO. In Cr(NO)4 this bonding is reflected in a charge transfer of about half an electron into the 2 pi level of each one of the NO molecules. The results of first principles calculations of shakeup energies and shakeup intensities for the photo-electron spectra of carbonyls and nitrosyls are reported. The mechanisms by which core holes produced by the photo-excitation are screened are discussed. The results for Ni(CO)4 and Cr(NO)4 are in excellent agreement with experiment. Dissert. Abstr.

RESONANCES AND COLLECTIVE EFFECTS IN PHOTOEMISSION Ph.D. Thesis
Harry Jay Levinson 1980 175 p
Avail: Univ. Microfilms Order No. 8018572

Factors which determine the intensity of photoionization other than a system's initial state, in atoms, molecules, and solids were investigated. The effect of dielectric response on surface photoemission has been studied on Al(001). In a spectral region where the metal was far from transparent (near or below the bulk plasma frequency) a spatially varying photon field at the metal surface was found to contribute significantly to the photoionization cross section. The actual cross section was more than an order of magnitude larger than the inappropriate result obtained within the dipole approximation. This was ascertained by making an absolute determination of the photoionization cross section for the surface state and Fermi level on Al(001). A gas phase spectrometer capable of measuring angle-resolved cross sections was used to study asymmetry parameters in N2 and branching ratios of the spin orbit split 5p level in xenon using synchrotron radiation. The affect of final state resonances on the photoionization cross section from SF6 were studied by a theoretical self consistent field X alpha calculation. A breakdown of the single particle picture was observed. Dissert. Abstr.

STUDY AND CHARACTERIZATION OF SEMICONDUCTOR SURFACES AND INTERFACES Ph.D. Thesis
John David Langan 1979 279 p
Avail: Univ. Microfilms Order No. 8019842

Indium antimonide surfaces were prepared with surface state densities less than 10 to the 10th power 2V/sq cm and without capacitance voltage hysteresis by preservation of the thin, natural oxide on the substrate surface. Quasi-static capacitance-voltage and conductance measurements were made on MOS structures. It is shown that apparent measurements on InSb structures of high surface state densities in capacitance and conductance techniques could be due to misinterpretation because of the presence of surface potential lateral inhomogeneity. The presence, chemical identification, and thickness of the natural oxide, both before and after the LTCVD process were independently confirmed by Auger electron spectroscopy and X-ray photoelectron spectroscopy. The oxidation state and resultant electrical properties are identified with changes in LTCVD reactor conditions. In general, the natural oxide composition is shown to be In2O3 and Sb2O3, although Sb oxide is removed during the LTCVD reaction, due to the volatility of Sb. The relative Sb/In ratio varies within the oxide, but generally is 0.25. Dissert. Abstr.

MICROSTRUCTURAL ASPECTS OF IMPACT OF EROSION IN LiF, NaCl, KCl AND CaF2 SINGLE CRYSTALS Ph.D. Thesis
Susan Roberta Schuon 1980 119 p
Avail: Univ. Microfilms Order No. 8020737

To clarify the fundamental mechanisms of material removal in erosion by solid particles entrained in a fluid stream impinging on a solid surface, single crystals were selected for targets in view of their precisely defined structure. The damage to the target by impact of a single particle ('single-impact mode') and by impact of a stream of particles ('multiple-impact mode') was

studied by scanning electron microscopy. In addition, the damage by multiple impact was assessed by measuring the erosion rate. In the single impact mode, the damage is highly dependent on the mechanical properties of the target as chips spalled off or micromachined out in individual impacts. At normal impact, the predominant mechanism is intersecting fractures, but at impact angles away from the normal, micromachining appears. NaCl and KCl, and in fact becomes the major mechanism of material removal. In LiF, only a little micromachining occurs and in CaF2, none at all; hence in these materials, spalling is the controlling mechanism for loss in individual impacts. Dissert. Abstr.

COMPARISON OF ATOMIC CONCENTRATION PROFILES, DEFECT DENSITY PROFILES, AND TYPES OF MICROSTRUCTURAL DEFECTS IN GaAs ANNEALED AFTER IMPLANTATION WITH Be Ph.D. Thesis
Kae-Shyong Lee 1979 69 p
Avail: Univ. Microfilms Order No. 8020494

Semi-insulating chromium-doped GaAs was implanted with 100 keV Be ions to fluences of 5 x 10 to the 13th power and 1 x 10 to the 15th power ions/sq cm. Specimens were annealed at 800 C for thirty minutes. Beryllium atomic concentration profiles, as determined by secondary ion mass spectrometry, were compared to the defect profiles obtained from transmission electron stereomicroscopy techniques for the annealed samples. A major redistribution of Be was observed compared to the as-implanted distribution after annealing at the higher fluence, whereas only a slight redistribution of Be occurred for the lower fluence. A major difference in the defect density profiles was observed with the fluences used for this study in the region where the annealed specimens were compared. The distribution of defects throughout the implanted-annealed layer was examined using sectioned specimens. The distribution and size of defects appear to be directly influenced by the Be concentration and its associated implantation induced damage. In addition, chromium doped semi-insulation /001/ GaAs was annealed at elevated temperatures after implantation with a Be fluence of 1 x 10 to the 15th power ions/sq cm at 60 keV. Dissert. Abstr.

ADLAYER EFFECTS ON THE SURFACE REACTIVITY OF W(100) AND Mo(100) SINGLE CRYSTALS Ph.D. Thesis
Edmond Inq-Ming Ko 1980 282 p
Avail: Univ. Microfilms Order No. 8016841

The surface reactivity of W(100) and Mo(100) single crystals with adsorbed carbon and oxygen was studied using flash desorption spectroscopy and temperature programmed reaction spectroscopy. Carbon and oxygen adatoms were deposited by the thermal cracking of ethylene and the chemisorption of molecular oxygen, respectively. For either adatom several ordered overlayers were observed as a function of coverage and temperature. The presence of either carbon or oxygen severely hindered the ability of W(100) and Mo(100) to dissociatively chemisorb hydrogen or carbon monoxide. In the case of carbon, a correlation was found between the available fourfold sites on the surface and the amount of carbon monoxide dissociated. The ability of the carbide surface to adsorb molecular carbon monoxide was not significantly affected. On the other hand, oxygen was found to suppress the chemisorption of molecular carbon monoxide at room temperature as it reduced the carbon monoxide binding energy considerably more than carbon. Dissert. Abstr.

RAMAN SCATTERING BY A MOLECULE ADSORBED AT THE SURFACE OF A THIN METALLIC FILM Ph.D. Thesis
Mark Francis Wright 1980 81 p
Avail: Univ. Microfilms Order No. 8019677

The Raman scattering cross section is calculated using standard third order perturbation theory. The scattering is viewed as a three-stage process: an electron-hole pair is created in the metal by the incident photon; the excited electron scatters off the molecule inelastically, exciting a molecular vibration; the electron finally recombines with the hole emitting the Raman scattered photon. The electrons in the film are confined by infinite potential barriers at the surfaces, but are otherwise free. The resulting sinusoidal one-electron eigenfunctions are used to calculate the nonlocal conductivity tensor in the random phase approximation. Maxwell's equations are then used to determine the vector potential inside the film, which allows the electron-photon matrix elements to be calculated. The electron-molecule interaction is deduced from experimental data on low energy inelastic electron scattering from polar molecules. Calculations are performed for the frequency dependence of the Raman cross section with two different film thicknesses. Dissert. Abstr.

ELECTRONIC BAND STRUCTURE AND OPTICAL PROPERTIES OF THE CUBIC Sc, Y AND La HYDRIDE SYSTEMS Ph.D. Thesis
Douglas Jay Peterman 1980 122 p
Avail: Univ. Microfilms Order No. 8019657

Self-consistent band calculations of ScH2 and YH2 were carried out using the Korringa-Kohn-Rostoker method. The respective joint densities of states were computed and compared to the dielectric functions determined from the optical measurements of Weaver, Rosei and Peterson. Additional calculations were performed in which the Fermi level or band gap energies were rigidly shifted by a small energy increment. These calculations were used to simulate the derivative structure in thermomodulation spectra and relate the origin of experimental interband features to the calculated energy bands. While good systematic agreement was obtained for several spectral features, the origin of low-energy interband transitions in YH2 cannot be explained by these calculated bands. Measurements of the optical absorptivity of LaH(x) with $1.6 < x < 2.9$ are presented which, as expected, indicate a more premature occupation of the octahedral sites in the larger LaH2 lattice. These experimental results also suggest that, in contrast to recent calculations, LaH3 is a small-band-gap semiconductor. Dissert. Abstr.

SURFACE PLASMONS CONFINED BY MICROSTRUCTURES Ph.D. Thesis
Ronald Wallace Rendell 1979 174 p
Avail: Univ. Microfilms Order No. 8019845

Surface plasmons confined by microstructures on tunnel junctions are theoretically examined. A theory of surface plasmons excited by inelastic electron tunneling is formulated in a way which can be conveniently modified to take into account the effects of a random distribution of impurities in the counterelectrode. Two qualitatively different dispersion regimes found in the smooth junction surface plasmons suggest a convenient and natural division of possible microstructure excitations into two types: gap modes which are confined to a region beneath the microstructure, and rod modes which are confined to the bulk of the microstructure. The frequency, angular, polarization, and surface distribution dependence of optical emission by the rod and gap modes excited by inelastic tunneling are examined in detail. In addition, the cases of microstructures raised above a junction, superconducting microstructures, and microstructures in an external field are discussed. Dissert. Abstr.

PHONON REFLECTION FROM CRYSTAL INTERFACES AND THE KAPITZA PROBLEM Ph.D. Thesis
Peter Taborek 1979 123 p
Avail: Univ. Microfilms Order No. 8020432

The heat pulse technique is used to study phonon reflection from sapphire-vacuum and sapphire-liquid helium interfaces. In order to interpret the complex time-of-flight spectra, the problem of the reflection of elastic waves in an anisotropic medium is analyzed in detail. The analysis shows that there are, in general, nine phonon reflection processes, each with a different time of flight, which transfer energy from heater to detector via a single reflection. Although the sharp features in the reflection signal due to specular (k micron conserved) processes can be explained using anisotropic elastic theory, approximately half the energy which reaches the detector arrives via nonspecular channels. The non-specular scattering, which may be due to surface roughness, gives rise to broad features in the signal. The main difference between crystal-vacuum and crystal-helium reflection signals is that the non-specular signal is much smaller for the helium covered surface. The specular signal is not affected by helium. Apparently, the non-specular processes are involved in the anomalous Kapitza conductance. A method of analyzing

phonon focusing based on an asymptotic analysis of the phonon Green's function is developed. Dissert. Abstr.

STRUCTURAL AND ELECTRONIC PROPERTIES OF A LINEAR CHAIN MERCURY COMPOUND Ph.D. Thesis
Richard David Spal 1980 171 p
Avail: Univ. Microfilms Order No. 8018614

The quasi one dimensional metal consists of one dimensional lattices, or chains, of Hg atoms, periodically arrayed in channels along the a and b axes of a three dimensional, tetragonal host lattice of AsF6(-) octahedra. The primary properties investigated were X-ray scattering, dc conductivity and Hall effect, and the Meissner effect. The compound exhibits usual type 1 superconductivity, and unusual, anisotropic superconductivity at low temperatures. Meissner effect observations demonstrate type 1 superconductivity with a critical temperature of 43 K and a critical field of about 20 G. Between .43 and 4.1 K, conductivity and magnetization measurements reveal anisotropic superconductivity, with a critical field curve similar to that of Hg. Detailed analysis of the data shows that the origin of the anisotropic superconductivity is not surface Hg, as proposed in the literature, nor Hg inclusions with minimum dimensions of at least 1 micron but may be smaller inclusions which are strongly influenced by the proximity effect. Dissert. Abstr.

DIFFUSION INDUCED GRAIN BOUNDARY MIGRATION IN Au-Cu AND Au-Ag THIN FILMS Ph.D. Thesis
Ju-Don Pan 1980 142 p
Avail: Univ. Microfilms Order No. 8020865

Diffusion induced grain boundary migration was studied by employing Au-Cu and Au-Ag thin film specimens. The results support the conclusion that this phenomenon is widespread and that it can lead to boundary migration and bulk composition change under conditions where neither is expected. Two approaches were employed to study this phenomenon. In the first approach polycrystalline gold thin films were coated with either copper or silver layers annealed and etched in an appropriate acid bath to strip off the copper or silver layers. The microstructure and the chemical composition of these alloy zones, were studied by means of both transmission electron microscopy and scanning transmission electron microscopy. In the second approach coated gold thin films were depth profiled by combined Auger Electron Spectroscopy and Xe Ion Sputtering. In both approaches, it was observed that the boundary migration rate decreased as the migration proceeded. Dissert. Abstr.

LIQUID CRYSTALS (NEMATIC LIQUIDS)
K.-H. Walter, W. Geffecken, and W. Geubel 30 Oct. 1979 94 p refs Transl. into ENGLISH of "Flussige Kristalle (Nematische Flussigkeiten)", Rept. BMFT-FB-T-76-71 Siemens A.G., Munich, 1976
(RAE-Lib-Trans-2020; BR72936; BMFT-FB-T-76-71) Avail: NTIS HC A06/MF A01

The development of a screen matrix with liquid crystals is described. The starting point was primarily a matrix concept that envisaged auxiliary elements for the decoupling. However, the concept of using liquid crystals capable of storage proved to be more advantageous in regard to actual realization and the attainment of higher resolution. The end result of the work is a matrix consisting of 16,000 image-pints (each 0.5 x 0.5 sq mm) that utilizes the bistability effect, is suited to the representation of graphical data or alphanumeric symbols, and operates in an erase-write action. Circuit concepts for the integration of the driver elements are worked out. The technological problems associated with the Matrix as well as with general liquid crystal displays (such as surface purification, surface orientation, sealing techniques, and aging processes) are treated. (AD-A086652; AFOSR-80-0462TR) Avail: NTIS HC A02/MF A01 CSCL 20/12

The amphoteric electrical properties of germanium single implants into gallium arsenide, and of dual implants of germanium with either gallium or arsenic into gallium arsenide, have been studied. Room temperature implantation was performed for all implanted ions at 120 keV, with doses ranging from 5E12 to 3E15 ions per square centimeter. Implanted samples were annealed with pyrolytic silicon nitride encapsulants at temperatures ranging from 700 to 1000 degrees Celsius. Both p- and n-type layers were observed. Type of conductivity, electrical activation, and carrier mobility were found to depend critically upon ion dose and anneal temperature. The general electrical behavior suggests that in samples of lower dose and anneal temperature, the implanted Ge ions go into As sites preferentially, producing p-type activity, whereas in samples of higher dose and anneal temperature, more Ge ions go into Ga sites, producing n-type activity. Conductivity was found to change from p- to n-type at an intermediate dose of 3E14 ions per square centimeter and at an anneal temperature between 900 and 950 degrees Celsius. It has been determined that additional implantation of As into GaAs Ge favors Ge occupancy of Ga sites and an enhancement of n-type activity, whereas the additional implantation of Ga encourages Ge occupancy of As sites and an enhancement of p-type activity. Enhancement factors of as much as 8 for p-type activations, and as much as 50 for n-type activations have been measured. GRA

The objective of this program is the exploratory development of doubly rotated cuts of quartz possessing superior Surface Acoustic Wave (SAW) properties for applications involving environmentally hardened devices. The key properties examined and optimized both theoretically and experimentally are: first, second and third order Temperature Coefficients of Delay (TCD), piezoelectric coupling factor, power flow angle, Bulk Acoustic Wave (BAW) inverse velocity surfaces, degeneracies and leaky waves, and sensitivities of the above quantities to misorientations and manufacturing tolerances. The program consists of two major task areas comprising an interactive numerical/experimental approach. Task 1 involves the numerical computation of the key SAW properties for doubly rotated quartz substrates for the purpose of locating promising angular ranges with properties

superior to the singly rotated cuts now in existence. More detailed calculations follow to refine the angular coordinates in order to specify cuts for experimental verification in Task 2. In Task 2, sets of substrates with promising orientations identified in Task 1 will be prepared and SAW device patterns will be fabricated for evaluation of the key SAW properties. The experimental results of this task will be correlated with the theoretical predictions and an iterative process develops for refinement of both theoretical and experimental parameters. As the program proceeds, working SAW device models will be delivered as a demonstration of progress and an indication of the future potential of the doubly rotated cuts. GRA

THE GROWTH OF BERLINITE (AlPO4) SINGLE CRYSTALS Final Report, 1 Jul. 1977 - 30 Sep. 1979
Larry E. Drafall and Roger F. Belt Mar. 1980 75 p refs
(Contract F19628-77-C-0213)
(AD-A086751; RADC-TR-80-73) Avail: NTIS HC A04/MF A01 CSCL 20/2

Single crystals of the berlinite mineral phase of anhydrous aluminum orthophosphate have been grown for possible surface acoustic wave applications. The desired piezoelectric form of AlPO4 is the alpha-phase which is stable from 130 to 580 C. A seeded hydrothermal growth technique was used. Nutrient was prepared by heating hydrated alumina and phosphoric acid in a sealed silver liner from 140 to 200 C at a rate of 5 deg/day and a 15 deg temperature gradient. Because AlPO4 has retrograde solubility, the nutrient was placed in a silver mesh basket in the upper, cooler portion of the liner with the seeds situated in the lower, hotter portion. A 20% free area baffle separated the two regions. Two basic techniques were used for the growth runs. The constant temperature method with a 10 C gradient produced rates of 23-25 mils/day. The rates could be varied significantly depending on such parameters as growth temperature, gradient, nutrient basket mesh size, seed orientation and baffle design. The second technique used increasing temperature at a rate of 5 C/day over the range of 140-200 C to obtain average growth rates of 22-32 mils/day. Seed orientation for most runs was (0001) plates. New growth of AlPO4 for the most part was clear and of fair quality. GRA

IMPURITY STUDIES IN THE SINGLE CRYSTAL CADMIUM SULFIDE Final Report, 1966 - 1974
Lawrence C. Greene Dec. 1979 125 p refs
(AF Proj. 7885)
(AD-A086741; AFML-TR-79-4104) Avail: NTIS HC A06/MF A01 CSCL 20/2

In cadmium sulfide crystals, an easily observed and measured phenomenon is the low temperature bound exciton emission spectrum. The spectral lines are sharp, and their wavelength can be measured with considerable precision. The spectral position of the lines in a magnetic field can tell us much about the symmetry and structure of the center. The purpose of this work was to establish a relationship between the bound exciton spectra and defect or impurity structure of the crystal. A line associated with a neutral donor and a pair of lines associated with an ionized donor were found for the very purest material. A neutral donor was found for crystals equilibrated in hydrogen, and a pair of ionized donors for material equilibrated in hydrogen sulfide. Lithium doped crystals showed several pairs of ionized donor lines as well as a large number of characteristic neutral donor lines. Silver doping produced a large number of characteristic lines, but the nature of the associated centers has not been established. Sodium showed many characteristic lines, some associated with neutral donors, some with ionized donors, as well as lines clearly associated with complex structures. Potassium and rubidium both showed characteristic ionized donor lines. GRA

GaAs SURFACE EFFECTS Interim Technical Report, 1 Jul. 1978 - 1 Jul. 1979
G. Kinoshita and Gordon G. Kuhlmann Wright-Patterson AFB, Ohio AFWAL Mar. 1980 61 p refs
(Contract F33615-78-C-1591; AF Proj. 2305)
(AD-A087033; C79-1032/501; AFWAL-TR-80-1018) Avail: NTIS HC A04/MF A01 CSCL 07/4

This report presents the results of the first six months of a program to investigate the passivation of GaAs surfaces using a native insulator. Ion implantation of phosphorus and subsequent oxidation of the surface was used to form the insulator. Post-implant annealing indicates that CVD SiO2 has somewhat better encapsulating properties than sputtered Si3N4. It was found that high dose phosphorus implantation significantly reduces decomposition of the semiconductor surface under the SiO2 encapsulant during high temperature annealing. Ion microprobe analysis of the implant profiles indicate that phosphorus diffusion is not significant during either high temperature annealing or oxidation. Elemental depth profiles of oxide layers indicate phosphorus incorporation into the film in the region from the peak of the implant to the interface with the semiconductor. A lack of arsenic and phosphorus at the oxide surfaces indicates that this region may be composed primarily of Ga2O3. GRA

Large Single Crystals of CdTe were grown by the methods of Liquid Encapsulated Czochralski, Fast Vertical Bridgman, Travelling Heater Method, Stockbarger method. Electrical characterization was done by Seebeck, Hall Effect and Conductivity measurements. Surfaces were investigated using XPS, UPS, AES and LEED. Metal-CdTe contacts were fabricated. Formation of these was monitored using XPS, UPS, LEED, AES. Barrier Heights were established by I-V, C-V and UPS measurements. Results show that the effect of the CdTe surface on the type of contact formed is very marked. GRA

GaAs FET DEVICE FABRICATION AND ION IMPLANTATION TECHNOLOGY Summary Report, 1 Oct. 1978 - 30 Sep. 1979
Kenneth J. Sleger and Harry B. Dietrich 25 Jun. 1980 26 p refs
(ZF54581001)
(AD-A087004; AD-E000481; NRL-MR-4263) Avail: NTIS HC A03/MF A01 CSCL 09/1

Microwave device fabrication and evaluation in conjunction with ion implantation has been selected to provide a benchmark technology for evaluation of semi-insulating GaAs and InP grown at NRL and elsewhere. Devices have been processed by a combination of conventional contact photolithography and liftoff techniques to achieve geometries with linewidths as small as 0.8 microns. A plasma deposited layer of Si3N4 has been employed as an annealing encapsulant at temperatures between 800 C and 850 C for 15-30 minutes (GaAs) or 700 C - 750 C for 15 minutes (InP). Si and Se were used as the principal implant species. During this period, the Si3N4 encapsulation process and the fabrication of GaAs FETs with one micron gate lengths and noise figures below 2.4 dB at 6 GHz have become routine. Difference in microwave performance between ion

implanted channel and epitaxial channel (industrially supplied) GaAs FETs was systematically correlated with various materials parameters such as mobility and light sensitivity and with static FET characteristics such as looping, backside gating, pinch-off voltage and transconductance. Experimental results indicate that good microwave performance can be obtained even though a few of the static or material characteristics are independently judged to be substandard. GRA

CRYSTAL DEFECT STUDIES USING X-RAY DIFFUSE SCATTERING
1980. 19 p. refs. Presented at Am. Inst. of Metal. Engr. Meeting, Las Vegas, Nev., Feb. 1980
(Contract W-7405-eng-26)
(CONF-800205-7) Avail: NTIS HC A02/MF A01
The effect of interruptions of the crystal lattice on the scattering of X-rays is considered, and examples are presented of the use of the diffuse scattering to study the defects. X-ray studies of self-interstitials in electron irradiated aluminum and copper are discussed in terms of the identifications of the interstitial configuration. Methods for detecting the onset of point defect aggregation into dislocation loops are considered and techniques for determination of separate size distributions for vacancy loops and interstitial loops are presented. Direct comparisons of dislocation loop measurements by X-rays with existing electron microscopy studies of dislocation loops indicate agreements of large size loops, but X-ray measurements report higher concentration in the smaller loop range. Methods for distinguishing between loops and three dimensinal precipitates are discussed and possibilities for detailed studies considered. DOE

(Contract EG-77-C-01-4042)
(DOE/SERI-8119-3/1; QTPR-1) Avail: NTIS HC A03/MF A01
The direct purification of MG-Si is being investigated. A unique characteristic of the approach used by this project is the use of a crystal puller to perform both purification and crystal growth. Sequential steps of purification were taken. By the completion of this series of purification, the purified MG-Si melt will be further purified by impurity redistribution using ingot pulling. The final purified silicon will be in an ingot form of desired dimensions for slicing into silicon sheets. The sequential steps of purification include: (1) leaching of MG-Si charge, (2) phase separation, (3) reactive gas treatment, (4) liquid-liquid extraction (called Slagging), and (5) purification by redistribution of impurities using ingot pulling. Progress on items (1) and (2) is reported. DOE

OPTICAL AND PHOTOEMISSION STUDIES OF LANTHANUM HYDRIDES
D. J. Peterson and J. H. Weaver. 1980. 14 p. refs. Presented at the Intern. Symp. on the Properties and Appl. of Metal Hydrides, Colorado Springs, 7 Apr. 1980. Prepared in cooperation with Wisconsin Univ., Stoughton. Sponsored in part by NSF
(Contract W-7405-eng-82)
(ISM-264; CONF-800402-5) Avail: NTIS HC A02/MF A01
The results of optical absorptivity and photoemission measurements on lanthanum hydrides. LaH/sub x/(1.98 < or = x < or = 2.89) are reported. The low energy (< or = 0.5 eV) optical features in LaH/sub x/ are attributed to the filling of octahedral sites. Higher energy interband absorption involves states within the d band complex, analogous to other dihydrides. As x increases above 2.0, the optical features change rapidly due to the increase in the number of occupied octahedral sites. Various band structure studies suggest that LaH3 might be a semiconductor. Photoemission results show that as x increases, the d derived states at E/sub F/ are drawn down and that for LaH2 only very weak valence band emission is observed. The hydrogen derived bonding bands are shown centered approximately 5 eV below E/sub F/. Observed chemical shifts in the La 5p/sub 1/23/2/ cores are discussed for 1.98 < or = x < or = 2.89. DOE

METAL-ELECTROLYTE BOUNDARY STUDIES WITH IN SITU PHOTOEMISSION
D. E. Grider and T. E. Furtak. 1980. 18 p. refs. Presented at the Conf. on Non-traditional Approaches to the Study of the SolidElectrolyte Interface, Snowmass, Colo., 23 Sep. 1979
(Contract W-7405-eng-82)
(ISM-257; CONF-790956-5) Avail: NTIS HC A02/MF A01
The boundary between copper (111) and 0.5 M H2SO4 is investigated using interfacial photoemission spectroscopy. Exploiting knowledge of electron momentum restrictions a feature in the ratio of p-polarized to s-polarized photoelectron yield was correlated with the onset of transitions to Bloch-like final states within the metal at 4.1 eV. This provide some energy specification in the electron energy integrated yield data. The quality of the interface was monitored using both clean and adsorbate (thiourea) covered Cu surfaces. The major effect of adsorption is attributed to a loss of conversation of electron momentum parallel to the surface during the emission process. DOE

MOLECULAR REORIENTATIONS IN LIQUID CRYSTALS. THE 13 C -/1H/ NUCLEAR OVERHAUSER EFFECTS IN LIQUID MBBA
L. Radics (Central Research Inst. of Chemistry, Budapest, Hungary) and P. L. Indovina. 4 Jun. 1979. 30 p. refs. Sponsored by Italian National Research Council
(ISS-P-79/4) Avail: NTIS HC A03/MF A01

High resolution 13 C, 1H spin-lattice relaxation times (T(1)C, T(1)H) and 13 C-/1H/ nuclear Overhauser enhancement factors (NOEF) were measured at 25 MHz (T(1)C) as well as at 100 MHz (T(1)H) for the nematic liquid crystal N-(p-methoxybenzilidene)-p-n buthylaniline (MBBA) over the nematic-isotropic transition between 43 and 75 C. Most of the carbon atoms in the molecule exhibit highly reduced NOEEs indicating the presence of slow motions affecting the T(1) processes. On the basis of dilution experiments, the low frequency motions can be attributed to the overall reorientation of the molecule. Estimates of the respective correlation time give 2 nanosec which is an order of magnitude larger than the value currently accepted for this motion. It is shown that a model of slow overall reorientation and fast multiple internal rotation of groups can adequately explain the temperature dependence of the relaxation parameters and predict a substantial contribution to the frequency dependence of proton spin lattice relaxation time down to the MHz range. THERMODYNAMICS BASED ON A WORK INEQUALITY. Ph.D. Thesis
Chi-Sing Man. 1980. 147 p.
Avail: Univ. Microfilms Order No. 8020268

An attempt is made to extend Truesdell's work estimate (W sub 0) by seeking appropriate quantities, namely, the cumulative heat received C - , and the temperatures theta(-) sub s, theta(-) sub i to replace the heat absorbed C, and the temperatures theta(max), theta(min) respectively, in (W sub 0) so that the resulting estimate (W) is appropriate to inhomogeneous process and when restricted to homogeneous processes is equivalent to (W sub 0). For a body B which undergoes a thermodynamic process in a time interval T, the work estimate (W) is postulated to hold for every part P of B and for every subinterval of T. This postulate is called the fundamental work inequality (W), and the continuum thermodynamics is studied for when the Clausius-Duhem inequality is replaced by the postulate (W). Since most of the objections against basing thermodynamics on the Clausius-Duhem inequality remain if by (W), it is not claimed that (W) is the final form of the Second Law in continuum thermodynamics. Rather, (W), as a replacement for the Clausius-Duhem inequality, is taken as an intermediate step in the program of making the second generic principle of continuum thermodynamics a statement regarding heat and work. Dissert. Abstr.

INVESTIGATION INTO INTERACTIVE GRAPHICS DATA BASE EXCHANGE VIA GERBER DATA
Robert E. Parks. Mar. 1980. 18 p.
(Contract EY-76-C-04-0789)
(SAND-80-0588) Avail: NTIS. HC A02/MF A01.

The use of the Gerber language as a common data form through which design data could be exchanged between unlike systems is examined. Applicon Graphic System was used cyclically to check retention or degeneration of the data integrity when the original design was extracted/defined in the Gerber language and reentered into the AGS utilizing various Gerber interface Programs. Even though plots of the files appear very similar, the individual data bases are very dissimilar. Programs, both present and future, that might supply needed information or design aids and characteristics would find it virtually impossible to do so from a data base lacking the sophistication and completeness of the original AGS data base. Man machine hours required to bring the data base back to original quality would be extensive. The loss of data base integrity shown by this study was restricted to an AGS to AGS transfer. The loss could very easily be magnified if the transfer were between unlike systems. DOE

HYBRID VEHICLE POTENTIAL ASSESSMENT. VOLUME 3: PARALLEL SYSTEMS
S. P. DeGrey. 30 Sep. 1979. 60 p.
(Contract EM-78-I-01-4209)
(CONS-4209-T1-Vol-3) Avail: NTIS. HC A04/MF A01.

The hybrid vehicle type is characterized by arrangement of the heat engine and electric motor in the power train such that a direct mechanical or fluid mechanical power path from both the motor and engine to the wheels is available. Out of the several possible component arrangements that could satisfy these

requirements, a configuration in which the engine and motor are mounted in tandem, driving a 4 speed manual transmission, was selected for extensive computer analysis. Simulation of all the identified missions were run for this parallel hybrid configuration. For each mission, the battery mass fraction which is defined as the ratio of the battery mass to the gross vehicle weight (expressed in percent) was varied from 5 to 30%. These vehicles were designed such that the total energy usage of the battery before cut off would be about 80% of the C/3 discharge rate.

The potential of hybrid vehicles as a replacement of the conventional gasoline or diesel fueled internal combustion engine vehicle within the next 20 to 30 yr are considered. Hybrid vehicle designs and applications which are technically and economically viable are discussed. Critical technical areas where research and development can be most usefully concentrated are identified. R.C.T.

N80-31273# Jet Propulsion Lab., California Inst. of Tech., Pasadena.
ELECTRIC AND HYBRID VEHICLE SYSTEM RESEARCH AND DEVELOPMENT PROJECT, HYBRID VEHICLE POTENTIAL ASSESSMENT. VOLUME 4: SERIES SYSTEMS
Z. Popinski 30 Sep. 1979 76 p 10 Vol.
(Contract EM-78-I-01-4209)
(CONS-4209-T1-Vol-4) Avail: NTIS HC A05/MF A01

An evaluation of the series configuration is presented. The series configuration has the advantage that the engine is mechanically uncoupled from the wheels and can be operated at its best economy point much of the time. The mechanical energy produced by the engine is converted through a generator into electrical energy which is used to drive the motor or charge the batteries. This configuration offers a good degree of flexibility. It has the disadvantage that substantial losses of energy occur since the mechanical energy from the engine passes through several components before being used to drive the wheels. The energy produced by the engine is reduced by the product of efficiencies of components connected in series. Trade-offs involved in the study of the series configurations were directed toward establishing the size of the engine, motor and generator to meet vehicle acceleration performance; determining what level to operate the engine, and determining when to use the battery. These results were then used in the electric range simulation.

ELECTRIC AND HYBRID VEHICLE SYSTEM RESEARCH AND DEVELOPMENT PROJECT, HYBRID VEHICLE POTENTIAL ASSESSMENT. VOLUME 6: COST ANALYSIS
K. S. Hardy 30 Sep. 1979 106 p
(Contract EM-78-I-01-4209)
(CONS-4209-T1-Vol-6) Avail: NTIS HC A06/MF A01

The economic feasibility of a variety of hybrid vehicles with respect to conventional vehicles specifically designed for the same duty cycle defined by the mission analysis was determined. Several different hybrid configurations including parallel, parallel-flywheel, and series vehicles were evaluated. The ramifications of incorporating examples of advanced batteries, these being the advanced lead acid, nickel zinc, and sodium sulfur were also investigated. Vehicles were specifically designed with these batteries and for the driving cycles specified by the mission. It was concluded that: in the event that gasoline prices reach $2.50 to $3.00/gal, hybrid vehicles in many applications will become economically competitive with conventional vehicles without subsidization; in some commercial applications hybrid vehicles could be economically competitive, when the gasoline price ranges from $1.20 to $1.50/gal. (CONS-4209-T1-Vol-8) Avail: NTIS HC A03/MF A01

Scenarios are described which have been generated to develop of consistent and credible forecasts required to estimate the potential impact of hybrid vehicles on future petroleum consumption in the USA, given a set of specific electric, hybrid and conventional vehicle designs. The four major areas of concern are population and vehicle fleet size, travel patterns and vehicle fleet mix, conventional vehicle technology (Otto baseline), battery technology, and prices. The forecasts were generated to reflect two baseline scenarios, a Petroleum Conservation Scenario and an Energy Conservation Scenario. The primary assumption in scenario A is higher gasoline prices than in scenario B. This should result in less travel per car and an increased demand for smaller and more fuel efficient cars. In scenario B the primary assumption is higher prices on cars (new as well as used) than in scenario A. This should lead to less cars and a shift to other modes of transportation. DOE

RECENT DEVELOPMENTS IN AEROSPACE TECHNOLOGY
J. Balazard 12 Nov. 1979 29 p
(SNIAS-792-502-101) Avail: NTIS HC A03/MF A01

A rundown of aerospace research and development activities is presented. Advances in supercritical wing technology and flow field modeling around helicopters are highlighted. Materials studies cover a titanium forming process, nonmetallic helicopter blade performance, and composite materials used in aircraft (A300 B) structures. Work on missile propulsion systems is mentioned. Recent contributions to aerospace equipment and systems design are cited. Optimization of aerospace-related manufacturing techniques is also discussed. Author (ESA)

INDUSTRIAL WASTES: AN UNEXPLORED SOURCE OF VALUABLE MINERALS
15 May 1980. 83 p.
(PB80-180250; EMD-80-45) Avail: NTIS HC A05/MF A01 CSCL 11F

The need for minerals recovery from industrial wastes is addressed. It is reported that industrial wastes often contain valuable metals, and often dispose of in ways that preclude the future recovery of mineral values. Although Congress passed the Resources Conservation and Recovery Act of 1976 to, among other objectives, improve the recovery of usable meterials from wastes, the Executive Branch has done little to enhance mineral recovery, especially from industrial wastes. A PHOTOMETRIC INVESTIGATION OF POSSIBLE BINARY OCCURRENCE IN THE CENTRAL STARS OF SEVENTEEN PLANETARY NEBULAE Ph.D. Thesis
Jack Donald Drummond. 1980. 127 p.
Avail: Univ. Microfilms. Order No. 8019219

All known and suspected visual, spectroscopic, and spectrum binaries, as well as all reported variable central stars, are presented in a series of tables. A photoelectric study was conducted in order to determine the status of short period variability of the central regions of seventeen planetary nebulae. Only the stellar appearing planetary nebula M1-2 was found to be variable. Its short period suggests that it may be only the second eclipsing binary found among central stars to date. A method of concentric apertures was developed to determine the amount of light contributed by the central star vis-a-vis the nebula through a given aperture and filter. The procedure enabled UBV magnitudes and colors of central stars to be measured including some in the sample of seventeen for which no previous values were published. Mean nebular UBV magnitudes, surface brightnesses, and color indices were also found with the technique. Various UBV two parameter were constructed, revealing possible nebular/stellar sequences; a star-plus-nebula two color diagram identifies three spectral classes of central stars, and two suspected binaries in the seventeen studied. Dissert. Abstr.

OBSERVATIONS AND INTERPRETATION OF THE PERMITTED EMISSION LINE SPECTRA OF QUASI-STELLAR OBJECTS Ph.D. Thesis
Richard Charles Puetter. 1980. 188 p.
Avail: Univ. Microfilms. Order No. 8018796

Combined optical and infrared spectrophotometry of the emission line spectra of 14 QSOs are presented. A formalism is described for the solution of the frequency-integrated radiative transfer equation and the atomic steady state equation appropriate to an externally irradiated, semi-infinite medium. Asymptotic forms for scaling forms for scaling law solutions to the radiative transfer equation are developed. Escape probabilities appropriate to the above scaling law solutions are discussed for subordinate lines, strongly interlocked resonance lines, weakly interlocked resonance lines, and the bound free continua. The formation of the hydrogen Lyman alpha Balmer, and Paschen lines and the Balmer continuum in highly idealized QSO broad emission line clouds (ELCs) of constant temperature and density, irradiated by an external source of power law spectral form was calculated. The permitted emission line region that emerges is of many dense, hot, photoionized condensations that are optically thick in the resonance lines of all abundant atomic species and the Balmer lines of hydrogen, and which cover a large fraction of the sky as seen from the central object. Dissert. Abstr.

VERY LONG BASELINE INTERFEROMETRY OBSERVATIONS OF THE MASERS TOWARD ORION A Ph.D. Thesis
Stanley Severin Hansen. 1980. 217 p.
Avail: Univ. Microfilms. Order No. 8019464

Based on velocity, and position, the water vapor masers in Orion may be divided into five classes, four of which are associated with stages of star formulation. The fifth class may be associated with an evolved star. The masers of the fifth class have velocities from -7 to -3 km and from + 15 to 18 gm. These masers are large (10 to 60 a.u.) and less variable than the other H20 masers and occur in a single cluster 1000 a.u. in diameter. The OH masers with velocities similar to the fifth class of H20 masers are less variable, less polarized, and larger than the other OH masers. All the SiO masers have the same velocities as the H20 masers of the fifth class and at the same position. This evidence strongly suggests that all these masers exist in expanding shells of gas about a single object. VLBI observations at 1665 MHz detected three OH masers with apparent diameters of 10 30 a.u. The two strongest of these were spatially coincident, circularly polarized in opposite senses, and of equal amplitude, suggesting that they may be a Zeeman pair. The velocity separation requires a 3 milligauss magnetic field. Dissert. Abstr.

VARIABLE X-RAY SPECTRA OF BL LAC OBJECTS: HEAO-1 OBSERVATIONS OF PKS 0548-322 AND 2A 1219+306
D. M. Worrall (California Univ., San Diego), E. A. Boldt, S. S. Holt, R. F. Mushotzky, and P. J. Serlemitsos. May 1980. 21 p. refs. Submitted for publication.
(NASA-TM-80700) Avail: NTIS HC A02/MF A01 CSCL 03A

X-ray spectra for the BL Lac objects PKS 0548-322 and 2A 1219+305 measured with the HEAO-1 A2 detectors during pointing maneuvers on September 30, 1978 and May 31, 1978 respectively are presented. Both fit single power law components with low energy absorption. For 2A 1219+305, a thermal bremsstrahlung form gives an unacceptable fit. From a comparison with other statistically poorer observations taken at 6 month intervals while the satellite was in its normal scanning mode, it is found that the sources exhibit spectral variability. A summary of measurements of the 5 BL Lac objects detected with the A2 experiment is presented and it is concluded that X-ray spectral changes in this class of source are common. Their general X-ray spectral characteristics distinguish BL Lac objects from other classes of X-ray emitting active galactic nuclei. Analysis of their total spectra indicates that most of the energy is emitted in the 5 to 100 eV band. M.G.

QUASI-SIMULTANEOUS OBSERVATIONS OF THE BL LaC OBJECT MK 501 IN X-RAY, UV, VISIBLE, IR AND RADIO FREQUENCIES
D. M. Kondo, D. M. Worrall, R. F. Mushotzky, R. L. Hackney (Univ. of Western Kentucky), K. H. Hackney (Univ. of Western Kentucky), J. B. Oke (Palomar Observatory), H. Yee (Palomar Observatory), G. Neugebauer (Palomar Observatory), K. Matthews (Palomar Observatory), and P. A. Feldman (NRC of Canada, Ottawa). Jul. 1980. 32 p. refs. Submitted for publication. (NASA-TM-81985). Avail: NTIS. HC A03/MF A01. CSCL 03A.

Quasi-simultaneous observations of the BL Lacertae (Lac) objects MK 501 were performed for the first time at X-ray, ultraviolet, visible, infrared, and radio frequencies. The observed spectral slope from the X-ray to UV regions is positive and continuous, but that from the mid UV to visible light region becomes gradually flat and possibly turns down toward lower frequencies; the optical radio emission can not be accounted for by a single power law. Several theoretical models were considered for the emission mechanism. A quantitative comparison was performed with the synchrotron-self-Compton model; the total spectrum is found consistent with this model. The spectrum from visible light to X-ray is consistent with synchrotron radiation or with inverse-Compton scattering by a hot thermal cloud of electrons. The continuity of the spectral slope from X-ray to UV implied by the current data suggests that the previous estimates of the total luminosity of this BL Lac object is underestimated by a factor of about three or four. HIPPARCOS PAYLOAD STUDY, VOLUMES 1 AND 2. Final Report
14 Jan. 1980. 279 p.
(Contract ESTEC-3967/79-NL-MS)
(Rept-60/890; ESA-CR(P)-1318). Avail: NTIS. HC A13/MF A01.

A feasibility study was made which includes the mirror manufacturing process, relay optics, and star mapper grid for the three mirror telescope. The stiffness and strength requirements, and materials selection were studied, and a dynamic structural analysis performed. Payload thermal control was reviewed in terms of mirror distortion. Detection and electronics subsystems were reviewed and a data flow assessment made for data handling. Reliability predictions were made for the payload electronics. A technological development program is presented to answer uncertainties about mirror fabrication and assembly, radiation effects, and wavefront error verification. Author (ESA)

ORBITAL DECAY AND ACCRETION FOR PLANETARY OR BINARY SYSTEMS WITHIN A PLANETARY NEBULA. Ph.D. Thesis
Kyu Hong Choi. 1980. 120 p.
Avail: Univ. Microfilms. Order No. 8018533.

The problem of the survival of a planet and low mass secondary orbiting a primary star that becomes a planetary nebula is studied. The values of the mass of the primary used are 1.0, 1.5, and 2.0 solar mass. The values for the planet's mass are 0.001 and 0.01 solar mass. The mass of the secondary is 0.1 solar mass. The evolution of the orbital elements and mass of the secondary due to accretion and drag forces in the common envelope are presented. The possible application of the results to V471 Tau, UU Sgr, WZ Sge, and Sun-Jupiter system are discussed. Dissert. Abstr.

TORQUES ON A NEARLY RIGID BODY IN A RELATIVISTIC GRAVITATIONAL FIELD
Alessandro Caporali. Aug. 1980. 25 p. refs.
(NASA-TM-78295). Avail: NTIS. HC A02/MF A01. CSCL 03B.

The effect of post-Newtonian potentials on the rotation of a nearly rigid body is shown to consist of a precession and a torque. The frequency of the precession can be exactly represented by means of suitable differential operators. The relativistic torques in the quadrupole approximation depend on the instantaneous orientation of the principal axes of one body with respect to the position like the classical torque and velocity of the other. For a relatively low mass body, such as a gyroscope, these velocity-dependent torques have no observable consequences. Author

SOFT CP VIOLATION AND THE GLOBAL MATTER-ANTIMATTER SYMMETRY OF THE UNIVERSE
Goran Senjanovic (Maryland Univ., College Park) and F. W. Stecker. Jun. 1980. 17 p. refs. Submitted for publication. (NASA-TM-80730). Avail: NTIS. HC A02/MF A01. CSCL 03B.

Scenarios for baryon production are considered within the context of SU(5) and SO(10) grand unified theories where CP violation arises spontaneously. The spontaneous CP symmetry breaking then results in a matter-antimatter domain structure in the universe. Two possible, distinct types of theories of soft CP violation are defined. In the first type the CP nonconservation originates only from the breaking of SU(2) sub L X U(1) symmetry, and in the second type, even at the unification temperature scale, CP violation can emerge as a result of symmetry breaking by the vacuum expectation values of the superheavy Higgs sector scalers. UTILIZATION OF MULTI-BODY TRAJECTORIES IN THE SUN-EARTH-MOON SYSTEM
Robert W. Farquhar. Aug. 1980. 24 p. refs. Submitted for publication. (NASA-TM-80740). Avail: NTIS. HC A02/MF A01. CSCL 03B.

An overview of three uncommon trajectory concepts for space missions in the Sun-Earth-Moon System is presented. One concept uses a special class of libration-point orbits called 'halo orbits.' It is shown that members of this orbit family are advantageous

for monitoring the solar wind input to the Earth's magnetosphere, and could also be used to establish a continuous communications link between the Earth and the far side of the Moon. The second concept employs pretzel-like trajectories to explore the Earth's geomagnetic tail. These trajectories are formed by using the Moon to carry out a prescribed sequence of gravity-assist maneuvers. Finally, there is the 'boomerang' trajectory technique for multiple-encounter missions to comets and asteroids. In this plan, Earth-swingby maneuvers are used to retarget the original spacecraft trajectory. The boomerang method could be used to produce a triple-encounter sequence which includes flybys of comets Halley and Tempel-2 as well as the asteroid Geographos. Author

THERMOLUMINESCENCE STUDIES OF THE THERMAL AND RADIATION HISTORIES OF CHRONDRITIC METEORITES Ph.D. Thesis
Charles Lee Melcher 1980 175 p
Avail: Univ. Microfilms Order No. 8018748

The thermoluminescence properties of chondritic meteorites are investigated to understand the ways in which the stored TL reflects the thermal and radiation histories of these objects. Differences in TL levels measured in recent falls are attributed to small differences in orbital temperatures. In addition, a correlation between TL level and terrestrial age is observed in meteorites of known terrestrial age. A modification of the apparatus for measurement of thermoluminescence is described in which a microcomputer is interfaced to the existing light detection and heating control units. The computer allows photons to be counted directly and the numbers stored automatically for later manipulation. This results in more precise as well as more efficient data acquisition and reduction. Dissert. Abstr.

POLARIMETRY OF JUPITER AT LARGE PHASE ANGLES Ph.D. Thesis
Clifford Paul Stoll 1980 95 p
Avail: Univ. Microfilms Order No. 8020326

Pioneer 10 and 11 polarimetry maps of Jupiter, taken at a wide variety of phase angles, were analyzed. Data were reduced in two colors for Jupiter's South Equatorial Belt (latitude -5 to -8 degrees) and scattering models were constructed. Variations in polarization from center to limb set constraints on the vertical structure of the atmosphere. The absolute polarization near the center of the disc constrained the single scattering polarization phase matrix of the scattering particles. It was found that a two cloud model with a haze in the upper atmosphere fits the data best. The haze particles are closely approximated by conservatively scattering spheres of index of refraction 1.5 and uniformly distributed sizes between 0.16 and 0.18 microns radius. A relationship exists between the required index of refraction for the haze particles and the mean size of the particles. The upper cloud, which is thought to be made of ammonia crystals, must be at least optical depth 2, and could be semi-infinite. The polarization scattering properties of the clouds are distinctly different from the haze, indicating a compositional or size difference. The lowest cloud is more weakly constrained. Dissert. Abstr.

INTERPRETATION OF LASER/MULTI-SENSOR DATA FOR SHORT RANGE TERRAIN MODELING AND HAZARD DETECTION
Brian S. Messing Aug. 1980 102 p refs Prepared for JPL (Grant NsG-7369; Contract JPL-954880)
(NASA-CR-163492; RPI-TR-MP-75) Avail: NTIS HC A06/MF A01 CSCL 08B

A terrain modeling algorithm that would reconstruct the sensed ground images formed by the triangulation scheme, and classify as unsafe any terrain feature that would pose a hazard to a roving vehicle is described. This modeler greatly reduces quantization errors inherent in a laser/sensing system through the use of a thinning algorithm. Dual filters are employed to separate terrain steps from the general landscape, simplifying the analysis of terrain features. A crosspath analysis is utilized to detect and avoid obstacles that would adversely affect the roll of the vehicle. Computer simulations of the rover on various terrains examine the performance of the modeler. T.M.

SILVER ISOTOPIC ANOMALIES IN IRON METEORITES: COSMIC-RAY PRODUCTION AND OTHER POSSIBLE SOURCES
Robert C. Reedy 18 Apr. 1980 18 p refs Presented at the 11th Lunar and Planetary Sci. Conf., Houston, Tex., Mar. 1980 (Contract W-7405-eng-36)
(LA-UR-80-1199; CONF-800361-1) Avail: NTIS HC A02/MF A01

The sources of excess Ag107 observed in iron meteorites are examined with emphasis on the reactions of cosmic ray particles with palladium. The cross sections for the production of the silver isotopes from palladium by energetic cosmic ray particles are evaluated and used to calculate spallogenic production rates relative to that of Mn53 from iron. The upper limit for the production rate of excess Ag107 by galactic cosmic ray particles is 400 atoms/min/kg(Pd) which over an exposure age of 10 to the 9th years, would make only 1% of the observed excesses of Ag107. Neutron capture reactions with Pd isotopes produce mainly Ag109. Binary fission of a siderophilic superheavy element would be expected to yield more Ag109 than Ag107. An intense proton irradiation in the early solar system probably would produce a lower ratio (Pd107/Pd108) to (A126/A127) than observed in meteorites. Therefore the presence of excess Ag107 in iron meteorites with large Pd/Ag ratios very likely is due to the incorporation of 6.6 x 10 to the 6th per year Pd107 of nucleosynthetic origin in these meteorites. SOLAR WIND FLOWS ASSOCIATED WITH HOT HEAVY IONS
Edward Eugene Fenimore. May 1980 58 p refs
(Contract W-7405-eng-36)
(LA-8344-T) Avail: NTIS HC A04/MF A01

Heavy ion spectra from three different periods throughout the solar cycle were analyzed. The spectra indicating hot coronal conditions occur in roughly 1/7th of all measurements and almost exclusively in postshock flows (PSFs), nonshock related helium abundance enhancements (HAEs), or noncompressive density enhancements (NCDEs). The PSFs and HAEs are both probably interplanetary manifestations of solar flares. The observation of several flare related HAEs which were not preceded by an interplanetary shock suggests that the flare heated plasma can evolve into the solar wind without producing a noticeable shock at 1 AU. The NCDEs with hot heavy ions differ from the PSFs and HAEs in several ways implying that they evolve from events or places with lower temperatures and less energy than those associated with the flares, but with higher temperatures and densities than the quiet corona. Active regions, coronal mass ejections, and equatorial streamers are possible sources for the NCDEs with spectra indicating hot coronal conditions. DOE

THE RELATION BETWEEN THE GALACTIC COMPACT RADIO SOURCES AND THE EXTRAGALACTIC COMPACT RADIO SOURCES Ph.D. Thesis
Bernard Jay Geldzahler. 1980 133 p
Avail: Univ. Microfilms Order No. 8018546

Maps resulting from high resolution, high sensitivity observations are presented for the quasars 3C138 and 3C286. For the first time, the structure of 3C138 over angular scales between 0.010 and 0.45 is reported. Strong evidence in favor of oppositely directed dual beam models of energy transport in extragalactic radio sources is provided by a newly discovered low surface brightness feature in 3C286 which is interpreted as the first detection of the counterjet proposed in such models. Six Galactic or suspected Galactic compact radio sources were also observed. Cygnus X-3,1909 + 048(=SS433), CL4, G127.11 + 0.54, G74.87 + 1.22, and the compact radio source at the Galactic center. It is demonstrated that the structures and physical properties of the Galactic and extragalactic compact radio sources are similar and that the Galactic objects lie on the extreme low luminosity end of an apparent continuum of luminosities. The nature of the radiation mechanism at the site of the energy generation is discussed. Dissert. Abstr.

N80-31304# Office of Naval Research, London (England).
EUROPEAN SCIENTIFIC NOTES. VOLUME 34, NO. 6
Richard S. Hughes, ed. and Don J. Peters, ed. 30 Jun. 1980 54 p
(AD-A086806; ESN-34-6) Avail: NTIS HC A04/MF A01 CSCL 05/2

This monthly publication presents brief articles concerning recent developments in European scientific research. It is hoped that these articles (which do not constitute part of the scientific literature) may prove of value to American scientists by calling attention to current developments and to institutions and individuals engaged in these scientific efforts. The articles are written primarily by members of the staff of ONRL and occasionally articles are prepared by, or in cooperation with, members of the scientific staffs of the United States Air Force's European Office of Aerospace Research and Development and the United States Army Research and Standardization Group. Articles are also contributed by visiting Stateside scientists. GRA

SUBJECT INDEX

Typical Subject Index Listing

The subject heading is the key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The NASA accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus* (NASA SP-7050).

A

ABLATION
Wind-tunnel and flight tests of ablators and insulators for rocket vehicles
[SAND-80-05230] N80-30446
A computer program for transient and axisymmetric ablation, conduction and radiation
[SNIAS-792-422-120] N80-30705
Properties of ablatively accelerated targets
[AD-A086727] N80-31209

ABSORPTION COOLING
Development of solar driven absorption air conditioners and heat pumps
[LBL-10771] N80-30925

ABSORPTION SPECTRA
Conducting organic polymers: Doped polyacetylene
[AD-A086869] N80-30523
Remote monitoring of gaseous pollutants by differential absorption laser techniques
[PB80-179351] N80-30968
Reactions and relaxation of vibrationally excited hydrogen
[AD-A086976] N80-31168
Adlayer effects on the surface reactivity of W(100) and Mo(100) single crystals N80-31234

ABSORPTIVITY
Photoconductivity in polyacetylene
[AD-A086942] N80-30527

AC GENERATORS
Research and development of concept leading to an automotive alternator with significantly improved efficiency and weight
[COO-50042-1] N80-30654

ACCELERATED LIFE TESTS
Evaluation of radiation effects in the MA328 CCD image sensor
[SIRA-6/5309/00] N80-30662
Assembly and testing of a catalytic hydrazine gas generator
[VB-0421-011-B] N80-30759

ACCELERATION (PHYSICS)
Properties of ablatively accelerated targets
[AD-A086727] N80-31209

ACCELERATION STRESSES (PHYSIOLOGY)
Thermoregulation in rats: Effects of varying duration of hypergravic fields
[NASA-CR-163481] N80-31030

ACCELERATION TOLERANCE
The effect of physical conditioning on +GZ tolerance N80-31031

ACCELEROMETERS
BIRAMIS payload study, volume 1 --- satellite measurements of the Earth's energy budget
[ONERA-RT-4/3373-SYP-VOL-1] N80-30379
BIRAMIS payload study. Volume 3: The accelerometer super-CACTUS
[ONERA-RT-5/3373-SY-VOL-3] N80-30380

ACCESS CONTROL
Collision-resolution algorithms and random-access communications
[AD-A086695] N80-30613

ACCUMULATIONS
Studies of stability in applied mathematics
[ISBN-91-7222-268-9] N80-31130

ACCURACY
Shuttle time and frequency transfer experiment
[NASA-TM-78288] N80-30342
Accurate numerical solutions for elastic-plastic models
[ANL-80-31] N80-30815

ACETYL COMPOUNDS
Organic metals and semiconductors: The chemistry of polyacetylene, (CH) sub x, and its derivatives
[AD-A086870] N80-30522

ACETYLENE
Pressure dependence of the absolute rate constant for the reaction OH + C2H2 from 226 to 413K
[NASA-TM-80743] N80-30458
Conducting organic polymers: Doped polyacetylene
[AD-A086869] N80-30523
Photoconductivity in polyacetylene
[AD-A086942] N80-30527
Magnetic soliton defects in polyacetylene
[AD-A086978] N80-30528

ACOUSTIC ATTENUATION
Mid-term progress report on the development of army Closed Cycle Circulator (CCC) system
[AD-A087219] N80-30744

ACOUSTIC DELAY LINES
Adaptive time delay circuitry for interference cancellation systems
[AD-A086326] N80-30605

ACOUSTIC EMISSION
An investigation of mechanisms effecting environmental stress cracking in titanium alloy
[AD-A086979] N80-30499
Non-contacting strain control and acoustic emission in high-temperature testing
[ICAF-1142] N80-30786

ACOUSTIC MEASUREMENTS
The blast noise prediction program: User reference manual
[CERL-IR-N-75] N80-31155

ACOUSTIC SCATTERING
Analysis of scattering and radiation of acoustic waves from an axisymmetric structure in a infinite fluid medium
[AD-A086587] N80-31157

ACOUSTICS
Array gain improvement by selective sensor exclusion N80-31154
Doubly rotated cut saw devices
[AD-A086734] N80-31245
The growth of berlinite (AlPO4) single crystals
[AD-A086751] N80-31246

ACTUATORS
On feedback systems possessing integrity with respect to actuator outages
[AD-A086609] N80-31093

ADDITIVES
Evaluation of XRG no. 1: A fuel additive
[PB80-180672] N80-30559

ADHESIVE BONDING
The application of optical interferometry to time dependent unbonding, parts 1, 2, and 3 N80-30774

ADHESIVES
Quick reaction evaluation of materials for systems applications
[AD-A085859] N80-30789

ADIABATIC CONDITIONS
Adiabatic compression of field-reversed plasma
[UCID-18614] N80-31220

ADJUSTING
Robustness with observers
[AD-A086610] N80-31092

ADSORPTION
Raman scattering by a molecule adsorbed at the surface of a thin metallic film N80-31235

AERIAL PHOTOGRAPHY
Monitoring the use of riverways with aerial photography: The development, testing, and evaluation of a computer assisted methodology
[AD-A086471] N80-30877

AERODYNAMIC CHARACTERISTICS
Analysis of T-2C high angle of attack flight test data with nonlinear system identification methodology
[AD-A086327] N80-30298

AERODYNAMIC CONFIGURATIONS
Quantitative measurements of the effects of variations in panel method computer programs
[AD-A086358] N80-30279
The USAF stability and control digital datcom. Volume 1: User's manual
[AD-A086557] N80-30315
The USAF stability and control digital Datcom. Volume 2: Implementation of Datcom methods
[AD-A086558] N80-30316

AERODYNAMIC FORCES
Effect of near-zero spin on instability of controlled projectiles in ascending or descending flight
[AD-A086775] N80-30278

AERODYNAMIC LOADS
Comparison of wind tunnel and flight test measurements of static aerodynamic loading of a captive store
[AD-A087237] N80-30281

AERODYNAMIC STABILITY
Effect of near-zero spin on instability of controlled projectiles in ascending or descending flight
[AD-A086775] N80-30278
Design, development, and flight demonstration of the loads and stability characteristics of a bearingless main rotor
[AD-A086754] N80-30299
The USAF stability and control digital Datcom. Volume 3: Plot module
[AD-A086559] N80-30317

SUBJECT

AERODYNAMICS
Multilingual Aeronautical Dictionary
[LC-77-93566] N80-30272
Numerical studies in computer aided design. Part 2: Studies in high speed

NASA program plan N80-31269

AERONOMY
Sounding rocket program aeronomy: Complex payload B2. Report of system design, integration, testing and flight
[ESA-TT-589] N80-30363
Sounding rocket program aeronomy. Project Upper Polar Atmosphere. Supra-thermal auroral particle observations
[BMFT-FB-W-79-03] N80-30992

AEROSOLS
Deliquescence properties and particle size change of hydroscopic aerosols
[BNL-27094] N80-30963
Design and performance of an aerosol mass distribution monitor
[PB80-179310] N80-30973
Aerosols and climate
[CONF-800309-5] N80-31006
Parameterization of extended cloudiness and radiation for climate models N80-31009
The South Pole automatic condensation nuclei counter: Instrument details and five years of observations
[PB80-181712] N80-31014
Study of a chemical analyzer of the condensables in the atmosphere of Venus by attenuated total IR-reflection
[ANL-TRANS-1184] N80-31295

AEROSPACE ENGINEERING
Recent developments in aerospace technology
[SNIAS-792-502-101] N80-31276

AEROSPACE ENVIRONMENTS
Evaluation and prediction of long term space environmental effects on non-metallic materials
[NASA-CR-161545] N80-30436
Investigation of the solidification behavior of electron beam welds under microgravitational conditions
[ESA-TT-591] N80-30760

AEROSPACE SCIENCES
NASA program plan N80-31269

AEROSPACE SYSTEMS
Design guidelines and optimization procedures for test subsystem design
[AD-A087059] N80-30769

AFRICA
Comparison of estimated and observed values for solar radiation at the surface of the African continent
[PB80-180417] N80-31016

AGING (MATERIALS)
High performance VCHP life test
[ESA-CR(P)-1321] N80-30770

AGRICULTURE
Remote sensing research studies
[E80-10117] N80-30823
Use of LANDSAT data for estimating the area of sugar cane in the state of Sao Paulo --- Brazil
[E80-10260] N80-30843
Utilization of LANDSAT data to inventory the sugar cane in the state of Sao Paulo
[E80-10261] N80-30844
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
A labeling technology for LANDSAT imagery
[E80-10293] N80-30861
Cloud seeding. Citations from the NTIS data base --- effects on irrigated farming
[PB80-811037] N80-31017

AGRISTARS PROJECT
The integrated analysis procedure for identification of spring small grains and barley --- Great Plains Corridor: U.S. and Canada
[E80-10274] N80-30847
Statistical Outlier Detection (SOD): A computer program for detecting outliners in data --- AgRISTARS Project
[E80-10275] N80-30848
Estimation of probabilities of label imperfections and correction of mislabels
[E80-10288] N80-30856
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
A labeling technology for LANDSAT imagery
[E80-10293] N80-30861
Maximal analysis labeling procedure (preliminary)
[E80-10294] N80-30862
An exploratory study to develop a cluster-based area estimation procedure --- Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863
Use of soil moisture information in yield models
[E80-10302] N80-30869
Evaluating the use of analyst labels in maximum likelihood cluster proportion estimation
[E80-10303] N80-30870
Evaluation of Bayesian sequential proportion estimation using analyst labels
[E80-10304] N80-30871
Analysis of scanner data for crop inventories
[E80-10308] N80-30874

AGROCLIMATOLOGY
Florida water resources
[E80-10246] N80-30829
Florida water resources, Executive summary
[E80-10247] N80-30830

AGROMETEOROLOGY
Maximal analysis labeling procedure (preliminary)

AIR BREATHING ENGINES
Liquid airbreathing missile fuels: An overview of properties and applications N80-30419

AIR CONDITIONING EQUIPMENT
Development of solar driven absorption air conditioners and heat pumps
[LBL-10771] N80-30925

AIR CURRENTS
Report of the NCAQ Atmospheric Dispersion Modeling Panel. Volume 1: Recommendations
[PB80-174964] N80-30975

AIR FLOW
Nonsymmetric split of flow during cocurrent upflow at air-water mixtures through symmetric bifurcations N80-30678
Turbulent heat transfer and fluid flow characteristics for air flow in an unsymmetrically heated triangular duct N80-30683
Unsteady swirling flows in gas turbines
[AD-A086765] N80-30697

AIR INTAKES
Evaluation of the Ram-Jet device, a PCV air bleed
[PB80-170657] N80-30964

AIR POLLUTION
Development study of a novel continuous-flow impactor
[PB80-179286] N80-30574
Advanced combustion systems for stationary gas turbine engines. Volume 3: Combustor verification testing
[PB80-177108] N80-30763
Proceedings of the Conference on Environmental Toxicology
[AD-A086341] N80-30958
The benefits of air and water pollution control: A review and synthesis of recent estimates
[PB80-178759] N80-30967
Survey analysis of phenolic compounds in industrial effluents by gas chromatography mass spectrometry
[PB80-177793] N80-30969
Modelling of simulated photochemical smog with kinetic mechanisms. Volume 2 CHEMK: A computer modeling scheme for chemical kinetics
[PB80-181084] N80-30970
An evaluation study of EPA method 8 --- emissions from sulfuric acid plants
[PB80-181936] N80-30972
Tunable laser survey of molecular air pollutants: Doppler-limited spectra of the C-H stretching bands of formaldehyde, ethylene, ethane and allene
[PB80-180003] N80-30974
Report of the NCAQ Atmospheric Dispersion Modeling Panel. Volume 1: Recommendations
[PB80-174964] N80-30975
Aerosols and climate
[CONF-800309-5] N80-31006

AIR QUALITY
Report of the NCAQ Atmospheric Dispersion Modeling Panel. Volume 1: Recommendations
[PB80-174964] N80-30975

AIR SAMPLING
Total particulate mass emission sampling errors
[PB80-181910] N80-30965
An evaluation study of EPA method 8 --- emissions from sulfuric acid plants
[PB80-181936] N80-30972

AIR TO AIR MISSILES
HARM rocket motor development N80-30415

AIR TRAFFIC
Air traffic congestion and capacity. Citations from the NTIS data base
[PB80-811052] N80-30294
Assessment of the capacity of the Automated Radar Terminal Systems (ARTS IIIA) for the years 1980-1990
[AD-A087243] N80-30621

AIR TRAFFIC CONTROL
Air traffic congestion and capacity. Citations from the NTIS data base
[PB80-811052] N80-30294

AIR WATER INTERACTIONS
Models of the equatorial ocean circulation N80-31024

AIRBORNE EQUIPMENT

Light twin-engine aircraft accidents following engine failures
[PB80-177306] N80-30287

AIRCRAFT ANTENNAS
Airborne antenna pattern code user's manual
[AD-A086331] N80-30591

AIRCRAFT APPROACH SPACING
Vortex advisory system. Volume 1: Effectiveness for selected airports
[AD-A086982] N80-30286

AIRCRAFT CONSTRUCTION MATERIALS
Recent developments in aerospace technology
[SNIAS-792-502-101] N80-31276

AIRCRAFT DESIGN
Combined linear theory/impact theory method for analysis and design of high speed configurations
[NASA-CR-3314] N80-30273

AIRCRAFT ENGINES
Unsteady swirling flows in gas turbines
[AD-A086765] N80-30697

AIRCRAFT FUELS
Autoignition characteristics of aircraft-type fuels
[NASA-CR-159886] N80-30535
Analytical techniques for aromatic components in aircraft
[AD-A086343] N80-30536

AIRCRAFT INSTRUMENTS
Sea king Mk. 50 helicopter flight control system: A mathematical model of the AFCS (ASW) mode
[AD-A086969] N80-30318
Analysis of electrical transients created by lightning
[NASA-CR-159308] N80-30645

AIRCRAFT LANDING
Instrument scanning and controlling: Using eye movement data to understand pilot behavior and strategies
[NASA-CR-3306] N80-31039

AIRCRAFT PARTS
Evaluation of forged helicopter components processed with controlled solidification and thermal mechanical treatments
[AD-A086818] N80-30302
AIRCRAFT PILOTS
Instrument scanning and controlling: Using eye movement data to understand pilot behavior and strategies
[NASA-CR-3306] N80-31039
AIRCRAFT RELIABILITY
Fatigue damage estimation for the BAeA aircraft fatigue data analysis system
[AD-A086470] N80-30301
AIRCRAFT SAFETY
Investigation of helicopter wire strike protection concepts
[AD-A086857] N80-30285
AIRCRAFT WAKES
Vortex advisory system. Volume 1: Effectiveness for selected airports
[AD-A086982] N80-30286
AIRFOIL PROFILES
A theoretical investigation of the shock location on an axisymmetric body and on a two dimensional airfoil in transonic flows affected by axial pressure gradients and shifts in pressure level
[MBB-FE-124/S/PUB/9] N80-30283
AIRFOILS
Quantitative measurements of the effects of variations in panel method computer programs
[AD-A086358] N80-30279
The USAF stability and control digital Datcom. Volume 3: Plot module
[AD-A086559] N80-30317
AIRFRAMES
Analysis of ground calibration data from strain gauges attached to the airframe of CT4-A airtrainer A19-031
[AD-A086970] N80-30719
AIRPORTS
Vortex advisory system. Volume 1: Effectiveness for selected airports
[AD-A086982] N80-30286
Pavement evaluation and overlay design using vibratory nondestructive testing and layered elastic theory. Volume 1: Development procedure
[AD-A087186] N80-30808
ALABAMA
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
ALGEBRA
Algebraic coding theory N80-31096
ALGORITHMS
Position determination with Loran-C triplets and the Hewlett-Packard HP-67/97 programmable calculators
[AD-A086823] N80-30290
Dynamics and control in modal-space of flexible spacecraft N80-30376
Synthesis of MCJ codes
[AD-A086778] N80-30594
A conflict resolution algorithm for noisy multiaccess channels
[AD-A086767] N80-30608
Measuring apparent target length using target resolving signals
[REPT-6/79] N80-30630
Study of interferences in satellite communication systems. Volume 3: Study report
[ESS/CCG-66-VOL-3] N80-30635
Study of interferences in satellite communication systems. Volume 4: Executive summary
[ESS/CCG-67-VOL-4] N80-30636
Simulation of viscous steady flow past an arbitrary two-dimensional body
[AD-A086799] N80-30694
Accurate numerical solutions for elastic-plastic models
[ANL-80-31] N80-30815
An optimal state estimation algorithm for terrain-ranging systems N80-30820
Numerical studies in computer aided design. Part 2: Studies in high speed
[AD-A087060] N80-31060
A dual Algorithm to solve linear least absolute value approximations
[AD-A087078] N80-31080
A computer algorithm for generating a basis of the trades on t-designs
[AD-A087251] N80-31082
High order time setting methods for nonlinear evaluation equations
[BNL-27011] N80-31123
Decentralized algorithms for optimization of single commodity flows
[AD-A086736] N80-31143
Linear state feedback, quadratic weights, and closed loop eigenstructures
[NASA-CR-163484] N80-31146
ALKALI METAL COMPOUNDS
Moisture protective coatings for alkali halide IR optics
[AD-A086747] N80-30526
ALKALIES
Measurement of the energy dependence of the integral scattering cross section for electronic stimulation in shocks of alkali with mercury, with spectral analysis of light
[MPIS-17/1979] N80-31260
ALLOYS
Effect of alloy deformation on the average spacing parameters of non-deforming particles
[COO-3084-75] N80-30509
Quick reaction evaluation of materials for systems applications
[AD-A085859] N80-30789
ALPS MOUNTAINS (EUROPE)
Application Explorer Mission-A heat capacity mapping mission --- Bavaria, Germany and Marrakech, Morocco
[E80-10309] N80-30875
ALTERNATIVES
SPS salvage and disposal alternatives
[NASA-CR-161548] N80-30898
ALTITUDE
Critical requirements for mid-altitude IR predictions N80-30429
MARS 1414 recorder environmental tests
[NASA-TP-1709] N80-30716
ALUMINATES
Localized impact damage in ceramics. Localized impact damage in zinc sulfide crack growth from small flaws in larger grains in alumina
[AD-A085874] N80-30790
ALUMINUM
Hydrostatic stress dependent yield of 7075-T6 aluminum
[SAND-79-2220] N80-30505
Feasibility study for industrial cogeneration fuel cell application
[SAN-1889-T1] N80-30934
Control system considerations for an aluminum-air battery powered electric vehicle
[UCRL-15241] N80-30939
ALUMINUM ALLOYS
Evaluation of forged helicopter components processed with controlled solidification and thermal mechanical treatments
[AD-A086818] N80-30302
Structure and deformation characteristics of rheocast metals
[AD-A086469] N80-30442
A fundamental study of a new fabrication technique for fiber reinforced aluminum matrix composites

Cryogenic heat pipes, phase 1 report
[ESA-CR(P)-1323] N80-30711
DIAL with heterodyne detection including speckle noise: Aircraft/shuttle measurements of O3, H2O, and NH3 with pulsed tunable CO2 lasers
[NASA-TP-1725] N80-30717
AMORPHOUS MATERIALS
A low temperature specific heat study of some disordered alloy systems N80-30452
AMORPHOUS SEMICONDUCTORS
Perfecting of nuclear microanalysis of deuterium by means of ion implantation. Application to the study of the hydrogeneration of amorphous silicon through ionic implantation N80-30468
AMPLIFICATION
Array gain improvement by selective sensor exclusion N80-31154
AMPLITUDE MODULATION
Modeling of pulses having arbitrary amplitude and frequency modulation
[AD-A086567] N80-30806
Use of integrated optics for analog data signal conditioning aboard spacecraft
[LCR-79-108/R/G5] N80-31203
ANALOG CIRCUITS
Use of integrated optics for analog data signal conditioning aboard spacecraft
[LCR-79-108/R/G5] N80-31203
ANALYSIS (MATHEMATICS)
An analytical solution of lift loss for a round planform with a central lifting jet
[AD-A086669] N80-30276
Studies of continuous chromatographic reactors N80-30457
Interaction between a parallel-plate EMP simulator and a cylindrical test object
[AD-A086815] N80-30597
Excitation of the parallel-plate section of a bounded wave EMP simulator by a conical transmission line
[AD-A086812] N80-30600
Techniques of analysis of load-displacement records by j-integral methods N80-30778
Analysis of human auditory brainstem responses for complex stimuli N80-31034
ANALYSIS OF VARIANCE
Exact two-sided confidence intervals on nonnegative linear combination of variance
[AD-A087052] N80-31120
ANALYTIC FUNCTIONS
On the optimality of axiomatic constraints for pion pion scattering: The case of the lower bounds
[PM/79/16] N80-31175
ANCHORS (FASTENERS)
Mooring dynamics: Computer models and experiments at a sixty foot scale
[AD-A086854] N80-30565
ANGIOGRAPHY
Ultrasonics in medicine. Citations from the NTIS data base
[PB80-810922] N80-31037
ANGLES (GEOMETRY)
The calibration of angle blocks by intercomparison
[PB80-182132] N80-30578

ANGULAR MOMENTUM
Phenomena at very high spins
[LBL-10645] N80-31184
ANGULAR RESOLUTION
Radar backscatter study of sea ice
[AD-A087032] N80-30618
ANISOTROPIC FLUIDS
Liquid crystals (nematic liquids)
[RAE-LIB-TRANS-2020] N80-31241
ANNUAL VARIATIONS
Soil moisture in relation to geologic structure and lithology, northern California
[E80-10298] N80-30865
ANNULAR DUCTS
The annular heat pipe operating limit equations and chemical reactor application N80-30674
ANOMALIES
Study of elf propagation anomalies as related to improved knowledge of electron density profiles produced by energetic particle precipitation
[AD-A087255] N80-30619
ANTARCTIC REGIONS
Radio-echo sounding in the Allan Hills, Antarctica, in support of the meteorite field program
[AD-A086858] N80-30879
ANTENNA ARRAYS
Edge effects in low sidelobe array antennas
N80-30582
Experimental validation of the antenna pattern distortion computer program: DISTORT (UHF antennas)
[AD-A086330] N80-30601
ANTENNA DESIGN
Study and development of a slotted waveguide element in an antenna array --- for a synthetic aperture radar
[ESA-CR(P)-1286] N80-30626
Solar power satellite offshore rectenna study
[NASA-CR-161543] N80-30891
ANTENNA RADIATION PATTERNS
Pattern analysis of a horn antenna in the presence of obstacles
[AD-A086426] N80-30590
Airborne antenna pattern code user's manual
[AD-A086331] N80-30591
Experimental validation of the antenna pattern distortion computer program: DISTORT (UHF antennas)
[AD-A086330] N80-30601
Theoretical antenna analysis
[AD-A086703] N80-30614
An experimental investigation of the King surface current probing technique in a transient application
[AD-A087203] N80-30615
Fundamentals of a theory for conformal antennas
[REPT-2-79] N80-30627
ANTENNAS
New hardware for tethered balloons
[AD-A086838] N80-30280
ANTIMATTER
Soft CP violation and the global matter-antimatter symmetry of the universe
[NASA-TM-80730] N80-31290
ANTISUBMARINE WARFARE
Sea king Mk. 50 helicopter flight control system: A mathematical model of the AFCS (ASW) mode
[AD-A086869] N80-30318
APPLICATIONS OF MATHEMATICS
On matched asymptotic expansions and the calculus of variations
[AD-A086807] N80-31098
APPROPRIATIONS
NASA authorization for fiscal year 1981. Part 4: Index
[GPO-65-701] N80-31266
Department of Housing and Urban Development independent agencies appropriation bill, 1981
[S-96-926] N80-31267
APPROXIMATION
Stability of diced systems
[AD-A086685] N80-31104
High order time setting methods for nonlinear evaluation equations
[BNL-27011] N80-31123
High-order curved finite elements
[KAPL-4134] N80-31125
Dichotomies for band matrices
[AD-A086373] N80-31148
What is the main diagonal of a biinfinite band matrix?
[AD-A086366] N80-31150
Electron ionization cross sections in the distorted-wave approximation
[AD-A087210] N80-31167
AQUIFERS
Experimental study of the storage of thermal energy in confined aquifers
[ORNL/SUB-7338/1] N80-30944
ARC WELDING
The effects of titanium on submerged-arc weld metal N80-30748
ARCHITECTURE
Activities in the building trade industry in 1978
[CSTB-198] N80-30572
A Three-Dimensional Stability Analysis/Design program (3DSAD). Report 1. General geometry module
[AD-A087074] N80-30807
ARCHITECTURE (COMPUTERS)
A statement oriented data flow processor
N80-31051
Handbook of procedures for estimating computer system sizing and timing parameters. Volume 1: Procedures and techniques
[AD-A086444] N80-31059
ARCTIC OCEAN
Correlation of under-ice roughness with satellite and airborne thermal infrared data --- Beaufort Sea and Arctic Ocean pack ice
[AD-A085512] N80-30880
ARGON PLASMA
Effective collision frequency and electron temperature in a weakly ionized argon plasma
[MBB-UA-498-79OE] N80-31225
ARIZONA
Investigation of the application of HCMM thermal data to snow hydrology --- Salt-Verde watershed, Arizona and the Sierra Nevada Mountains, California
[E80-10297] N80-30864
ARKANSAS
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
ARMATURES
Research and development of concept leading to an automotive alternator with significantly improved efficiency and weight
[COO-50042-1] N80-30654
ARMOR
The psychomotor performance of men and women wearing two types of body armor
[AD-A086742] N80-31040
AROMATIC COMPOUNDS
Determination of aromaticity of fuels and lubricant basestocks by ultraviolet spectroscopy
[AD-A086654] N80-30461
Analytical techniques for aromatic components in aircraft
[AD-A086343] N80-30536
ARRAYS
Array gain improvement by selective sensor exclusion N80-31154
ARTIFICIAL SATELLITES
Artificial satellites, list for 1957 to 1976
[AERONOMICA-ACTA-F-28-1979] N80-30353
ASBESTOS
Proceedings of the Conference on Environmental Toxicology
[AD-A086341] N80-30958
ASHES
Processes to increase utilization of power solid wastes
[ISM-245] N80-30929
ASPECT RATIO
Large aspect ratio Tokamak study
[CONF-791102-156] N80-31213
ASPHALT
Use of fabrics and other measures for retarding reflective cracking of asphaltic concrete overlays
[AD-A085851] N80-30567
ASTROMETRY
An astronomical glossary
[AD-A084445] N80-30805
Hipparcos payload study, volumes 1 and 2
[REPT-60/890] N80-31286
Hipparcos. Spacecraft design and development
[ESA-PF-616] N80-31287
ASTRONAVIGATION
STS-1 low-speed ground navigation console procedures
[NASA-TM-81134] N80-30370
ASTRONOMICAL MODELS
Quasi-simultaneous observations of the BL Lac object MK 501 in X-ray, UV, visible, IR and radio frequencies
[NASA-TM-81985] N80-31285
ASTRONOMICAL OBSERVATORIES
Hipparcos payload study, volumes 1 and 2
[REPT-60/890] N80-31286
Hipparcos. Spacecraft design and development
[ESA-PF-616] N80-31287
ASTRONOMICAL PHOTOGRAPHY
An astronomical glossary
[AD-A084445] N80-30805
ASTRONOMICAL PHOTOMETRY
Observations and interpretation of the permitted emission line spectra of quasi-stellar objects
N80-31281
ASTRONOMICAL SPECTROSCOPY
X-ray astronomical spectroscopy
[NASA-TM-80737] N80-31284
ASTROPHYSICS
The telecommunications and data acquisition report
[NASA-CR-163431] N80-30319
ASYMPTOTES
Convergence of progressively censored likelihood ratio processes in life-testing
[AD-A087057] N80-31138
ASYMPTOTIC METHODS
Interacting inviscid and laminar viscous flow, and some aspects of their stability N80-30679
Asymptotic properties of solutions of nonlinear abstract Volterra equations
[AD-A086387] N80-31113
Analytic approaches to atomic response properties
N80-31159
ASYMPTOTIC SERIES
On matched asymptotic expansions and the calculus of variations
[AD-A086807] N80-31098
On multiple solutions of singularly perturbed systems in the conditionally stable case
[AD-A087049] N80-31119
Waves, caustics and Thom's theorem
[AD-A086974] N80-31122
ATLANTIC OCEAN
South Atlantic OCS physical oceanography, volume 2 --- monitoring ocean currents and sea states to assess effects of oil and gas activities on the environment
[PB80-181555] N80-31026
South Atlantic OCS physical oceanography, volume 3 --- monitoring ocean currents and sea states to assess the environment effects of oil and gas activities
[PB80-181563] N80-31027
ATMOSPHERIC ATTENUATION
Study of the atmospheric effects on the radiation detected by the sensor aboard orbiting platforms (ERTS/LANDSAT) --- Ribeirao Preto and Brasilia, Brazil
[E80-10259] N80-30842
ATMOSPHERIC BOUNDARY LAYER
Project PHOENIX. The September 1978 field operation
[PB80-180433] N80-31022
ATMOSPHERIC CHEMISTRY
Project PHOENIX. The September 1978 field operation
[PB80-180433] N80-31022
ATMOSPHERIC DENSITY
Condensed storage of diffusion equation solutions for atmospheric density model computations
[AD-A086868] N80-30986
Satellite density gauge instrumentation program
[AD-A086809] N80-30987
ATMOSPHERIC HEAT BUDGET
Aerosols and climate
[CONF-800309-5] N80-31006

ATMOSPHERIC MODELS
Users manual for DWNWND: An interactive Gaussian plume atmospheric transport model with eight dispersion parameter options
[ORNL/TM-6874] N80-30962
Report of the NCAQ Atmospheric Dispersion Modeling Panel. Volume 1: Recommendations
[PB80-174964] N80-30975
Condensed storage of diffusion equation solutions for atmospheric density model computations
[AD-A086868] N80-30986
The application of measures of synoptic similarity to the evaluation and development of atmospheric prediction models, task 2
[AD-A086034] N80-30998
Planetary boundary layer parameterization for tropical cyclones based on generalized similarity theory
[AD-A086781] N80-31004
Parameterization of extended cloudiness and radiation for climate models N80-31009

ATMOSPHERIC MOISTURE
Mission operation report. Geostationary operational satellite GOES-D
[NASA-TM-81123] N80-30354

ATMOSPHERIC PHYSICS
Project PHOENIX. The September 1978 field operation
[PB80-180433] N80-31022

ATMOSPHERIC REFRACTION
Optical turbulence forecasting: A tutorial
[AD-A086863] N80-31005

ATMOSPHERIC SCATTERING
Multiple scattering in clouds
[AD-A087043] N80-30616
The contribution of the diffuse light component to the topographic effect on remotely sensed data
[NASA-TM-80728] N80-30876
Polarimetry of Jupiter at large phase angles
N80-31293

ATMOSPHERIC TEMPERATURE
Mission operation report. Geostationary operational satellite GOES-D
[NASA-TM-81123] N80-30354
As-built design specification for phase 3 model areas added to the monthly data base of the US --- Montana, South Dakota, Oklahoma, Nebraska, and Colorado
[E80-10263] N80-30846

ATMOSPHERIC TURBULENCE
Optical turbulence forecasting: A tutorial
[AD-A086863] N80-31005
Study of a pulsed coherent lidar for crosswind sensing
[PB80-181027] N80-31013

ATOM CONCENTRATION
Comparison of atomic concentration profiles, defect density profiles, and types of microstructural defects in GaAs annealed after implantation with Be
N80-31233

ATOMIC COLLISIONS
Theoretical studies of molecular collision processes. 1: Two-potential approach for electron-molecular scattering. 2: Three-dimensional quantum mechanical study on atom-molecule reactive collision with rotationally pre-excited target molecule N80-31163

ATOMIC EXCITATIONS
Studies of laser selective excitation of atoms
[AD-A086497] N80-30734
Inversion of spectral lineshapes to yield collisional rate constants
[AD-A086347] N80-30735

ATOMIC PHYSICS
Analytic approaches to atomic response properties
N80-31159

ATOMIC SPECTRA
Symposium on Atomic Spectroscopy
[DOE/ER-10460/1] N80-30467
Studies of laser selective excitation of atoms
[AD-A086497] N80-30734

ATOMIC STRUCTURE
Analytic approaches to atomic response properties
N80-31159
Electron response theory of lattice vibrations: Emergence of concepts and a glance at the future
[LA-UR-80-1000] N80-31252
Electronic structure studies of metal hydrides
[ISM-265] N80-31256

ATTITUDE (INCLINATION)
Crash tests of four identical high-wing single-engine airplanes
[NASA-TP-1699] N80-30296

ATTITUDE CONTROL
The USAF stability and control digital datcom. Volume 1: User's manual
[AD-A086557] N80-30315
The USAF stability and control digital Datcom. Volume 2: Implementation of Datcom methods
[AD-A086558] N80-30316
The USAF stability and control digital Datcom. Volume 3: Plot module
[AD-A086559] N80-30317
A study of a space communication system for the control and monitoring of the electric distribution system. Volume 2: Supporting data and analyses
[NASA-CR-163478] N80-30587

AUDIOMETRY
Analysis of human auditory brainstem responses for complex stimuli N80-31034

AUDITORY STIMULI
Analysis of human auditory brainstem responses for complex stimuli N80-31034

AURORAS
Comparison of results from the S3-2 satellite and the Chatanika radar in an early morning aurora
[AD-A086861] N80-30983
Influence of magnetic shear on the current convective instability in the diffuse aurora
[AD-A086789] N80-30984
Auroral electrodynamics I. 1: Preliminary electron density profile. 2: Vehicle potential changes during an active beam experiment
[AD-A086728] N80-30989
Sounding rocket program aeronomy. Project Upper Polar Atmosphere. Supra-thermal auroral particle observations
[BMFT-FB-W-79-03] N80-30992

AUSTENITE
Consequences of the re-transformation of precipitated austenite in ferritic cryogenic steels
[LBL-10128] N80-30508

AUSTENITIC STAINLESS STEELS
A STEM analysis of two rapidly solidified stainless steels
[AD-A085887] N80-30485
The role of hydrogen in the stress corrosion failure of high strength Al-Zn-Mg alloys and sensitized austenitic stainless steels
[AD-A086427] N80-30494

AUSTRALIA
Submicrosecond comparisons of time standards with the Navigation Technology Satellites (NTS)
[AD-A086780] N80-30564
Heat capacity mapping mission project HCM-051 --- East Australian Current and the Tasman Front
[E80-10278] N80-30850

AUTOCORRELATION
A search for the persistent velocity autocorrelation in hydrogen by dense plasma decay N80-31205

AUTOMATIC FLIGHT CONTROL
Sea king Mk. 50 helicopter flight control system: A mathematical model of the AFCS (ASW) mode
[AD-A086969] N80-30318

AUTOMATIC PILOTS
Sea king Mk. 50 helicopter flight control system: A mathematical model of the AFCS (ASW) mode
[AD-A086969] N80-30318

AUTOMOBILE ENGINES
Study of hydrogen-powered versus battery-powered automobiles
[ATR-79(7759)-1-VOL-1] N80-31271

AUTOMOBILE FUELS
Evaluation of XRG no. 1: A fuel additive
[PB80-180672] N80-30559

AUXILIARY POWER SOURCES
Pacific Missile Test Center energy projects. Summary of projects, contributions, and plans
[AD-A086196] N80-30903
Performance data for a lithium-silicon/iron disulfide, long-life, primary thermal battery
[SAND-79-2148C] N80-30933

AVIONICS
Nonoperating failure rates for avionics study
[AD-A087048] N80-30309
Feasibility study for integrated flight trajectory control fighter
[AD-A084784] N80-30314
STS-2 sail non-avionics subsystems math model requirements
[JSC-16748] N80-30369

AXIAL LOADS
Large deflection response of an elliptical section ring to disturbed axial load N80-30781

AXIAL STRAIN
On the thermomechanical response of 3.5 Ni-Mo-V alloy steel and type 304 stainless steel undergoing cyclic uniaxial inelastic deformation N80-30776

AXIOMS
On the optimality of axiomatic constraints for pion pion scattering: The case of the lower bounds
[PM/79/16] N80-31175

AXISYMMETRIC BODIES
RITZ 2 software: Dynamic longitudinal analysis using a variational method for slender bodies of revolution containing liquids
[CNES-NT-91] N80-30361
A computer program for transient and axisymmetric ablation, conduction and radiation
[SNIAS-792-422-120] N80-30705
Analysis of scattering and radiation of acoustic waves from an axisymmetric structure in a infinite fluid medium
[AD-A086587] N80-31157

AXISYMMETRIC FLOW
Computer analysis of the base-flow region of a rocket exhaust N80-30431

B

BACKSCATTERING
Radar backscatter study of sea ice
[AD-A087032] N80-30618

BALL BEARINGS
Vacuum tests on a rotary/linear sleeve bearing
[ESA-ESTL-42] N80-30761

BALLISTIC MISSILES
Single stage liquid propulsion systems: Specific optima for NRBM vehicles N80-30410
Advances in propellant propulsion technology for intermediate range ballistic missile N80-30411

BALLISTIC TRAJECTORIES
Effect of near-zero spin on instability of controlled projectiles in ascending or descending flight
[AD-A086775] N80-30278
Simulant reaction temperature measurement via telemetry for the XM736 at charge 9
[AD-A086774] N80-30374

BALLISTICS
Effect of near-zero spin on instability of controlled projectiles in ascending or descending flight
[AD-A086775] N80-30278
Development and testing of two-stage hybrid launcher
[AD-A086268] N80-30356

BALLOON FLIGHT
Payloads used in first three data-gathering BAMM flights
[AD-A086839] N80-30275

BALLOON SOUNDING
Payloads used in first three data-gathering BAMM flights
[AD-A086839] N80-30275

BALLOON-BORNE INSTRUMENTS
Payloads used in first three data-gathering BAMM flights
[AD-A086839] N80-30275

BANACH SPACE
Foundations of feedback theory for nonlinear dynamical systems
[AD-A086578] N80-31091
Approximation of the spectrum of closed operators, the determination of normal modes of a rotating basin
[AD-A086661] N80-31116
Banach space shift operators N80-31145
Notes on generalized boundary value problems Banach spaces
[AD-A086371] N80-31149

BAND STRUCTURE OF SOLIDS
Electronic band structure and optical properties of the cubic Sc, Y and La hydride systems N80-31236

BANDPASS FILTERS
Surface acoustic wave microwave oscillator and frequency synthesizer
[AD-A086336] N80-30649

BANDWIDTH
Measurement of optical fiber bandwidth in the time domain
[PB80-177421] N80-31204
BARLEY
The integrated analysis procedure for identification of spring small grains and barley --- Great Plains Corridor: U.S. and Canada
[E80-10274] N80-30847
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
BARRIERS
Laser optical appraisal and design of a PRIME/Rover interface
[NASA-CR-163508] N80-31193
BASALT
Studies to assess the feasibility of storing nuclear waste in Columbia plateau basalts
[RHO-BWI-SA-19] N80-31183
BASE FLOW
Computer analysis of the base-flow region of a rocket exhaust N80-30431
BASE PRESSURE
Mach 3 hydrogen external/base burning N80-30413
BATCH PROCESSING
Segmentation, dynamic storage, and variable loading on CDC equipment
[NASA-CR-3315] N80-31071
Algorithms analysis of a Markovian model for a system with batch and interactive jobs
[AD-A086711] N80-31106
BAYES THEOREM
Preposterior analysis of Bayes estimators of mean life, 1
[AD-A086771] N80-31135
BEACONS
Spatial acquisition of optical sources in the presence of intense interference N80-30337
BEAM CURRENTS
Intense pulsed ion beams for fusion applications
[SAND-80-0402] N80-31185
BEAM SPLITTERS
The spectral characteristics of metal film beam splitters
[AD-A086419] N80-31196
BEAMS (RADIATION)
CW and pulsed beam propagation in focusing media with random-axis misalignments N80-30584
Comprehensive description of fields in optical fibers by means of the propagating beam method
[UCRL-84219] N80-31200
Properties of ablatively accelerated targets
[AD-A086727] N80-31209
BEAMS (SUPPORTS)
Laminated beams of isotropic or orthotropic materials subjected to temperature change
[AD-A087230] N80-30806
BEAUFORT SEA (NORTH AMERICA)
Correlation of under-ice roughness with satellite and airborne thermal infrared data --- Beaufort Sea and Arctic Ocean pack ice
[AD-A085512] N80-30880
BEDS (PROCESS ENGINEERING)
Second phase of a coalbed methane extraction and utilization program
[AESD-TM-3026] N80-30556

Ultrasonic in medicine. Citations from the Engineering Index data base
[PB80-810930] N80-31038
BILLETS
Curing stress fields in involute exit cones
[AD-A086404] N80-30803
BIMETALS
Torsional waves in a bimetallic cylinder. Part 1: Axially homogeneous case
[AD-A085822] N80-30793
BINARY ALLOYS
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 1: Formulation and analysis
[NASA-CR-161540] N80-30479
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 2: Software documentation
[NASA-CR-161541] N80-30480
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 3: Operating manual
[NASA-CR-161542] N80-30481
BINARY STARS
A photometric investigation of possible binary occurrence in the central stars of seventeen planetary nebulae N80-31280
BIOASTRONAUTICS
Thermoregulation in rats: Effects of varying duration of hypergravic fields
[NASA-CR-163481] N80-31030
BIOMASS ENERGY PRODUCTION
Production of sugarcane and tropical grasses as a renewable energy source
[ORO-5912-T3] N80-30543
Research and evaluation of biomass resources/conversion/utilization systems (market/experimental analysis for development of a data base for a fuels from biomass model)
[DOE/ET-20611/11] N80-30552
BIOMETRICS
Ultrasonic in medicine. Citations from the Engineering Index data base
[PB80-810930] N80-31038
BIOSPHERE
Carbon Dioxide Effects Research and Assessment PRogram: The role of Temperate Zone Forests in the World Carbon Cycle: Problem Definition and Research Needs
[CONF-7903105] N80-30959
BIREFRINGENCE
Theory of the longitudinal free electron laser, 1: A theoretical model of the linear electrooptic effect, 2 N80-30723
BITUMENS
Applied research and evaluation of process concepts for liquefaction and gasification of western coals
[FE-2006-17] N80-30549
BL LACERTAE OBJECTS
Variable X-ray spectra of BL Lac objects: HEAO-1 observations of PKS 0548-322 and 2A 1219+305
[NASA-TM-80700] N80-31283
Quasi-simultaneous observations of the BL Lac object MK 501 in X-ray, UV, visible, IR and radio frequencies
[NASA-TM-81985] N80-31285
BLOCKS
The calibration of angle blocks by intercomparison
[PB80-182132] N80-30578
BLOOD FLOW
Topographical simulation of the blood vessels of the human bulbar conjunctiva and application to pressure-flow relationships N80-31033
BLOOD VESSELS
Topographical simulation of the blood vessels of the human bulbar conjunctiva and application to pressure-flow relationships N80-31033
BLUNT BODIES
Experimental study of three-dimensional shock wave turbulent boundary layer interaction: Scaling of sharp and blunt fin-induced flowfields
[AD-A086875] N80-30277
BOHR THEORY
Electronic stopping power calculations for all heavy ions at low velocity in all elements
[AD-A087107] N80-31166
BOILERS
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 1: Coal-fired nocogeneration process boiler, section A
[NASA-CR-159770-PT-1-A] N80-30888
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 1: Coal-fired nocogeneration process boiler, section B
[NASA-CR-159770-PT-1-B] N80-30889
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 2: Residual-fired nocogeneration process boiler
[NASA-CR-159770-PT-2] N80-30890
BOLTS
Evaluation of titanium bolts coated with ivadize aluminum and Kalgard 2240 C in torque tension tests
[SPS-5254] N80-30512
BORON HYDRIDES
Synthesis of CMP beginning with sodium borohydride N80-30407
Pyrolysis of (C2H5)4NBH4 to (C2H5)4N 2B10H10: Use of a liquid heat transfer medium N80-30408
BOUNDARY LAYER COMBUSTION
Structure and pathology of the steady state, stability and dynamics of the combustion of an impervious carbon particle N80-30455
BOUNDARY LAYER FLOW
A nozzle boundary layer model including the subsonic sublayer usable for determining boundary layer effects on plume flowfields N80-30428
Laminar natural convection along vertical corners and rectangular ducts N80-30675
BOUNDARY LAYER STABILITY
Stability of boundary-layer flows over curved walls N80-30668
BOUNDARY LAYERS
Planetary boundary layer parameterization for tropical cyclones based on generalized similarity theory
[AD-A086781] N80-31004
BOUNDARY VALUE PROBLEMS
Finite element modeling for convection-diffusion problems
[AD-A086777] N80-30698
An integral bound on the strain energy for the traction problem in nonlinear elasticity with small strains
[AD-A086377] N80-30802
An adaptive grid finite element method for initial-boundary value problems N80-31095
Convergence estimates for semidiscrete parabolic equation approximations
[AD-A086369] N80-31099

On the maximum principle for pseudoparabolic equations
[AD-A086380] N80-31100
Regularizing effects of homogeneous evolution equations
[AD-A086561] N80-31108
A singular perturbations approach to reduced-order modeling and decoupling for large scale linear systems
[AD-A087050] N80-31118
On multiple solutions of singularly perturbed systems in the conditionally stable case
[AD-A087049] N80-31119
Notes on generalized boundary value problems Banach spaces
[AD-A086371] N80-31149
Collisional plasma transport: Two dimensional scalar formulation of the initial boundary value problem and quasi one dimensional models
[REPT-79-120] N80-31223

BRAIN STEM
Analysis of human auditory brainstem responses for complex stimuli N80-31034

BRANCHING (MATHEMATICS)
Occurrences in a branching process --- point process analysis of population growth N80-31129

BRAZIL
Evaluating the reforested area for the municipality of Buri by automatic analysis of LANDSAT imagery --- Sao Paulo, Brazil
[E80-10258] N80-30841
Study of the atmospheric effects on the radiation detected by the sensor aboard orbiting platforms (ERTS/LANDSAT) --- Ribeirao Preto and Brasilia, Brazil
[E80-10259] N80-30842
Use of LANDSAT data for estimating the area of sugar cane in the state of Sao Paulo --- Brazil
[E80-10260] N80-30843
Utilization of LANDSAT data to inventory the sugar cane in the state of Sao Paulo
[E80-10261] N80-30844

BRAZING
Chem-braze abradable seal attachment
[AD-A086872] N80-30525

BREADBOARD MODELS
Study and development of a slotted waveguide element in an antenna array --- for a synthetic aperture radar
[ESA-CR(P)-1286] N80-30626

BREMSSTRAHLUNG
Radiation dose in satellites at 1111 kilometers with an inclination of 63 deg
[AD-A086779] N80-30358

BRIDGES (STRUCTURES)
Measuring the rate of corrosion of reinforcing steel in concrete --- nondestructive measuring of bridge deck deterioration
[PB80-170848] N80-30513

BRIDGMAN METHOD
Growth and application of cadmium telluride
[AD-A086991] N80-31250

BRIGHTNESS TEMPERATURE
A labeling technology for LANDSAT imagery
[E80-10293] N80-30861

BROADBAND
Wideband beamformer to control a 38 element sonar antenna
[REPT-5/79] N80-30629

BROADCASTING
UHF task force: Executive overview and summary
[PB80-177280] N80-30641

BRUSHES (ELECTRICAL CONTACTS)
Further fabrication studies of dry lubricated slip ring brush materials for satellite applications
[AERE-G-1480] N80-30664

BUBBLES
Bubble dynamics in structural foam processing
N80-30677
Marangoni bubble motion in zero gravity
N80-30682
Fundamental investigation of interaction forces in bubble swarms and application to the design of centrifugal separators
[WTHD-115] N30-30706

BUCKLING
On the propagating buckle and its arrest --- offshore pipelines N80-30779

BUILDINGS
Research in building construction and materials for 1978
[CSTB-192] N80-30571
Design and construction of large-panel concrete structures. Report 6: Design methodology
[PB80-189137] N80-30577

BUOYS
Mooring dynamics: Computer models and experiments at a sixty foot scale
[AD-A086854] N80-30565

BURNING RATE
Design and evaluation of progressively burning pyrotechnic formulations
[SAND-80-0355C] N80-30553

BURNS (INJURIES)
Telemetry system for evaluation of burn protection in full-scale fuel fire manikin exposures
[AD-A086700] N80-30375
Technique and measurement of heat flux and flame temperature in rocket plume exposures
[AD-A086533] N80-30432

BUTENES
Molecular reorientations in liquid crystals. The 13 C -/1H/ nuclear Overhauser effects in liquid MBBA
[ISS-P-79/4] N80-31259

BUTTONS
Keyboards and touch controls: An evaluation of reliability and constructional principles for 11 different types
[ECR-90] N80-30660

BYPASSES
Evaluation of the Ram-Jet device, a PCV air bleed
[PB80-170657] N80-30964

C

CABLES
Investigation of helicopter wire strike protection concepts
[AD-A086857] N80-30285

CABLES (ROPES)
Mooring dynamics: Computer models and experiments at a sixty foot scale
[AD-A086854] N80-30565

CADMIUM SULFIDES
Impurity studies in the single crystal cadmium sulfide
[AD-A086741] N80-31248

CADMIUM TELLURIDES
Controlled cadmium telluride thin films for solar cell applications (emerging materials systems for solar cell applications)
[DOE/ET-23023/T3] N80-30921
Growth and application of cadmium telluride
[AD-A086991] N80-31250

CALCULUS OF VARIATIONS
On matched asymptotic expansions and the calculus of variations
[AD-A086807] N80-31098

CALIBRATING
Calibration validation for the GEOS-3 altimeter
[NASA-TM-80710] N80-30377
Sub arc second sensor calibration
[OAT-586] N80-30378
The calibration of angle blocks by intercomparison
[PB80-182132] N80-30578
Calibration of a strain-gauged CT4-A undercarriage
[AD-A086965] N80-30718

CALIFORNIA
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
Investigation of the application of HCMM thermal data to snow hydrology --- Salt-Verde watershed, Arizona and the Sierra Nevada Mountains, California
[E80-10297] N80-30864
Soil moisture in relation to geologic structure and lithology, northern California
[E80-10298] N80-30865

CAMBERED WINGS
Combined linear theory/impact theory method for analysis and design of high speed configurations
[NASA-CR-3314] N80-30273

CANADA
Submicrosecond comparisons of time standards with the Navigation Technology Satellites (NTS)
[AD-A086780] N80-30564
The integrated analysis procedure for identification of spring small grains and barley --- Great Plains Corridor: U.S. and Canada
[E80-10274] N80-30847

CANCELLATION CIRCUITS
Adaptive time delay circuitry for interference cancellation systems
[AD-A086326] N80-30605

CANOPIES (VEGETATION)
Light reflectance, transmittance, and utilization within a vegetative canopy --- Texas
[E80-10282] N80-30851
Grizzly bear habitat analysis. Section 3: LANDSAT-1 multispectral imagery and computer analysis of grizzly bear habitat --- Slategoat, Scapegoat and Danaher areas, Montana
[NASA-CR-163382] N30-30867

CAPACITORS
Compressed magnetic flux amplifier with capacitive load
[SAND-79-2339] N80-30657

CARBON
Structure and pathology of the steady state, stability and dynamics of the combustion of an impervious carbon particle N80-30455

CARBON CYCLE
Carbon Dioxide Effects Research and Assessment PRogram: The role of Temperate Zone Forests in the World Carbon Cycle: Problem Definition and Research Needs
[CONF-7903105] N80-30959

CARBON DIOXIDE
Oxygen production for interplantary return missions N80-30399
High resolution band models: Application to the 4.3 micrometer CO2 band N80-30425
Consequences of a hypothetical world climate change produced by increased atmospheric carbon dioxide
[DOE/EV-10281/1] N80-31007
High-temperature, high-resolution measurements of CO2 in the region of 2200 to 2400 CM-1
[AD-A087234] N80-31169

CARBON DIOXIDE CONCENTRATION
Carbon Dioxide Effects Research and Assessment PRogram: The role of Temperate Zone Forests in the World Carbon Cycle: Problem Definition and Research Needs
[CONF-7903105] N80-30959

CARBON DIOXIDE LASERS
DIAL with heterodyne detection including speckle noise: Aircraft/shuttle measurements of O3, H2O, and NH3 with pulsed tunable CO2 lasers
[NASA-TP-1725] N80-30717

CARBON MONOXIDE
Catalytic oxidation of carbon monoxide at high humidity and low temperature
[AD-A087206] N80-30465

CARBON STEELS
Void nucleation in spheroidized steels during tensile deformation
[COO-3084-77] N80-30510
Fatigue and fracture of ultrahigh strength steel and titanium roll bonded and diffusion bonded laminates
[AD-A086511] N80-30796

CARBONATES
Transition metal-promoted oxidative fusion with carborane and borine anions. Synthesis of C4B sub n (n = 8-11) carborane systems in the presence of B5H8(-) or B-3H8(-) ions
[AD-A087252] N80-30463

CARDIOVASCULAR SYSTEM
An investigation of cardiac threshold variability relative to stimulus shape and respiratory cycle
N80-31032

CARRIER FREQUENCIES
Power line carrier radiation and the low-frequency aeronautical radio compass
[AD-A087126] N80-30293
Distribution of packet delay and interdeparture time in carrier sense multiple access
[AD-A086446] N80-30589

CARRIER MOBILITY
Electrical characterization of germanium implanted gallium arsenide
[AD-A086652] N80-31243

CASE HISTORIES
Mitigation of noise impact via operational changes
[CERL-TR-N-76] N80-31156
CASTING
Structure and deformation characteristics of rheocast metals
[AD-A086469] N80-30442
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 1: Formulation and analysis
[NASA-CR-161540] N80-30479
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 2: Software documentation
[NASA-CR-161541] N80-30480
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 3: Operating manual
[NASA-CR-161542] N80-30481
CATALYSIS
Materials for fuel cells
[PB80-182355] N80-30955
CATALYSTS
Alloy catalysts with monolith supports for methanation of coal-derived gases
[FE-2729-8] N80-30541
CATALYTIC ACTIVITY
Formation and control of fuel-nitrogen pollutants in catalytic combustion of coal-derived gases
[FE-2762-7] N80-30466
CAUSTICS (OPTICS)
Waves, caustics and Thom's theorem
[AD-A086974] N80-31122
CAVITATION FLOW
Hydrodynamics of turbomachines
[AD-A086873] N80-30566
CAVITIES
Growth of grain boundary cavities under applied stress and internal pressure
[COO-2172-26] N80-31247
CELESTIAL MECHANICS
An astronomical glossary
[AD-A084445] N80-30805
CELLS (BIOLOGY)
A paraboloidal flow cytometer for improved fluorescence analysis of single cells N80-31029
CENSORED DATA (MATHEMATICS)
Convergence of progressively censored likelihood ratio processes in life-testing
[AD-A087057] N80-31138
CENSUS
Mapping urbanized area expansion through digital image processing of LANDSAT and conventional data --- Orlando, Florida; Seattle, Washington; and Boston, Massachusetts
[E80-10301] N80-30868
CENTER OF GRAVITY
Center of gravity
[AD-A086961] N80-30568
CENTRAL PROCESSING UNITS
Design considerations for data-flow database machines
[AD-A086374] N80-31056
CENTRIFUGES
Novel approach to the computation of axisymmetric countercurrent patterns in gas centrifuges
[LA-8258-MS] N80-30703
CENTRIFUGING
Fundamental investigation of interaction forces in bubble swarms and application to the design of centrifugal separators
[WTHD-115] N80-30706
CERAMIC COATINGS
Advanced electron beam techniques for metallic and ceramic protective coating systems --- modifying gas turbine and diesel engines for alternative fuel use
[LBL-10520] N80-30449
CERAMICS
Evaluation and prediction of long term space environmental effects on non-metallic materials
[NASA-CR-161545] N80-30436
Fracture studies of high temperature ceramics
[AD-A086653] N80-30524
Localized impact damage in ceramics. Localized impact damage in zinc sulfide crack growth from small flaws in larger grains in alumina
[AD-A085874] N80-30790
CERENKOV RADIATION
Cerenkov radiation in dielectric-loaded waveguides
N80-30581
CETANE
Autoignition characteristics of aircraft-type fuels
[NASA-CR-159886] N80-30535
CHANNEL CAPACITY
Multi-user Time Division Multiple Access (TDMA) and Spread Spectrum (SS)-TDMA
[ESA-CR(P)-1324] N80-30633
CHANNEL FLOW
Nonsymmetric split of flow during cocurrent upflow at air-water mixtures through symmetric bifurcations
N80-30678
CHANNELS (DATA TRANSMISSION)
Collision-resolution algorithms and random-access communications
[AD-A086695] N80-30613
CHARGE CARRIERS
Photoconductivity in polyacetylene
[AD-A086942] N80-30527
CHARGE COUPLED DEVICES
Introduction to the study of noise in charged coupled devices
[CNES-NT-90] N80-30631
Evaluation of radiation effects in the MA328 CCD image sensor
[SIRA-6/5309/00] N80-30662
CHARGE EXCHANGE
Differential charge transfer to the continuum by ions in atomic hydrogen
[DOE/ER-10512/T1] N80-31172
CHEMICAL ANALYSIS
Analytical techniques for aromatic components in aircraft
[AD-A086343] N80-30536
Survey analysis of phenolic compounds in industrial effluents by gas chromatography mass spectrometry
[PB80-177793] N80-30969
A paraboloidal flow cytometer for improved fluorescence analysis of single cells N80-31029
Study of a chemical analyzer of the condensables in the atmosphere of Venus by attenuated total IR-reflection
[ANL-TRANS-1184] N80-31295
CHEMICAL BONDS
The molybdenum-molybdenum triple bond. 7.1 bis (1,3-Di-p-tolytriazenido) tetrakis (dimethylamido) dimolybdenum
[AD-A086239] N80-30486
Theoretical and experimental investigation of bonding of simple ligands to metal complexes as reflected in their photoelectron spectra N80-31229
CHEMICAL ELEMENTS
Electronic stopping power calculations for all heavy ions at low velocity in all elements
[AD-A087107] N80-31166
CHEMICAL ENERGY
Simultaneous photoproduction of hydrogen and oxygen by photosynthesis --- to convert solar energy into stored chemical free energy
[CONF-791072-32] N80-30550
Sulfuric acid and water chemical heat pump/chemical energy storage program, phase 2-A
[SAND-78-8176] N80-30924
CHEMICAL LASERS
Energy transfer and optical spectroscopy of diatomic molecules in chemically reacting systems
[AD-A086629] N80-31165
CHEMICAL PROPERTIES
The design of a system for pre-prototype use of the chemical substance information network
[PB80-178320] N80-30438
CHEMICAL PROPULSION
Analytical investigation of two hydrogen-oxygen rocket engine systems for low-thrust application --- for orbital transfer N80-30382
LEO-to-GEO low thrust chemical propulsion
N80-30384
Fluorine-Hydrazine Propulsion Technology update
N80-30391
Modulation of a gas generator N80-30414
CHEMICAL REACTIONS
Pressure dependence of the absolute rate constant for the reaction OH + C2H2 from 228 to 413K
[NASA-TM-80743] N80-30458
Splat-quenching of zirconium alloys, with special reference to martensite and precipitate reactions
[AD-A086647] N80-30489
Cyclic fluorosilicone polymers and copolymers
[AD-A086748] N80-30519
Coal processing for fuel cell utilization. Task 11: Fluidized bed coal gasification model; data analysis and predictions
[METC-8450-T1] N80-30909
Use of organic working fluids in Rankine engines
[DOE/CS-30202/T1] N80-30917
CHEMICAL REACTORS
Studies of continuous chromatographic reactors
N80-30457
Research and evaluation of biomass resources/conversion/utilization systems (market/experimental analysis for development of a data base for a fuels from biomass model)
[DOE/ET-20611/11] N80-30552
The annular heat pipe operating limit equations and chemical reactor application N80-30674
CHEMILUMINESCENCE
Chemiluminescent reactions of selenium and tellerium with fluorine
[AD-A087202] N80-30464
Atomic and molecular processes
[AD-A086764] N80-31164
CHEMISORPTION
Adlayer effects on the surface reactivity of W(100) and Mo(100) single crystals N80-31234
CHIPS (ELECTRONICS)
Artwork analysis tools for VLSI circuits
[AD-A087040] N80-30653
CHONDRITES
Microcharacterization of interplanetary dust collected in the Earth's stratosphere N80-30976
Thermoluminescence studies of the thermal and radiation histories of chrondritic meteorites
N80-31292
CHROMATOGRAPHY
Studies of continuous chromatographic reactors
N80-30457
CHROMIUM ALLOYS
The influence of coherency strains on the elevated temperature mechanical behavior of Ni-15r-Al-Ti-Mo alloys N80-30474
CIRCUIT BOARDS
Study and evaluation of modular packaging techniques for on board data handling: Technology assessment
[ESS/SS-918] N80-30663
CIRCUIT DIAGRAMS
Wideband beamformer to control a 38 element sonar antenna
[REPT-5/79] N80-30629
CIRCUIT PROTECTION
Reliability and maintainability improvement program for the AV-8 A/TAV-8A harrier head-up display set. Volume 1: Modifications to digital display indicator IP-1351/AVQ-30(v)
[AD-A085309] N80-30306
Lightning, surge and transient protection. Citations from the NTIS data base
[PB80-810781] N80-30667
CIRCUITS
Simulation models for microwave power transistors under large signal operating conditions. Part 1: Theoretical and experimental results
[ESA-CR(P)-1336-PT-1] N80-30634
CIRCULAR CYLINDERS
Cross-flow-induced instabilities of circular cylinders
N80-30773
CIRCULATION
Mid-term progress report on the development of army Closed Cycle Circulator (CCC) system
[AD-A087219] N80-30744
CITIES
Mapping urbanized area expansion through digital image processing of LANDSAT and conventional data --- Orlando, Florida; Seattle, Washington; and Boston, Massachusetts
[E80-10301] N80-30868
CIVIL AVIATION
Minimizing the cost of operating aircraft on multistop tours N80-31140
CLASSICAL MECHANICS
On the number of periodic trajectories for a Hamiltonian flow and a convex energy surface
[AD-A086367] N80-31102
CLASSIFICATIONS
Classification with spectral-spatial-temporal prototypes
[E80-10251] N80-30834

As-built design specification for CLASY program modification
[E80-10253] N80-30836
As-built design specification for the Patterson-Pitt-Thadani minimum loss classifier
[E80-10262] N80-30845
An exploratory study to develop a cluster-based area estimation procedure --- Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863
Evaluating the use of analyst labels in maximum likelihood cluster proportion estimation
[E80-10303] N80-30870
Evaluation of Bayesian sequential proportion estimation using analyst labels
[E80-10304] N80-30871
As-built design specification of the CAMS/CAS interface tape report generation program for LACIE 8
[E80-10306] N80-30872
As-built specification for CLASSY conversion
[E80-10307] N80-30873
Analysis of scanner data for crop inventories
[E80-10308] N80-30874
Classification techniques for multivariate data analysis
[AD-A086521] N80-31114

CLEAN ENERGY
Wind power. Citations from the NTIS data base
[PB80-811433] N80-30956
Wind power. Citations from the Engineering Index data base
[PB80-811441] N80-30957

CLEANING
Development and testing of cleaning procedures and feeding systems for a field emission thruster model
[FRI-R664/3] N80-30434
Evaluation of ultrasonic cleaning systems
[GEPP-OP-501] N80-31158

CLIMATE
Climate and energy: A comparative assessment of the Satellite Power System (SPS) and alternative energy technologies
[DOE/ER-0050] N80-30914
Modeling the prospects for climatic change: Current state-of-the-art and implications
[CONF-800474-1] N80-30961
Consequences of a hypothetical world climate change produced by increased atmospheric carbon dioxide
[DOE/EV-10281/1] N80-31007

CLIMATOLOGY
Aerosols and climate
[CONF-800309-5] N80-31006
Parameterization of extended cloudiness and radiation for climate models N80-31009
Plan and basis of the World Climatology Program, 1980 to 1983
[WMO-540] N80-31010
The South Pole automatic condensation nuclei counter: Instrument details and five years of observations
[PB80-181712] N80-31014
Selective guide to climatic data sources

COAL
Formation and control of fuel-nitrogen pollutants in catalytic combustion of coal-derived gases
[FE-2762-7] N80-30466
Devolatilization kinetics and elemental release in the pyrolysis of pulverized coal N80-30533
Thermophysical properties of coal liquids
[BMI-2053] N80-30546

COAL DERIVED LIQUIDS
Partial liquefaction of coal by direct hydrogenation
[FE-2044-51] N80-30540
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes. Laboratory and pilot plant studies of the processing of SRC-1
[FE-2315-45] N80-30544
Upgrading of coal liquids: Hydrocracking of EDS process derived gas oils
[FE-2566-33] N80-30545

COAL GASIFICATION
Alloy catalysts with monolith supports for methanation of coal-derived gases
[FE-2729-8] N80-30541
Advanced coal gasification system for electric power generation
[FE-1514-97] N80-30548
Applied research and evaluation of process concepts for liquefaction and gasification of western coals
[FE-2006-17] N80-30549
Materials technology for coal-conversion processes
[ANL-80-12] N80-30551
Molten salt coal gasification process development unit
[SAN-1429-52] N80-30554
Second phase of a coalbed methane extraction and utilization program
[AESD-TM-3026] N80-30556
Coal processing for fuel cell utilization. Task 11: Fluidized bed coal gasification model; data analysis and predictions
[METC-8450-T1] N80-30909

COAL LIQUEFACTION
Partial liquefaction of coal by direct hydrogenation
[FE-2044-51] N80-30540
Upgrading of coal liquids: Hydrocracking of EDS process derived gas oils
[FE-2566-33] N80-30545
Upgrading of coal liquids for use as power generation fuels
[EPRI-AF-1225] N80-30547
Applied research and evaluation of process concepts for liquefaction and gasification of western coals
[FE-2006-17] N80-30549
Materials technology for coal-conversion processes
[ANL-80-12] N80-30551
Thermophysical properties of coal liquids
[BMI-2043] N80-30557

COAL UTILIZATION
Development of high-temperature turbine subsystem technology to a technology readiness status, phase 2
[FE-1606-86] N80-30753
Performance of a diesel engine operating on raw coal-diesel fuel and solvent refined coal-diesel fuel slurries
[CONS-3288-T6] N80-30758
Climate and energy: A comparative assessment of the Satellite Power System (SPS) and alternative energy technologies
[DOE/ER-0050] N80-30914
Processes to increase utilization of power solid wastes
[ISM-245] N80-30929
Pilot scale combustion evaluation of waste and alternate fuels, phase 3
[PB80-177413] N80-30952
Photochemical study of NOx removal from stack gases
[PB80-181274] N80-30966

COASTAL CURRENTS
Coastal upwelling ecosystems analysis. Data report: Cruise B/1, SNP-1, 7904
[PB80-132921] N80-31029

COASTAL ECOLOGY
Coastal upwelling ecosystems analysis. Data report: Cruise B/1, SNP-1, 7904
[PB80-132921] N80-31029

COASTAL RANGES (CA)
Soil moisture in relation to geologic structure and lithology, northern California
[E80-10298] N80-30865

COASTS
Study of geological structure of Sicily and other Italian areas --- Gulf of Orosei, Eastern Sardinia
[E80-10299] N80-30866

COATINGS
Biramis payload study. Determination of the radiation balance of the Earth with the space-borne microaccelerometer. Volume 2: Characterization and selection of spacecraft coatings
[CERT-VOL-2] N80-30365
Pavement evaluation and overlay design using vibratory nondestructive testing and layered elastic theory. Volume 1: Development procedure
[AD-A087186] N80-30808
Evaluation of ultrasonic cleaning systems
[GEPP-OP-501] N80-31158

COCHLEA
Cochlear microphonic evidence for mechanical propagation of distortion products (f2-f1) and (2f1-f2)
N80-31153

CODING
Algebraic coding theory N80-31096

COGENERATION
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 1: Coal-fired nocogeneration process boiler, section A
[NASA-CR-159770-PT-1-A] N80-30888
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 1: Coal-fired nocogeneration process boiler, section B
[NASA-CR-159770-PT-1-B] N80-30889
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 2: Residual-fired nocogeneration process boiler
[NASA-CR-159770-PT-2] N80-30890

COHERENT ELECTROMAGNETIC RADIATION
Spatial and temporal coherence of a GHz gyromonotron using the TE01 circular mode
[AD-A086997] N80-30740

COHERENT LIGHT
Optical turbulence forecasting: A tutorial
[AD-A085863] N80-31005

COHERENT RADAR
Study of a pulsed coherent lidar for crosswind sensing
[PB80-181027] N80-31013

COLD CATHODE TUBES
Satellite density gauge instrumentation program
[AD-A086809] N80-30987

COLD WEATHER
Cold weather stress on humans. Citations from the NTIS data base
[PB80-810988] N80-31035

COLLAPSE
A comparative study on the elastic-plastic collapse strength of initially imperfect deep spherical shells
[AD-A086006] N80-30794

COLLISION PARAMETERS
Analysis of the copper vapor laser and development of a general laser plasma model N80-30725
Calculation of the energetics and collision dynamics of electronic transition lasers
[AD-A086657] N80-30731
Cross sections for ionization of rare gas excimers by electron impact and atomic and molecular processes in excimer laser
[AD-A086698] N80-30732
Theoretical aspects of positron electron annihilation and hyperon hyperon collisions
[PM/79/15] N80-31174

COLLISION RATES
Inversion of spectral lineshapes to yield collisional rate constants
[AD-A086347] N80-30735
Effective collision frequency and electron temperature in a weakly ionized argon plasma
[MSB-UA-498-79OE] N80-31225

COLLISIONAL PLASMAS
Collisional plasma transport: Two dimensional scalar formulation of the initial boundary value problem and quasi one dimensional models
[REPT-79-120] N80-31223

COLOR
Design specification for color coded spectral plots
[E80-10245] N80-30828

COLORADO
As-built design specification for phase 3 model areas added to the monthly data base of the US — Montana, South Dakota, Oklahoma, Nebraska, and Colorado
[E80-10263] N80-30846
An exploratory study to develop a cluster-based area estimation procedure — Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863

COMBINATORIAL ANALYSIS
A computer algorithm for generating a base of the trades on t-designs
[AD-A087251] N80-31082
Cumulative processes: Linear combinations of order statistics and percentiles
[AD-A086372] N80-31136

COMBUSTION
Formation and control of fuel-nitrogen pollutants in catalytic combustion of coal-derived gases
[FE-2762-7] N80-30466

COMBUSTION CHAMBERS
Advanced combustion systems for stationary gas turbine engines. Volume 4: Combustor verification testing, addendum
[PB80-179849] N80-30313

COMBUSTION PRODUCTS
Advanced combustion systems for stationary gas turbine engines. Volume 3: Combustor verification testing
[PB80-177198] N80-30783
Pilot scale combustion evaluation of waste and alternate fuels, phase 3
[PB80-177413] N80-30952

COMBUSTION STABILITY
Structure and pathology of the steady state, stability and dynamics of the combustion of an impervious carbon particle N80-30455

COMETS
Microcharacterization of interplanetary dust collected in the Earth's stratosphere N80-30976

COMMAND AND CONTROL
Communications requirements for a Loran-C position monitoring system for VTS Valdez, Alaska
[AD-A087199] N80-30292

COMMAND GUIDANCE
The role of Command and Data Management Subsystem (CDMS) in a future payload operations scenario
[ESA-CR(P)-1325] N80-30350

COMMUNICATION NETWORKS
Ground communication facility and network operations control center reconfiguration N80-30339
Distribution of packet delay and interdeparture time in carrier sense multiple access
[AD-A086446] N80-30589
The human use of telecommunication systems
[AD-A086745] N80-30811

COMMUNICATION SATELLITES
Satellite constellations for worldwide and hemisphere coverage
[AD-A086920] N80-30359
Bipropellant propulsion system for INSAT-1 N80-30401
A study of a space communication system for the control and monitoring of the electric distribution system. Volume 2: Supporting data and analyses
[NASA-CR-163478] N80-30587
Studies on the reduction of intermodulation generation in communications systems
[AD-A086905] N80-30622
Trend analysis: Space communications system technology. Phase 1: Definition of user needs
[ADL-82971F] N80-30632
Multi-user Time Division Multiple Access (TDMA) and Spread Spectrum (SS)-TDMA
[ESA-CR(P)-1324] N80-30633
Study of interferences in satellite communication systems. Volume 3: Study report
[ESS/CCG-86-VOL-3] N80-30835
Study of interferences in satellite communication systems. Volume 4: Executive summary
[ESS/CCG-87-VOL-4] N80-30836
A study of a space communication system for the control and monitoring of the electric distribution system. Volume 1: Summary
[NASA-CR-163477] N80-31288

COMMUNICATIONS TECHNOLOGY SATELLITE
Study of a mathematical model of a flexible solar array sub-panel assembly (VELSA 2)
[REPT-10.2-93/NT] N80-30386

COMPARISON
Comparative assessment of environmental welfare issues associated with the Satellite Power System (SPS) and alternative technologies
[DOE/ER-0055] N80-30815

COMPILERS
Augmented predictive parsing N80-31086

COMPONENT RELIABILITY
Keyboards and touch controls: An evaluation of reliability and constructional principles for 11 different types
[ECR-90] N80-30880

COMPOSITE MATERIALS
Statistical analysis of the fatigue of composite materials N80-30439
An investigation of a composite oxide film as a corrosion inhibitor for 2024 aluminum
[AD-A086791] N80-30497
Superconductivity in Th-Nb composites N80-30643
Quick reaction evaluation of materials for systems applications
[AD-A085859] N80-30789
Dynamic measurements of micropolar elastic constants
[OUEL-1291/91] N80-30819

COMPRESSIBLE FLOW
The stability of a compressible free shear layer
[AD-A086864] N80-30601

COMPRESSION TESTS
Dynamic measurements of micropolar elastic constants
[OUEL-1291/91] N80-30819

COMPRESSIVE STRENGTH
Planar mechanics of fully grouted concrete masonry N80-30562

COMPRESSOR BLADES
Vibrations of a compressor blade with slip at the root
[AD-A086852] N80-30312

COMPRESSOR ROTORS
Evaluation of the cyclic behavior of aircraft turbine disk alloys, part 2
[NASA-CR-165123] N80-30462

COMPRESSORS
Compressed magnetic flux amplifier with capacitive load
[SAND-79-2339] N80-30657

COMPUTATION
Algebraic coding theory N80-31096

COMPUTER GRAPHICS
Remote sensing research studies
[E80-10117] N80-30823
Implementation specification for Large Area Crop Inventory Experiment (LACIE) phase 3 automatic status and tracking system
[E80-10249] N80-30832
User's guide Large Area Crop Inventory Experiment (LACIE) phase 3 PDP 11/45 automatic status and tracking system
[E80-10256] N80-30839
Design specification for ERIPS fields data base deck conversion

A Three-Dimensional Stability Analysis/Design program (3DSAD). Report 1. General geometry module
[AD-A087074] N80-30807

Coal processing for fuel cell utilization. Task 11: Fluidized bed coal gasification model; data analysis and predictions
[METC-8450-T1] N80-30909

Supplementary material on passive solar heating concepts: A compilation of published articles. Presented in conjunction with a series of passive solar heating seminars sponsored by the Solar Energy Technology Transfer program
[PNL-SA-7820] N80-30920

Numerical studies in computer aided design. Part 2: Studies in high speed
[AD-A087060] N80-31060

Quisp: A computer processor for the design and display of quadric-surface bodies N80-31069

A computer algorithm for generating a basis of the trades on t-designs
[AD-A087251] N80-31082

COMPUTERIZED SIMULATION

Development of Loran-C data collection and analysis procedures
[AD-A086683] N80-30289

Simulation development and evaluation of an improved longitudinal velocity vector control wheel steering mode and electronic display format
[NASA-TP-1664] N80-30305

STS-2 sail non-avionics subsystems math model requirements
[JSC-16748] N80-30369

Field emission electric propulsion ion optics of double edged materials
[CLM-RR/E1/25] N80-30435

The computer simulation of martensitic transformations in idealized systems N80-30478

Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 3: Operating manual
[NASA-CR-161542] N80-30481

Simulations of gas phase detonation: Introduction of an induction parameter model
[AD-A087007] N80-30537

Mooring dynamics: Computer models and experiments at a sixty foot scale
[AD-A086854] N80-30565

Multiple scattering in clouds
[AD-A087043] N80-30616

Radar emitter recognition using pulse repetition interval
[AD-A086968] N80-30620

A maximum likelihood estimator for the extent of radar or sonar targets using high resolution signals
[REPT-3/79] N80-30628
Simulation models for microwave power transistors under large signal operating conditions. Part 1: Theoretical and experimental results
[ESA-CR(P)-1336-PT-1] N80-30634
The shear viscosity for the soft sphere liquid via discrete cell hydrodynamics N80-30669
Development of a thermal model library: Application to dynamic simulation of thermal control for Spacelab fluid loops
[ESA-CR(P)-1302] N80-30709
Modeling, simulation, and control of a closed cycle laser gas supply system N80-30724
Pavement evaluation and overlay design using vibratory nondestructive testing and layered elastic theory. Volume 1: Development procedure
[AD-A087166] N80-30808
Modelling of simulated photochemical smog with kinetic mechanisms. Volume 2 CHEMK: A computer modeling scheme for chemical kinetics
[PB80-181084] N80-30970
Condensed storage of diffusion equation solutions for atmospheric density model computations
[AD-A086868] N80-30986
Advanced flight design systems subsystem performance models. Executive summary
[NASA-CR-160768] N80-31044
Advanced flight design systems subsystem performance models. Sample model: Environmental analysis routine library
[NASA-CR-160770] N80-31046
Antithetic variates revisited --- computerized simulation problems
[AD-A086114] N80-31131
Hybrid vehicle potential assessment. Volume 3: Parallel systems
[CONS-4209-T1-VOL-3] N80-31270

COMPUTERS
Real-world properties in the requirements for embedded systems
[AD-A086867] N80-31058

CONCENTRATION (COMPOSITION)
The South Pole automatic condensation nuclei counter: Instrument details and five years of observations
[PB80-181712] N80-31014

CONCRETES
Measuring the rate of corrosion of reinforcing steel in concrete --- nondestructive measuring of bridge deck deterioration
[PB80-170848] N80-30513
Planar mechanics of fully grouted concrete masonry N80-30562
Microcracking and engineering properties of high-strength concrete N80-30563
Use of fabrics and other measures for retarding reflective cracking of asphaltic concrete overlays
[AD-A085851] N80-30567
Simple and complex models for nonlinear seismic response of reinforced concrete structures
[PB80-182413] N80-30576
Design and construction of large-panel concrete structures. Report 6: Design methodology
[PB80-189137] N80-30577

CONDENSATES
The South Pole automatic condensation nuclei counter: Instrument details and five years of observations
[PB80-181712] N80-31014

CONDENSING
Outgassing data for spacecraft materials
[NASA-RP-1061] N80-30441

CONDUCTIVE HEAT TRANSFER
Diode behavior
[ESA-CR(P)-1319] N80-30710
High performance VCHP life test
[ESA-CR(P)-1321] N80-30770

CONFERENCES
The 1980 JANNAF propulsion Meeting, volume 5
[AD-A087063] N80-30381
JANNAF 11th Plume Technology Meeting, volume 2
[AD-A079647] N80-30422
Symposium on Atomic Spectroscopy
[DOE/ER-10460/1] N80-30467
Proceedings of the Conference on Environmental Toxicology
[AD-A086341] N80-30958

CONFIDENCE LIMITS
Estimation of confidence limits for testing large logic networks
[AD-A086281] N80-30650
Exact two-sided confidence intervals on nonnegative linear combination of variance
[AD-A087052] N80-31120

CONFORMAL MAPPING
Fundamentals of a theory for conformal antennas
[REPT-2-79] N80-30627

CONGRESSIONAL REPORTS
NASA authorization for fiscal year 1981. Part 4: Index
[GPO-65-791] N80-31266
Department of Housing and Urban Development independent agencies appropriation bill, 1981
[S-96-926] N80-31267
Industrial wastes: An unexplored source of valuable minerals
[PB80-180250] N80-31279

CONICAL BODIES
Curing stress fields in involute exit cones
[AD-A086404] N80-30803

CONJUNCTIVA
Topographical simulation of the blood vessels of the human bulbar conjunctiva and application to pressure-flow relationships N80-31033

CONSERVATION LAWS
Symmetry mappings and conservation laws in relativistic fluids N80-30681

CONSOLES
Reliability and maintainability improvement program for the AV-8 A/TAV-8A harrier head-up display set. Volume 2: Modifications to display set control, C10626/AV9-30(V)
[AD-A085310] N80-30307

CONSTANTS
On some spectral problems and isospectral evolutions connected with the classical string problem. Part 1: Constants of motion
[PM/79/19-PT-1] N80-31126

CONSTITUTIVE EQUATIONS
Use of endochronic plasticity for multi-dimensional small and large strain problems
[ANL-CT-79-19] N80-30817

CONSTRAINTS
On the optimality of axiomatic constraints for pion pion scattering: The case of the lower bounds
[PM/79/16] N80-31175

CONSTRUCTION
Solar atrium: A hybrid solar heating and cooling system
[DOE/CS-34135/T1] N80-30918

CONSTRUCTION INDUSTRY
Research in building construction and materials for 1978
[CSTB-192] N80-30571
Activities in the building trade industry in 1978
[CSTB-198] N80-30572

CONSTRUCTION MATERIALS
Activities in the building trade industry in 1978
[CSTB-198] N80-30572

CONTACT RESISTANCE
Surface physics and chemistry of electrical contact phenomena
[AD-A086733] N80-30450

CONTAINERLESS MELTS
Flow phenomena in gravitationless melting zones in the presence of electromagnetic fields
[ESA-TT-592] N80-30713

CONTAMINANTS
The design of a system for pre-prototype use of the chemical substance information network
[PB80-178320] N80-30438
Formation and control of fuel-nitrogen pollutants in catalytic combustion of coal-derived gases
[FE-2762-7] N80-30466
Energy savings by means of fuel cell electrodes in electro-chemical industries
[COO-4881-12] N80-30902
Survey analysis of phenolic compounds in industrial effluents by gas chromatography mass spectrometry
[PB80-177793] N80-30969

CONTAMINATION
The benefits of air and water pollution control: A review and synthesis of recent estimates
[PB80-178759] N80-30967

CONTINENTAL SHELVES
South Atlantic OCS physical oceanography, volume 2 --- monitoring ocean currents and sea states to assess effects of oil and gas activities on the environment
[PB80-181555] N80-31026
South Atlantic OCS physical oceanography, volume 3 --- monitoring ocean currents and sea states to assess the environment effects of oil and gas activities
[PB80-181563] N80-31027

CONTINUITY (MATHEMATICS)
Stability of diced systems
[AD-A086685] N80-31104

CONTINUOUS RADIATION
Measuring and modeling rocket-plume Doppler spectral asymmetry in CW downlink transmissions N80-30430
CW and pulsed beam propagation in focusing media with random-axis misalignments N80-30584

CONTINUOUS SPECTRA
Discrete and continuous spectra of finite-width, parallel-plate simulator fields
[AD-A086813] N80-30598

CONTINUOUS WAVE LASERS
The mode locked dye laser, 1. Picosecond photoconductivity of semi-insulating gallium-arsenide, 2 N80-30722

CONTINUUM MECHANICS
Differential charge transfer to the continuum by ions in atomic hydrogen
[DOE/ER-10512/T1] N80-31172

CONTOURS
Stability of boundary-layer flows over curved walls N80-30668

CONTROL BOARDS
Keyboards and touch controls: An evaluation of reliability and constructional principles for 11 different types
[ECR-90] N80-30660

CONTROL EQUIPMENT
A propulsion system for the Mars rover vehicle
[NASA-CR-163494] N80-30750

CONTROL STABILITY
On feedback systems possessing integrity with respect to actuator outages
[AD-A086609] N80-31093

CONTROL SURFACES
The USAF stability and control digital Datcom. Volume 2: Implementation of Datcom methods
[AD-A086558] N80-30316

CONTROL THEORY
Sizing distributed systems: Overview and recommendations
[PB80-184377] N80-31086
Foundations of feedback theory for nonlinear dynamical systems
[AD-A086578] N80-31091
Robustness with observers
[AD-A086610] N80-31092
Stationary points and finite-difference schemes for differential inclusions
[AD-A086381] N80-31103
Linear state feedback, quadratic weights, and closed loop eigenstructures
[NASA-CR-163484] N80-31146

CONTROLLED FUSION
Review of the wall problem and conditioning techniques for Tokamaks
[PPPL-1666] N80-31221

CONTROLLERS
A propulsion and steering control system for the Mars rover
[NASA-CR-163501] N80-30751
Control system considerations for an aluminum-air battery powered electric vehicle
[UCRL-15241] N80-30939

CONVECTION
Laminar natural convection along vertical corners and rectangular ducts N80-30675
Numerical analysis of natural convection in two-dimensional square and circular containers in low gravity
[NASA-CR-163487] N80-30686
High order ZIP differencing of convective terms
[AD-A086725] N80-31208

CONVECTION CURRENTS
Investigation of the solidification behavior of electron beam welds under microgravitational conditions
[ESA-TT-591] N80-30760

CONVECTIVE FLOW
Flow phenomena in gravitationless melting zones in the presence of electromagnetic fields
[ESA-TT-592] N80-30713
CONVECTIVE HEAT TRANSFER
Similitude modeling of natural convection heat transfer through an aperture in passive solar heated buildings N80-30670
Finite element modeling for convection-diffusion problems
[AD-A086777] N80-30698
CONVERGENCE
Gate phase 3 mean synoptic-scale radiative convergence profiles
[PB80-180797] N80-31020
Convergence estimates for semidiscrete parabolic equation approximations
[AD-A086369] N80-31099
Convergent approximations in parabolic variational inequalities. 2: Hamilton-Jacobi inequalities
[AD-A086364] N80-31101
Convergence of progressively censored likelihood ratio processes in life-testing
[AD-A087057] N80-31138
COOLING SYSTEMS
Modeling, simulation, and control of a closed cycle laser gas supply system N80-30724
COORDINATE TRANSFORMATIONS
A comparison among various theories for turbulent, reacting, planar mixing layers N80-30676
COPOLYMERS
Cyclic fluorosilicone polymers and copolymers
[AD-A086748] N80-30519
COPPER
Analysis of the copper vapor laser and development of a general laser plasma model N80-30725
COPPER ALLOYS
Studies of microscopic aspects of wear processes in metals
[AD-A086760] N80-30493
CORN
Remote sensing research studies
[E80-10117] N80-30823
Light reflectance, transmittance, and utilization within a vegetative canopy --- Texas
[E80-10262] N80-30851
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
Maximal analysis labeling procedure (preliminary)
[E80-10294] N80-30862
Analysis of scanner data for crop inventories
[E80-10308] N80-30874
CORNER FLOW
Laminar natural convection along vertical corners and rectangular ducts N80-30675
Flow visualization study of secondary flow in a corner
[AD-A082634] N80-30688
CORRELATION
An investigation of satellite-radar correlation functions N80-30996
CORRELATION COEFFICIENTS
The use of the climatic water budget to evaluate the validity of a precipitation record
[PB80-182157] N80-31019
Relationships among the slopes of lines derived from various data analysis techniques and the associated correlation coefficient
[NASA-TM-80733] N80-31097
CORRELATION DETECTION
The Tidbinbilla interferometer N80-30321
CORROSION
Nickel-iron alloy corrosion in a sealed pyrotechnic system
[MLM-2707(OP)] N80-30511
Measuring the rate of corrosion of reinforcing steel in concrete --- nondestructive measuring of bridge deck deterioration
[PB80-170848] N80-30513
CORROSION PREVENTION
Studies on corrosion prevention of Mardan connectors by organic coatings
[AD-A086730] N80-30491
CORROSION RESISTANCE
An investigation of a composite oxide film as a corrosion inhibitor for 2024 aluminum
[AD-A086791] N80-30497
COSMIC RAYS
Thermoluminescence studies of the thermal and radiation histories of chrondritic meteorites N80-31292
Silver isotopic anomalies in iron meteorites: Cosmic-ray production and other possible sources
[LA-UR-80-1199] N80-31296
COSMOLOGY
Soft CP violation and the global matter-antimatter symmetry of the universe
[NASA-TM-80730] N80-31290
COST ANALYSIS
Engine cycle studies program
[NASA-CR-159500] N80-30310
Research and evaluation of biomass resources/conversion/utilization systems (market/experimental analysis for development of a data base for a fuels from biomass model)
[DOE/ET-20611/11] N80-30552
A study of a space communication system for the control and monitoring of the electric distribution system. Volume 1: Summary
[NASA-CR-163477] N80-31268
Electric and hybrid vehicle system research and development project, hybrid vehicle potential assessment. Volume 6: Cost analysis
[CONS-4209-T1-VOL-6] N80-31274
COST EFFECTIVENESS
Design and development of Stirling engines for stationary power applications in the 500 to 3000 hp range. Subtask 1A report: State-of-the-art conceptual design
[DOE/ET-15209-T1] N80-30755
COST ESTIMATES
Solar heating and domestic hot water system installed at Kansas City, Fire Stations, Kansas City, Missouri
[NASA-CR-161513] N80-30895
COST REDUCTION
Reduction in cost of rocket motor manufacture by use of liner with controllable cure N80-30409
Research and development of concept leading to an automotive alternator with significantly improved efficiency and weight
[COO-50042-1] N80-30654
Command procedures for manipulating tape data files: A set of procedures developed for use with the COMNET ALPHA time sharing system
[PB80-177546] N80-31064
Minimizing the cost of operating aircraft on multistop tours N80-31140
Wider use of better computer software technology can improve management control and reduce losts
[PB80-178254] N80-31264
COTTON
Light reflectance, transmittance, and utilization within a vegetative canopy --- Texas
[E80-10262] N80-30851
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
COUNTERS
Characteristics of electrical discharges on the T78-2 satellite (SCATHA)
[AD-A087249] N80-30360
COUPLED MODES
Stability and dynamic response to gravitational forces of the flapping and lead-lag hinges on a rigid rotor blade with the leading-edge angle of attack and flapping being coupled
[ISD-244] N80-30949
COUPLINGS
New hardware for tethered balloons
[AD-A086836] N80-30280
CRACK INITIATION
Use of fabrics and other measures for retarding reflective cracking of asphaltic concrete overlays
[AD-A085851] N80-30567
The application of optical interferometry to time dependent unbonding, parts 1, 2, and 3 N80-30774
Non-contacting strain control and acoustic emission in high-temperature testing
[ICAF-1142] N80-30786
CRACK PROPAGATION
Evaluation of the cyclic behavior of aircraft turbine disk alloys, part 2
[NASA-CR-165123] N80-30482
Scatter of fatigue crack rates in 7XXX aluminum alloys
[AD-A086543] N80-30498
An investigation of mechanisms effecting environmental stress cracking in titanium alloy
[AD-A086979] N80-30499
On the dynamic energy release rate in elastic crack propagation N80-30775
Non-contacting strain control and acoustic emission in high-temperature testing
[ICAF-1142] N80-30786
Localized impact damage in ceramics. Localized impact damage in zinc sulfide crack growth from small flaws in larger grains in alumina
[AD-A085874] N80-30790
Numerical estimation of stress intensity factors by a finite difference Eulerian method (The HELP code)
[AD-A086111] N80-30792
A review of nonlinear fracture relative to fatigue
[AD-A086671] N80-30795
The surface singularity of cracks
[AD-A086491] N80-30799
Influence of small scale yielding on dynamic fracture
[AD-A086335] N80-30801
Observations on the generality of the grain-size effect on fatigue crack growth in alpha plus beta titanium alloys
[AD-A087215] N80-30811
Fracture problems in power law viscoelastic materials
[AD-A087244] N80-30813
CRACKING (FRACTURING)
Techniques of analysis of load-displacement records by j-integral methods N80-30778
CRACKS
Nonlocal stress field at Griffith crack
[AD-A086496] N80-30797
CRASH LANDING
Crash tests of four identical high-wing single-engine airplanes
[NASA-TP-1699] N80-30296
CREEP BUCKLING
Nonlinear creep buckling analysis of initially imperfect shallow spherical shells
[AD-A087017] N80-30814
CREEP PROPERTIES
Impurity effects on the creep of polycrystalline magnesium and aluminum oxides at elevated temperatures --- mixed transition metal impurities
[COO-1591-34] N80-30447
CRITICAL TEMPERATURE
Superconductivity in Th-Nb composites N80-30643
CROP GROWTH
Production of sugarcane and tropical grasses as a renewable energy source
[ORO-5912-T3] N80-30543
Use of soil moisture information in yield models
[E80-10302] N80-30869
Cloud seeding. Citations from the NTIS data base --- effects on irrigated farming
[PB80-811037] N80-31017
CROP IDENTIFICATION
Remote sensing research studies
[E80-10117] N80-30823
The integrated analysis procedure for identification of spring small grains and barley --- Great Plains Corridor: U.S. and Canada
[E80-10274] N80-30847
Light reflectance, transmittance, and utilization within a vegetative canopy --- Texas
[E80-10262] N80-30851
Estimation of probabilities of label imperfections and correction of mislabels
[E80-10268] N80-30856
Maximal analysis labeling procedure (preliminary)
[E80-10294] N80-30862
CROP INVENTORIES
Detailed design specification for the automatic status and tracking system modifications for LACIE procedure 1
[E80-10243] N80-30826

As-built design specification for scatter plots for direct wheat
[E80-10250] N80-30833
Classification with spectral-spatial-temporal archetypes
[E80-10251] N80-30834
As-built design specification for field statistics (FIELDSTAT)
[E80-10252] N80-30835
User's guide Large Area Crop Inventory Experiment (LACIE) phase 3 PDP 11/45 automatic status and tracking system
[E80-10256] N80-30839
Use of LANDSAT data for estimating the area of sugar cane in the state of Sao Paulo --- Brazil
[E80-10260] N80-30843
Utilization of LANDSAT data to inventory the sugar cane in the state of Sao Paulo
[E80-10261] N80-30844
As-built design specification for phase 3 model areas added to the monthly data base of the US --- Montana, South Dakota, Oklahoma, Nebraska, and Colorado
[E80-10263] N80-30846
User's guide for the Yield Estimation Subsystem Data Management System (YESDAMS)
[E80-10276] N80-30849
Draft user procedures: Software wheat yield predictions/foreign equivalent test --- Kansas, Oklahoma, and Nebraska
[E80-10287] N80-30855
An exploratory study to develop a cluster-based area estimation procedure --- Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863
Evaluating the use of analyst labels in maximum likelihood cluster proportion estimation
[E80-10303] N80-30870
Evaluation of Bayesian sequential proportion estimation using analyst labels
[E80-10304] N80-30871
As-built design specification of the CAMS/CAS interface tape report generation program for LACIE 8
[E80-10306] N80-30872
As-built specification for CLASSY conversion
[E80-10307] N80-30873
Analysis of scanner data for crop inventories
[E80-10308] N80-30874

CROSS CORRELATION
Progress report on the Block 1 VLBI correlator implementation N80-30324
Measurement of surface roughness and correlation length using dichromatic speckle N80-31191

CROSS FLOW
The Shock and Vibration Digest, volume 12, no. 5
[AD-A085328] N80-30771
Cross-flow-induced instabilities of circular cylinders N80-30773

CRUISE MISSILES
Analytical study of the bistatic radar cross-section of a prolate spheroid
[AD-A086846] N80-30610

CRYOGENIC EQUIPMENT
Weldability of thermally grain-refined Fe12Ni-0.25Ti for cryogenic structural applications
[LBL-10259] N80-30506
Consequences of the re-transformation of precipitated austenite in ferritic cryogenic steels
[LBL-10128] N80-30508

CRYOGENIC FLUID STORAGE
Hydrogen storage: Storage as a gas or liquid. Citations from the NTIS data base
[PB80-811086] N80-30560

CRYOGENICS
A low temperature specific heat study of some disordered alloy systems N80-30452
Fracture toughness of some cryogenic alloys N80-30476
The dc superconducting power transmission line project at LASL. US DOE division of electric energy systems
[LA-8323-PR] N80-30656
Cryogenic heat pipes, phase 1 report
[ESA-CR(P)-1323] N80-30711

CRYSTAL DEFECTS
Comparison of atomic concentration profiles, defect density profiles, and types of microstructural defects in GaAs annealed after implantation with Be N80-31233
Crystal defect studies using X-ray diffuse scattering
[CONF-800205-7] N80-31254

CRYSTAL GROWTH
Flow phenomena in gravitationless melting zones in the presence of electromagnetic fields
[ESA-TT-582] N80-30713
Critically evaluated data on optical and transport properties of solids refractive index and absorption coefficient of selected optical materials
[AD-A086658] N80-31199
Sequential purification and crystal growth for the production of low cost silicon substrates
[DOE/SERI-8119-3/1] N80-31255

CRYSTAL LATTICES
Crystal defect studies using X-ray diffuse scattering
[CONF-800205-7] N80-31254

CRYSTAL STRUCTURE
Model compound studies of rigid rod aromatic heterocyclic polymer systems. Part 1: The crystal and molecular structures of 2,6-diphenylbenzi (1,2-D:4,5-D') bisthiazole and 2,6-diphenylbenzo (1,2-D:5,4-D') bisoxazole
[AD-A086804] N80-30520

CRYSTAL SURFACES
Growth and application of cadmium telluride
[AD-A086991] N80-31250

CRYSTALLOGRAPHY
Deformation of an alloy with a lamellar microstructure: Experimental
[AD-A087100] N80-30500
Alignment of liquid crystals by surface gratings
[AD-A086816] N80-31194
Sequential purification and crystal growth for the production of low cost silicon substrates
[DOE/SERI-8119-3/1] N80-31255

CURING
Curing stress fields in involute exit cones
[AD-A086404] N80-30803

CURRENT AMPLIFIERS
Compressed magnetic flux amplifier with capacitive load
[SAND-79-2339] N80-30657

CURRENT DENSITY
An experimental investigation of the King surface current probing technique in a transient application
[AD-A087203] N80-30615

CURRENT REGULATORS
Lightning, surge and transient protection. Citations from the NTIS data base
[PB80-810781] N80-30667

CYBERNETICS
On feedback systems possessing integrity with respect to actuator outages
[AD-A086609] N80-31093

CYCLIC COMPOUNDS
Cyclic fluorosilicone polymers and copolymers
[AD-A086748] N80-30519

CYCLIC LOADS
On the thermomechanical response of 3.5 Ni-Mo-V alloy steel and type 304 stainless steel undergoing cyclic uniaxial inelastic deformation N80-30776

CYCLONES
Planetary boundary layer parameterization for tropical cyclones based on generalized similarity theory
[AD-A086781] N80-31004

CYCLOTRON RESONANCE
Influence of wall impedance on the electron cyclotron maser instability
[AD-A086401] N80-30736
Spatial and temporal coherence of a GHz gyromonotron using the TE01 circular mode
[AD-A086997] N80-30740

CYLINDRICAL BODIES
Torsional waves in a bimetallic cylinder. Part 1: Axially homogeneous case
[AD-A085822] N80-30793

CYTOGENESIS
A paraboloidal flow cytometer for improved fluorescence analysis of single cells N80-31029

CZOCHRALSKI METHOD
Growth and application of cadmium telluride
[AD-A086991] N80-31250

D

D REGION
Study and evaluation of impulse mass spectrometers for ion analysis in the D and E regions of the ionosphere
[NASA-CR-163490] N80-30979

DAMAGE ASSESSMENT
Crash tests of four identical high-wing single-engine airplanes
[NASA-TP-1689] N80-30296
Fatigue damage estimation for the BAeA aircraft fatigue data analysis system
[AD-A086470] N80-30301
Linear-nonlinear interface for finite element transient impact damage analysis N80-30777
Earthquake risk and damage functions: An integrated preparedness and planning model applied to New Madrid
[PB80-170368] N80-30994
Laser protective eyewear program at the Los Alamos Scientific Laboratory
[LA-UR-80-1038] N80-31049

DATA ACQUISITION
Digital recording acquisition subsystem for radio interferometry applications implementation plan N80-30322
Solar site test module
[NASA-TM-78291] N80-30899

DATA BASES
Remote sensing research studies
[E80-10117] N80-30823
Detail design specification for enhancement of the automatic status and tracking system software
[E80-10254] N80-30837
As-built design specification for phase 3 model areas added to the monthly data base of the US --- Montana, South Dakota, Oklahoma, Nebraska, and Colorado
[E80-10263] N80-30846
Functional design for an automated data base error detection system
[AD-A086611] N80-31053
Design considerations for data-flow database machines
[AD-A086374] N80-31056
Investigation into interactive graphics data base exchange via Gerber data
[SAND-80-0598] N80-31265

DATA COMPRESSION
Reversible image compression N80-31065

DATA CONVERSION ROUTINES
Detailed design specification for the automatic status and tracking system modifications for LACIE procedure 1
[E80-10243] N80-30826
Implementation specification document for merge of BTREAD, phase 1, and phase 2 accuracy assessment programs
[E80-10285] N80-30853
Design specification for ERIPS fields data base deck conversion
[E80-10296] N80-30854
As-built specification for CLASSY conversion
[E80-10307] N80-30873

DATA CONVERTERS
Design specification for merge of BTREAD, Phase 1 and Phase 2 accuracy assessment programs
[E80-10255] N80-30838

DATA LINKS
Feasibility study for integrated flight trajectory control fighter
[AD-A084784] N80-30314
Signal to noise ratio calculation for fiber optics links N80-30331
A high speed telemetry data link for an autonomous roving vehicle
[NASA-CR-163495] N80-30373
A predictor model for SHF and EHF MILSATCOM system availabilities in the presence of rain
[AD-A086714] N80-30609

DATA MANAGEMENT
Development of Loran-C data collection and analysis procedures
[AD-A086863] N80-30289
Detail design specification for enhancement of the automatic status and tracking system software
[E80-10254] N80-30837
User's guide for the Yield Estimation Subsystem Data Management System (YESDAMS)
[E80-10276] N80-30849

Functional design for an automated data base error detection system
[AD-A086811] N80-31053
HLYWD: A program for post-processing data files to generate selected plots or time lapse graphics
[ORNL/CSD/TM-109] N80-31083

DATA PROCESSING
Fatigue damage estimation for the BAeA aircraft fatigue data analysis system
[AD-A086470] N80-30301
The role of Command and Data Management Subsystem (CDMS) in a future payload operations scenario
[ESA-CR(P)-1325] N80-30350
Remote sensing research studies
[E80-10117] N80-30823
As-built design specification for Boundary Detection And Registration Program (BDARP1)
[E80-10216] N80-30824
Forest resource information system, phase 3 --- St. Regis Paper Co.: Picayune, Mississippi
[E80-10242] N80-30825
High Density Tape Reformatting System/LANDSAT imagery verification and Extraction System (HDTRS/LIVES) throughput analysis
[E80-10248] N80-30831
Implementation specification for Large Area Crop Inventory Experiment (LACIE) phase 3 automatic status and tracking system
[E80-10249] N80-30832
Detail design specification for enhancement of the automatic status and tracking system software
[E80-10254] N80-30837
Design specification for merge of BTREAD, Phase 1 and Phase 2 accuracy assessment programs
[E80-10255] N80-30838
User's guide Large Area Crop Inventory Experiment (LACIE) phase 3 PDP 11/45 automatic status and tracking system
[E80-10256] N80-30839
Statistical Outlier Detection (SOD): A computer program for detecting outliners in data --- AgRISTARS Project
[E80-10275] N80-30848
Operator's guide for LACIE phase 3 automatic status and tracking system
[E80-10284] N80-30852
Draft user procedures: Software wheat yield predictions/foreign equivalent test --- Kansas, Oklahoma, and Nebraska
[E80-10287] N80-30855
As-built design specification of the CAMS/CAS interface tape report generation program for LACIE 8
[E80-10306] N80-30872
Analysis of scanner data for crop inventories
[E80-10308] N80-30874
A multidirectional photodiode array for the measurement of solar radiances
[PB80-181753] N80-30995
The GMS users' guide, issue 1 N80-30997
The 7th WMO Executive Committe Inter-Government Panel Session on the First GARP Global Experiment
[GARP-SPEC-35] N80-31012
A statement oriented data flow processor N80-31051
A hill-sliding strategy for initialization of Gaussian clusters in the multidimensional space
[NASA-TM-80721] N80-31072
GRAPH: An interactive computer program used for technical plotting
[AD-A086354] N80-31076
HLYWD: A program for post-processing data files to generate selected plots or time lapse graphics
[ORNL/CSD/TM-109] N80-31083
Sizing distributed systems: Overview and recommendations
[PB80-184377] N80-31088
Affect units and narrative summarization
[AD-A086735] N80-31089
Relationships among the slopes of lines derived from various data analysis techniques and the associated correlation coefficient
[NASA-TM-80733] N80-31097
Classification techniques for multivariate data analysis
[AD-A086521] N80-31114
Interpretation of laser/multi-sensor data for short range terrain modeling and hazard detection
[NASA-CR-163492] N80-31294

DATA PROCESSING EQUIPMENT
Assessment of the capacity of the Automated Radar Terminal Systems (ARTS IIIA) for the years 1980-1990
[AD-A087243] N80-30621
Laser optical appraisal and design of a PRIME/Rover interface
[NASA-CR-163508] N80-31193

DATA REDUCTION
Development of Loran-C data collection and analysis procedures
[AD-A086683] N80-30289
Progress report on the Block 1 VLBI correlator implementation N80-30324
Automated frequency standard stability data reduction N80-30330
The 6th GARP Planning Meeting for the Monsoon Experiment (MONEX)
[GARP-SPEC-34] N80-31011

DATA SAMPLING
A hill-sliding strategy for initialization of Gaussian clusters in the multidimensional space
[NASA-TM-80721] N80-31072

DATA STORAGE
Command procedures for manipulating tape data files: A set of procedures developed for use with the COMNET ALPHA time sharing system
[PB80-177546] N80-31064
Segmentation, dynamic storage, and variable loading on CDC equipment
[NASA-CR-3315] N80-31071

DATA SYSTEMS
Radian DART microcomputer system hardware documentation operation system description. DART 2 documentation, volume 3
[COO-4596-1-VOL-3] N80-31061

DATA TRANSMISSION
Feasibility and cost study on VOIR SAR data transfer via a bent pipe link N80-30336
Microwave communication. Citations from the NTIS data base
[PB80-810831] N80-30639
Scheduler software for tracking and data relay satellite system loading analysis: User manual and programmer guide
[NASA-TM-78290] N80-31070
Decentralized algorithms for optimization of single commodity flows
[AD-A086736] N80-31143
Use of integrated optics for analog data signal conditioning aboard spacecraft
[LCR-79-108/R/G5] N80-31203

DECAY RATES
A search for the persistent velocity autocorrelation in hydrogen by dense plasma decay N80-31205

DECOMPOSITION
A decomposition procedure for large scale optimal plastic design problems
[AD-A086560] N80-30798
A non-recursive incomplete Cholesky decomposition method for the solution of linear equations with a sparse matrix
[AD-A087005] N80-31117
GaAs surface effects
[AD-A087033] N80-31249

DECOUPLING
A singular perturbations approach to reduced-order modeling and decoupling for large scale linear systems
[AD-A087050] N80-31118

DEEP SPACE NETWORK
The telecommunications and data acquisition report
[NASA-CR-163431] N80-30319
VLBI system for weekly measurement of UT1 and polar motion: Preliminary results N80-30323
Progress report on the Block 1 VLBI correlator implementation N80-30324
Block 1, phase 1 very long baseline interferometry implementation N80-30325
Network functions and facilities N80-30326
DSN Monitor and Control System, Mark III-80 N80-30327
Pioneers 10 through 12 support N80-30328
Pioneers 6 through 9 support N80-30329
Feasibility and cost study on VOIR SAR data transfer via a bent pipe link N80-30336
Navigation network operational considerations N80-30338
Power line anomalies as they affect the operation of a DSN station: Overview N80-30340
Voyager-Jupiter radio science data papers N80-30341

DEFECTS
Structural defects in laser- and electron-beam annealed silicon
[CONF-791112-62] N80-30437
A comparative study on the elastic-plastic collapse strength of initially imperfect deep spherical shells
[AD-A086006] N80-30794

DEFLECTION
Large deflection response of an elliptical section ring to disturbed axial load N80-30781

DEFORESTATION
Modeling the prospects for climatic change: Current state-of-the-art and implications
[CONF-800474-1] N80-30961

DEFORMATION
Compressive deformation characteristics of some cemented tungsten carbides at elevated temperatures N80-30440
Structure and deformation characteristics of rheocast metals
[AD-A086469] N80-30442
Deformation of an alloy with a lamellar microstructure: Experimental
[AD-A087100] N80-30500
Non-Newtonian migration of a deformable drop in shearing flows N80-30680
On the thermomechanical response of 3.5 Ni-Mo-V alloy steel and type 304 stainless steel undergoing cyclic uniaxial inelastic deformation N80-30776
Laminated beams of isotropic or orthotropic materials subjected to temperature change
[AD-A087230] N80-30806

DEGRADATION
Solar photovoltaic module degradation from electro-migration
[COO-4094-64] N80-30910
Materials for fuel cells
[PB80-182355] N80-30955

DELAMINATING
Laminated beams of isotropic or orthotropic materials subjected to temperature change
[AD-A087230] N80-30806

DELAY CIRCUITS
Adaptive time delay circuitry for interference cancellation systems
[AD-A086326] N80-30605

DEMAND (ECONOMICS)
Supply and use patterns for the platinum-group metals
[PB80-179088] N80-30514
Trend analysis. Space communications system technology. Phase 1: Definition of user needs
[ADL-82871F] N80-30632

DENSITY (MASS/VOLUME)
Thermophysical properties of coal liquids
[BMI-2053] N80-30546
Lateral density variations in elastic Earth models from an extended minimum energy approach
[NASA-TM-80742] N80-30787

DENSITY DISTRIBUTION
Study of elf propagation anomalies as related to improved knowledge of electron density profiles produced by energetic particle precipitation
[AD-A087255] N80-30619

DEOXYRIBONUCLEIC ACID
A paraboloidal flow cytometer for improved fluorescence analysis of single cells N80-31029

DEPERSONALIZATION
Functional design for an automated data base error detection system
[AD-A086811] N80-31053

DEPOLARIZATION
The influence of random media on the propagation and depolarization of electromagnetic waves N80-30579

DEPOSITION
Dependence of silicon carbide coating properties on deposition parameters: Preliminary report --- coatings for high temperature gas cooled reactors
[ORNL/TM-7209] N80-30448

DEPOSITS
Pulse plating of nickel deposits
[BDX-613-2378] N80-30502

DEPTH MEASUREMENT
Radio-echo sounding in the Allan Hills, Antarctica, in support of the meteorite field program
[AD-A086858] N80-30879

DESALINIZATION
Development of reverse osmosis membrane for seawater desalination
[PB80-182090] N80-30472

DESCENT TRAJECTORIES
Effect of near-zero spin on instability of controlled projectiles in ascending or descending flight
[AD-A086775] N80-30278

DESIGN ANALYSIS
Keyboards and touch controls: An evaluation of reliability and constructional principles for 11 different types
[ECR-90] N80-30660
Development of high-temperature turbine subsystem technology to a technology readiness status, phase 2
[FE-1806-86] N80-30753
Design study of a two-phase turbine bottoming cycle
[DOE/ET-15350-T1] N80-30757
Design guidelines and optimization procedures for test subsystem design
[AD-A087059] N80-30769
Small Wind Turbine Systems 1979: A Workshop on R and D Requirements and Utility Interface/Institutional Issues. Volume 1: R and D requirements
[RFP-3014-VOL-1] N80-30943
Study of optimality criteria in design of experiments
[AD-A086830] N80-31141

DESTRUCTIVE TESTS
Keyboards and touch controls: An evaluation of reliability and constructional principles for 11 different types
[ECR-90] N80-30660

DETECTION
Non-contacting strain control and acoustic emission in high-temperature testing
[ICAF-1142] N80-30786

DETONATION
Simulations of gas phase detonation: Introduction of an induction parameter model
[AD-A087007] N80-30537
On the initiation of detonations in a one-dimensional system
[AD-A086713] N80-30693

DEUTERIUM
Perfecting of nuclear microanalysis of deuterium by means of ion implantation. Application to the study of the hydrogeneration of amorphous silicon through ionic implantation N80-30468

DIAMAGNETISM
Superconducting diamagnetism in samples of SN(x), TaSe(3) and NbS Ne(3) N80-30644

DIATOMIC MOLECULES
Energy transfer and optical spectroscopy of diatomic molecules in chemically reacting systems
[AD-A086829] N80-31165

DICHROISM
Measurement of surface roughness and correlation length using dichromatic speckle N80-31191

DICKE RADIOMETERS
The development of a stepped frequency microwave radiometer and its application to remote sensing of the Earth N80-30822

DICTIONARIES
Multilingual Aeronautical Dictionary
[LC-77-93566] N80-30272
An astronomical glossary
[AD-A084445] N80-30805

DIELECTRIC PROPERTIES
Evaluation and prediction of long term space environmental effects on non-metallic materials
[NASA-CR-161545] N80-30436

DIELECTRICS
Cerenkov radiation in dielectric-loaded waveguides N80-30581
Propagation in a dielectric waveguide using the Green's function method N80-30583
Collective ion acceleration and electron beam propagation in dielectric guides
[AD-A086493] N80-31177

DIESEL ENGINES
Advanced electron beam techniques for metallic and ceramic protective coating systems --- modifying gas turbine and diesel engines for alternative fuel use
[LBL-10520] N80-30449
Design study of a two-phase turbine bottoming cycle
[DOE/ET-15350-T1] N80-30757

DIESEL FUELS
Combustion of drops and sprays of no. 2 diesel oil and its emulsions with water and methanol. Volume 1. Experimental
[PB80-178213] N80-30470
Combustion of drops and sprays of no. 2 diesel oil and its emulsions with water and methanol. Volume 2. Theoretical
[PB80-178221] N80-30471
Autoignition characteristics of aircraft-type fuels
[NASA-CR-159886] N80-30535
Process evaluation: Steam reforming of diesel fuel oil
[AD-A087053] N80-30538
Performance of a diesel engine operating on raw coal-diesel fuel and solvent refined coal-diesel fuel slurries
[CONS-3288-T6] N80-30758

DIFFERENTIAL EQUATIONS
Novel approach to the computation of axisymmetric countercurrent patterns in gas centrifuges
[LA-8258-MS] N80-30703
Numerical operational methods in structural dynamics N80-30783
Numerical studies in computer aided design. Part 2: Studies in high speed
[AD-A087060] N80-31060
Generalized equations and their solutions. Part 2: Applications to nonlinear programming
[AD-A086365] N80-31075
Stability of power systems and other systems of second order differential equations N80-31094
Stationary points and finite-difference schemes for differential inclusions
[AD-A086381] N80-31103
Regularizing effects of homogeneous evolution equations
[AD-A086561] N80-31108
Viable and monotone trajectories of differential inclusions
[AD-A086382] N80-31109
Fully nonlinear second order elliptic equations with large zeroth order coefficient
[AD-A086383] N80-31111
A non-recursive incomplete Cholesky decomposition method for the solution of linear equations with a sparse matrix
[AD-A087005] N80-31117

DIFFRACTION PATTERNS
Pattern analysis of a horn antenna in the presence of obstacles
[AD-A086426] N80-30590
Theoretical antenna analysis
[AD-A086703] N80-30614

DIFFUSE RADIATION
The contribution of the diffuse light component to the topographic effect on remotely sensed data
[NASA-TM-80728] N80-30876

DIFFUSION
Finite element modeling for convection-diffusion problems
[AD-A086777] N80-30698
A holographic interferometric study of the temperature dependence of diffusion of aqueous sodium chloride in water, from 32 C to 50 C N80-30715
Users manual for DWNWND: An interactive Gaussian plume atmospheric transport model with eight dispersion parameter options
[ORNL/TM-6874] N80-30962
Crystal defect studies using X-ray diffuse scattering
[CONF-800205-7] N80-31254

DIFFUSION THEORY
A theoretical study of transient effects in absorptive optical bistability N80-31192

DIGITAL COMPUTERS
A survey of synchronization problems
[AD-A086509] N80-31055

DIGITAL DATA
Reliability and maintainability improvement program for the AV-8 A/TAV-8A harrier head-up display set. Volume 1: Modifications to digital display indicator IP-1351/AVQ-30(v)
[AD-A085309] N80-30306
Use of LANDSAT data for estimating the area of sugar cane in the state of Sao Paulo --- Brazil
[E80-10260] N80-30843

DIGITAL SIMULATION
The USAF stability and control digital Datcom. Volume 2: Implementation of Datcom methods
[AD-A086558] N80-30316

DIGITAL SYSTEMS
The USAF stability and control digital Datcom. Volume 3: Plot module
[AD-A086559] N80-30317
Digital recording acquisition subsystem for radio interferometry applications implementation plan N80-30322
A digital temperature control and measurement system
[AD-A086805] N80-31052

DIGITAL TECHNIQUES
Classification of multispectral images according to crosswise textural characteristics --- Mato Grasso, Brazil
[E80-10257] N80-30840

DIHYDRIDES
Electronic structure studies of metal hydrides
[ISM-265] N80-31256

DIMENSIONAL STABILITY
A Three-Dimensional Stability Analysis/Design program (3DSAD). Report 1. General geometry module
[AD-A087074] N80-30807
Static investigation of rotor blades at rest and under quasi-stationary loading
[ISD-243] N80-30948

DIMERS
Laser physics and laser techniques
[AD-A087245] N80-30742

DIODES
Second breakdown susceptibility of silicon-on-sapphire diodes having systematically different geometries
[AD-A086345] N80-30648
Diode behavior
[ESA-CR(P)-1319] N80-30710
Measurement of optical fiber bandwidth in the time domain
[PB80-177421] N80-31204

DIPOLE ANTENNAS
A search for advanced fields in electro-magnetic radiation N80-30580

DIPOLE MOMENTS
Study of the anisotropic potential of KCl and CsCl in a rotation inelastic collision with rare gases. Part A: Study of the quadrupole moment of molecules from rotation inelastic scattering cross sections of CsF
[MPIS-19/1979-PT-A] N80-31261

DIRECT CURRENT
Measurements of electron heat flow along a dc magnetic field in strong temperature gradients
[LA-UR-80-1109] N80-31152

DISPERSING
Effect of alloy deformation on the average spacing parameters of non-deforming particles
[COO-3084-75] N80-30509
Evaluation of uncertainties in selected environmental dispersion needs --- radiation dosage
[CONF-791103-108] N80-30960

DISPLACEMENT MEASUREMENT
General shearing speckle interferometry and numerical boundary-integral techniques in experimental mechanics N80-30780

DISPLAY DEVICES
Simulation development and evaluation of an improved longitudinal velocity vector control wheel steering mode and electronic display format
[NASA-TP-1664] N80-30305
Reliability and maintainability improvement program for the AV-8 A/TAV-8A harrier head-up display set. Volume 1: Modifications to digital display indicator IP-1351/AVQ-30(v)
[AD-A085309] N80-30306

Helicopter electro-optical system display requirements. 2: Performance of helicopter pilots when using a low-light-level television system during simulated nap-of-the-earth flight
[AD-A086855] N80-30308
The human use of telecommunication systems
[AD-A086745] N80-30611
An optimal state estimation algorithm for terrain-ranging systems N80-30820
Liquid crystals (nematic liquids)
[RAE-LIB-TRANS-2020] N80-31241

DISPOSAL
SPS salvage and disposal alternatives
[NASA-CR-161548] N80-30898

DISTANCE MEASURING EQUIPMENT
Calibration validation for the GEOS-3 altimeter
[NASA-TM-80710] N80-30377

DISTORTION
Electron ionization cross sections in the distorted-wave approximation
[AD-A087210] N80-31167

DISTRIBUTED PARAMETER SYSTEMS
Sizing distributed systems: Overview and recommendations
[PB80-184377] N80-31088

DISTRIBUTION FUNCTIONS
Imperfect repair
[AD-A086845] N80-30765
A study of the properties of a new goodness-of-fit test
[AD-A086563] N80-31134

DIVING (UNDERWATER)
Thermal insulation materials for diver's underwear garment
[AD-A086743] N80-31048

DOCUMENTATION
Selective guide to climatic data sources
[PB80-187354] N80-31018

DOMESTIC SATELLITE COMMUNICATIONS SYSTEMS
Microwave communication. Citations from the NTIS data base
[PB80-810831] N80-30639

DOPED CRYSTALS
Critically evaluated data on optical and transport properties of solids refractive index and absorption coefficient of selected optical materials
[AD-A086658] N80-31199

DOPES
Photoconductivity in polyacetylene
[AD-A086942] N80-30527

DOPPLER EFFECT
Measuring and modeling rocket-plume Doppler spectral asymmetry in CW downlink transmissions
N80-30430

DOPPLER RADAR
A 35 GHz radar to measure particles in Rayleigh fields
[TUM-RT-KB-78/4] N80-30623
A 35 GHz Doppler radar to measure the speed of small particles
[TUM-RT-KB-79/2] N80-30624
Doppler radar measurement in high speed fields
[TUM-RT-KB-79/8] N80-30625

DRAG REDUCTION
Mach 3 hydrogen external/base burning
N80-30413

DRAINAGE
The use of the climatic water budget to evaluate the validity of a precipitation record
[PB80-182157] N80-31019

DROP TESTS
Store separation trajectory analysis
[AD-A086704] N80-30284

DROPS (LIQUIDS)
Non-Newtonian migration of a deformable drop in shearing flows N80-30680
Transformation of a drop falling on the surface layer of a liquid in a vortex ring
[MPIS-15/1979] N80-30707

DUAL SPIN SPACECRAFT
Dynamics and control in modal-space of flexible spacecraft N80-30376

DUCT GEOMETRY
Non-steady behavior of a flame spreading from a point in a two-dimensional duct N80-30454
Laminar natural convection along vertical corners and rectangular ducts N80-30675

DUCTILITY
Hydrostatic stress dependent yield of 7075-T6 aluminum
[SAND-79-2220] N80-30505

DUST
Explosibility of explosive and propellant dust
[AD-A087240] N80-30539
Proceedings of the Conference on Environmental Toxicology
[AD-A086341] N80-30958

DYE LASERS
The mode locked dye laser, 1. Picosecond photoconductivity of semi-insulating gallium-arsenide, 2 N80-30722
Remote monitoring of gaseous pollutants by differential absorption laser techniques
[PB80-179351] N80-30968

DYNAMIC LOADS
Pavement evaluation and overlay design using vibratory nondestructive testing and layered elastic theory. Volume 1: Development procedure
[AD-A087186] N80-30808

DYNAMIC MODELS
Models of the equatorial ocean circulation
N80-31024

DYNAMIC MODULUS OF ELASTICITY
Dynamic measurements of micropolar elastic constants
[OUEL-1291/91] N80-30819

DYNAMIC PROGRAMMING
Foundations of feedback theory for nonlinear dynamical systems
[AD-A086578] N80-31091

DYNAMIC RESPONSE
The dynamic behavior of nylon and polyester line
[AD-A087106] N80-30529
Shock in solids: Army materials research and applications N80-30772
On the dynamic energy release rate in elastic crack propagation N80-30775
Pavement evaluation and overlay design using vibratory nondestructive testing and layered elastic theory. Volume 1: Development procedure
[AD-A087186] N80-30808

DYNAMIC STABILITY
The Shock and Vibration Digest, volume 12, no. 5
[AD-A085328] N80-30771
Cross-flow-induced instabilities of circular cylinders
N80-30773

DYNAMIC STRUCTURAL ANALYSIS
Study of a mathematical model of a flexible solar array sub-panel assembly (VELSA 2)
[REPT-10.2-93/NT] N80-30366
Numerical operational methods in structural dynamics N80-30783
User's guide for a computer simulation program for multi-rigid-body systems
[ESA-STM-216] N80-31085

DYNAMOMETERS
Rocky Flats Small Wind Systems Test Center activities. Volume 2: Controlled velocity, vibration and dynamometer testing of Small Wind Energy Conversion Systems
[RFP-3004-VOL-2] N80-30908

E

E REGION
Study and evaluation of impulse mass spectrometers for ion analysis in the D and E regions of the ionosphere
[NASA-CR-163490] N80-30979

EARTH ATMOSPHERE
Selective guide to climatic data sources
[PB80-187354] N80-31018

EARTH ENVIRONMENT
Modeling the prospects for climatic change: Current state-of-the-art and implications
[CONF-800474-1] N80-30961
Consequences of a hypothetical world climate change produced by increased atmospheric carbon dioxide
[DOE/EV-10281/1] N80-31007

EARTH SATELLITES
Report on European space activities
[ESA-SP-1023] N80-30347

EARTHQUAKE DAMAGE
Earthquake risk and damage functions: An integrated preparedness and planning model applied to New Madrid
[PB80-170368] N80-30094

EARTHQUAKE RESISTANT STRUCTURES
Prediction of earthquake resistance of structures
[PB80-170731] N80-30573

EARTHQUAKES
Commonality of earthquake and wind analysis
[PB80-178312] N80-30575
Simple and complex models for nonlinear seismic response of reinforced concrete structures
[PB80-182413] N80-30576
Study of seismic wave excitation for two earthquakes in northern Baha, California N80-30977

ECHO SOUNDING
Preliminary results of radar environmental mapping
[AD-A086788] N80-30596
Radio-echo sounding in the Allan Hills, Antarctica, in support of the meteorite field program
[AD-A086858] N80-30879

ECHOCARDIOGRAPHY
Ultrasonics in medicine. Citations from the NTIS data base
[PB80-810922] N80-31037
Ultrasonic in medicine. Citations from the Engineering Index data base
[PB80-810930] N80-31038

ECONOMIC ANALYSIS
Trend analysis. Space communications system technology. Phase 1: Definition of user needs
[ADL-82871F] N80-30632
Solar energy system economic evaluation final report for SEMCO-Loxahatchee, Loxahatchee National Wildlife refuge, Palm Beach County, Florida
[NASA-CR-161512] N80-30894
Design study and economic assessment of multi-unit offshore wind energy conversion systems application. Volume 1: Executive summary
[WASH-2330-78/4-VOL-1] N80-30930
Energy analysis program, FY 1979
[LBL-10320] N80-30942

ECOSYSTEMS
Grizzly bear habitat analysis. Section 3: LANDSAT-1 multispectral imagery and computer analysis of grizzly bear habitat --- Stategoat, Scapegoat and Danaher areas, Montana
[NASA-CR-163382] N80-30867
Evaluation of uncertainties in selected environmental dispersion needs --- radiation dosage
[CONF-791103-108] N80-30960
Coastal upwelling ecosystems analysis. Data report: Cruise B/1, SNP-1, 7604
[PB80-132921] N80-31028

EDDY CURRENTS
Eddy current heating of irregularly shaped plates by slow ramped fields
[CONF-791102-167] N80-30655

EDUCATION
KL: A well-structured beginning computer language N80-31067

EFFICIENCY
Short pulse UV-visible waveguide laser
[AD-A086856] N80-30738

EFFLUENTS
Total particulate mass emission sampling errors
[PB80-181910] N80-30965
Survey analysis of phenolic compounds in industrial effluents by gas chromatography mass spectrometry
[PB80-177793] N80-30969

EIGENVALUES
Linear state feedback, quadratic weights, and closed loop eigenstructures
[NASA-CR-163484] N80-31146

EIGENVECTORS
Computer error bounds for aggregated Markov chain
[AD-A086193] N80-31132

EJECTION INJURIES
Technique and measurement of heat flux and flame temperature in rocket plume exposures
[AD-A086533] N80-30432

ELASTIC PROPERTIES
The dynamic behavior of nylon and polyester line
[AD-A087106] N80-30529
Wave propagation in honeycomb and foam-core panels for application to panel NDE
[AD-A086667] N80-30604

On the dynamic energy release rate in elastic crack propagation N80-30775
Nonlinear behavior of guyed towers N80-30782
Torsional waves in a bimetallic cylinder. Part 1: Axially homogeneous case
[AD-A085822] N80-30793
A review of nonlinear fracture relative to fatigue
[AD-A086671] N80-30795
Nonlocal stress field at Griffith crack
[AD-A086496] N80-30797
The surface singularity of cracks
[AD-A086491] N80-30799
An integral bound on the strain energy for the traction problem in nonlinear elasticity with small strains
[AD-A086377] N80-30802
Piping inelastic fracture mechanics analysis --- nuclear reactors
[AD-A087002] N80-30810
The prediction of response of solids to thermal loading using the finite element code AGGIE 1
[AD-A087042] N80-30812
Accurate numerical solutions for elastic-plastic models
[ANL-80-31] N80-30815

ELASTIC WAVES
The propagation of elastic waves in heterogeneous media N80-30586

ELASTOMERS
Evaluation and prediction of long term space environmental effects on non-metallic materials
[NASA-CR-161545] N80-30436

ELASTOPLASTICITY
A comparative study on the elastic-plastic collapse strength of initially imperfect deep spherical shells
[AD-A086006] N80-30794

ELECTRIC AUTOMOBILES
Fuel cells for electric utility and transportation applications
[BNL-27452] N80-30937
Study of hydrogen-powered versus battery-powered automobiles
[ATR-79(7759)-1-VOL-1] N80-31271

ELECTRIC BATTERIES
North-south station keeping with electric propulsion using onboard battery power N80-30395
Lithium-thionyl chloride battery
[AD-A085661] N80-30906
Development of advanced batteries at Argonne National Laboratory
[ANL-80-32] N80-30927
Performance data for a lithium-silicon/iron disulfide, long-life, primary thermal battery
[SAND-79-2148C] N80-30933

ELECTRIC CONTACTS
Surface physics and chemistry of electrical contact phenomena
[AD-A086733] N80-30460
Studies on corrosion prevention of Mardan connectors by organic coatings
[AD-A086730] N80-30491
Keyboards and touch controls: An evaluation of reliability and constructional principles for 11 different types
[ECR-90] N80-30660

ELECTRIC CURRENT
An experimental investigation of the King surface current probing technique in a transient application
[AD-A087203] N80-30615

ELECTRIC DISCHARGES
Characteristics of electrical discharges on the T78-2 satellite (SCATHA)
[AD-A087249] N80-30360
Analysis of electrical transients created by lightning
[NASA-CR-159308] N80-30645
Short pulse UV-visible waveguide laser
[AD-A086856] N80-30738

ELECTRIC ENERGY STORAGE
Conceptual design of electrical balance of plant for advanced battery energy storage facility
[ANL-80-16] N80-30940

ELECTRIC EQUIPMENT
Electromagnetic shielding. Citations from the NTIS data base
[PB80-810849] N80-30640

ELECTRIC FIELDS
Excitation of the parallel-plate section of a bounded wave EMP simulator by a conical transmission line
[AD-A086812] N80-30600
Interaction between particle beams and nonlinear states N80-31176

ELECTRIC GENERATORS
Upgrading of coal liquids for use as power generation fuels
[EPRI-AF-1225] N80-30547
Stability of power systems and other systems of second order differential equations N80-31094

ELECTRIC HYBRID VEHICLES
Hybrid vehicle potential assessment. Volume 3: Parallel systems
[CONS-4209-T1-VOL-3] N80-31270
Electric and hybrid vehicle system research and development project: Hybrid vehicle potential assessment. Volume 1: Summary
[CONS-4209-T1-VOL-1] N80-31272
Electric and hybrid vehicle system research and development project, hybrid vehicle potential assessment. Volume 4: Series systems
[CONS-4209-T1-VOL-4] N80-31273
Electric and hybrid vehicle system research and development project, hybrid vehicle potential assessment. Volume 6: Cost analysis
[CONS-4209-T1-VOL-6] N80-31274
Electric and hybrid vehicle system research and development project, hybrid vehicle potential assessment. Volume 8: Scenario generation --- impact of hybrid vehicles on petroleum consumption
[CONS-4209-T1-VOL-8] N80-31275

ELECTRIC IGNITION
Power independent ignition energy measurements
[MLM-2709(OP)] N80-30935

ELECTRIC POTENTIAL
Auroral electrodynamics I. 1: Preliminary electron density profile. 2: Vehicle potential changes during an active beam experiment
[AD-A086728] N80-30989
Study of the anisotropic potential of KCl and CsCl in a rotation inelastic collision with rare gases. Part A: Study of the quadrupole moment of molecules from rotation inelastic scattering cross sections of CsF
[MPIS-19/1979-PT-A] N80-31261

ELECTRIC POWER
Comparative analysis of net energy balance for Satellite Power Systems (SPS) and other energy systems
[DOE/ER-0056] N80-30916

ELECTRIC POWER PLANTS
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 1: Coal-fired nocogeneration process boiler, section A
[NASA-CR-159770-PT-1-A] N80-30888
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 1: Coal-fired nocogeneration process boiler, section B
[NASA-CR-159770-PT-1-B] N80-30889
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 2: Residual-fired nocogeneration process boiler
[NASA-CR-159770-PT-2] N80-30890
Navy-New Hampshire wind energy program
[AD-A086506] N80-30904
Utility views on solar thermal central receivers
[SAND-80-8203] N80-30911
Comparative assessment of environmental welfare issues associated with the Satellite Power System (SPS) and alternative technologies
[DOE/ER-0055] N80-30915
Comparative analysis of net energy balance for Satellite Power Systems (SPS) and other energy systems
[DOE/ER-0056] N80-30916
Magnetohydrodynamic generators in power generation. Citations from the NTIS data base
[PB80-810856] N80-30954

ELECTRIC POWER TRANSMISSION
A study of a space communication system for the control and monitoring of the electric distribution system. Volume 2: Supporting data and analyses
[NASA-CR-163478] N80-30587
Satellite power systems (SPS) concept definition study. Volume 1: Executive summary
[NASA-CR-3317] N80-30901
A study of a space communication system for the control and monitoring of the electric distribution system. Volume 1: Summary
[NASA-CR-163477] N80-31268

ELECTRIC PROPULSION
The 1980 JANNAF propulsion Meeting, volume 5
[AD-A087063] N80-30381
Upper stages utilizing electric propulsion N80-30386
North-south station keeping with electric propulsion using onboard battery power N80-30395
US Air Force programs in electric propulsion N80-30396

ELECTRIC WIRE
Manufacture of superconducting wire
[DOE/ER-10367/2] N80-30570

ELECTRICAL ENGINEERING
The dc superconducting power transmission line project at LASL: US DOE division of electric energy systems
[LA-8323-PR] N80-30656
European Scientific Notes. Volume 34, No. 6
[AD-A086806] N80-31304

ELECTRICAL FAULTS
Second breakdown susceptibility of silicon-on-sapphire diodes having systematically different geometries
[AD-A086345] N80-30648

ELECTRICAL IMPEDANCE
Influence of wall impedance on the electron cyclotron maser instability
[AD-A086401] N80-30736

ELECTRICAL INSULATION
X-ray examination of lapped electrical insulation
[BNL-27456] N80-30659

ELECTRICAL PROPERTIES
Reliability evaluation of GaAs power FETs
[AD-A086668] N80-30651
Structural and electronic properties of a linear chain mercury compound N80-31239
Electrical characterization of germanium implanted gallium arsenide
[AD-A086652] N80-31243

ELECTRICAL RESISTANCE
Submicron FETS using molecular beam epitaxy
[AD-A086422] N80-31244

ELECTRICAL RESISTIVITY
Influence of wall impedance on the electron cyclotron maser instability
[AD-A086401] N80-30736
Nonlinear evolution of resistive interchange modes in reversed field pinches
[UCRL-84301] N80-31215

ELECTRO-OPTICS
Monolithic integration of gallium arsenide optoelectronic devices N80-30642
Theory of the longitudinal free electron laser, 1. A theoretical model of the linear electrooptic effect, 2 N80-30723

ELECTROCATALYSTS
Aqueous trifluoromethanesulfonic acid fuel cells
[AD-A086579] N80-30905
Materials for fuel cells
[PB80-182355] N80-30955

ELECTROCHEMICAL CELLS
Energy savings by means of fuel cell electrodes in electro-chemical industries
[COO-4881-12] N80-30902
Advanced photovoltaic concentrator cells
[DSE-4042-T30] N80-30946

ELECTROCHEMISTRY
Introduction to electrochemistry of nerve membranes
[PB80-178908] N80-31036
MHD electrode development
[FE-15529-5] N80-31222

ELECTRODES
Development of advanced batteries at Argonne National Laboratory
[ANL-80-32] N80-30927
MHD electrode development
[FE-15529-5] N80-31222

ELECTRODYNAMICS
Eddy current heating of irregularly shaped plates by slow ramped fields
[CONF-791102-167] N80-30655
Auroral electrodynamics I. 1: Preliminary electron density profile. 2: Vehicle potential changes during an active beam experiment
[AD-A086728] N80-30989

ELECTROLYTES
Energy savings by means of fuel cell electrodes in electro-chemical industries
[COO-4881-12] N80-30902
Aqueous trifluoromethanesulfonic acid fuel cells
[AD-A086579] N80-30905

ELECTROMAGNETIC ABSORPTION
A theoretical study of transient effects in absorptive optical bistability N80-31192
ELECTROMAGNETIC FIELDS
Flow phenomena in gravitationless melting zones in the presence of electromagnetic fields
[ESA-TT-592] N80-30713
Matrix methods for determining system poles from transient response
[AD-A087204] N80-31121
ELECTROMAGNETIC INTERFERENCE
The magnetic characteristics of tape wrapped cylindrical ferromagnatic laminations for frequencies below 50 kHz
[AD-A086333] N80-30592
A predictor model for SHF and EHF MILSATCOM system availabilities in the presence of rain
[AD-A086714] N80-30609
ELECTROMAGNETIC NOISE
Introduction to the study of noise in charged coupled devices
[CNES-NT-90] N80-30631
Analysis of electrical transients created by lightning
[NASA-CR-159308] N80-30645
DIAL with heterodyne detection including speckle noise: Aircraft/shuttle measurements of O3, H2O, and NH3 with pulsed tunable CO2 lasers
[NASA-TP-1725] N80-30717
ELECTROMAGNETIC PULSES
Interaction between a parallel-plate EMP simulator and a cylindrical test object
[AD-A086815] N80-30597
Discrete and continuous spectra of finite-width, parallel-plate simulator fields
[AD-A086813] N80-30598
Parallel-plate transmission line type of EMP simulators: Systematic review and recommendations
[AD-A086814] N80-30599
Excitation of the parallel-plate section of a bounded wave EMP simulator by a conical transmission line
[AD-A086812] N80-30600
ELECTROMAGNETIC RADIATION
The influence of random media on the propagation and depolarization of electromagnetic waves N80-30579
A search for advanced fields in electro-magnetic radiation N80-30580
Generation and injection of e.m. waves in space plasma by means of a long orbiting tether
[NASA-CR-161533] N80-30588
ELECTROMAGNETIC SCATTERING
Scatterplate interferometry N80-31190
ELECTROMAGNETIC SHIELDING
Electromagnetic shielding. Citations from the NTIS data base
[PB80-810849] N80-30640
ELECTROMAGNETIC SPECTRA
Research investigation directed toward extending the useful range of the electromagnetic spectrum
[AD-A087034] N80-30617
ELECTROMAGNETIC WAVE TRANSMISSION
Comprehensive description of fields in optical fibers by means of the propagating beam method
[UCRL-84219] N80-31200
European Scientific Notes. Volume 34, No. 6
[AD-A086806] N80-31304
ELECTRON ACCELERATION
Intense pulsed ion beams for fusion applications
[SAND-80-0402] N80-31185
ELECTRON ACCELERATORS
Collective ion acceleration and electron beam propagation in dielectric guides
[AD-A086493] N80-31177
TWCP electron beam testing program: Volume 2: Preliminary characterization of the Blackjack 3 pulsed electron beam for material response studies
[AD-A086306] N80-31179
TWCP electron beam testing program: Volume 3: Material response instrumentation for the Blackjack 3 electron beam facility
[AD-A086307] N80-31180
ELECTRON BEAM WELDING
Investigation of the solidification behavior of electron beam welds under microgravitational conditions
[ESA-TT-591] N80-30760
ELECTRON BEAMS
Structural defects in laser- and electron-beam annealed silicon
[CONF-791112-62] N80-30437
Advanced electron beam techniques for metallic and ceramic protective coating systems --- modifying gas turbine and diesel engines for alternative fuel use
[LBL-10520] N80-30449
High voltage switch using externally ionized plasmas
[AD-A086761] N80-30647
High power submillimeter and infrared radiation from intense relativistic electron beams
[AD-A086688] N80-30737
Resonant interaction between an active molecular medium and a free electron laser
[AD-A087056] N80-30743
Computer aided automated hybrid substrate probe testing development
[AD-A087124] N80-30768
TWCP electron beam testing program: Volume 2: Preliminary characterization of the Blackjack 3 pulsed electron beam for material response studies
[AD-A086306] N80-31179
TWCP electron beam testing program: Volume 3: Material response instrumentation for the Blackjack 3 electron beam facility
[AD-A086307] N80-31180
ELECTRON DENSITY (CONCENTRATION)
Spectral analysis of scintillation data taken from an aircraft, part 1
[AD-A086837] N80-30603
Study of elf propagation anomalies as related to improved knowledge of electron density profiles produced by energetic particle precipitation
[AD-A087255] N80-30619
ELECTRON DENSITY PROFILES
Auroral electrodynamics I. 1: Preliminary electron density profile. 2: Vehicle potential changes during an active beam experiment
[AD-A086728] N80-30989
ELECTRON ENERGY
Effective collision frequency and electron temperature in a weakly ionized argon plasma
[MBB-UA-498-79OE] N80-31225
ELECTRON GUNS
Computer aided automated hybrid substrate probe testing development
[AD-A087124] N80-30768
ELECTRON IMPACT
Electron ionization cross sections in the distorted-wave approximation
[AD-A087210] N80-31167
ELECTRON MICROSCOPY
A STEM analysis of two rapidly solidified stainless steels
[AD-A085887] N80-30485
ELECTRON OPTICS
Computer controlled measurement of shapes and their variations by means of active targets and an optoelectronic converter
[ISD-245] N80-31201
ELECTRON PARAMAGNETIC RESONANCE
Magnetic soliton defects in polyacetylene
[AD-A086978] N80-30528
ELECTRON PROBES
Computer aided automated hybrid substrate probe testing development
[AD-A087124] N80-30768
ELECTRON STATES
A study of low-temperature processes in non-equilibrium electronic states
[AD-A086494] N80-30729
Calculation of the energetics and collision dynamics of electronic transition lasers
[AD-A086657] N80-30731
ELECTRON TRANSFER
Short pulse UV-visible waveguide laser
[AD-A086856] N80-30738
ELECTRON TRANSITIONS
Photoconductivity in polyacetylene
[AD-A086942] N80-30527
ELECTRON TUNNELING
Studies on the reduction of intermodulation generation in communications systems
[AD-A086995] N80-30622
Superconductive devices for millimeter wave detection mixing and amplification
[AD-A086443] N80-30646
Inelastic electron tunneling spectroscopy intensities as a function of surface coverage: Experimental determination, physical model, and application --- metal-oxide-metal tunnel junctions N80-31228
Surface plasmons confined by microstructures N80-31237
ELECTRONIC CONTROL
A propulsion system for the Mars rover vehicle
[NASA-CR-163494] N80-30750
ELECTRONIC EQUIPMENT
Safety and health hazard evaluation, general equipment
[AD-A086990] N80-30569
Electromagnetic shielding. Citations from the NTIS data base
[PB80-810849] N80-30640
Lightning, surge and transient protection. Citations from the NTIS data base
[PB80-810781] N80-30667
ELECTRONIC EQUIPMENT TESTS
Wave propagation in honeycomb and foam-core panels for application to panel NDE
[AD-A086667] N80-30604
Design guidelines and optimization procedures for test subsystem design
[AD-A087059] N80-30769
Random access memomy, volume 1
[ESS/SS-935-VOL-1] N80-31062
Random access memory, volume 2
[ESS/SS-935-VOL-2] N80-31063
ELECTRONIC MODULES
Study and evaluation of modular packaging techniques for on board data handling: Technology assessment
[ESS/SS-918] N80-30663
The blast noise prediction program: User reference manual
[CERL-IR-N-75] N80-31155
ELECTRONIC PACKAGING
Study and evaluation of modular packaging techniques for on board data handling: Technology assessment
[ESS/SS-918] N80-30663
ELECTROPHYSIOLOGY
Introduction to electrochemistry of nerve membranes
[PB80-178908] N80-31036
ELECTROPLATING
Pulse plating of nickel deposits
[BDX-613-2378] N80-30502
ELECTROSTATICS
A non-recursive incomplete Cholesky decomposition method for the solution of linear equations with a sparse matrix
[AD-A087005] N80-31117
ELECTROWINNING
Energy savings by means of fuel cell electrodes in electro-chemical industries
[COO-4881-12] N80-30902
ELEMENTARY PARTICLES
Research program in elementary particle theory
[COO-3533-161] N80-31170
ELLIPTICAL POLARIZATION
Conventions and formulas for using the Mueller-Stokes calculus in ellipsometry
[LBL-10172] N80-31124
ELLIPTICITY
Ideal magnetohydrodynamic equilibrium of a weakly toroidal plasma with elongated cross section. Part 1: Elliptic cross section
[REPT-79-121-PT-1] N80-31224
EMISSION SPECTRA
Studies of laser selective excitation of atoms
[AD-A086497] N80-30734
Impurity studies in the single crystal cadmium sulfide
[AD-A086741] N80-31248
Observations and interpretation of the permitted emission line spectra of quasi-stellar objects N80-31281
Solar wind flows associated with hot heavy ions
[LA-8344-T] N80-31299
EMITTERS
Development and testing of cleaning procedures and feeding systems for a field emission thruster model
[FRI-R664/3] N80-30434
ENCEPHALITIS
Ultrasonic in medicine. Citations from the Engineering Index data base
[PB80-810930] N80-31038
ENERGETIC PARTICLES
Solar-geophysical data number 426, February 1980. Part 2: Comprehensive reports
[PB80-186158] N80-31302

ENERGY ABSORPTION FILMS
Thin films of InP for photovoltaic energy conversion
[COO-3004-2] N80-30912
ENERGY BUDGETS
BIRAMIS payload study, volume 1 — satellite measurements of the Earth's energy budget
[ONERA-RT-4/3373-SYP-VOL-1] N80-30379
BIRAMIS payload study. Volume 3: The accelerometer super-CACTUS
[ONERA-RT-5/3373-SY-VOL-3] N80-30380
Parameterization of extended cloudiness and radiation for climate models N80-31009
ENERGY CONSERVATION
Industrial application and assessment of waste energy recovery technologies N80-30886
Pacific Missile Test Center energy projects. Summary of projects, contributions, and plans
[AD-A086196] N80-30903
Energy analysis program, FY 1979
[LBL-10320] N80-30942
Evaluation of the Ram-Jet device, a PCV air bleed
[PB80-170657] N80-30964
Electric and hybrid vehicle system research and development project: Hybrid vehicle potential assessment. Volume 1: Summary
[CONS-4209-T1-VOL-1] N80-31272
Electric and hybrid vehicle system research and development project, hybrid vehicle potential assessment. Volume 6: Cost analysis
[CONS-4209-T1-VOL-6] N80-31274
Electric and hybrid vehicle system research and development project, hybrid vehicle potential assessment. Volume 8: Scenario generation—impact of hybrid vehicles on petroleum consumption
[CONS-4209-T1-VOL-8] N80-31275
ENERGY CONSUMPTION
Feasibility study for industrial cogeneration fuel cell application
[SAN-1889-T1] N80-30934
Comparative assessment of five long-run energy projections
[DOE/EIA/CR-0016/02] N80-30936
ENERGY CONVERSION
Hydrogen storage. Hydrogen as a hydride. Citations from the NTIS data base
[PB80-811094] N80-30561
Industrial application and assessment of waste energy recovery technologies N80-30886
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 1: Coal-fired nocogeneration process boiler, section A
[NASA-CR-159770-PT-1-A] N80-30888
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 1: Coal-fired nocogeneration process boiler, section B
[NASA-CR-159770-PT-1-B] N80-30889
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 2: Residual-fired nocogeneration process boiler
[NASA-CR-159770-PT-2] N80-30890
Rocky Flats Small Wind Systems Test Center activities. Volume 1: Atmospheric test data collected from Small Wind Energy Conversion Systems
[RFP-3004-VOL-1] N80-30907
Rocky Flats Small Wind Systems Test Center activities. Volume 2: Controlled velocity, vibration and dynamometer testing of Small Wind Energy Conversion Systems
[RFP-3004-VOL-2] N80-30908
Siting handbook for small wind energy conversion systems
[PNL 2521-REV-1] N80-30941
Solar passive systems for buildings
[NP-24377] N80-30947
Thermionic energy conversion. Citations from the NTIS data base
[PB80-810906] N80-30950
ENERGY CONVERSION EFFICIENCY
Solar energy system performance evaluation report for IBM System 4 at Canton, Mississippi
[NASA-CR-161509] N80-30893
ENERGY DISSIPATION
On the dynamic energy release rate in elastic crack propagation N80-30775
ENERGY LEVELS
On the number of periodic trajectories for a Hamiltonian flow and a convex energy surface
[AD-A086367] N80-31102
ENERGY POLICY
Production of sugarcane and tropical grasses as a renewable energy source
[ORO-5912-T3] N80-30543
Research and evaluation of biomass resources/conversion/utilization systems (market/experimental analysis for development of a data base for a fuels from biomass model)
[DOE/ET-20611/11] N80-30552
Second phase of a coalbed methane extraction and utilization program
[AESD-TM-3026] N80-30556
Thermophysical properties of coal liquids
[BMI-2043] N80-30557
Performance of a diesel engine operating on raw coal-diesel fuel and solvent refined coal-diesel fuel slurries
[CONS-3288-T6] N80-30758
Comparative assessment of environmental welfare issues associated with the Satellite Power System (SPS) and alternative technologies
[DOE/ER-0055] N80-30915
Hybrid photovoltaic/thermal systems with a solar-assisted heat pump
[BNL-27667] N80-30919
Controlled cadmium telluride thin films for solar cell applications (emerging materials systems for solar cell applications)
[DOE/ET-23023/T3] N80-30921
Report of the 6th Ocean Thermal Energy Conversion Conference: Ocean Thermal Energy for the 1980's
[CONF-790631-1] N80-30922
Photovoltaic systems and applications perspective
[SAND-80-0926C] N80-30923
Design study and economic assessment of multi-unit offshore wind energy conversion systems application. Volume 1: Executive summary
[WASH-2330-78/4-VOL-1] N80-30930
Sencenbaugh Model 1000-14 wind turbine generator
[RFP-3034/3533/79-5] N80-30931
Performance data for a lithium-silicon/iron disulfide, long-life, primary thermal battery
[SAND-79-2148C] N80-30933
Fuel cells for electric utility and transportation applications
[BNL-27452] N80-30937
Thermally driven open-cycle heat pump system
[CONF-800549-1] N80-30938
Energy analysis program, FY 1979
[LBL-10320] N80-30942
Advanced photovoltaic concentrator cells
[DSE-4042-T33] N80-30946
Static investigation of rotor blades at rest and under quasi-stationary loading
[ISD-243] N80-30948
Stability and dynamic response to gravitational forces of the flapping and lead-lag hinges on a rigid rotor blade with the leading-edge angle of attack and flapping being coupled
[ISD-244] N80-30949
Dynamic analysis of a rotor blade with lead-lag freedom, flapping freedom, and variable-controlled blade pitch angle
[ISD-258] N80-30950
Regenerative energy sources for the production of low temperature heat. Energy sources, energy types, and energy conversion, results and applications, measures to promote use
[ISBN 3-7041-0038-2] N80-30951
Assessment of the US Mirror Fusion program. Report of the 1980 Mirror Senior Review Panel
[DOE/ER-0057] N80-31214
Study of hydrogen-powered versus battery-powered automobiles
[ATR-79(7759)-1-VOL-1] N80-31271
ENERGY REQUIREMENTS
Comparative assessment of five long-run energy projections
[DOE/EIA/CR-0016/02] N80-30936
ENERGY STORAGE
Hydrogen storage. Storage as a gas or liquid. Citations from the NTIS data base
[PB80-811086] N80-30560
Hydrogen storage. Hydrogen as a hydride. Citations from the NTIS data base
[PB80-811094] N80-30561
Sulfuric acid and water chemical heat pump/chemical energy storage program, phase 2-A
[SAND-78-8178] N80-30924
System design, tests results, and economic analysis of a flywheel energy storage and conversion system for photovoltaic applications
[COO-4094-70] N80-30928
Performance data for a lithium-silicon/iron disulfide, long-life, primary thermal battery
[SAND-79-2148C] N80-30933
Fuel cells for electric utility and transportation applications
[BNL-27452] N80-30937
Wind power. Citations from the NTIS data base
[PB80-811433] N80-30956
Wind power. Citations from the Engineering Index data base
[PB80-811441] N80-30957
ENERGY TECHNOLOGY
Report of the 6th Ocean Thermal Energy Conversion Conference: Ocean Thermal Energy for the 1980's
[CONF-790631-1] N80-30922
Solar assisted heat pump program overview and summary of work at Brookhaven National Laboratory
[BNL-27662] N80-30926
NASA program plan N80-31269
ENERGY TRANSFER
Energy transfer and optical spectroscopy of diatomic molecules in chemically reacting systems
[AD-A086829] N80-31165
ENGINE DESIGN
Design and development of Stirling engines for stationary power applications in the 500 to 3000 hp range. Subtask 1A report: State-of-the-art conceptual design
[DOE/ET-15209-T1] N80-30755
Electric and hybrid vehicle system research and development project, hybrid vehicle potential assessment. Volume 6: Cost analysis
[CONS-4209-T1-VOL-6] N80-31274
ENGINE FAILURE
Light twin-engine aircraft accidents following engine failures
[PB80-177306] N80-30287
ENTHALPY
Solar thermal energy storage using a paraffin wax phase change material N80-30887
ENTIRE FUNCTIONS
Waves, caustics and Thom's theorem
[AD-A086974] N80-31122
ENVIRONMENT EFFECTS
Evaluation and prediction of long term space environmental effects on non-metallic materials
[NASA-CR-161545] N80-30436
Environmental implications of accelerated gasohol production: Preliminary assessment
[ANL/ES-91] N80-30555
Solar energy system economic evaluation final report for SEMCO-Loxahatchee, Loxahatchee National Wildlife refuge, Palm Beach County, Florida
[NASA-CR-161512] N80-30894
Climate and energy: A comparative assessment of the Satellite Power System (SPS) and alternative energy technologies
[DOE/ER-0050] N80-30914
Comparative assessment of environmental welfare issues associated with the Satellite Power System (SPS) and alternative technologies
[DOE/ER-0055] N80-30915
Energy analysis program, FY 1979
[LBL-10320] N80-30942
South Atlantic OCS physical oceanography, volume 2 — monitoring ocean currents and sea states to assess effects of oil and gas activities on the environment
[PB80-181555] N80-31026
South Atlantic OCS physical oceanography, volume 3 — monitoring ocean currents and sea states to assess the environment effects of oil and gas activities
[PB80-181563] N80-31027
ENVIRONMENT MODELS
Advanced flight design systems subsystem performance models: Sample model: Environmental analysis routine library
[NASA-CR-160770] N80-31046
ENVIRONMENT POLLUTION
Evaluation of uncertainties in selected environmental dispersion needs — radiation dosage
[CONF-791103-108] N80-30960

ENVIRONMENT PROTECTION
Waste isolation safety assessment program: Task 4: Collection and generation of transport data theoretical and experimental evaluation of waste transport in selected rocks
[LBL-9945] N80-31182
ENVIRONMENTAL CONTROL
Advanced flight design systems subsystem performance models. User guide: Environmental analysis routine library
[NASA-CR-160769] N80-31045
ENVIRONMENTAL MONITORING
Preliminary results of radar environmental mapping
[AD-A086788] N80-30596
Design and performance of an aerosol mass distribution monitor
[PB80-179310] N80-30973
ENVIRONMENTAL QUALITY
The benefits of air and water pollution control: A review and synthesis of recent estimates
[PB80-178759] N80-30967
ENVIRONMENTAL TESTS
Fatigue behavior of glass fiber reinforced polybutyleneterephthalate
[AD-A087104] N80-30444
MARS 1414 recorder environmental tests
[NASA-TP-1709] N80-30716
Rocky Flats Small Wind Systems Test Center activities. Volume 1: Atmospheric test data collected from Small Wind Energy Conversion Systems
[RFP-3004-VOL-1] N80-30907
EPITAXY
Epitaxial growth of single crystal films
[NASA-CR-161544] N80-31242
EPOXY RESINS
Effect of applied stress, thermal environment and water in epoxy resins
[AD-A086200] N80-30517
EQUATIONS OF MOTION
Vibrations of a compressor blade with slip at the root
[AD-A086852] N80-30312
The translational motion of particles in a viscoelastic liquid N80-30673
Some comments on the rational solutions of the Zakharov-Schabat equations N80-31128
Analysis of scattering and radiation of acoustic waves from an axisymmetric structure in a infinite fluid medium
[AD-A086587] N80-31157
EQUATIONS OF STATE
Viable and monotone trajectories of differential inclusions
[AD-A086382] N80-31109
EQUATORIAL ATMOSPHERE
Spectral analysis of scintillation data taken from an aircraft, part 1
[AD-A086837] N80-30603
EQUATORIAL ELECTROJET
Rocket measurement of toroidal magnetic fields in an equatorial electrojet: Method of evaluation
[GAMMA-34] N80-30993
EQUILIBRIUM EQUATIONS
Ideal magnetohydrodynamic equilibrium of a weakly toroidal plasma with elongated cross section. Part 1: Elliptic cross section
[REPT-79-121-PT-1] N80-31224
EROSION
Microstructural aspects of impact of erosion in LiF, NaCl, KCl and CaF2 single crystals N80-31232
EROSIVE BURNING
Modeling propellant combustion interacting with an eroding solid surface
[UCRL-83727] N80-30433
ERROR ANALYSIS
Estimation of probabilities of label imperfections and correction of mislabels
[E80-10288] N80-30856
Total particulate mass emission sampling errors
[PB80-181910] N80-30965
Two's-complement fixed-point multiplication errors, theory
[AD-A086826] N80-31115
Computer error bounds for aggregated Markov chain
[AD-A086193] N80-31132
ERROR CORRECTING CODES
Functional design for an automated data base error detection system
[AD-A086811] N80-31053
ERROR CORRECTING DEVICES
Synthesis of MCJ codes
[AD-A086778] N80-30594
ERROR DETECTION CODES
Functional design for an automated data base error detection system
[AD-A086811] N80-31053
ESTIMATING
Estimation of confidence limits for testing large logic networks
[AD-A086281] N80-30650
A fast estimation algorithm for two-dimensional gravity data, geofast
[AD-A086835] N80-30988
ETCHING
Characterization of macromolecular films adsorbed in track-etched membranes N80-30515
ETHANE
Tunable laser survey of molecular air pollutants: Doppler-limited spectra of the C-H stretching bands of formaldehyde, ethylene, ethane and allene
[PB80-180003] N80-30974
ETHYLENE
Tunable laser survey of molecular air pollutants: Doppler-limited spectra of the C-H stretching bands of formaldehyde, ethylene, ethane and allene
[PB80-180003] N80-30974
EUROPE
Application Explorer Mission-A heat capacity mapping mission — Bavaria, Germany and Marrakech, Morocco
[E80-10309] N80-30875
EUROPEAN SPACE PROGRAMS
Report on European space activities, 1979 N80-30345
Report on European space activities
[ESA-SP-1023] N80-30347
Trend analysis. Space communications system technology. Phase 1: Definition of user needs
[ADL-82871F] N80-30632
EUTECTIC ALLOYS
Fatigue of Ni-Al-Mo aligned eutectics N80-30473
Heats of transformation of eutectic alloys N80-30477
EUTECTICS
New processing for DEB powder for thermal batteries
[GEPP-OP-486] N80-30932
EVALUATION
Reliability evaluation of GaAs power FETs
[AD-A086668] N80-30651
Hydrogen engine performance analysis project
[SAN-1212-T1] N80-30756
Quick reaction evaluation of materials for systems applications
[AD-A085859] N80-30789
Evaluation of a new fracture toughness measuring technique, and adaptation of the technique to use ultra-small specimens
[AD-A085892] N80-30791
EVAPORATION
The flash evaporation of powdered indium antimonide
[AD-A086531] N80-30495
EVAPOTRANSPIRATION
Florida water resources
[E80-10246] N80-30829
Use of soil moisture information in yield models
[E80-10302] N80-30869
EVERGLADES (FL)
Florida water resources
[E80-10246] N80-30829
EXCIMER LASERS
Research investigation directed toward extending the useful range of the electromagnetic spectrum
[AD-A087034] N80-30617
Cross sections for ionization of rare gas excimers by electron impact and atomic and molecular processes in xcimer laser
[AD-A086698] N80-30732
Reactions and relaxation of vibrationally excited hydrogen
[AD-A086976] N80-31168
EXCITATION
Excitation of the parallel-plate section of a bounded wave EMP simulator by a conical transmission line
[AD-A086812] N80-30600
Reactions and relaxation of vibrationally excited hydrogen
[AD-A086976] N80-31168
Phenomena at very high spins
[LBL-10645] N80-31184
Measurement of the energy dependence of the integral scattering cross section for electronic stimulation in shocks of alkali with mercury, with spectral analysis of light
[MPIS-17/1979] N80-31260
EXHAUST EMISSION
Advanced combustion systems for stationary gas turbine engines. Volume 4: Combustor verification testing, addendum
[PB80-179849] N80-30313
EXHAUST FLOW SIMULATION
A nozzle boundary layer model including the subsonic sublayer usable for determining boundary layer effects on plume flowfields N80-30428
EXHAUST GASES
Evaluation of the Ram-Jet device, a PCV air bleed
[PB80-17C957] N80-30964
Total particulate mass emission sampling errors
[PB80-181910] N80-30965
Photochemical study of NOx removal from stack gases
[PB80-181274] N80-30966
EXHAUST SYSTEMS
Engine cycle studies program
[NASA-CR-159500] N80-30310
EXISTENCE THEOREMS
Stationary points and finite-difference schemes for differential inclusions
[AD-A086381] N80-31103
Viable and monotone trajectories of differential inclusions
[AD-A086382] N80-31109
Fully nonlinear second order elliptic equations with large zeroth order coefficient
[AD-A086383] N80-31111
EXPERIMENTAL DESIGN
Study of optimality criteria in design of experiments
[AD-A086830] N80-31141
EXPERIMENTATION
Study on the utilization of solar energy for the operation of Spacelab material science furnaces
[ESA-CR(P)-1301] N80-30348
EXPLOSIONS
Explosibility of explosive and propellant dust
[AD-A087240] N80-30539
EXPLOSIVE WELDING
Viscosity of metals in explosive welding
[UCRL-TRANS-11542] N80-30504
EXPONENTIAL FUNCTIONS
Flux-spline method for heat, mass and momentum transfer N80-30671
Preposterior analysis of Bayes estimators of mean life, 1
[AD-A086771] N80-31135
EXPOSURE
Technique and measurement of heat flux and flame temperature in rocket plume exposures
[AD-A086533] N80-30432
EXTERNAL COMBUSTION ENGINES
Mach 3 hydrogen external/base burning N80-30413
EXTERNAL STORES
Comparison of wind tunnel and flight test measurements of static aerodynamic loading of a captive store
[AD-A087237] N80-30281
Store separation trajectory analysis
[AD-A086704] N80-30284
EXTRAGALACTIC RADIO SOURCES
Quasi-simultaneous observations of the BL Lac object MK 501 in X-ray, UV, visible, IR and radio frequencies
[NASA-TM-81985] N80-31285
The relation between the galactic compact radio sources and the extragalactic compact radio sources N80-31303
EXTRAPOLATION
On the extrapolation of band-limited signals N80-30585
EXTRATERRESTRIAL INTELLIGENCE
The telecommunications and data acquisition report
[NASA-CR-163431] N80-30319
EXTREMELY HIGH FREQUENCIES
Use of K sub A-band for radio metric determinations N80-30333

EXTRUDING
Bubble dynamics in structural foam processing
N80-30677

EYE MOVEMENTS
Instrument scanning and controlling: Using eye movement data to understand pilot behavior and strategies
[NASA-CR-3306] N80-31039

EYE PROTECTION
Laser protective eyewear program at the Los Alamos Scientific Laboratory
[LA-UR-80-1038] N80-31049

F

F REGION
Influence of magnetic shear on the current convective instability in the diffuse aurora
[AD-A086789] N80-30984

F-4 AIRCRAFT
Store separation trajectory analysis
[AD-A086704] N80-30284

FABRICATION
A fundamental study of a new fabrication technique for fiber reinforced aluminum matrix composites
[AD-A086282] N80-30443
Development study of a novel continuous-flow impactor
[PB80-179286] N80-30574
Advanced photovoltaic concentrator cells
[DSE-4042-T30] N80-30946

FABRICS
Triaxially woven fabrics of Kevlar, Dacron polyester and hybrids of Kevlar and Dacron polyester
[AD-A086866] N80-30521

FAILURE ANALYSIS
Reliability evaluation of GaAs power FETs
[AD-A086668] N80-30651
Integrated circuit reliability. Citations from the NTIS data base
[PB80-811128] N80-30666
Sensor failure analysis and multivariable control for airbreathing propulsion systems N80-30747
Non-contacting strain control and acoustic emission in high-temperature testing
[ICAF-1142] N80-30786
Development of advanced batteries at Argonne National Laboratory
[ANL-80-32] N80-30927

FAILURE MODES
Nonoperating failure rates for avionics study
[AD-A087048] N80-30309
The role of hydrogen in the stress corrosion failure of high strength Al-Zn-Mg alloys and sensitized austenitic stainless steels
[AD-A086427] N80-30494
Microcracking and engineering properties of high-strength concrete N80-30563
The application of optical interferometry to time dependent unbonding, parts 1, 2, and 3 N80-30774
Failure time distributions: Estimates and asymptotoc results
[AD-A086828] N80-31133

FANS (LANDFORMS)
Soil moisture in relation to geologic structure and lithology, northern California
[E80-10298] N80-30865

FARM CROPS
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations — Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missoun, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860

FAST FOURIER TRANSFORMATIONS
A fast estimation algorithm for two-dimensional gravity data, geofast
[AD-A086835] N80-30988

FATIGUE (MATERIALS)
Fatigue of Ni-Al-Mo aligned eutectics N80-30473
Scatter of fatigue crack rates in 7XXX aluminum alloys
[AD-A086543] N80-30498
Fatigue effects in the wear of polymers
N80-30516
Analysis of ground calibration data from strain gauges attached to the airframe of CT4-A airtrainer A19-031
[AD-A086970] N80-30719
A review of nonlinear fracture relative to fatigue
[AD-A086671] N80-30795
Observations on the generality of the grain-size effect on fatigue crack growth in alpha plus beta titanium alloys
[AD-A087215] N80-30811

FATIGUE LIFE
Fatigue damage estimation for the BAeA aircraft fatigue data analysis system
[AD-A086470] N80-30301
Evaluation of the impact of towing the L-1011 airplane at Boston-Logan Airport
[AD-A086977] N80-30303
Statistical analysis of the fatigue of composite materials N80-30439
Fatigue behavior of glass fiber reinforced polybutyleneterephthalate
[AD-A087104] N80-30444
MINITWIST, a shortened version of TWIST
[NLR-MP-79018-U] N80-30785

FATIGUE TESTS
Fatigue damage estimation for the BAeA aircraft fatigue data analysis system
[AD-A086470] N80-30301
Evaluation of forged helicopter components processed with controlled solidification and thermal mechanical treatments
[AD-A086818] N80-30302
Evaluation of the cyclic behavior of aircraft turbine disk alloys, part 2
[NASA-CR-165123] N80-30482
MINITWIST, a shortened version of TWIST
[NLR-MP-79018-U] N80-30785
Critically loaded hole technology advisory group for aerospace research and development
[AD-A086021] N80-30788

FEASIBILITY ANALYSIS
Feasibility study for integrated flight trajectory control fighter
[AD-A084784] N80-30314
Concerning the feasibility of a real time SAR digital processor for VOIR low resolution imaging modes
N80-30335
Feasibility and cost study on VOIR SAR data transfer via a bent pipe link N80-30336
Sub arc second sensor calibration
[OAT-586] N80-30378
Feasibility study for industrial cogeneration fuel cell application
[SAN-1889-T1] N80-30934

FEDERAL BUDGETS
Department of Housing and Urban Development independent agencies appropriation bill, 1981
[S-96-926] N80-31267

FEED SYSTEMS
Understanding flow blockage in small thrusters
N80-30394
Advanced coal gasification system for electric power generation
[FE-1514-97] N80-30548

FEEDBACK
Linear state feedback, quadratic weights, and closed loop eigenstructures
[NASA-CR-163484] N80-31146

FEEDBACK CONTROL
Command control of solid propellant gas generators and thrusters by hot cutters N80-30406
Tight rounds on the response of multivariable systems with component uncertainty
[AD-A086580] N80-31090
Robustness with observers
[AD-A086610] N80-31092
On feedback systems possessing integrity with respect to actuator outages
[AD-A086609] N80-31093

FEEDING (SUPPLYING)
Development and testing of cleaning procedures and feeding systems for a field emission thruster model
[FRI-R664/3] N80-30434

FERMENTATION
Dry anaerobic fermentation to methane of organic residues N80-30532

FERMI LIQUIDS
A hydrodynamic theory of heavy ion collisions
N80-31162

FERMI SURFACES
Conducting organic polymers: Doped polyacetylene
[AD-A086869] N80-30523

FERMIONS
Zero-point energy of confined fermions
[DOE/ER-01545/274] N80-31173

FERRITIC STAINLESS STEELS
Consequences of the re-transformation of precipitated austenite in ferritic cryogenic steels
[LBL-10128] N80-30508

FERROMAGNETIC MATERIALS
The magnetic characteristics of tape wrapped cylindrical ferromagnatic laminations for frequencies below 50 kHz
[AD-A086333] N80-30592

FERTILIZERS
Remote sensing research studies
[E80-10117] N80-30823

FIBER COMPOSITES
Effect of applied stress, thermal environment and water in epoxy resins
[AD-A086200] N80-30517

FIBER OPTICS
Signal to noise ratio calculation for fiber optics links N80-30331
Manufacturing methods and technology program for ruggedized tactical fiber optic cable
[AD-A086874] N80-31197
Manufacturing methods and technology program for ruggedized tactical fiber optics cable
[AD-A086706] N80-31198
Comprehensive description of fields in optical fibers by means of the propagating beam method
[UCRL-84219] N80-31200
Use of integrated optics for analog data signal conditioning aboard spacecraft
[LCR-79-108/R/G5] N80-31203
Measurement of optical fiber bandwidth in the time domain
[PB80-177421] N80-31204

FIBER ORIENTATION
Comparison of quasi-isotropic fiber reinforced composite laminates — candidate materials for flywheels
[UCRL-15225] N80-30450

FIELD EFFECT TRANSISTORS
Reliability evaluation of GaAs power FETs
[AD-A086668] N80-30651
Artwork analysis tools for VLSI circuits
[AD-A087040] N80-30653
Submicron FETS using molecular beam epitaxy
[AD-A086422] N80-31244
GaAS FET device fabrication and ion implantation technology
[AD-A087004] N80-31251

FIELD EMISSION
Development and testing of cleaning procedures and feeding systems for a field emission thruster model
[FRI-R664/3] N80-30434
Field emission electric propulsion ion optics of double edged materials
[CLM-RR/E1/25] N80-30435
Computer aided automated hybrid substrate probe testing development
[AD-A087124] N80-30768

FIELD STRENGTH
Lateral density variations in elastic Earth models from an extended minimum energy approach
[NASA-TM-80742] N80-30787

FIELD THEORY (ALGEBRA)
Matrix methods for determining system poles from transient response
[AD-A087204] N80-31121

FIELD THEORY (PHYSICS)
Research program in elementary particle theory
[COO-3533-161] N80-31170
Soft CP violation and the global matter-antimatter symmetry of the universe
[NASA-TM-80730] N80-31290

FIGHTER AIRCRAFT
Feasibility study for integrated flight trajectory control fighter
[AD-A084784] N80-30314

FILE MAINTENANCE (COMPUTERS)
The computer modern family of typefaces
[AD-A086359] N80-31057

FILTRATION
On the maximum principle for pseudoparabolic equations
[AD-A086380] N80-31100
FINITE DIFFERENCE THEORY
Computer analysis of the base-flow region of a rocket exhaust N80-30431
Analysis of numerical methods for the equations of fluid dynamics
[AD-A086659] N80-30690
R2D2: A FORTRAN program for two-dimensional chemically reacting, hyperthermal, internal flows. Volume 2: User guide
[AD-A086762] N80-30695
The SHAFT book: Design charts for torsional properties of noncircular SHAFTS: User's manual
[AD-A086498] N80-30752
Numerical estimation of stress intensity factors by a finite difference Eulerian method (The HELP code)
[AD-A086111] N80-30792
A comparative study on the elastic-plastic collapse strength of initially imperfect deep spherical shells
[AD-A086006] N80-30794
Solar thermal energy storage using a paraffin wax phase change material N80-30887
Stationary points and finite-difference schemes for differential inclusions
[AD-A086381] N80-31103
High order ZIP differencing of convective terms
[AD-A086725] N80-31208
FINITE ELEMENT METHOD
Analysis of numerical methods for the equations of fluid dynamics
[AD-A086659] N80-30690
Finite element modeling for convection-diffusion problems
[AD-A086777] N80-30698
Finite element simulations of thermally induced convection in an enclosed cavity
[UCID-18602] N80-30702
Linear-nonlinear interface for finite element transient impact damage analysis N80-30777
A decomposition procedure for large scale optimal plastic design problems
[AD-A086560] N80-30798
The surface singularity of cracks
[AD-A086491] N80-30799
Curing stress fields in involute exit cones
[AD-A086404] N80-30803
Determination of K-factors for arbitrarily shaped flaws at pressure vessel nozzle corners
[CONF-791118-11] N80-30816
An adaptive grid finite element method for initial-boundary value problems N80-31095
Stability of diced systems
[AD-A086685] N80-31104
Approximation of the spectrum of closed operators, the determination of normal modes of a rotating basin
[AD-A086661] N80-31116
High-order curved finite elements
[KAPL-4134] N80-31125
FIRE CONTROL
Objective quality control of artillery computer meteorological messages
[AD-A086554] N80-31001
FIXED POINTS (MATHEMATICS)
Two's-complement fixed-point multiplication errors, theory
[AD-A086826] N80-31115
FLAME STABILITY
Non-steady behavior of a flame spreading from a point in a two-dimensional duct N80-30454
FLAMMABILITY
Telemetry system for evaluation of burn protection in full-scale fuel fire manikin exposures
[AD-A086700] N80-30375
Flammability testing of solids under the Federal Hazardous Substances Act
[PB80-179047] N80-30469
Flame testing of two samples of exposure suit material
[AD-A086739] N80-31047
FLAPPING HINGES
Stability and dynamic response to gravitational forces of the flapping and lead-lag hinges on a rigid rotor blade with the leading-edge angle of attack and flapping being coupled
[ISD-244] N80-30949
Dynamic analysis of a rotor blade with lead-lag freedom, flapping freedom, and variable-controlled blade pitch angle
[ISD-258] N80-30950
FLASHING (VAPORIZING)
The flash evaporation of powdered indium antimonide
[AD-A086531] N80-30495
FLIGHT
Tactical night terrain flight navigation
[AD-A086458] N80-30288
FLIGHT CHARACTERISTICS
LANDSAT-2 and LANDSAT-3 flight evaluation report
[E80-10291] N80-30859
FLIGHT CONTROL
Feasibility study for integrated flight trajectory control fighter
[AD-A084784] N80-30314
The USAF stability and control digital datcom. Volume 1: User's manual
[AD-A086557] N80-30315
The USAF stability and control digital Datcom. Volume 2: Implementation of Datcom methods
[AD-A086558] N80-30316
STS-1 low-speed ground navigation console procedures
[NASA-TM-81134] N80-30370
FLIGHT INSTRUMENTS
Reliability and maintainability improvement program for the AV-8 A/TAV-8A harrier head-up display set. Volume 2: Modifications to display set control, C10626/AV9-30(V)
[AD-A085310] N80-30307
FLIGHT OPTIMIZATION
Minimizing the cost of operating aircraft on multistop tours N80-31140
FLIGHT PATHS
Air traffic congestion and capacity. Citations from the NTIS data base
[PB80-811052] N80-30294
Crash tests of four identical high-wing single-engine airplanes
[NASA-TP-1690] N80-30296
FLIGHT PLANS
Air traffic congestion and capacity. Citations from the NTIS data base
[PB80-811052] N80-30294
FLIGHT RULES
Air traffic congestion and capacity. Citations from the NTIS data base
[PB80-811052] N80-30294
FLIGHT SIMULATION
Helicopter electro-optical system display requirements. 2: Performance of helicopter pilots when using a low-light-level television system during simulated nap-of-the-earth flight
[AD-A086855] N80-30308
MINITWIST, a shortened version of TWIST
[NLR-MP-79018-U] N80-30785
FLIGHT STABILITY TESTS
Comparison of wind tunnel and flight test measurements of static aerodynamic loading of a captive store
[AD-A087237] N80-30291
FLIGHT TESTS
Store separation trajectory analysis
[AD-A086704] N80-30284
Analysis of T-2C high angle of attack flight test data with nonlinear system identification methodology
[AD-A086327] N80-30298
Wind-tunnel and flight tests of ablators and insulators for rocket vehicles
[SAND-80-05230] N80-30446
Analysis of electrical transients created by lightning
[NASA-CR-159308] N80-30645
FLIR DETECTORS
Human operator interface with FLIR displays
[AD-A086284] N80-31041
FLOODS
Florida water resources
[E80-10246] N80-30829
FLORIDA
Florida water resources
[E80-10246] N80-30829
Florida water resources, Executive summary
[E80-10247] N80-30830
Mapping urbanized area expansion through digital image processing of LANDSAT and conventional data --- Orlando, Florida; Seattle, Washington; and Boston, Massachusetts
[E80-10301] N80-30866
FLOW CHARACTERISTICS
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 2: Software documentation
[NASA-CR-161541] N80-30480
FLOW CHARTS
The description of the ROBIN program and its conversion to the Interdata 7-32 computer system
[AD-A086810] N80-31000
FLOW DISTRIBUTION
JANNAF 11th Plume Technology Meeting, volume 2
[AD-A079847] N80-30422
Direct simulation Monte Carlo method applied to shuttle flow field analysis N80-30427
Non-steady behavior of a flame spreading from a point in a two-dimensional duct N80-30454
A theoretical study of developing gas-liquid flows in vertical pipes N80-30672
Nonsymmetric split of flow during cocurrent upflow of air-water mixtures through symmetric bifurcations N80-30678
Numerical analysis of natural convection in two-dimensional square and circular containers in low gravity
[NASA-CR-163487] N80-30686
Applications of Rayleigh scattering to turbulent flows with heat transfer and combustion
[AD-A086660] N80-30689
On the spreading rate and structure of a turbulent spot
[AD-A086445] N80-30692
FLOW STABILITY
Stability of boundary-layer flows over curved walls N80-30668
FLOW THEORY
Two-Phase nozzle theory and parametric analysis
[AD-A086795] N80-30696
FLOW VELOCITY
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 1: Formulation and analysis
[NASA-CR-161540] N80-30479
Autoignition characteristics of aircraft-type fuels
[NASA-CR-159886] N80-30535
FLOW VISUALIZATION
Flow visualization study of secondary flow in a corner
[AD-A082634] N80-30688
Visualization study of turbulent spots
[AD-A086831] N80-30699
FLUID DYNAMICS
LeRC reduced gravity fluid management technology program N80-30383
Symmetry mappings and conservation laws in relativistic fluids N80-30681
Numerical analysis of natural convection in two-dimensional square and circular containers in low gravity
[NASA-CR-163487] N80-30686
Visualization study of turbulent spots
[AD-A086831] N80-30699
High order ZIP differencing of convective terms
[AD-A086725] N80-31208
FLUID FLOW
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 1: Formulation and analysis
[NASA-CR-161540] N80-30479
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 2: Software documentation
[NASA-CR-161541] N80-30480
Turbulent heat transfer and fluid flow characteristics for air flow in an unsymmetrically heated triangular duct N80-30683
The effect of suspended solids on the viscous drag on an oscillating disk N80-30685
Analysis of numerical methods for the equations of fluid dynamics
[AD-A086659] N80-30690
Two-Phase nozzle theory and parametric analysis
[AD-A086795] N80-30696

Numerical studies in computer aided design. Part 2: Studies in high speed
[AD-A087060] N80-31060

FLUIDIZED BED PROCESSORS
Experimental program for the development of peat gasification. Task 2: Hydrogasification. Task 3: Fluidized-bed tests
[FE-2489-48] N80-30542
Research and evaluation of biomass resources/conversion/utilization systems (market/experimental analysis for development of a data base for a fuels from biomass model)
[DOE/ET-20611/11] N80-30552
Coal processing for fuel cell utilization. Task 11: Fluidized bed coal gasification model; data analysis and predictions
[METC-6450-T1] N80-30909
Processes to increase utilization of power solid wastes
[ISM-245] N80-30929

FLUORESCENCE
A paraboloidal flow cytometer for improved fluorescence analysis of single cells N80-31029

FLUORINE
Fluorine-Hydrazine Propulsion Technology update
N80-30391
Chemiluminescent reactions of selenium and tellurium with fluorine
[AD-A087202] N80-30464

FLUOROPOLYMERS
Cyclic fluorosilicone polymers and copolymers
[AD-A086748] N80-30519

FLUOROSILICATES
Cyclic fluorosilicone polymers and copolymers
[AD-A086748] N80-30519

FLUX DENSITY
Gas channel formation studies including real-air thermodynamic properties
[AD-A086999] N80-31212
The relation between the galactic compact radio sources and the extragalactic compact radio sources
N80-31303

FLUX PINNING
Superconducting diamagnetism in samples of SN(x), TaSe(3) and NbS Ne(3) N80-30644

FLUX QUANTIZATION
Flux-spline method for heat, mass and momentum transfer N80-30671

FLYBY MISSIONS
Halleys comet 1985-86: A unique opportunity for space exploration
[NASA-TM-80633] N80-30343
GIOTTO: Comet Halley flyby. Report on the phase A study
[ESA-SCI(80)-4] N80-30346
Study on use of ISEE-B platform as a probe for ESA/NASA cometary mission. Volume 1: Technical results
[ESA-CR(P)-1316-VOL-1] N80-30362

FLYWHEELS
Comparison of quasi-isotropic fiber reinforced composite laminates — candidate materials for flywheels
[UCRL-15225] N80-30450
System design, tests results, and economic analysis of a flywheel energy storage and conversion system for photovoltaic applications
[COO-4094-70] N80-30979
Flywheel energy management systems for improving the fuel economy of motor vehicles
[PB80-175300] N80-31278

FOAMS
Wave propagation in honeycomb and foam-core panels for application to panel NDE
[AD-A086667] N80-30604
Bubble dynamics in structural foam processing
N80-30677

FOCUSING
CW and pulsed beam propagation in focusing media with random-axis misalignments N80-30584

FOKKER-PLANCK EQUATION
A theoretical study of transient effects in absorptive optical bistability N80-31192

FORECASTING
Comparative assessment of five long-run energy projections
[DOE/EIA/CR-0016/02] N80-30936
Differentially weighting linear models of behavior: An empirical comparison of six methods
[AD-A086876] N80-31043

FOREST MANAGEMENT
Forest resource information system, phase 3 — St. Regis Paper Co.: Picayune, Mississippi
[E80-10242] N80-30825

FORESTS
Evaluating the reforested area for the municipality of Buri by automatic analysis of LANDSAT imagery — Sao Paulo, Brazil
[E80-10258] N80-30841
Grizzly bear habitat analysis. Section 3: LANDSAT-1 multispectral imagery and computer analysis of grizzly bear habitat — Stategoat, Scapegoat and Danaher areas, Montana
[NASA-CR-163382] N80-30867
Carbon Dioxide Effects Research and Assessment PRogram. The role of Temperate Zone Forests in the World Carbon Cycle: Problem Definition and Research Needs
[CONF-7903105] N80-30959

FORGING
Evaluation of forged helicopter components processed with controlled solidification and thermal mechanical treatments
[AD-A086818] N80-30302

FORMALDEHYDE
Tunable laser survey of molecular air pollutants: Doppler-limited spectra of the C-H stretching bands of formaldehyde, ethylene, ethene and allene
[PB80-180003] N80-30974

FORMS (PAPER)
Forecast worksheet: A new approach
[AD-A086151] N80-30999

FORMULAS (MATHEMATICS)
Conventions and formulas for using the Mueller-Stokes calculus in ellipsometry
[LBL-10172] N80-31124

FORMULATIONS
Development of alternate silicone potting compounds. Volume 6: Development of secondary alternates for Dow Corning's Aerospace Sealant, DC93-119
[UCRL-52434-VOL-6] N80-30445

FORTRAN
Discrete/continuous simulation language
[AD-A086487] N80-31074
User's guide for a computer simulation program for multi-rigid-body systems
[ESA-STM-216] N80-31085

FOSSIL FUELS
Magnetohydrodynamic generators in power generation. Citations from the NTIS data base
[PB80-810856] N80-30954
Modeling the prospects for climatic change: Current state-of-the-art and implications
[CONF-800474-1] N80-30961

FOURIER TRANSFORMATION
On the extrapolation of band-limited signals
N80-30585
Novel approach to the computation of axisymmetric countercurrent patterns in gas centrifuges
[LA-8258-MS] N80-30703
Optical intrarray processing
[AD-A086665] N80-31195

FRACTOGRAPHY
Fracture toughness of some cryogenic alloys
N80-30476

FRACTURE MECHANICS
Fracture mechanics design of shuttle payload pressure vessels N80-30397
Fatigue behavior of glass fiber reinforced polybutyleneterephthalate
[AD-A087104] N80-30444
Plastic flow and fracture processes in powder metallurgical nickel-base superalloys
[AD-A086697] N80-30490
Effect of alloy deformation on the average spacing parameters of non-deforming particles
[COO-3064-75] N80-30509
Evaluation of a new fracture toughness measuring technique, and adaptation of the technique to use ultra-small specimens
[AD-A085892] N80-30791
A review of nonlinear fracture relative to fatigue
[AD-A086671] N80-30795
Fatigue and fracture of ultrahigh strength steel and titanium roll bonded and diffusion bonded laminates
[AD-A086511] N80-30796
Influence of small scale yielding on dynamic fracture
[AD-A086335] N80-30801
Piping inelastic fracture mechanics analysis — nuclear reactors
[AD-A087002] N80-30810
Fracture problems in power law viscoelastic materials
[AD-A087244] N80-30813

FRACTURE STRENGTH
Fracture toughness of some cryogenic alloys
N80-30476
The influence of prior warm rolling on fracture toughness of heat treated AISI 52100 steel
[AD-A086821] N80-30492
Fracture studies of high temperature ceramics
[AD-A086653] N80-30524
Evaluation of a new fracture toughness measuring technique, and adaptation of the technique to use ultra-small specimens
[AD-A085892] N80-30791

FRACTURING
Fracture problems in power law viscoelastic materials
[AD-A087244] N80-30813

FRANCE
Subnanosecond comparisons of time standards with the Navigation Technology Satellites (NTS)
[AD-A086780] N80-30564

FREE CONVECTION
Natural convection film boiling on a vertical surface N80-30684
Finite element simulations of thermally induced convection in an enclosed cavity
[UCID-18602] N80-30702

FREE ELECTRON LASERS
Resonant interaction between an active molecular medium and a free electron laser
[AD-A087056] N80-30743

FREE ELECTRONS
Theory of the longitudinal free electron laser. 1. A theoretical model of the linear electrooptic effect. 2
N80-30723

FREE ENERGY
Simultaneous photoproduction of hydrogen and oxygen by photosynthesis — to convert solar energy into stored chemical free energy
[CONF-791072-32] N80-30550

FREE FLOW
Experimental study of three-dimensional shock wave turbulent boundary layer interaction: Scaling of sharp and blunt fin-induced flowfields
[AD-A086875] N80-30277

FREQUENCIES
On the extrapolation of band-limited signals
N80-30585

FREQUENCY MODULATION
Radio receiver, spurious response. Test operating procedure
[AD-A086463] N80-30602
Modeling of pulses having arbitrary amplitude and frequency modulation
[AD-A086567] N80-30606

FREQUENCY MULTIPLIERS
Quantum mechanical studies of molecular hyperpolarizabilities
[AD-A086662] N80-30733

FREQUENCY RESPONSE
Tight rounds on the response of multivariable systems with component uncertainty
[AD-A086580] N80-31090

FREQUENCY STABILITY
Automated frequency standard stability data reduction N80-30330
A report on the gravitational redshift test for non-metric theories of gravitation
[NASA-CR-163496] N80-30978

FREQUENCY STANDARDS
Automated frequency standard stability data reduction N80-30330
Shuttle time and frequency transfer experiment
[NASA-TM-78288] N80-30342

FREQUENCY SYNTHESIZERS
Surface acoustic wave microwave oscillator and frequency synthesizer
[AD-A086336] N80-30649

FRICTION
Study of the interactions between friction, wear and system rigidity
[DOE/ER-10471/1] N80-30816

FRICTION FACTOR
Turbulent heat transfer and fluid flow characteristics for air flow in an unsymmetrically heated triangular duct N80-30683

FRICTION MEASUREMENT
Study of the interactions between friction, wear and system rigidity
[DOE/ER-19471/1] N80-30818

FRICTION REDUCTION
Lubricating oil analysis for wear monitoring. Citations from the NTIS data base
[PB80-807889] N80-30831

FUEL CELLS
Energy savings by means of fuel cell electrodes in electro-chemical industries
[COO-4881-12] N80-30902
Aqueous trifluoromethanesulfonic acid fuel cells
[AD-A086579] N80-30905
Feasibility study for industrial cogeneration fuel cell application
[SAN-1986-T1] N80-30934
Fuel cells for electric utility and transportation applications
[BNL-27452] N80-30937
Materials for fuel cells
[PB80-182355] N80-30955

FUEL COMBUSTION
Combustion of drops and sprays of no. 2 diesel oil and its emulsions with water and methanol. Volume 1. Experimental
[PB80-178213] N80-30470
Combustion of drops and sprays of no. 2 diesel oil and its emulsions with water and methanol. Volume 2. Theoretical
[PB80-178221] N80-30471
Detailed investigation of a vaporising fuel spray. Part 1: Experimental investigation of time averaged spary
[NASA-CR-163483] N80-30687

FUEL CONSUMPTION
Evaluation of XRG no. 1: A fuel additive
[PB80-180672] N80-30559
Electric and hybrid vehicle system research and development project, hybrid vehicle potential assessment. Volume 6: Cost analysis
[CONS-4209-T1-VOL-6] N80-31274
Electric and hybrid vehicle system research and development project, hybrid vehicle potential assessment. Volume 8: Scenario generation --- impact of hybrid vehicles on petroleum consumption
[CONS-4209-T1-VOL-8] N80-31275
Flywheel energy management systems for improving the fuel economy of motor vehicles
[PB80-175300] N80-31278

FUEL OILS
Combustion of drops and sprays of no. 2 diesel oil and its emulsions with water and methanol. Volume 1. Experimental
[PB80-178213] N80-30470
Combustion of drops and sprays of no. 2 diesel oil and its emulsions with water and methanol. Volume 2. Theoretical
[PB80-178221] N80-30471
Process evaluation: Steam reforming of diesel fuel oil
[AD-A087053] N80-30538

FUEL PRODUCTION
Oxygen production for interplanetary return missions N80-30389
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes. Laboratory and pilot plant studies of the processing of SRC-1
[FE-2315-45] N80-30544
Molten salt coal gasification process development unit
[SAN-1429-52] N80-30554
Environmental implications of accelerated gasohol production: Preliminary assessment
[ANL/ES-91] N80-30555

FUEL SPRAYS
Combustion of drops and sprays of no. 2 diesel oil and its emulsions with water and methanol. Volume 1. Experimental
[PB80-178213] N80-30470
Combustion of drops and sprays of no. 2 diesel oil and its emulsions with water and methanol. Volume 2. Theoretical
[PB80-178221] N80-30471
Detailed investigation of a vaporising fuel spray. Part 1: Experimental investigation of time averaged spary
[NASA-CR-163483] N80-30687

FUEL TESTS
Advanced combustion systems for stationary gas turbine engines. Volume 4: Combustor verification testing, addendum
[PB80-179849] N80-30313
Performance of a diesel engine operating on raw coal-diesel fuel and solvent refined coal-diesel fuel slurries
[CONS-3288-T6] N80-30758

FUELS
Determination of aromaticity of fuels and lubricant basestocks by ultraviolet spectroscopy
[AD-A086654] N80-30461
Formation and control of fuel-nitrogen pollutants in catalytic combustion of coal-derived gases
[FE-2762-7] N80-30466

FUNCTION GENERATORS
Random process generation
[AD-A086758] N80-31054

FUNCTIONAL INTEGRATION
On some spectral problems and isospectral evolutions connected with the classical string problem. Part 1: Constants of motion
[PM/79/19-PT-1] N80-31126

FUSION (MELTING)
Properties of ablatively accelerated targets
[AD-A086727] N80-31209

G

GALACTIC EVOLUTION
Orbital decay and accretion for planetary or binary systems within a planetary nebula N80-31286

GALACTIC NUCLEI
Variable X-ray spectra of BL Lac objects: HEAO-1 observations of PKS 0548-322 and 2A 1219+305
[NASA-TM-80700] N80-31283

GALACTIC RADIO WAVES
The relation between the galactic compact radio sources and the extragalactic compact radio sources N80-31303

GALLIUM ARSENIDES
Monolithic integration of gallium arsenide optoelectronic devices N80-30642
The mode locked dye laser, 1. Picosecond photoconductivity of semi-insulating gallium-arsenide, 2 N80-30722
Comparison of atomic concentration profiles, defect density profiles, and types of microstructural defects in GaAs annealed after implantation with Be N80-31233
Electrical characterization of germanium implanted gallium arsenide
[AD-A086652] N80-31243
GaAs surface effects
[AD-A087033] N80-31249
GaAS FET device fabrication and ion implantation technology
[AD-A087004] N80-31251

GAME THEORY
Convergent approximations in parabolic variational inequalities. 2: Hamilton-Jacobi inequalities
[AD-A086364] N80-31101

GAMMA RAY LASERS
Nuclear isomer suitable for gamma ray laser
[NASA-CR-163482] N80-30727

GAMMA RAYS
Absolute calibration of a prompt gamma ray detector for intense bursts of protons
[AD-A086726] N80-31178

GARP ATLANTIC TROPICAL EXPERIMENT
Gate phase 3 mean synoptic-scale radiative convergence profiles
[PB80-180797] N80-31020

GAS CHROMATOGRAPHY
Instrumentation for detecting hazardous materials
[AD-A086467] N80-30462
Analytical techniques for aromatic components in aircraft
[AD-A086343] N80-30536
Survey analysis of phenolic compounds in industrial effluents by gas chromatography mass spectrometry
[PB80-177793] N80-30969

GAS DENSITY
Gas channel formation studies including real-air thermodynamic properties
[AD-A086999] N80-31212

GAS FLOW
Modeling, simulation, and control of a closed cycle laser gas supply system N80-30724
Mid-term progress report on the development of army Closed Cycle Circulator (CCC) system
[AD-A087219] N80-30744

GAS GENERATORS
Command control of solid propellant gas generators and thrusters by hot cutters N80-30406
Modulation of a gas generator N80-30414
Design and evaluation of progressively burning pyrotechnic formulations
[SAND-80-0355C] N80-30553
Assembly and testing of a catalytic hydrazine gas generator
[VB-0421-011-B] N80-30759

GAS INJECTION
Particle confinement and magnetic fluctuations in Tokamak discharges with gas puffing N80-31206

GAS RECOVERY
US Department of Energy's methane from landfills program
[CONF-7910126-1] N80-30558

GAS TURBINE ENGINES
High energy X-ray study
[AD-A086279] N80-30311
Advanced electron beam techniques for metallic and ceramic protective coating systems --- modifying gas turbine and diesel engines for alternative fuel use
[LBL-10520] N80-30449
Development of high temperature turbine subsystem technology to a technology readiness status, phase 2
[FE-1806-79] N80-30754

GAS TURBINES
Unsteady swirling flows in gas turbines
[AD-A086765] N80-30697
Development of high-temperature turbine subsystem technology to a technology readiness status, phase 2
[FE-1806-86] N80-30753
Advanced combustion systems for stationary gas turbine engines. Volume 3: Combustor verification testing
[PB80-177108] N80-30763

GAS VALVES
New hardware for tethered balloons
[AD-A086836] N80-30280

GAS-LIQUID INTERACTIONS
Fundamental investigation of interaction forces in bubble swarms and application to the design of centrifugal separators
[WTHD-115] N80-30706

GAS-METAL INTERACTIONS
Modeling propellant combustion interacting with an eroding solid surface
[UCRL-83727] N80-30433

GASEOUS FUELS
Downdraft gasification characteristics of major California residue-derived fuels N80-30534

GASIFICATION
Downdraft gasification characteristics of major California residue-derived fuels N80-30534

GASOHOL (FUEL)
Environmental implications of accelerated gasohol production: Preliminary assessment
[ANL/ES-91] N80-30555

GASOLINE
Electric and hybrid vehicle system research and development project, hybrid vehicle potential assessment. Volume 8: Scenario generation --- impact of hybrid vehicles on petroleum consumption
[CONS-4209-T1-VOL-8] N80-31275

GENERATORS
Experiments on the junction of relativistic electron beams into preformed channels in the atmosphere: A feasibility study
[AD-A086732] N80-30982

GEODESY
A fast estimation algorithm for two-dimensional gravity data, geofast
[AD-A086835] N80-30988

GEODYNAMICS
The telecommunications and data acquisition report
[NASA-CR-163431] N80-30319
Digital recording acquisition subsystem for radio interferometry applications implementation plan N80-30322

The 7th WMO Executive Committe Inter-Government Panel Session on the First GARP Global Experiment
[GARP-SPEC-35] N80-31012
GLOBAL POSITIONING SYSTEM
Shuttle time and frequency transfer experiment
[NASA-TM-78288] N80-30342
GOES SATELLITES
Mission operation report. Geostationary operational satellite GOES-D
[NASA-TM-81123] N80-30354
GOLD
Diffusion induced grain boundary migration in Au-Cu and Au-Ag thin films N80-31240
GRAIN BOUNDARIES
Austenitic grain growth characteristics in rapidly solidified martensitic steels
[AD-A085883] N80-30484
Diffusion induced grain boundary migration in Au-Cu and Au-Ag thin films N80-31240
Growth of grain boundary cavities under applied stress and internal pressure
[COO-2172-26] N80-31247
GRAINS (FOOD)
The integrated analysis procedure for identification of spring small grains and barley --- Great Plains Corridor: U.S. and Canada
[E80-10274] N80-30847
Evaluating the use of analyst labels in maximum likelihood cluster proportion estimation
[E80-10303] N80-30870
Evaluation of Bayesian sequential proportion estimation using analyst labels
[E80-10304] N80-30871
GRAPH THEORY
Multiple objectives and the path determination problem
[AD-A086744] N80-31142
GRAPHS (CHARTS)
MARS 1414 recorder environmental tests
[NASA-TP-1709] N80-30716
The SHAFT book: Design charts for torsional properties of noncircular SHAFTS: User's manual
[AD-A086498] N80-30752
GRASSES
Production of sugarcane and tropical grasses as a renewable energy source
[ORO-5912-T3] N80-30543
GRASSLANDS
Grizzly bear habitat analysis. Section 3: LANDSAT-1 multispectral imagery and computer analysis of grizzly bear habitat --- Slategoat, Scapegoat and Danaher areas, Montana
[NASA-CR-163382] N80-30867
GRATINGS (SPECTRA)
Alignment of liquid crystals by surface gratings
[AD-A086816] N80-31194
GRAVITATION
A report on the gravitational redshift test for non-metric theories of gravitation
[NASA-CR-163496] N80-30978
Spherical Earth analysis and modeling of lithospheric gravity and magnetic anomlies
[NASA-TM-80709] N80-30980
GRAVITATION THEORY
A report on the gravitational redshift test for non-metric theories of gravitation
[NASA-CR-163496] N80-30978
GRAVITATIONAL EFFECTS
Stability and dynamic response to gravitational forces of the flapping and lead-lag hinges on a rigid rotor blade with the leading-edge angle of attack and flapping being coupled
[ISD-244] N80-30949
A report on the gravitational redshift test for non-metric theories of gravitation
[NASA-CR-163496] N80-30978
Thermoregulation in rats: Effects of varying duration of hypergravic fields
[NASA-CR-163481] N80-31030
GRAVITATIONAL FIELDS
Lateral density variations in elastic Earth models from an extended minimum energy approach
[NASA-TM-80742] N80-30787
A fast estimation algorithm for two-dimensional gravity data, geofast
[AD-A086835] N80-30988
Torques on a nearly rigid body in a relativistic gravitational field
[NASA-TM-78295] N80-31289
GREASES
Molybdenum disulphide lubrication. A continuation survey: 1979 to 1980
[STC-79/419] N80-30762
GREAT BRITAIN
Submicrosecond comparisons of time standards with the Navigation Technology Satellites (NTS)
[AD-A086780] N80-30564
GREAT PLAINS CORRIDOR (NORTH AMERICA)
The integrated analysis procedure for identification of spring small grains and barley --- Great Plains Corridor: U.S. and Canada
[E80-10274] N80-30847
GREEN FUNCTION
Propagation in a dielectric waveguide using the Green's function method N80-30583
Zero-point energy of confined fermions
[DOE/ER-01545/274] N80-31173
GREEN WAVE EFFECT
A labeling technology for LANDSAT imagery
[E80-10293] N80-30861
GREENHOUSE EFFECT
Supplementary material on passive solar heating concepts: A compilation of published articles. Presented in conjunction with a series of passive solar heating seminars sponsored by the Solar Energy Technology Transfer program
[PNL-SA-7820] N80-30920
GRINDING (MATERIAL REMOVAL)
Metallographic preparation of titanium diboride coatings
[SAND-80-0596] N80-30503
GROUND BASED CONTROL
Ground communication facility and network operations control center reconfiguration N80-30339
STS-1 low-speed ground navigation console procedures
[NASA-TM-81134] N80-30370
GROUND EFFECT MACHINES
Noncontacting suspension and propulsion for ground transportation
[PB80-176274] N80-31277
GROUND STATIONS
The Tidbinbilla interferometer N80-30321
Network functions and facilities N80-30326
GROUND SUPPORT EQUIPMENT
DSN Monitor and Control System, Mark III-80 N80-30327
Input signal conditioner for the multimegasymbol telemetry system feasibility model N80-30332
GROUND SUPPORT SYSTEMS
DSN Monitor and Control System, Mark III-80 N80-30327
Design guidelines and optimization procedures for test subsystem design
[AD-A087059] N80-30769
GROUND TRUTH
Preliminary user guide for the program GTDDM (Ground Truth Dot Dump)
[E80-10244] N80-30827
As-built design specification for field statistics (FIELDSTAT)
[E80-10252] N80-30835
Design specification for merge of BTREAD, Phase 1 and Phase 2 accuracy assessment programs
[E80-10255] N80-30838
Implementation specification document for merge of BTREAD, phase 1, and phase 2 accuracy assessment programs
[E80-10285] N80-30853
Study of geological structure of Sicily and other Italian areas --- Gulf of Orosei, Eastern Sardinia
[E80-10299] N80-30866
The contribution of the diffuse light component to the topographic effect on remotely sensed data
[NASA-TM-80728] N80-30876
GROUP DYNAMICS
Communication control and leadership in telecommunications by small groups
[AD-A086746] N80-30612
GUIDANCE (MOTION)
Bank-to-turn control technology survey for homing missiles
[NASA-CR-3325] N80-30274
Optimized propulsion/guidance analysis of ramjet powered vehicles N80-30420
GUIDANCE SENSORS
Sub arc second sensor calibration
[OAT-586] N80-30378
GULFS
Study of geological structure of Sicily and other Italian areas --- Gulf of Orosei, Eastern Sardinia
[E80-10299] N80-30866

GUNS (ORDNANCE)
A plan for developing and validating a gun system design trade-off methodology
[AD-A087239] N80-30304

GUY WIRES
Nonlinear behavior of guyed towers N80-30782

GYROSCOPES
Dynamics and control in modal-space of flexible spacecraft N80-30376

H

HABITATS
Grizzly bear habitat analysis. Section 3: LANDSAT-1 multispectral imagery and computer analysis of grizzly bear habitat --- Slategoat, Scapegoat and Danaher areas, Montana
[NASA-CR-163382] N80-30867

HADRONS
Zero-point energy of confined fermions
[DOE/ER-01545/274] N80-31173
The reaction positron electron yields hyperon + hadrons at high energy
[PM/79/18] N80-31189

HALIDES
Moisture protective coatings for alkali halide IR optics
[AD-A086747] N80-30526

HALL EFFECT
Quantum limit magnetoconductivity in the dilute impurity regime N80-31227
Growth and application of cadmium telluride
[AD-A086991] N80-31250

HALLEY'S COMET
Halleys comet 1985-86: A unique opportunity for space exploration
[NASA-TM-80633] N80-30343
GIOTTO: Comet Halley flyby. Report on the phase A study
[ESA-SCI(80)-4] N80-30346
Study on use of ISEE-B platform as a probe for ESA/NASA cometary mission. Volume 1: Technical results
[ESA-CR(P)-1316-VOL-1] N80-30362

HAMILTON-JACOBI EQUATION
Convergent approximations in parabolic variational inequalities. 2: Hamilton-Jacobi inequalities
[AD-A086364] N80-31101

HAMILTONIAN FUNCTIONS
On the number of periodic trajectories for a Hamiltonian flow and a convex energy surface
[AD-A086367] N80-31102
Non-adiabatic mass parameters
[LA-UR-80-1020] N80-31263

HARMONIC ANALYSIS
Approximation of the spectrum of closed operators, the determination of normal modes of a rotating basin
[AD-A086661] N80-31116

HARMONIC GENERATIONS
Nonlinear optics in guided structures. Application to frequency doubling
[LCR-78-05/R/G5] N80-31202

HARRIER AIRCRAFT
Reliability and maintainability improvement program for the AV-8 A/TAV-8A harrier head-up display set. Volume 1: Modifications to digital display indicator IP-1351/AVQ-30(v)
[AD-A085309] N80-30306
Reliability and maintainability improvement program for the AV-8 A/TAV-8A harrier head-up display set. Volume 2: Modifications to display set control, C10626/AV9-30(V)
[AD-A085310] N80-30307

HARTREE APPROXIMATION
Electronic stopping power calculations for all heavy ions at low velocity in all elements
[AD-A087107] N80-31166

HAZARDS
The benefits of air and water pollution control: A review and synthesis of recent estimates
[PB80-178759] N80-30967
Interpretation of laser/multi-sensor data for short range terrain modeling and hazard detection
[NASA-CR-163492] N80-31294

HEAD-UP DISPLAYS
Reliability and maintainability improvement program for the AV-8 A/TAV-8A harrier head-up display set. Volume 1: Modifications to digital display indicator IP-1351/AVQ-30(v)
[AD-A085309] N80-30306
Reliability and maintainability improvement program for the AV-8 A/TAV-8A harrier head-up display set. Volume 2: Modifications to display set control, C10626/AV9-30(V)
[AD-A085310] N80-30307

HEALTH PHYSICS
Scientific and technical needs for hazardous waste management
[PB80-177173] N80-30971

HEART DISEASES
Ultrasonic in medicine. Citations from the Engineering Index data base
[PB80-810930] N80-31038

HEAT CAPACITY MAPPING MISSION
Heat capacity mapping mission project HCM-051 --- East Australian Current and the Tasman Front
[E80-10278] N80-30850
Investigation of the application of HCMM thermal data to snow hydrology --- Salt-Verde watershed, Arizona and the Sierra Nevada Mountains, California
[E80-10297] N80-30864
Soil moisture in relation to geologic structure and lithology, northern California
[E80-10298] N80-30865
Study of geological structure of Sicily and other Italian areas --- Gulf of Orosei, Eastern Sardinia
[E80-10299] N80-30866
Application Explorer Mission-A heat capacity mapping mission --- Bavaria, Germany and Marrakech, Morocco
[E80-10309] N80-30875

HEAT EXCHANGERS
The annular heat pipe operating limit equations and chemical reactor application N80-30674
Design study of a two-phase turbine bottoming cycle
[DOE/ET-15350-T1] N80-30757

HEAT FLUX
Asymptotic behavior of positive solutions of nonlinear Volterra equations for heat flow
[AD-A086385] N80-31112
Asymptotic properties of solutions of nonlinear abstract Volterra equations
[AD-A086387] N80-31113

HEAT GENERATION
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 1: Coal-fired nocogeneration process boiler, section A
[NASA-CR-159770-PT-1-A] N80-30888
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 1: Coal-fired nocogeneration process boiler, section B
[NASA-CR-159770-PT-1-B] N80-30889
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 2: Residual-fired nocogeneration process boiler
[NASA-CR-159770-PT-2] N80-30890

HEAT OF FUSION
Heats of transformation of eutectic alloys N80-30477

HEAT PIPES
Study on the utilization of solar energy for the operation of Spacelab material science furnaces
[DS-ERT-21-79] N80-30349
Diode behavior
[ESA-CR(P)-1319] N80-30710
Cryogenic heat pipes, phase 1 report
[ESA-CR(P)-1323] N80-30711
Optimization of a rotating thermally conducting joint and incorporation in a laboratory model deployable radiator
[DS-190-0-78] N80-30714
High performance VCHP life test
[ESA-CR(P)-1321] N80-30770

HEAT PUMPS
Hybrid photovoltaic/thermal systems with a solar-assisted heat pump
[BNL-27667] N80-30919
Sulfuric acid and water chemical heat pump/chemical energy storage program, phase 2-A
[SAND-78-8176] N80-30924
Development of solar driven absorption air conditioners and heat pumps
[LBL-10771] N80-30925
Solar assisted heat pump program overview and summary of work at Brookhaven National Laboratory
[BNL-27662] N80-30926
Thermally driven open-cycle heat pump system
[CONF-800549-1] N80-30938

HEAT RESISTANT ALLOYS
Hydrogen-related phenomena in a nickel-base alloy N80-30475
Review of European powder metallurgy of superalloys
[AD-A086682] N80-30488
Plastic flow and fracture processes in powder metallurgical nickel-base superalloys
[AD-A086697] N80-30490

HEAT STORAGE
Heats of transformation of eutectic alloys N80-30477
Solar thermal energy storage using a paraffin wax phase change material N80-30887
Experimental study of the storage of thermal energy in confined aquifers
[ORNL/SUB-7338/1] N80-30944

HEAT TRANSFER
Pyrolysis of (C2H5)4NBH4 to (C2H5) 4N 2B10H10: Use of a liquid heat transfer medium N80-30408
Flux-spline method for heat, mass and momentum transfer N80-30671
Natural convection film boiling on a vertical surface N80-30684
Applications of Rayleigh scattering to turbulent flows with heat transfer and combustion
[AD-A086660] N80-30689
A computer program for transient and axisymmetric ablation, conduction and radiation
[SNIAS-792-422-120] N80-30705
Cryogenic heat pipes, phase 1 report
[ESA-CR(P)-1323] N80-30711
Thermally driven open-cycle heat pump system
[CONF-800549-1] N80-30938

HEAT TRANSMISSION
Laminar natural convection along vertical corners and rectangular ducts N80-30675

HEAT TREATMENT
Heat Sterilizable propellant development N80-30393
The influence of prior warm rolling on fracture toughness of heat treated AISI 52100 steel
[AD-A086821] N80-30492
Modified 43XX steels for high toughness
[AD-A086453] N80-30496

HEATING
Eddy current heating of irregularly shaped plates by slow ramped fields
[CONF-791102-167] N80-30655

HEAVY IONS
Isobar production in heavy ion collisions N80-31161
A hydrodynamic theory of heavy ion collisions N80-31162
Electronic stopping power calculations for all heavy ions at low velocity in all elements
[AD-A087107] N80-31166
X-ray emission in heavy-ion collisons
[DOE/ER-06036/3] N80-31186
Solar wind flows associated with hot heavy ions
[LA-8344-T] N80-31299

HEAVY NUCLEI
Search for magnetic dipole strength and giant spin-flip resonances in heavy nuclei
[CONF-800540-1] N80-31181

HELICOPTER DESIGN
A plan for developing and validating a gun system design trade-off methodology
[AD-A087239] N80-30304

HELICOPTERS
Investigation of helicopter wire strike protection concepts
[AD-A086857] N80-30285
Evaluation of forged helicopter components processed with controlled solidification and thermal mechanical treatments
[AD-A086818] N80-30302
Helicopter electro-optical system display requirements. 2: Performance of helicopter pilots when using a low-light-level television system during simulated nap-of-the-earth flight
[AD-A086855] N80-30308

HELIUM ISOTOPES
Experimental determination of the temperature dependence of metallic work functions at low temperatures
[DOE/ER-02314] N80-30501
HELMHOLTZ VORTICITY EQUATION
Waves, caustics and Thom's theorem
[AD-A086974] N80-31122
HETEROCYCLIC COMPOUNDS
Model compound studies of rigid rod aromatic heterocyclic polymer systems. Part 1: The crystal and molecular structures of 2,6-diphenylbenzi (1,2-D:4,5-D') bisthiazole and 2,6-diphenylbenzo (1,2-D:5,4-D') bisoxazole
[AD-A086804] N80-30520
HETERODYNING
DIAL with heterodyne detection including speckle noise: Aircraft/shuttle measurements of O3, H2O, and NH3 with pulsed tunable CO2 lasers
[NASA-TP-1725] N80-30717
HIERARCHIES
The design and implementation of a hierarchical multicomputer N80-31050
Classification techniques for multivariate data analysis
[AD-A086521] N80-31114
HIGH ALTITUDE TESTS
A Monte Carlo simulation of solar induced fluorescent scattering in optically thick high altitude plumes N80-30426
HIGH ENERGY INTERACTIONS
Atomic and molecular processes
[AD-A086764] N80-31164
The reaction positron electron yields hyperon + hadrons at high energy
[PM/79/18] N80-31189
HIGH ENERGY PROPELLANTS
Advanced expander cycle engine for manned orbit transfer vehicles N80-30385
HIGH FIELD MAGNETS
Status of the structural design of superconducting magnets for the large coil program
[CONF-791102-160] N80-31151
HIGH POWER LASERS
High power submillimeter and infrared radiation from intense relativistic electron beams
[AD-A086686] N80-30737
Unsteady thermal blooming of intense laser beams
[AD-A087207] N80-30741
Evaluation of a high power submillimeter pulsed laser system
[CONF-800138-1] N80-30745
Lithium-thionyl chloride battery
[AD-A085661] N80-30906
Atomic and molecular processes
[AD-A086764] N80-31164
HIGH RESOLUTION
High resolution band models: Application to the 4.3 micrometer CO2 band N80-30425
A maximum likelihood estimator for the extent of radar or sonar targets using high resolution signals
[REPT-3/79] N80-30628
Measuring apparent target length using target resolving signals
[REPT-6/79] N80-30630
High-temperature, high-resolution measurements of CO2 in the region of 2200 to 2400 CM-1
[AD-A087234] N80-31169
New atlas of IR solar spectra
[NASA-CR-163499] N80-31298
HIGH SPEED
Combined linear theory/impact theory method for analysis and design of high speed configurations
[NASA-CR-3314] N80-30273
HIGH STRENGTH ALLOYS
The role of hydrogen in the stress corrosion failure of high strength Al-Zn-Mg alloys and sensitized austenitic stainless steels
[AD-A086427] N80-30484
HIGH STRENGTH STEELS
Modified 43XX steels for high toughness
[AD-A086453] N80-30496
Fatigue and fracture of ultrahigh strength steel and titanium roll bonded and diffusion bonded laminates
[AD-A086511] N80-30796
HIGH TEMPERATURE
Compressive deformation characteristics of some cemented tungsten carbides at elevated temperatures N80-30440
The influence of coherency strains on the elevated temperature mechanical behavior of Ni-15r-Al-Ti-Mo alloys N80-30474
Heats of transformation of eutectic alloys N80-30477
Autoignition characteristics of aircraft-type fuels
[NASA-CR-159886] N80-30535
High-temperature, high-resolution measurements of CO2 in the region of 2200 to 2400 CM-1
[AD-A087234] N80-31169
HIGH TEMPERATURE GAS COOLED REACTORS
Dependencii of silicon carbide coating properties on deposition parameters: Preliminary report — coatings for high temperature gas cooled reactors
[ORNL/TM-7209] N80-30448
HIGH TEMPERATURE RESEARCH
Development of high temperature turbine subsystem technology to a technology readiness status, phase 2
[FE-1806-79] N80-30754
HIGH TEMPERATURE TESTS
Development of high temperature turbine subsystem technology to a technology readiness status, phase 2
[FE-1806-79] N80-30754
Non-contacting strain control and acoustic emission in high-temperature testing
[ICAF-1142] N80-30786
HOLE DISTRIBUTION (MECHANICS)
Critically loaded hole technology advisory group for aerospace research and development
[AD-A086021] N80-30788
HOLOGRAPHIC INTERFEROMETRY
A holographic interferometric study of the temperature dependence of diffusion of aqueous sodium chloride in water, from 32 C to 50 C N80-30715
HOMING DEVICES
Bank-to-turn control technology survey for homing missiles
[NASA-CR-3325] N80-30274
HOMOGENIZING
How to homogenize a nonlinear diffusion equation E.G. Stefans problem
[AD-A086379] N80-31110
HOMOLOGY
Euler manifolds and Stiefel-Whitney homology classes N80-31144
HOMOTOPY THEORY
Euler manifolds and Stiefel-Whitney homology classes N80-31144
HONEYCOMB CORES
Wave propagation in honeycomb and foam-core panels for application to panel NDE
[AD-A086667] N80-30604
HORN ANTENNAS
Pattern analysis of a horn antenna in the presence of obstacles
[AD-A086426] N80-30590
Fundamentals of a theory for conformal antennas
[REPT-2-79] N80-30627
HOT PRESSING
Further fabrication studies of dry lubricated slip ring brush materials for satellite applications
[AERE-G-1480] N80-30664
HUGONIOT EQUATION OF STATE
Shock temperatures of materials: Experiments and applications to the high pressure equation of state N80-30453
HUMAN BEHAVIOR
Instrument scanning and controlling: Using eye movement data to understand pilot behavior and strategies
[NASA-CR-3306] N80-31039
Differentially weighting linear models of behavior: An empirical comparison of six methods
[AD-A086876] N80-31043
HUMAN FACTORS ENGINEERING
Cold weather stress on humans. Citations from the NTIS data base
[PB80-810989] N80-31035
The psychomotor performance of men and women wearing two types of body armor
[AD-A086742] N80-31040
KL: A well-structured beginning computer language N80-31067
HUMAN TOLERANCES
The effect of physical conditioning on +GZ tolerance N80-31031
HUMIDITY
Catalytic oxidation of carbon monoxide at high humidity and low temperature
[AD-A087206] N80-30465
Deliquescence properties and particle size change of hydroscopic aerosols
[BNL-27094] N80-30963
HUYGENS PRINCIPLE
Rate measurement in shock waves with the laser-schlieren
[COO-4759-2] N80-30701
HYBRID CIRCUITS
Computer aided automated hybrid substrate probe testing development
[AD-A087124] N80-30768
HYBRID PROPULSION
Dual throat engine design for a SSTO launch vehicle N80-30388
Bipropellant propulsion system for INSAT-1 N80-30401
HYDRAZINE ENGINES
Fluorine-Hydrazine Propulsion Technology update N80-30391
Understanding flow blockage in small thrusters N80-30394
Assembly and testing of a catalytic hydrazine gas generator
[VB-0421-011-B] N80-30759
HYDRIDES
Hydrogen storage: Hydrogen as a hydride. Citations from the NTIS data base
[PB80-811094] N80-30561
HYDROCRACKING
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes. Laboratory and pilot plant studies of the processing of SRC-1
[FE-2315-45] N80-30544
Upgrading of coal liquids: Hydrocracking of EDS process derived gas oils
[FE-2566-33] N80-30545
HYDRODYNAMIC EQUATIONS
The convergence of periodic waves to solitary waves in the long wave limit
[AD-A086370] N80-30700
HYDRODYNAMICS
Technical research activities for 1978 — chemistry, hydrothermodynamics, information theory, raman spectroscopy, and composite materials and structures N80-30451
Hydrodynamics of turbomachines
[AD-A086873] N80-30566
The shear viscosity for the soft sphere liquid via discrete cell hydrodynamics N80-30669
A hydrodynamic theory of heavy ion collisions N80-31162
Gas channel formation studies including real-air thermodynamic properties
[AD-A086999] N80-31212
HYDROFOILS
Hydrodynamics of turbomachines
[AD-A086873] N80-30566
HYDROGEN
Hydrogen-related phenomena in a nickel-base alloy N80-30475
Hydrogen absorption in metals: A field ion microscopy study
[DOE/ER-10430] N80-30507
Hydrogen storage: Storage as a gas or liquid. Citations from the NTIS data base
[PB80-811086] N80-30560
Hydrogen storage: Hydrogen as a hydride. Citations from the NTIS data base
[PB80-811094] N80-30561
Materials for fuel cells
[PB80-182355] N80-30955
Reactions and relaxation of vibrationally excited hydrogen
[AD-A086976] N80-31168
A search for the persistent velocity autocorrelation in hydrogen by dense plasma decay N80-31205
HYDROGEN ATOMS
Differential charge transfer to the continuum by ions in atomic hydrogen
[DOE/ER-10512/T1] N80-31172
HYDROGEN ENGINES
Hydrogen engine performance analysis project
[SAN-1212-T1] N80-30756
Study of hydrogen-powered versus battery-powered automobiles
[ATR-79(7759)-1-VOL-1] N80-31271

HYDROGEN MASERS
Shuttle time and frequency transfer experiment
[NASA-TM-78288] N80-30342
HYDROGEN OXYGEN ENGINES
Analytical investigation of two hydrogen-oxygen rocket engine systems for low-thrust application --- for orbital transfer N80-30382
Cryogenic LOX/H2 engine candidates for orbital transfer missions. Part 1: Expander cycle optimization N80-30387
HYDROGEN OXYGEN FUEL CELLS
Materials for fuel cells
[PB80-182355] N80-30955
HYDROGEN PRODUCTION
Simultaneous photoproduction of hydrogen and oxygen by photosynthesis --- to convert solar energy into stored chemical free energy
[CONF-791072-32] N80-30550
Hydrogen storage: Hydrogen as a hydride. Citations from the NTIS data base
[PB80-811094] N80-30561
HYDROGEN RECOMBINATIONS
Hydrogen storage: Hydrogen as a hydride. Citations from the NTIS data base
[PB80-811094] N80-30561
HYDROGENATION
Perfecting of nuclear microanalysis of deuterium by means of ion implantation. Application to the study of the hydrogeneration of amorphous silicon through ionic implantation N80-30468
Partial liquefaction of coal by direct hydrogenation
[FE-2044-51] N80-30540
HYDROLOGY
Florida water resources
[E80-10246] N80-30829
Florida water resources, Executive summary
[E80-10247] N80-30830
Heat capacity mapping mission project HCM-051 --- East Australian Current and the Tasman Front
[E80-10278] N80-30850
Investigation of the application of HCMM thermal data to snow hydrology --- Salt-Verde watershed, Arizona and the Sierra Nevada Mountains, California
[E80-10297] N80-30864
Application Explorer Mission-A heat capacity mapping mission --- Bavaria, Germany and Marrakech, Morocco
[E80-10309] N80-30875
HYDROSTATIC PRESSURE
Hydrostatic stress dependent yield of 7075-T6 aluminum
[SAND-79-2220] N80-30505
HYDROTHERMAL CRYSTAL GROWTH
The growth of berlinite (AlPO4) single crystals
[AD-A086751] N80-31246
HYDROXYL RADICALS
Pressure dependence of the absolute rate constant for the reaction OH + C2H2 from 228 to 413K
[NASA-TM-80743] N80-30458
HYGROSCOPICITY
Deliquescence properties and particle size change of hydroscopic aerosols
[BNL-27094] N80-30963
HYPERONS
Theoretical aspects of positron electron annihilation and hyperon hyperon collisions
[PM/79/15] N80-31174
The reaction positron electron yields hyperon + hadrons at high energy
[PM/79/18] N80-31189
HYPERVELOCITY IMPACT
Numerical estimation of stress intensity factors by a finite difference Eulerian method (The HELP code)
[AD-A086111] N80-30792
HYPERVELOCITY LAUNCHERS
Development and testing of two-stage hybrid launcher
[AD-A086268] N80-30356
HYPERVELOCITY PROJECTILES
Development and testing of two-stage hybrid launcher
[AD-A086268] N80-30356
HYPOTHESES
Bounds on mixtures of distributions arising in order restricted inference
[AD-A087117] N80-31139

I

ICE
Radar backscatter study of sea ice
[AD-A087032] N80-30618
ICE FORMATION
Radar backscatter study of sea ice
[AD-A087032] N80-30618
ICE MAPPING
Radio-echo sounding in the Allan Hills, Antarctica, in support of the meteorite field program
[AD-A086858] N80-30879
IDEAL GAS
Gas channel formation studies including real-air thermodynamic properties
[AD-A086999] N80-31212
IGNEOUS ROCKS
Aerial gamma ray and magnetic survey: Raton Basin project. The Raton and Santa Fe quadrangles of New Mexico
[GJBX-9(80)-VOL-2] N80-30881
IGNITERS
Power independent ignition energy measurements
[MLM-2709(OP)] N80-30935
IGNITION
Autoignition characteristics of aircraft-type fuels
[NASA-CR-159886] N80-30535
IGNITION LIMITS
Power independent ignition energy measurements
[MLM-2709(OP)] N80-30935
IGNITION SYSTEMS
Power independent ignition energy measurements
[MLM-2709(OP)] N80-30935
ILLINOIS
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
IMAGE CONTRAST
Degradation of picture quality by speckle in coherent mapping systems N80-30821
Study of the atmospheric effects on the radiation detected by the sensor aboard orbiting platforms (ERTS/LANDSAT) --- Ribeirao Preto and Brasilia, Brazil
[E80-10259] N80-30842
IMAGE ENHANCEMENT
The GMS users' guide, issue 1 N80-30997
IMAGE PROCESSING
As-built design specification for Boundary Detection And Registration Program (BDARP1)
[E80-10216] N80-30824
Forest resource information system, phase 3 --- St. Regis Paper Co.: Picayune, Mississippi
[E80-10242] N80-30825
Detailed design specification for the automatic status and tracking system modifications for LACIE procedure 1
[E80-10243] N80-30826
Preliminary user guide for the program GTDDM (Ground Truth Dot Dump)
[E80-10244] N80-30827
Design specification for color coded spectral plots
[E80-10245] N80-30828
High Density Tape Reformatting System/LANDSAT imagery verification and Extraction System (HDTRS/LIVES) throughput analysis
[E80-10248] N80-30831
Implementation specification for Large Area Crop Inventory Experiment (LACIE) phase 3 automatic status and tracking system
[E80-10249] N80-30832
As-built design specification for scatter plots for direct wheat
[E80-10250] N80-30833
Classification with spectral-spatial-temporal archetypes
[E80-10251] N80-30834
As-built design specification for field statistics (FIELDSTAT)
[E80-10252] N80-30835
Classification of multispectral images according to crosswise textural characteristics --- Mato Grasso, Brazil
[E80-10257] N80-30840
Evaluating the reforested area for the municipality of Buri by automatic analysis of LANDSAT imagery --- Sao Paulo, Brazil
[E80-10258] N80-30841
As-built design specification for the Patterson-Pitt-Thadani minimum loss classifier
[E80-10262] N80-30845
Implementation specification document for merge of BTREAD, phase 1, and phase 2 accuracy assessment programs
[E80-10285] N80-30853
Estimation of probabilities of label imperfections and correction of mislabels
[E80-10288] N80-30856
As-built design specification for the CMAS image-100 hybrid system. Volume 2: Detailed flow charts and program listings, part 1
[E80-10289] N80-30857
As-built design specification for the CAMS image-100 hybrid system. Volume 3: Utilities and shared subroutines
[E80-10290] N80-30858
Maximal analysis labeling procedure (preliminary)
[E80-10294] N80-30862
An exploratory study to develop a cluster-based area estimation procedure --- Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863
Grizzly bear habitat analysis. Section 3: LANDSAT-1 multispectral imagery and computer analysis of grizzly bear habitat --- Slategoat, Scapegoat and Danaher areas, Montana
[NASA-CR-163382] N80-30867
Mapping urbanized area expansion through digital image processing of LANDSAT and conventional data --- Orlando, Florida; Seattle, Washington; and Boston, Massachusetts
[E80-10301] N80-30868
Multi-source image analysis --- radar, infrared, and photographic image interpretation
[AD-A086332] N80-30878
Reversible image compression N80-31065
IMAGE TRANSDUCERS
Evaluation of radiation effects in the MA328 CCD image sensor
[SIRA-6/5309/00] N80-30662
IMAGING TECHNIQUES
Concerning the feasibility of a real time SAR digital processor for VOIR low resolution imaging modes N80-30335
Ultrasonics in medicine. Citations from the NTIS data base
[PB80-810922] N80-31037
IMPACT DAMAGE
Crash tests of four identical high-wing single-engine airplanes
[NASA-TP-1699] N80-30296
Linear-nonlinear interface for finite element transient impact damage analysis N80-30777
Localized impact damage in ceramics. Localized impact damage in zinc sulfide crack growth from small flaws in larger grains in alumina
[AD-A085874] N80-30790
IMPACT LOADS
Combined linear theory/impact theory method for analysis and design of high speed configurations
[NASA-CR-3314] N80-30273
IMPACT TESTS
Crash tests of four identical high-wing single-engine airplanes
[NASA-TP-1699] N80-30296
Microstructural aspects of impact of erosion in LiF, NaCl, Kcl and CaF2 single crystals N80-31232
IMPACTORS
Development study of a novel continuous-flow impactor
[PB80-179286] N80-30574
IMPLANTATION
Semiconductor laser technology: Stripe structure
[LCR-34-078/R/G5] N80-30746
IMPURITIES
Impurity effects on the creep of polycrystalline magnesium and aluminum oxides at elevated temperatures --- mixed transition metal impurities
[COO-1591-34] N80-30447
Impurity studies in the single crystal cadmium sulfide
[AD-A086741] N80-31248

INCOMPRESSIBLE FLOW
Studies of nonlinear phenomena in plasmas
[AD-A086456] N80-31210
INCOMPRESSIBLE FLUIDS
Oscillations of a liquid with a free surface in a wedge shaped container
[HSBW-FB-LRT-WE-9-4-79] N80-30708
INDEXES (DOCUMENTATION)
Selective guide to climatic data sources
[PB80-187354] N80-31018
NASA authorization for fiscal year 1981. Part 4: Index
[GPO-65-791] N80-31266
INDIA
Bipropellant propulsion system for INSAT-1
N80-30401
INDIANA
The use of the climatic water budget to evaluate the validity of a precipitation record
[PB80-182157] N80-31019
INDICATING INSTRUMENTS
Orientation of measurement sensors for optimum end-of-life performance
[AD-A086280] N80-30767
INDIUM ANTIMONIDES
The flash evaporation of powdered indium antimonide
[AD-A086531] N80-30495
Study and characterization of semiconductor surfaces and interfaces N80-31231
INDIUM PHOSPHATES
Thin films of InP for photovoltaic energy conversion
[COO-3004-2] N80-30912
INDIUM PHOSPHIDES
GaAS FET device fabrication and ion implantation technology
[AD-A087004] N80-31251
INDUSTRIAL ENERGY
Industrial application and assessment of waste energy recovery technologies N80-30886
INDUSTRIAL WASTES
Survey analysis of phenolic compounds in industrial effluents by gas chromatography mass spectrometry
[PB80-177793] N80-30969
An evaluation study of EPA method 8 --- emissions from sulfuric acid plants
[PB80-181936] N80-30972
Industrial wastes: An unexplored source of valuable minerals
[PB80-180250] N80-31279
INDUSTRIES
Project MINOS: Technical study
[REPT-601/01] N80-30344
INELASTIC SCATTERING
Inelastic electron tunneling spectroscopy intensities as a function of surface coverage: Experimental determination, physical model, and application --- metal-oxide-metal tunnel junctions N80-31228
INEQUALITIES
Thermodynamics based on a work inequality
N80-31262
INERTIAL UPPER STAGE
IUS motor case development N80-30402
INFECTIOUS DISEASES
Studies of stability in applied mathematics
[ISBN-91-7222-268-9] N80-31130
INFERENCE
Bounds on mixtures of distributions arising in order restricted inference
[AD-A087117] N80-31139
INFORMATION DISSEMINATION
Department of Housing and Urban Development independent agencies appropriation bill, 1981
[S-96-926] N80-31267
INFORMATION FLOW
Design considerations for data-flow database machines
[AD-A086374] N80-31056
Affect units and narrative summarization
[AD-A086735] N80-31089
INFORMATION MANAGEMENT
An investigation of the dual task performance relationship to hemispheric specialization
[AD-A086808] N80-31042
INFORMATION RETRIEVAL
The design of a system for pre-prototype use of the chemical substance information network
[PB80-178320] N80-30438
Investigation into interactive graphics data base exchange via Gerber data
[SAND-80-0588] N80-31265
INFORMATION SYSTEMS
The design of a system for pre-prototype use of the chemical substance information network
[PB80-178320] N80-30438
Forest resource information system, phase 3 --- St. Regis Paper Co.: Picayune, Mississippi
[E80-10242] N80-30825
INFORMATION THEORY
Technical research activities for 1978 --- chemistry, hydrothermodynamics, information theory, raman spectroscopy, and composite materials and structures N80-30451
INFRARED DETECTORS
Instrumentation for detecting hazardous materials
[AD-A086467] N80-30462
Model LS-2X laser source detector test system
[AD-A086540] N80-30739
INFRARED IMAGERY
Heat capacity mapping mission project HCM-051 --- East Australian Current and the Tasman Front
[E80-10278] N80-30850
Soil moisture in relation to geologic structure and lithology, northern California
[E80-10298] N80-30865
Analysis of scanner data for crop inventories
[E80-10308] N80-30874
Application Explorer Mission-A heat capacity mapping mission --- Bavaria, Germany and Marrakech, Morocco
[E80-10309] N80-30875
Multi-source image analysis --- radar, infrared, and photographic image interpretation
[AD-A086332] N80-30878
Correlation of under-ice roughness with satellite and airborne thermal infrared data --- Beaufort Sea and Arctic Ocean pack ice
[AD-A085512] N80-30880
INFRARED INSPECTION
Computer controlled measurement of shapes and their variations by means of active targets and an optoelectronic converter
[ISD-245] N80-31201
INFRARED INSTRUMENTS
Remote sensing of the ocean: Dynamics. Citations from the NTIS data base
[PB80-811243] N80-30885
INFRARED LASERS
Theory of the longitudinal free electron laser, 1. A theoretical model of the linear electrooptic effect, 2
N80-30723
Optically pumped far infrared molecular lasers
[AD-A086495] N80-30728
INFRARED RADIATION
Critical requirements for mid-altitude IR predictions
N80-30429
New nonlinear optical processes in molecules at infrared frequencies
[AD-A086206] N80-30459
High power submillimeter and infrared radiation from intense relativistic electron beams
[AD-A086688] N80-30737
Atlas of the infrared frequencies of ozone, part 1
N80-30990
Atlas of the infrared frequencies of ozone, part 2
N80-30991
Atomic and molecular processes
[AD-A086764] N80-31164
INFRARED RADIOMETERS
Mission operation report. Geostationary operational satellite GOES-D
[NASA-TM-81123] N80-30354
INFRARED REFLECTION
Study of a chemical analyzer of the condensables in the atmosphere of Venus by attenuated total IR-reflection
[ANL-TRANS-1184] N80-31295
INFRARED SPECTRA
Conducting organic polymers: Doped polyacetylene
[AD-A086869] N80-30523
Research investigation directed toward extending the useful range of the electromagnetic spectrum
[AD-A087034] N80-30617
Observations and interpretation of the permitted emission line spectra of quasi-stellar objects
N80-31281
New atlas of IR solar spectra
[NASA-CR-163499] N80-31298
INFRARED SPECTROMETERS
Tunable laser survey of molecular air pollutants: Doppler-limited spectra of the C-H stretching bands of formaldehyde, ethylene, ethane and allene
[PB80-180003] N80-30974
INFRARED SPECTROSCOPY
Remote sensing of the ocean: Physical, chemical, and geologic properties. Citations from the NTIS data base
[PB80-811235] N80-30884
INGOTS
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 1: Formulation and analysis
[NASA-CR-161540] N80-30479
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 2: Software documentation
[NASA-CR-161541] N80-30480
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 3: Operating manual
[NASA-CR-161542] N80-30481
INJECTION LASERS
Monolithic integration of gallium arsenide optoelectronic devices N80-30642
INJECTION MOLDING
Bubble dynamics in structural foam processing
N80-30677
INPUT/OUTPUT ROUTINES
Advanced flight design systems subsystem performance models. User guide: Environmental analysis routine library
[NASA-CR-160769] N80-31045
User's manual for NEMESIS and PLMODE
[AD-A087254] N80-31081
INSOLATION
Environmental data for sites in the National Solar Data Network
[SOLAR/0010-80/04] N80-30945
INSTRUMENT APPROACH
Instrument scanning and controlling: Using eye movement data to understand pilot behavior and strategies
[NASA-CR-3306] N80-31039
INSTRUMENT PACKAGES
Sounding rocket program aeronomy: Complex payload B2. Report of system design, integration, testing and flight
[ESA-TT-589] N80-30363
INTEGRAL EQUATIONS
Edge effects in low sidelobe array antennas
N80-30582
General shearing speckle interferometry and numerical boundary-integral techniques in experimental mechanics N80-30780
Convergence estimates for semidiscrete parabolic equation approximations
[AD-A086369] N80-31099
INTEGRATED CIRCUITS
Monolithic integration of gallium arsenide optoelectronic devices N80-30642
Estimation of confidence limits for testing large logic networks
[AD-A086281] N80-30650
Artwork analysis tools for VLSI circuits
[AD-A087040] N80-30653
INTEGRATED OPTICS
Use of integrated optics for analog data signal conditioning aboard spacecraft
[LCR-79-108/R/G5] N80-31203
INTERFACIAL ENERGY
Study and characterization of semiconductor surfaces and interfaces N80-31231
INTERFERENCE LIFT
An analytical solution of lift loss for a round planform with a central lifting jet
[AD-A086669] N80-30276
INTERFEROMETERS
Accurate radio positions with the Tidbinbilla interferometer N80-30320
INTERFEROMETRY
The application of optical interferometry to time dependent unbonding, parts 1, 2, and 3 N80-30774
General shearing speckle interferometry and numerical boundary-integral techniques in experimental mechanics N80-30780
Scatterplate interferometry N80-31190

INTERMEDIATE FREQUENCY AMPLIFIERS
Radio receiver, spurious response. Test operations procedure
[AD-A086463] N80-30602
INTERNAL COMBUSTION ENGINES
Hydrogen engine performance analysis project
[SAN-1212-T1] N80-30756
INTERNAL PRESSURE
Growth of grain boundary cavities under applied stress and internal pressure
[COO-2172-26] N80-31247
INTERNATIONAL COOPERATION
Report on European space activities
[ESA-SP-1023] N80-30347
Submicrosecond comparisons of time standards with the Navigation Technology Satellites (NTS)
[AD-A086780] N80-30564
INTERNATIONAL SUN EARTH EXPLORER 2
Study on use of ISEE-B platform as a probe for ESA/NASA cometary mission. Volume 1: Technical results
[ESA-CR(P)-1316-VOL-1] N80-30362
INTERPLANETARY DUST
Microcharacterization of interplanetary dust collected in the Earth's stratosphere N80-30976
INTERPLANETARY FLIGHT
A pump fed bipropellant propulsion system for planetary missions N80-30392
Heat Sterilizable propellant development
N80-30393
INTERPLANETARY MAGNETIC FIELDS
Solar-geophysical data number 426, February 1980. Part 1: Prompt reports
[PB80-186141] N80-31301
INTERPLANETARY NAVIGATION
The telecommunications and data acquisition report
[NASA-CR-163431] N80-30319
VLBI system for weekly measurement of UT1 and polar motion: Preliminary results N80-30323
Block 1, phase 1 very long baseline interferometry implementation N80-30325
INTERSTELLAR MASERS
Very long baseline interferometry observations of the masers toward Orion A N80-31282
INTERVALS
Exact two-sided confidence intervals on nonnegative linear combination of variance
[AD-A087052] N80-31120
INVARIANCE
Stationary points and finite-difference schemes for differential inclusions
[AD-A086381] N80-31103
INVESTIGATION
A fundamental study of a new fabrication technique for fiber reinforced aluminum matrix composites
[AD-A086282] N80-30443
Studies of continuous chromatographic reactors
N80-30457
Detailed investigation of a vaporising fuel spray. Part 1: Experimental investigation of time averaged spary
[NASA-CR-163483] N80-30687
Accurate numerical solutions for elastic-plastic models
[ANL-80-31] N80-30815
Use of endochronic plasticity for multi-dimensional small and large strain problems
[ANL-CT-79-19] N80-30817
Study of seismic wave excitation for two earthquakes in northern Baha, California N80-30977
An investigation of cardiac threshold variability relative to stimulus shape and respiratory cycle
N80-31032
Cochlear microphonic evidence for mechanical propagation of distortion products (f2-f1) and (2f1-f2)
N80-31153
Isobar production in heavy ion collisions
N80-31161
Vortex formation during rf heating of plasma
[PPPL-1658] N80-31219
INVISCID FLOW
Interacting inviscid and laminar viscous flow, and some aspects of their stability N80-30679
The stability of a compressible free shear layer
[AD-A086664] N80-30691
Analysis of scattering and radiation of acoustic waves from an axisymmetric structure in a infinite fluid medium
[AD-A086587] N80-31157
ION ACCELERATORS
Collective ion acceleration and electron beam propagation in dielectric guides
[AD-A086493] N80-31177
ION BEAMS
An ion beam milliprobe for materials analysis
[AD-A086109] N80-30487
Low energy ion beam systems for surface analytical and structural studies
[SAND-79-2392C] N80-31171
Intense pulsed ion beams for fusion applications
[SAND-80-0402] N80-31185
MHD plasma channel response to propagating ion beams
[AD-A087214] N80-31211
ION CONCENTRATION
Study and evaluation of impulse mass spectrometers for ion analysis in the D and E regions of the ionosphere
[NASA-CR-163490] N80-30979
ION DENSITY (CONCENTRATION)
Influence of magnetic shear on the current convective instability in the diffuse aurora
[AD-A086789] N80-30984
ION EMISSION
Development and testing of cleaning procedures and feeding systems for a field emission thruster model
[FRI-R664/3] N80-30434
Field emission electric propulsion ion optics of double edged materials
[CLM-RR/E1/25] N80-30435
ION IMPLANTATION
Perfecting of nuclear microanalysis of deuterium by means of ion implantation. Application to the study of the hydrogeneration of amorphous silicon through ionic implantation N80-30468
Comparison of atomic concentration profiles, defect density profiles, and types of microstructural defects in GaAs annealed after implantation with Be
N80-31233
Electrical characterization of germanium implanted gallium arsenide
[AD-A086652] N80-31243
GaAS FET device fabrication and ion implantation technology
[AD-A087004] N80-31251
ION MICROSCOPES
Hydrogen absorption in metals: A field ion microscopy study
[DOE/ER-10430] N80-30507
ION MOTION
Solar photovoltaic module degradation from electro-migration
[COO-4094-64] N80-30910
ION PROPULSION
Development and testing of cleaning procedures and feeding systems for a field emission thruster model
[FRI-R664/3] N80-30434
Field emission electric propulsion ion optics of double edged materials
[CLM-RR/E1/25] N80-30435
ION SCATTERING
An ion beam milliprobe for materials analysis
[AD-A086109] N80-30487
IONIC COLLISIONS
Isobar production in heavy ion collisions
N80-31161
A hydrodynamic theory of heavy ion collisions
N80-31162
X-ray emission in heavy-ion collisons
[DOE/ER-06036/3] N80-31186
IONIZATION
Electron ionization cross sections in the distorted-wave approximation
[AD-A087210] N80-31167
IONIZATION CROSS SECTIONS
Electron ionization cross sections in the distorted-wave approximation
[AD-A087210] N80-31167
IONOSPHERIC COMPOSITION
Study and evaluation of impulse mass spectrometers for ion analysis in the D and E regions of the ionosphere
[NASA-CR-163490] N80-30979
IONOSPHERIC DISTURBANCES
Comparison of results from the S3-2 satellite and the Chatanika radar in an early morning aurora
[AD-A086861] N80-30983
Influence of magnetic shear on the current convective instability in the diffuse aurora
[AD-A086789] N80-30984
Plasma field studies during magnetic disturbances
[AD-A086420] N80-30985
IONOSPHERIC PROPAGATION
Spectral analysis of scintillation data taken from an aircraft, part 1
[AD-A086837] N80-30603
IONS
Study of elf propagation anomalies as related to improved knowledge of electron density profiles produced by energetic particle precipitation
[AD-A087255] N80-30619
Atomic and molecular processes
[AD-A086764] N80-31164
IRON
Nickel-iron alloy corrosion in a sealed pyrotechnic system
[MLM-2707(OP)] N80-30511
Research and development of concept leading to an automotive alternator with significantly improved efficiency and weight
[COO-50042-1] N80-30654
IRON ALLOYS
Weldability of thermally grain-refined Fe12Ni-0.25Ti for cryogenic structural applications
[LBL-10259] N80-30506
IRON COMPOUNDS
Development of advanced batteries at Argonne National Laboratory
[ANL-80-32] N80-30927
IRON METEORITES
Silver isotopic anomalies in iron meteorites: Cosmic-ray production and other possible sources
[LA-UR-80-1199] N80-31296
ISOMERIZATION
Magnetic soliton defects in polyacetylene
[AD-A086978] N80-30528
ISOMERS
Nuclear isomer suitable for gamma ray laser
[NASA-CR-163482] N80-30727
ISOPERIMETRIC PROBLEM
High-order curved finite elements
[KAPL-4134] N80-31125
ISOTHERMAL PROCESSES
Thermoluminescence studies of the thermal and radiation histories of chrondritic meteorites
N80-31292
ISOTROPIC MEDIA
Laminated beams of isotropic or orthotropic materials subjected to temperature change
[AD-A087230] N80-30808
ITALY
Study of geological structure of Sicily and other Italian areas --- Gulf of Orosei, Eastern Sardinia
[E80-10299] N80-30866
ITERATION
Matrix methods for determining system poles from transient response
[AD-A087204] N80-31121
ITERATIVE SOLUTION
Analysis of the copper vapor laser and development of a general laser plasma model N80-30725

J

JAPAN
Submicrosecond comparisons of time standards with the Navigation Technology Satellites (NTS)
[AD-A086780] N80-30564
JET AIRCRAFT NOISE
Engine cycle studies program
[NASA-CR-159500] N80-30310
JET ENGINES
Engine cycle studies program
[NASA-CR-159500] N80-30310
Vibrations of a compressor blade with slip at the root
[AD-A086852] N80-30312
JET EXHAUST
Measured and predicted laser signal attenuation through a solid rocket plume N80-30417
JET LIFT
An analytical solution of lift loss for a round planform with a central lifting jet
[AD-A086669] N80-30276

JOINTS (JUNCTIONS)
Studies on the reduction of intermodulation generation in communications systems
[AD-A086995] N80-30622
Optimization of a rotating thermally conducting joint and incorporation in a laboratory model deployable radiator
[DS-190-0-78] N80-30714
JOSEPHSON JUNCTIONS
Integrated thin film dc SQUIDS
[AD-A086466] N80-30652
Influence of Josephson effect on proximity coupled superconductors N80-31226
JUPITER (PLANET)
Voyager-Jupiter radio science data papers
N80-30341
JUPITER ATMOSPHERE
Polarimetry of Jupiter at large phase angles
N80-31293

K

KALMAN FILTERS
An optimal state estimation algorithm for terrain-ranging systems N80-30820
KANSAS
Draft user procedures: Software wheat yield predictions/foreign equivalent test --- Kansas, Oklahoma, and Nebraska
[E80-10287] N80-30855
An exploratory study to develop a cluster-based area estimation procedure --- Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863
KAPITZA RESISTANCE
Phonon reflection from crystal interfaces and the kapitza problem N80-31238
KEROSENE
Detailed investigation of a vaporising fuel spray. Part 1: Experimental investigation of time averaged spary
[NASA-CR-163483] N80-30687
KEYING
Keyboards and touch controls: An evaluation of reliability and constructional principles for 11 different types
[ECR-90] N80-30660
KINETIC ENERGY
Zero-point energy of confined fermions
[DOE/ER-01545/274] N80-31173
KINETICS
Modelling of simulated photochemical smog with kinetic mechanisms. Volume 2 CHEMK: A computer modeling scheme for chemical kinetics
[PB80-181084] N80-30970
KRAMERS-KRONIG FORMULA
Conducting organic polymers: Doped polyacetylene
[AD-A086869] N80-30523

L

L-1011 AIRCRAFT
Evaluation of the impact of towing the L-1011 airplane at Boston-Logan Airport
[AD-A086977] N80-30303
LABORATORY EQUIPMENT
Study of technical feasibility and costing of Biorack. Volume 1: Technical report
[ESA-CR(P)-1332-VOL-1] N80-30351
LAKE ICE
Radar backscatter study of sea ice
[AD-A087032] N80-30618
The development of a stepped frequency microwave radiometer and its application to remote sensing of the Earth N80-30822
LAKES
Florida water resources
[E80-10246] N80-30829
LAMINAR BOUNDARY LAYER
Visualization study of turbulent spots
[AD-A086831] N80-30699
LAMINAR FLOW
Laminar natural convection along vertical corners and rectangular ducts N80-30675
The stability of a compressible free shear layer
[AD-A086664] N80-30691
LAMINATES
Comparison of quasi-isotropic fiber reinforced composite laminates --- candidate materials for flywheels
[UCRL-15225] N80-30450
The magnetic characteristics of tape wrapped cylindrical ferromagnatic laminations for frequencies below 50 kHz
[AD-A086333] N80-30592
Fatigue and fracture of ultrahigh strength steel and titanium roll bonded and diffusion bonded laminates
[AD-A086511] N80-30796
Laminated beams of isotropic or orthotropic materials subjected to temperature change
[AD-A087230] N80-30806
LAND ICE
Radio-echo sounding in the Allan Hills, Antarctica, in support of the meteorite field program
[AD-A086858] N80-30879
LAND MANAGEMENT
Monitoring the use of riverways with aerial photography: The development, testing, and evaluation of a computer assisted methodology
[AD-A086471] N80-30877
Remote sensing of wildland resources: A state-of-the-art review
[PB80-184609] N80-30882
LAND USE
Application Explorer Mission-A heat capacity mapping mission --- Bavaria, Germany and Marrakech, Morocco
[E80-10309] N80-30875
Monitoring the use of riverways with aerial photography: The development, testing, and evaluation of a computer assisted methodology
[AD-A086471] N80-30877
LANDING GEAR
Evaluation of the impact of towing DC-9 transport airplanes at Boston-Logan Airport
[AD-A086864] N80-30297
Calibration of mirage main undercarriage to determine wheel loads from measured strains
[AD-A086721] N80-30300
Evaluation of the impact of towing the L-1011 airplane at Boston-Logan Airport
[AD-A086977] N80-30303
Calibration of a strain-gauged CT4-A undercarriage
[AD-A086965] N80-30718
LANDSAT D
Flight feasibility assessment of shuttle/LANDSAT-D/LANDSAT-D' missions
[NASA-TM-81145] N80-30372
Scheduler software for tracking and data relay satellite system loading analysis: User manual and programmer guide
[NASA-TM-78290] N80-31070
LANDSAT D PRIME
Flight feasibility assessment of shuttle/LANDSAT-D/LANDSAT-D' missions
[NASA-TM-81145] N80-30372
LANDSAT SATELLITES
LANDSAT-2 and LANDSAT-3 flight evaluation report
[E80-10291] N80-30859
LANTHANUM COMPOUNDS
Electronic band structure and optical properties of the cubic Sc, Y and La hydride systems N80-31236
Optical and photoemission studies of lanthanum hydrides
[ISM-264] N80-31257
LAPLACE TRANSFORMATION
Numerical operational methods in structural dynamics N80-30783
LARGE AREA CROP INVENTORY EXPERIMENT
As-built design specification for Boundary Detection And Registration Program (BDARP1)
[E80-10216] N80-30824
Detailed design specification for the automatic status and tracking system modifications for LACIE procedure 1
[E80-10243] N80-30826
Preliminary user guide for the program GTDDM (Ground Truth Dot Dump)
[E80-10244] N80-30827
High Density Tape Reformatting System/LANDSAT imagery verification and Extraction System (HDTRS/LIVES) throughput analysis
[E80-10248] N80-30831
Implementation specification for Large Area Crop Inventory Experiment (LACIE) phase 3 automatic status and tracking system
[E80-10249] N80-30832
As-built design specification for scatter plots for direct wheat
[E80-10250] N80-30833
Classification with spectral-spatial-temporal archetypes
[E80-10251] N80-30834
As-built design specification for field statistics (FIELDSTAT)
[E80-10252] N80-30835
Detail design specification for enhancement of the automatic status and tracking system software
[E80-10254] N80-30837
Design specification for merge of BTREAD, Phase 1 and Phase 2 accuracy assessment programs
[E80-10255] N80-30838
User's guide Large Area Crop Inventory Experiment (LACIE) phase 3 PDP 11/45 automatic status and tracking system
[E80-10256] N80-30839
As-built design specification for the Patterson-Pitt-Thadani minimum loss classifier
[E80-10262] N80-30845
As-built design specification for phase 3 model areas added to the monthly data base of the US --- Montana, South Dakota, Oklahoma, Nebraska, and Colorado
[E80-10263] N80-30846
The integrated analysis procedure for identification of spring small grains and barley --- Great Plains Corridor: U.S. and Canada
[E80-10274] N80-30847
Operator's guide for LACIE phase 3 automatic status and tracking system
[E80-10284] N80-30852
Implementation specification document for merge of BTREAD, phase 1, and phase 2 accuracy assessment programs
[E80-10285] N80-30853
Design specification for ERIPS fields data base deck conversion
[E80-10286] N80-30854
As-built design specification for the CMAS image-100 hybrid system. Volume 2: Detailed flow charts and program listings, part 1
[E80-10289] N80-30857
As-built design specification for the CAMS image-100 hybrid system. Volume 3: Utilities and shared subroutines
[E80-10290] N80-30858
An exploratory study to develop a cluster-based area estimation procedure --- Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863
Evaluating the use of analyst labels in maximum likelihood cluster proportion estimation
[E80-10303] N80-30870
Evaluation of Bayesian sequential proportion estimation using analyst labels
[E80-10304] N80-30871
As-built design specification of the CAMS/CAS interface tape report generation program for LACIE 8
[E80-10306] N80-30872
As-built specification for CLASSY conversion
[E80-10307] N80-30873
LASER ANNEALING
A study of low-temperature processes in non-equilibrium electronic states
[AD-A086494] N80-30729
LASER APPLICATIONS
Optical power spectrum analyzer. Scanning laser beam system permits full format coverage
[AD-A087047] N80-30720
Real-time operating system for a multi-laser/multi-detector system
[NASA-CR-163486] N80-30726
LASER CAVITIES
Modeling, simulation, and control of a closed cycle laser gas supply system N80-30724
Mid-term progress report on the development of army Closed Cycle Circulator (CCC) system
[AD-A087219] N80-30744
LASER GUIDANCE
Measured and predicted laser signal attenuation through a solid rocket plume N80-30417

LASER MODES
The mode locked dye laser, 1. Picosecond photoconductivity of semi-insulating gallium-arsenide, 2 N80-30722
LASER OUTPUTS
Structural defects in laser- and electron-beam annealed silicon
[CONF-791112-62] N80-30437
Optical turbulence forecasting: A tutorial
[AD-A086863] N80-31005
LASER PLASMAS
Analysis of the copper vapor laser and development of a general laser plasma model N80-30725
Hard X-ray spectrum from a one-fluid laser plasma mode
[NRL-MR-4241] N80-31218
LASER PUMPING
Optically pumped far infrared molecular lasers
[AD-A086495] N80-30728
Development of X-ray laser media: Measurement of gain and development of cavity resonators for wavelengths near 130 angstroms
[AD-A086670] N80-30730
Quantum mechanical studies of molecular hyperpolarizabilities
[AD-A086662] N80-30733
Laser physics and laser techniques
[AD-A087245] N80-30742
LASER TARGET DESIGNATORS
Measured and predicted laser signal attenuation through a solid rocket plume N80-30417
LASERS
Design of a dynamic test platform for autonomous robot vision systems
[RPI-TR-MP-69] N80-30352
Rate measurement in shock waves with the laser-schlieren
[COO-4759-2] N80-30701
Calculation of the energetics and collision dynamics of electronic transition lasers
[AD-A086657] N80-30731
Laser physics and laser techniques
[AD-A087245] N80-30742
Laser optical appraisal and design of a PRIME/Rover interface
[NASA-CR-163508] N80-31193
European Scientific Notes. Volume 34, No. 6
[AD-A086806] N80-31304
LASING
Unsteady thermal blooming of intense laser beams
[AD-A087207] N80-30741
LATTICE PARAMETERS
Phonon reflection from crystal interfaces and the kapitza problem N80-31238
Structural and electronic properties of a linear chain mercury compound N80-31239
LATTICE VIBRATIONS
Electron response theory of lattice vibrations: Emergence of concepts and a glance at the future
[LA-UR-80-1000] N80-31252
LAUNCHERS
Development and testing of two-stage hybrid launcher
[AD-A086268] N80-30356
LEADERSHIP
Communication control and leadership in telecommunications by small groups
[AD-A086746] N80-30612
LEADING EDGES
Study of an edge vortex by means of ultrasound in a close field behind a rectangular wing in a wind tunnel
[MPIS-11/1979] N80-30282
LEAST SQUARES METHOD
Differentially weighting linear models of behavior: An empirical comparison of six methods
[AD-A086876] N80-31043
A dual Algorithm to solve linear least absolute value approximations
[AD-A087078] N80-31080
LENGTH
Measurement of surface roughness and correlation length using dichromatic speckle N80-31191
LIFE (DURABILITY)
Failure time distributions: Estimates and asymptotoc results
[AD-A086828] N80-31133
Preposterior analysis of Bayes estimators of mean life, 1
[AD-A086771] N80-31135
LIFE CYCLE COSTS
Analysis of discrete software reliability models
[AD-A086334] N80-30766
Solar energy system economic evaluation final report for SEMCO-Loxahatchee, Loxahatchee National Wildlife refuge, Palm Beach County, Florida
[NASA-CR-161512] N80-30894
LIFE SCIENCES
Study of technical feasibility and costing of Biorack. Volume 1: Technical report
[ESA-CR(P)-1332-VOL-1] N80-30351
LIFE SUPPORT SYSTEMS
Advanced flight design systems subsystem performance models. Executive summary
[NASA-CR-160768] N80-31044
Advanced flight design systems subsystem performance models. User guide: Environmental analysis routine library
[NASA-CR-160769] N80-31045
Advanced flight design systems subsystem performance models. Sample model: Environmental analysis routine library
[NASA-CR-160770] N80-31046
LIGANDS
Theoretical and experimental investigation of bonding of simple ligands to metal complexes as reflected in their photoelectron spectra N80-31229
LIGHT AIRCRAFT
Light twin-engine aircraft accidents following engine failures
[PB80-177306] N80-30287
LIGHT EMISSION
Quasi-simultaneous observations of the BL Lac object MK 501 in X-ray, UV, visible, IR and radio frequencies
[NASA-TM-81985] N80-31285
LIGHT SCATTERING
Multiple scattering in clouds
[AD-A087043] N80-30616
Laser physics and laser techniques
[AD-A087245] N80-30742
LIGHT TRANSMISSION
Unsteady thermal blooming of intense laser beams
[AD-A087207] N80-30741
Light reflectance, transmittance, and utilization within a vegetative canopy --- Texas
[E80-10282] N80-30851
LIGHTNING
Analysis of electrical transients created by lightning
[NASA-CR-159308] N80-30645
Lightning, surge and transient protection. Citations from the NTIS data base
[PB80-810781] N80-30667
LINE SPECTRA
Measuring and modeling rocket-plume Doppler spectral asymmetry in CW downlink transmissions N80-30430
LINEAR ARRAYS
Phased arrays. Citations from the engineering index data base
[PB80-808058] N80-30638
LINEAR EQUATIONS
Analytic continuation of solutions to linear partial differential equations
[AD-A086712] N80-31105
A non-recursive incomplete Cholesky decomposition method for the solution of linear equations with a sparse matrix
[AD-A087005] N80-31117
Exact two-sided confidence intervals on nonnegative linear combination of variance
[AD-A087052] N80-31120
LINEAR PREDICTION
Cumulative processes: Linear combinations of order statistics and percentiles
[AD-A086372] N80-31136
LINEAR PROGRAMMING
A dual Algorithm to solve linear least absolute value approximations
[AD-A087078] N80-31080
LINEAR SYSTEMS
A singular perturbations approach to reduced-order modeling and decoupling for large scale linear systems
[AD-A087050] N80-31118
On the optimal solution of large linear systems
[AD-A086349] N80-31147
LIQUID CRYSTALS
Alignment of liquid crystals by surface gratings
[AD-A086816] N80-31194
Liquid crystals (nematic liquids)
[RAE-LIB-TRANS-2020] N80-31241
Molecular reorientations in liquid crystals. The 13 C -/1H/ nuclear Overhauser effects in liquid MBBA
[ISS-P-79/4] N80-31259
LIQUID FLOW
The translational motion of particles in a viscoelastic liquid N80-30673
LIQUID PHASES
Solar thermal energy storage using a paraffin wax phase change material N80-30887
Epitaxial growth of single crystal films
[NASA-CR-161544] N80-31242
LIQUID PROPELLANT ROCKET ENGINES
The 1980 JANNAF propulsion Meeting, volume 5
[AD-A087063] N80-30381
Bipropellant propulsion system for INSAT-1 N80-30401
LIQUID ROCKET PROPELLANTS
A pump fed bipropellant propulsion system for planetary missions N80-30392
Single stage liquid propulsion systems: Specific optima for NRBM vehicles N80-30410
Advances in propellant propulsion technology for intermediate range ballistic missile N80-30411
Liquid airbreathing missile fuels: An overview of properties and applications N80-30419
LIQUID-GAS MIXTURES
Nonsymmetric split of flow during cocurrent upflow at air-water mixtures through symmetric bifurcations N80-30678
LIQUID-VAPOR INTERFACES
Natural convection film boiling on a vertical surface N80-30684
LITHIUM ALLOYS
Development of advanced batteries at Argonne National Laboratory
[ANL-80-32] N80-30927
LITHIUM CHLORIDES
Lithium-thionyl chloride battery
[AD-A085661] N80-30906
LITHIUM SULFUR BATTERIES
Lithium-thionyl chloride battery
[AD-A085661] N80-30906
Conceptual design of electrical balance of plant for advanced battery energy storage facility
[ANL-80-16] N80-30940
LITHOLOGY
Soil moisture in relation to geologic structure and lithology, northern California
[E80-10298] N80-30865
Application Explorer Mission-A heat capacity mapping mission --- Bavaria, Germany and Marrakech, Morocco
[E80-10309] N80-30875
LITHOSPHERE
Lateral density variations in elastic Earth models from an extended minimum energy approach
[NASA-TM-80742] N80-30787
Spherical Earth analysis and modeling of lithospheric gravity and magnetic anomlies
[NASA-TM-80709] N80-30980
LOAD DISTRIBUTION (FORCES)
Center of gravity
[AD-A086961] N80-30568
Techniques of analysis of load-displacement records by j-integral methods N80-30778
Nonlinear behavior of guyed towers N80-30782
LOAD TESTS
Vacuum tests on a rotary/linear sleeve bearing
[ESA-ESTL-42] N80-30761
LOADING OPERATIONS
Segmentation, dynamic storage, and variable loading on CDC equipment
[NASA-CR-3315] N80-31071
LOADS (FORCES)
Design, development, and flight demonstration of the loads and stability characteristics of a bearingless main rotor
[AD-A086754] N80-30299
Calibration of mirage main undercarriage to determine wheel loads from measured strains
[AD-A086721] N80-30300
Evaluation of the impact of towing the L-1011 airplane at Boston-Logan Airport
[AD-A086977] N80-30303

The dynamic behavior of nylon and polyester line
[AD-A087106] N80-30529
Analysis of ground calibration data from strain gauges attached to the airframe of CT4-A airtrainer A19-031
[AD-A086970] N80-30719
Critically loaded hole technology advisory group for aerospace research and development
[AD-A086021] N80-30788
On the characterization of strain-hardening in plasticity
[AD-A086551] N80-30800

LOGIC DESIGN
Quicklist: The basis for a computer aided logic design system N80-30334

LONG TERM EFFECTS
Evaluation and prediction of long term space environmental effects on non-metallic materials
[NASA-CR-161545] N80-30436

LONGITUDINAL STABILITY
RITZ 2 software: Dynamic longitudinal analysis using a variational method for slender bodies of revolution containing liquids
[CNES-NT-91] N80-30361

LORAN C
New hardware for tethered balloons
[AD-A086836] N80-30280
Development of Loran-C data collection and analysis procedures
[AD-A086683] N80-30289
Position determination with Loran-C triplets and the Hewlett-Packard HP-67/97 programmable calculators
[AD-A086823] N80-30290
An algorithm for position determination using Loran-C triplets with a basic program for the Commodore 2001 microcomputer
[AD-A086790] N80-30291
Communications requirements for a Loran-C position monitoring system for VTS Valdez, Alaska
[AD-A087199] N80-30292

LORAN D
New hardware for tethered balloons
[AD-A086836] N80-30280

LOUISIANA
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860

LOW FREQUENCIES
Power line carrier radiation and the low-frequency aeronautical radio compass
[AD-A087126] N80-30293

LOW GRAVITY MANUFACTURING
Project MINOS: Technical study
[REPT-601/01] N80-30344

LOW SPEED
STS-1 low-speed ground navigation console procedures
[NASA-TM-81134] N80-30370

LOW TEMPERATURE
Catalytic oxidation of carbon monoxide at high humidity and low temperature
[AD-A087206] N80-30465
A study of low-temperature processes in non-equilibrium electronic states
[AD-A086494] N80-30729

LOW TEMPERATURE PHYSICS
Experimental determination of the temperature dependence of metallic work functions at low temperatures
[DOE/ER-02314] N80-30501
Integrated thin film dc SQUIDS
[AD-A086466] N80-30652
Zero-point energy of confined fermions
[DOE/ER-01545/274] N80-31173

LOW THRUST PROPULSION
Analytical investigation of two hydrogen-oxygen rocket engine systems for low-thrust application --- for orbital transfer N80-30382
LEO-to-GEO low thrust chemical propulsion N80-30384
Understanding flow blockage in small thrusters N80-30394

LOWER CALIFORNIA (MEXICO)
Study of seismic wave excitation for two earthquakes in northern Baha, California N80-30977

LUBRICANTS
Determination of aromaticity of fuels and lubricant basestocks by ultraviolet spectroscopy
[AD-A086654] N80-30461

LUBRICATING OILS
Lubricating oil analysis for wear monitoring. Citations from the NTIS data base
[PB80-807688] N80-30531

LUBRICATION
Molybdenum disulphide lubrication. A continuation survey: 1979 to 1980
[STC-79/419] N80-30762

LUMINOUS INTENSITY
Quasi-simultaneous observations of the BL Lac object MK 501 in X-ray, UV, visible, IR and radio frequencies
[NASA TM-81985] N80-31285

LUNAR ROVING VEHICLES
An advanced terrain modeler for an autonomous planetary rover
[NASA-CR-163485] N80-30749

M

MACHINING
Critically loaded hole technology advisory group for aerospace research and development
[AD-A086021] N80-30788

MAGNESIUM OXIDES
Impurity effects on the creep of polycrystalline magnesium and aluminum oxides at elevated temperatures --- mixed transition metal impurities
[COO-1591-34] N80-30447

MAGNETIC ANOMALIES
Spherical Earth analysis and modeling of lithospheric gravity and magnetic anomlies
[NASA-TM-80709] N80-30980

MAGNETIC CORES
Segmentation, dynamic storage, and variable loading on CDC equipment
[NASA-CR-3315] N80-31071

MAGNETIC DIPOLES
Search for magnetic dipole strength and giant spin-flip resonances in heavy nuclei
[CONF-800540-1] N80-31181

MAGNETIC FIELDS
Rocket measurement of toroidal magnetic fields in an equatorial electrojet: Method of evaluation
[GAMMA-34] N80-30993
Measurements of electron heat flow along a dc magnetic field in strong temperature gradients
[LA-UR-80-1109] N80-31152
Adiabatic compression of field-reversed plasma
[UCID-18614] N80-31220
Quantum limit magnetoconductivity in the dilute impurity regime N80-31227

MAGNETIC FLUX
Compressed magnetic flux amplifier with capacitive load
[SAND-79-2339] N80-30657

MAGNETIC MIRRORS
Assessment of the US Mirror Fusion program. Report of the 1980 Mirror Senior Review Panel
[DOE/ER-0057] N80-31214

MAGNETIC POLES
Matrix methods for determining system poles from transient response
[AD-A087204] N80-31121

MAGNETIC RESONANCE
Magnetic soliton defects in polyacetylene
[AD-A086978] N80-30528

MAGNETIC SHIELDING
The magnetic characteristics of tape wrapped cylindrical ferromagnatic laminations for frequencies below 50 kHz
[AD-A086333] N80-30592

MAGNETIC STORMS
Simultaneous measurements of magnetotail dynamics by IMP spacecraft
[NASA-TM-81986] N80-30981
Plasma field studies during magnetic disturbances
[AD-A086420] N80-30985
Solar-Geophysical data number 426, Febuary 1980. Supplement: Explanation of data reports
[PB80-186133] N80-31300
Solar-geophysical data number 426, February 1980. Part 1: Prompt reports
[PB80-186141] N80-31301

MAGNETIC SURVEYS
Spherical Earth analysis and modeling of lithospheric gravity and magnetic anomlies
[NASA-TM-80709] N80-30980

MAGNETIC SUSPENSION
Noncontacting suspension and propulsion for ground transportation
[PB80-176274] N80-31277

MAGNETIC TAPES
Command procedures for manipulating tape data files: A set of procedures developed for use with the COMNET ALPHA time sharing system
[PB80-177546] N80-31064

MAGNETIC VARIATIONS
Particle confinement and magnetic fluctuations in Tokamak discharges with gas puffing N80-31206

MAGNETOHYDRODYNAMIC GENERATORS
Thermionic energy conversion. Citations from the NTIS data base
[PB80-810906] N80-30953
Magnetohydrodynamic generators in power generation. Citations from the NTIS data base
[PB80-810856] N80-30954
MHD electrode development
[FE-15529-5] N80-31222

MAGNETOHYDRODYNAMIC STABILITY
Simultaneous measurements of magnetotail dynamics by IMP spacecraft
[NASA-TM-81986] N80-30981
The nonlinear dynamics of MHD unstable plasmas
[AD-A086729] N80-31207
Plasma rotation in reversed-field theta pinches
[MSNW-80-1144-1] N80-31217
Ideal magnetohydrodynamic equilibrium of a weakly toroidal plasma with elongated cross section. Part 1: Elliptic cross section
[REPT-79-121-PT-1] N80-31224

MAGNETOHYDRODYNAMIC WAVES
Generation and injection of e.m. waves in space plasma by means of a long orbiting tether
[NASA-CR-161533] N80-30588

MAGNETOHYDRODYNAMICS
Simultaneous measurements of magnetotail dynamics by IMP spacecraft
[NASA-TM-81986] N80-30981
MHD plasma channel response to propagating ion beams
[AD-A087214] N80-31211
Quantum limit magnetoconductivity in the dilute impurity regime N80-31227

MAGNETOSPHERE
Plasma field studies during magnetic disturbances
[AD-A086420] N80-30985

MAGNETRONS
Satellite power system (SPS) magnetron tube assessment study
[NASA-CR-161547] N80-30897

MAINTENANCE
Self-metric software. Volume 1: Summary of technical progress
[AD-A086290] N80-31077
Self-metric software. Volume 2: A handbook. Part 1: Logical ripple effect analysis
[AD-A086291] N80-31078
Self-metric software. Volume 3: A handbook. Part 2: Performance ripple effect analysis
[AD-A086292] N80-31079

MAMMALS
Grizzly bear habitat analysis. Section 3: LANDSAT-1 multispectral imagery and computer analysis of grizzly bear habitat --- Stategoat, Scapegoat and Danaher areas, Montana
[NASA-CR-163382] N80-30867

MAN ENVIRONMENT INTERACTIONS
Carbon Dioxide Effects Research and Assessment PRogram. The role of Temperate Zone Forests in the World Carbon Cycle: Problem Definition and Research Needs
[CONF-7903105] N80-30959

MAN MACHINE SYSTEMS
Human operator interface with FLIR displays
[AD-A086284] N80-31041

MANAGEMENT ANALYSIS
A computer algorithm for generating a basis of the trades on t-designs
[AD-A087251] N80-31082

MANAGEMENT METHODS
Wider use of better computer software technology can improve management control and reduce losts
[PB80-178254] N80-31264

MANAGEMENT SYSTEMS
Monitoring the use of riverways with aerial photography: The development, testing, and evaluation of a computer assisted methodology
[AD-A086471] N80-30877
MANIFOLDS (MATHEMATICS)
Euler manifolds and Stiefel-Whitney homology classes N80-31144
MANNED SPACE FLIGHT
Advanced expander cycle engine for manned orbit transfer vehicles N80-30385
MANNED SPACECRAFT
Artificial satellites, list for 1957 to 1976
[AERONOMICA-ACTA-F-28-1979] N80-30353
MANUFACTURING
Reduction in cost of rocket motor manufacture by use of liner with controllable cure N80-30409
Manufacture of superconducting wire
[DOE/ER-10367/2] N80-30570
Development of standards for superconductors
[PB80-175417] N80-30665
Manufacturing methods and technology program for ruggedized tactical fiber optics cable
[AD-A086706] N80-31198
MAP MATCHING GUIDANCE
An optimal state estimation algorithm for terrain-ranging systems N80-30820
MAPPING
Radar backscatter study of sea ice
[AD-A087032] N80-30618
Forest resource information system, phase 3 --- St. Regis Paper Co.: Picayune, Mississippi
[E80-10242] N80-30825
Mapping urbanized area expansion through digital image processing of LANDSAT and conventional data --- Orlando, Florida; Seattle, Washington; and Boston, Massachusetts
[E80-10301] N80-30868
Remote sensing of wildland resources: A state-of-the-art review
[PB80-184609] N80-30882
A hill-sliding strategy for initialization of Gaussian clusters in the multidimensional space
[NASA-TM-80721] N80-31072
Interpretation of laser/multi-sensor data for short range terrain modeling and hazard detection
[NASA-CR-163492] N80-31294
MARINE BIOLOGY
Remote sensing of the ocean: Physical, chemical, and geologic properties. Citations from the NTIS data base
[PB80-811235] N80-30884
MARINE TECHNOLOGY
On the propagating buckle and its arrest --- offshore pipelines N80-30779
MARKING
Estimation of probabilities of label imperfections and correction of mislabels
[E80-10286] N80-30856
MARKOV CHAINS
Throughput calculations for multiprocessor computer systems N80-31086
Computer error bounds for aggregated Markov chain
[AD-A086193] N80-31132
MARKOV PROCESSES
Algorithms analysis of a Markovian model for a system with batch and interactive jobs
[AD-A086711] N80-31106
MARS (PLANET)
Design of a dynamic test platform for autonomous robot vision systems
[RPI-TR-MP-69] N80-30352
Laser optical appraisal and design of a PRIME/Rover interface
[NASA-CR-163508] N80-31193
MARS LANDING
Oxygen production for interplantary return missions N80-30399
MARSHLANDS
Florida water resources
[E80-10246] N80-30829
Florida water resources, Executive summary
[E80-10247] N80-30830
MARTENSITE
Splat-quenching of zirconium alloys, with special reference to martensite and precipitate reactions
[AD-A086847] N80-30489
MARTENSITIC STAINLESS STEELS
Austenitic grain growth characteristics in rapidly solidified martensitic steels
[AD-A085883] N80-30484
MARTENSITIC TRANSFORMATION
The computer simulation of martensitic transformations in idealized systems N80-30478
MASERS
Influence of wall impedance on the electron cyclotron maser instability
[AD-A086401] N80-30736
Spatial and temporal coherence of a GHz gyromonotron using the TE01 circular mode
[AD-A086997] N80-30740
Resonant interaction between an active molecular medium and a free electron laser
[AD-A087056] N80-30743
MASKS
Artwork analysis tools for VLSI circuits
[AD-A087040] N80-30653
MASONRY
Planar mechanics of fully grouted concrete masonry N80-30562
MASS DISTRIBUTION
Design and performance of an aerosol mass distribution monitor
[PB80-179310] N80-30973
MASS FLOW
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 1: Formulation and analysis
[NASA-CR-161540] N80-30479
MASS SPECTROMETERS
Instrumentation for detecting hazardous materials
[AD-A086467] N80-30462
Study and evaluation of impulse mass spectrometers for ion analysis in the D and E regions of the ionosphere
[NASA-CR-163490] N80-30979
MASS SPECTROSCOPY
Survey analysis of phenolic compounds in industrial effluents by gas chromatography mass spectrometry
[PB80-177793] N80-30969
MASS TRANSFER
Flux-spline method for heat, mass and momentum transfer N80-30671
MASSACHUSETTS
Mapping urbanized area expansion through digital image processing of LANDSAT and conventional data --- Orlando, Florida; Seattle, Washington; and Boston, Massachusetts
[E80-10301] N80-30868
MATERIAL ABSORPTION
Hydrogen absorption in metals: A field ion microscopy study
[DOE/ER-10430] N80-30507
MATERIALS
Technical research activities for 1978 --- chemistry, hydrothermodynamics, information theory, raman spectroscopy, and composite materials and structures N80-30451
MATERIALS HANDLING
National Waste Terminal Storage Program: Containment system concepts for transporting type B quantities of transuranic waste
[RFP-2862] N80-31187
MATERIALS RECOVERY
Feasibility study for industrial cogeneration fuel cell application
[SAN-1889-T1] N80-30934
MATHEMATICAL MODELS
Store separation trajectory analysis
[AD-A086704] N80-30284
A plan for developing and validating a gun system design trade-off methodology
[AD-A087239] N80-30304
Sea king Mk. 50 helicopter flight control system: A mathematical model of the AFCS (ASW) mode
[AD-A086969] N80-30318
Dynamics and control in modal-space of flexible spacecraft N80-30376
Modeling propellant combustion interacting with an eroding solid surface
[UCRL-83727] N80-30433
Studies of continuous chromatographic reactors N80-30457
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 1: Formulation and analysis
[NASA-CR-161540] N80-30479
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 2: Software documentation
[NASA-CR-161541] N80-30480
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 3: Operating manual
[NASA-CR-161542] N80-30481
Fatigue effects in the wear of polymers N80-30516
Devolatilization kinetics and elemental release in the pyrolysis of pulverized coal N80-30533
Interaction between a parallel-plate EMP simulator and a cylindrical test object
[AD-A086815] N80-30597
Modeling of pulses having arbitrary amplitude and frequency modulation
[AD-A086567] N80-30606
Bounds on the utilization of aloha-like multiple-access broadcast channels
[AD-A086655] N80-30607
A predictor model for SHF and EHF MILSATCOM system availabilities in the presence of rain
[AD-A086714] N80-30609
Estimation of confidence limits for testing large logic networks
[AD-A086281] N80-30650
A theoretical study of developing gas-liquid flows in vertical pipes N80-30672
A comparison among various theories for turbulent, reacting, planar mixing layers N80-30676
Marangoni bubble motion in zero gravity N80-30682
Simulation of viscous steady flow past an arbitrary two-dimensional body
[AD-A086799] N80-30694
Finite element modeling for convection-diffusion problems
[AD-A086777] N80-30698
Resonant interaction between an active molecular medium and a free electron laser
[AD-A087056] N80-30743
The SHAFT book: Design charts for torsional properties of noncircular SHAFTS: User's manual
[AD-A086498] N80-30752
Lateral density variations in elastic Earth models from an extended minimum energy approach
[NASA-TM-80742] N80-30787
Nonlocal stress field at Griffith crack
[AD-A086496] N80-30797
Curing stress fields in involute exit cones
[AD-A086404] N80-30803
The development of a stepped frequency microwave radiometer and its application to remote sensing of the Earth N80-30822
Evaluation of uncertainties in selected environmental dispersion needs --- radiation dosage
[CONF-791103-108] N80-30960
Modelling of simulated photochemical smog with kinetic mechanisms. Volume 2 CHEMK: A computer modeling scheme for chemical kinetics
[PB80-181084] N80-30970
The application of measures of synoptic similarity to the evaluation and development of atmospheric prediction models, task 2
[AD-A086034] N80-30998
Differentially weighting linear models of behavior: An empirical comparison of six methods
[AD-A086876] N80-31043
Advanced flight design systems subsystem performance models. Executive summary
[NASA-CR-160768] N80-31044
Advanced flight design systems subsystem performance models. User guide: Environmental analysis routine library
[NASA-CR-160769] N80-31045
Advanced flight design systems subsystem performance models. Sample model: Environmental analysis routine library
[NASA-CR-160770] N80-31046
Discrete/continuous simulation language
[AD-A086487] N80-31074
Studies of stability in applied mathematics
[ISBN-91-7222-268-9] N80-31130
Measures of lack of fit, and transportation of predictors in composite designs
[AD-A086562] N80-31137
Array gain improvement by selective sensor exclusion N80-31154

A zero core-contribution model for photodetachment of atomic and molecular negative ions N80-31160
Advanced three-dimensional thermal modeling of a baseline spent fuel repository
[UCID-18660] N80-31188
Hard X-ray spectrum from a one-fluid laser plasma mode
[NRL-MR-4241] N80-31218
Collisional plasma transport: Two dimensional scalar formulation of the initial boundary value problem and quasi one dimensional models
[REPT-79-120] N80-31223
Quantum limit magnetoconductivity in the dilute impurity regime N80-31227
Interpretation of laser/multi-sensor data for short range terrain modeling and hazard detection
[NASA-CR-163492] N80-31294

MATHEMATICAL PROGRAMMING
Algebraic coding theory N80-31096

MATRICES (MATHEMATICS)
Dynamics and control in modal-space of flexible spacecraft N80-30376
A non-recursive incomplete Cholesky decomposition method for the solution of linear equations with a sparse matrix
[AD-A087005] N80-31117
A singular perturbations approach to reduced-order modeling and decoupling for large scale linear systems
[AD-A087050] N80-31118
On multiple solutions of singularly perturbed systems in the conditionally stable case
[AD-A087049] N80-31119
Computer error bounds for aggregated Markov chain
[AD-A086193] N80-31132
Linear state feedback, quadratic weights, and closed loop eigenstructures
[NASA-CR-163484] N80-31146
Dichotomies for band matrices
[AD-A086373] N80-31148
What is the main diagonal of a biinfinite band matrix?
[AD-A086366] N80-31150
Liquid crystals (nematic liquids)
[RAE-LIB-TRANS-2020] N80-31241

MATRIX METHODS
Application of a root locus technique to multiloop velocity output feedback vibration suppression controllers N80-30784
Dynamic analysis of a rotor blade with lead-lag freedom, flapping freedom, and variable-controlled blade pitch angle
[ISD-258] N80-30950
Matrix methods for determining system poles from transient response
[AD-A087204] N80-31121

MATTER (PHYSICS)
Soft CP violation and the global matter-antimatter symmetry of the universe
[NASA-TM-80730] N80-31290

MAXIMUM LIKELIHOOD ESTIMATES
Statistical analysis of the fatigue of composite materials N80-30439
A maximum likelihood estimator for the extent of radar or sonar targets using high resolution signals
[REPT-3/79] N80-30628

MAXWELL EQUATION
Influence of wall impedance on the electron cyclotron maser instability
[AD-A086401] N80-30736

MEASURE AND INTEGRATION
Occurrences in a branching process --- point process analysis of population growth N80-31129

MECHANICAL PROPERTIES
Evaluation and prediction of long term space environmental effects on non-metallic materials
[NASA-CR-161545] N80-30436
Comparison of quasi-isotropic fiber reinforced composite laminates --- candidate materials for flywheels
[UCRL-15225] N80-30450
Microcracking and engineering properties of high-strength concrete N80-30563
The effects of titanium on submerged-arc weld metal N80-30748

MECHANICAL SHOCK
The Shock and Vibration Digest, volume 12, no. 5
[AD-A085328] N80-30771
Shock in solids: Army materials research and applications N80-30772
Study of the anisotropic potential of KCl and CsCl in a rotation inelastic collision with rare gases. Part A: Study of the quadrupole moment of molecules from rotation inelastic scattering cross sections of CsF
[MPIS-19/1979-PT-A] N80-31261

MEDICAL SCIENCE
Ultrasonics in medicine. Citations from the NTIS data base
[PB80-810922] N80-31037

MEDITERRANEAN SEA
Study of geological structure of Sicily and other Italian areas --- Gulf of Orosei, Eastern Sardinia
[E80-10299] N80-30866

MEMBRANES
Characterization of macromolecular films adsorbed in track-etched membranes N80-30515

MERCURY (METAL)
Measurement of the energy dependence of the integral scattering cross section for electronic stimulation in shocks of alkali with mercury, with spectral analysis of light
[MPIS-17/1979] N80-31260

MERCURY COMPOUNDS
Structural and electronic properties of a linear chain mercury compound N80-31239

MERGING ROUTINES
Advanced flight design systems subsystem performance models. User guide: Environmental analysis routine library
[NASA-CR-160769] N80-31045

MESSAGE PROCESSING
Synthesis of MCJ codes
[AD-A086778] N80-30594
Objective quality control of artillery computer meteorological messages
[AD-A086554] N80-31001

MESSAGES
Decentralized algorithms for optimization of single commodity flows
[AD-A086736] N80-31143

METAL AIR BATTERIES
Control system considerations for an aluminum-air battery powered electric vehicle
[UCRL-15241] N80-30939

METAL BONDING
Chem-braze abradable seal attachment
[AD-A086872] N80-30525

METAL COATINGS
The spectral characteristics of metal film beam splitters
[AD-A086419] N80-31196

METAL CRYSTALS
Austenitic grain growth characteristics in rapidly solidified martensitic steels
[AD-A085883] N80-30484

METAL FILMS
Flammability testing of solids under the Federal Hazardous Substances Act
[PB80-179047] N80-30469
Molybdenum disulphide lubrication. A continuation survey: 1979 to 1980
[STC-79/419] N80-30762
Raman scattering by a molecule adsorbed at the surface of a thin metallic film N80-31235

METAL HYDRIDES
Electronic band structure and optical properties of the cubic Sc, Y and La hydride systems N80-31236
Electronic structure studies of metal hydrides
[ISM-265] N80-31256
Optical and photoemission studies of lanthanum hydrides
[ISM-264] N80-31257

METAL MATRIX COMPOSITES
Structure and deformation characteristics of rheocast metals
[AD-A086469] N80-30442
A fundamental study of a new fabrication technique for fiber reinforced aluminum matrix composites
[AD-A086282] N80-30443

METAL OXIDE SEMICONDUCTORS
Inelastic electron tunneling spectroscopy intensities as a function of surface coverage: Experimental determination, physical model, and application --- metal-oxide-metal tunnel junctions N80-31228
Study and characterization of semiconductor surfaces and interfaces N80-31231

METAL PARTICLES
Effect of alloy deformation on the average spacing parameters of non-deforming particles
[COO-3084-75] N80-30509

METAL PLATES
Viscosity of metals in explosive welding
[UCRL-TRANS-11542] N80-30504

METAL POWDER
Flammability testing of solids under the Federal Hazardous Substances Act
[PB80-179047] N80-30469
New processing for DEB powder for thermal batteries
[GEPP-OP-486] N80-30932

METAL SURFACES
Surface physics and chemistry of electrical contact phenomena
[AD-A086733] N80-30460
Experimental determination of the temperature dependence of metallic work functions at low temperatures
[DOE/ER-02314] N80-30501
Growth and application of cadmium telluride
[AD-A086991] N80-31250

METAL VAPOR LASERS
Analysis of the copper vapor laser and development of a general laser plasma model N80-30725

METAL-METAL BONDING
Fatigue and fracture of ultrahigh strength steel and titanium roll bonded and diffusion bonded laminates
[AD-A086511] N80-30796

METALLIZING
Evaluation of ultrasonic cleaning systems
[GEPP-OP-501] N80-31158

METALLOGRAPHY
Metallographic preparation of titanium diboride coatings
[SAND-80-0596] N80-30503

METALS
Hydrogen absorption in metals: A field ion microscopy study
[DOE/ER-10430] N80-30507

METASTABLE STATE
Monitoring metastable phases and grain structures derived from glassy alloys
[AD-A085882] N80-30483

METEORITES
Radio-echo sounding in the Allan Hills, Antarctica, in support of the meteorite field program
[AD-A086858] N80-30879

METEORITIC COMPOSITION
Microcharacterization of interplanetary dust collected in the Earth's stratosphere N80-30976
Silver isotopic anomalies in iron meteorites: Cosmic-ray production and other possible sources
[LA-UR-80-1199] N80-31296

METEOROLOGICAL PARAMETERS
Environmental data for sites in the National Solar Data Network
[SOLAR/0010-80/04] N80-30845
Objective quality control of artillery computer meteorological messages
[AD-A086554] N80-31001
The 6th GARP Planning Meeting for the Monsoon Experiment (MONEX)
[GARP-SPEC-34] N80-31011
The 7th WMO Executive Committe Inter-Government Panel Session on the First GARP Global Experiment
[GARP-SPEC-35] N80-31012

METEOROLOGICAL RADAR
Preliminary results of radar environmental mapping
[AD-A086788] N80-30596
Project PHOENIX. The September 1978 field operation
[PB80-180433] N80-31022

METEOROLOGICAL SATELLITES
Biramis payload study. Determination of the radiation balance of the Earth with the space-borne microaccelerometer. Volume 2: Characterization and selection of spacecraft coatings
[CERT-VOL-2] N80-30365
Precipitation estimations from satellite measurements of heat radiation at 19.35 and 37 GHz
[MITT-26] N80-31008

METEOROLOGICAL SERVICES
National Severe Local Storms Operations Plan
[PB80-187362] N80-31021

METEOROLOGY
Selective guide to climatic data sources
[PB80-187354] N80-31018
METHANE
Dry anaerobic fermentation to methane of organic residues N80-30532
Second phase of a coalbed methane extraction and utilization program
[AESD-TM-3026] N80-30556
US Department of Energy's methane from landfills program
[CONF-7910126-1] N80-30558
METHOXY SYSTEMS
Molecular reorientations in liquid crystals. The 13 C -/1H/ nuclear Overhauser effects in liquid MBBA
[ISS-P-79/4] N80-31259
MICROANALYSIS
Perfecting of nuclear microanalysis of deuterium by means of ion implantation. Application to the study of the hydrogeneration of amorphous silicon through ionic implantation N80-30468
A STEM analysis of two rapidly solidified stainless steels
[AD-A085887] N80-30485
An ion beam milliprobe for materials analysis
[AD-A085109] N80-30487
MICROCOMPUTERS
An algorithm for position determination using Loran-C triplets with a basic program for the Commodore 2001 microcomputer
[AD-A086790] N80-30291
Solar site test module
[NASA-TM-78291] N80-30899
Radian DART microcomputer system hardware documentation operation system description. DART 2 documentation, volume 3
[COO-4596-1-VOL-3] N80-31061
MICROCRACKS
Microcracking and engineering properties of high-strength concrete N80-30563
MICROELECTRONICS
Surface plasmons confined by microstructures N80-31237
MICROHARDNESS
Studies of microscopic aspects of wear processes in metals
[AD-A086760] N80-30493
Pulse plating of nickel deposits
[BDX-613-2378] N80-30502
MICROINSTRUMENTATION
Surface plasmons confined by microstructures N80-31237
MICROPROCESSORS
A propulsion and steering control system for the Mars rover
[NASA-CR-163501] N80-30751
MICROSCOPY
Microstructural aspects of impact of erosion in LiF, NaCl, Kcl and CaF2 single crystals N80-31232
MICROSTRIP TRANSMISSION LINES
Study and development of printed circuit elements for synthetic aperture radar array antennas
[ESA-CR(P)-1303] N80-30661
MICROSTRUCTURE
Monitoring metastable phases and grain structures derived from glassy alloys
[AD-A085882] N80-30483
Deformation of an alloy with a lamellar microstructure: Experimental
[AD-A087100] N80-30500
The effects of titanium on submerged-arc weld metal N80-30748
Microstructural aspects of impact of erosion in LiF, NaCl, Kcl and CaF2 single crystals N80-31232
Structural and electronic properties of a linear chain mercury compound N80-31239
MICROWAVE AMPLIFIERS
Simulation models for microwave power transistors under large signal operating conditions. Part 1: Theoretical and experimental results
[ESA-CR(P)-1336-PT-1] N80-30634
Satellite power system (SPS) magnetron tube assessment study
[NASA-CR-161547] N80-30897
MICROWAVE ATTENUATION
Techniques of plasma production and heat. 32: Plan for the plasma microwave-heating system at the T-10M facility
[UCRL-TRANS-11563] N80-31216
MICROWAVE EQUIPMENT
Optically Coupled Microwave Switch
[SAND-80-0029C] N80-30658
Remote sensing of the ocean: Dynamics. Citations from the NTIS data base
[PB80-811243] N80-30885
MICROWAVE OSCILLATORS
Surface acoustic wave microwave oscillator and frequency synthesizer
[AD-A086336] N80-30649
MICROWAVE RADIOMETERS
Variations in the Nimbus-7 scanning multichannel microwave radiometer cold reference antenna signals and temperatures during two orbital periods
[NASA-TM-81984] N80-30355
Survey of potential radio frequency interference sources
[AD-A086785] N80-30593
Project PHOENIX. The September 1978 field operation
[PB80-180433] N80-31022
MICROWAVE SWITCHING
Optically Coupled Microwave Switch
[SAND-80-0029C] N80-30658
MICROWAVE TRANSMISSION
Microwave communication. Citations from the NTIS data base
[PB80-810831] N80-30639
Satellite Power Systems (SPS) concept definition study. Volume 7: System/Subsystem requirements data book
[NASA-CR-3324] N80-30900
Satellite power systems (SPS) concept definition study. Volume 1: Executive summary
[NASA-CR-3317] N80-30901
MICROWAVES
Cerenkov radiation in dielectric-loaded waveguides N80-30581
MIDDLE EAR
Cochlear microphonic evidence for mechanical propagation of distortion products (f2-f1) and (2f1-f2) N80-31153
MILITARY OPERATIONS
Mitigation of noise impact via operational changes
[CERL-TR-N-76] N80-31156
MILITARY VEHICLES
Center of gravity
[AD-A086961] N80-30568
MILLIMETER WAVES
Superconductive devices for millimeter wave detection mixing and amplification
[AD-A086443] N80-30646
MINERAL EXPLORATION
Aerial gamma ray and magnetic survey: Raton Basin project. The Raton and Santa Fe quadrangles of New Mexico
[GJBX-9(80)-VOL-2] N80-30881
MINERALS
Industrial wastes: An unexplored source of valuable minerals
[PB80-180250] N80-31279
MINNESOTA
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
An exploratory study to develop a cluster-based area estimation procedure --- Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863
MINUTEMAN ICBM
Qualification of Minuteman stage 3 motor for spin stabilized perigee stages N80-30403
MIRAGE 3 AIRCRAFT
Calibration of mirage main undercarriage to determine wheel loads from measured strains
[AD-A086721] N80-30300
MISALIGNMENT
CW and pulsed beam propagation in focusing media with random-axis misalignments N80-30584
MISSILE CONTROL
Bank-to-turn control technology survey for homing missiles
[NASA-CR-3325] N80-30274
High torque-to-inertial servo system for stabilizing sensor systems. Candidate systems include missile guidance, surveillance, and tracking
[AD-A086705] N80-30357
MISSILE TRAJECTORIES
Effect of near-zero spin on instability of controlled projectiles in ascending or descending flight
[AD-A086775] N80-30278
Simulant reaction temperature measurement via telemetry for the XM736 at charge 9
[AD-A086774] N80-30374
MISSILES
Liquid airbreathing missile fuels: An overview of properties and applications N80-30419
MISSION PLANNING
GIOTTO: Comet Halley flyby. Report on the phase A study
[ESA-SCI(80)-4] N80-30346
Study of technical feasibility and costing of Biorack. Volume 1: Technical report
[ESA-CR(P)-1332-VOL-1] N80-30351
Study on use of ISEE-B platform as a probe for ESA/NASA cometary mission. Volume 1: Technical results
[ESA-CR(P)-1316-VOL-1] N80-30362
Mission planning and analysis division development plan for STS-2 through STS-4
[NASA-TM-81133] N80-30371
NASA program plan N80-31269
Hipparcos. Spacecraft design and development
[ESA-PF-616] N80-31287
MISSISSIPPI
Forest resource information system, phase 3 --- St. Regis Paper Co.: Picayune, Mississippi
[E80-10242] N80-30825
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
MISSISSIPPI RIVER (US)
Monitoring the use of riverways with aerial photography: The development, testing, and evaluation of a computer assisted methodology
[AD-A086471] N80-30877
MISSOURI
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
Earthquake risk and damage functions: An integrated preparedness and planning model applied to New Madrid
[PB80-170368] N80-30994
MIXING LENGTH FLOW THEORY
A comparison among various theories for turbulent, reacting, planar mixing layers N80-30676
MIXTURES
How to homogenize a nonlinear diffusion equation E.G. Stefans problem
[AD-A086379] N80-31110
MOISTURE CONTENT
Thermodynamic relations between selected parameters describing unsaturated flow
[DOE/DP-01253/18] N80-30704
Solar photovoltaic module degradation from electro-migration
[COO-4094-64] N80-30910
MOLECULAR BEAM EPITAXY
Submicron FETS using molecular beam epitaxy
[AD-A086422] N80-31244
MOLECULAR BEAMS
Submicron FETS using molecular beam epitaxy
[AD-A086422] N80-31244
MOLECULAR CHAINS
Structural and electronic properties of a linear chain mercury compound N80-31239
MOLECULAR COLLISIONS
Theoretical studies of molecular collision processes. 1: Two-potential approach for electron-molecular scattering. 2: Three-dimensional quantum mechanical study on atom-molecule reactive collision with rotationally pre-excited target molecule N80-31163

MOLECULAR DIFFUSION
A search for the persistent velocity autocorrelation in hydrogen by dense plasma decay N80-31205
MOLECULAR ENERGY LEVELS
Resonant interaction between an active molecular medium and a free electron laser
[AD-A087056] N80-30743
MOLECULAR FLOW
Direct simulation Monte Carlo method applied to shuttle flow field analysis N80-30427
MOLECULAR INTERACTIONS
New nonlinear optical processes in molecules at infrared frequencies
[AD-A086206] N80-30459
Raman scattering by a molecule adsorbed at the surface of a thin metallic film N80-31235
MOLECULAR IONS
A zero core-contribution model for photodetachment of atomic and molecular negative ions N80-31160
MOLECULAR OSCILLATIONS
New nonlinear optical processes in molecules at infrared frequencies
[AD-A086206] N80-30459
MOLECULAR RELAXATION
Reactions and relaxation of vibrationally excited hydrogen
[AD-A086976] N80-31168
MOLECULAR SPECTROSCOPY
High-temperature, high-resolution measurements of CO2 in the region of 2200 to 2400 CM-1
[AD-A087234] N80-31169
MOLECULAR STRUCTURE
Effect of structure on physical properties of polymers
[AD-A086199] N80-30518
Model compound studies of rigid rod aromatic heterocyclic polymer systems. Part 1: The crystal and molecular structures of 2,6-diphenylbenzi (1,2-D:4,5-D') bisthiazole and 2,6-diphenylbenzo (1,2-D:5,4-D') bisoxazole
[AD-A086804] N80-30520
Molecular reorientations in liquid crystals. The 13 C -/1H/ nuclear Overhauser effects in liquid MBBA
[ISS-P-79/4] N80-31259
MOLECULES
Atomic and molecular processes
[AD-A086764] N80-31164
MOLTEN SALTS
Molten salt coal gasification process development unit
[SAN-1429-52] N80-30554
MOLYBDENUM
The influence of coherency strains on the elevated temperature mechanical behavior of Ni-15r-Al-Ti-Mo alloys N80-30474
The molybdenum-molybdenum triple bond. 7.1 bis (1,3-Di-p-tolytriazenido) tetrakis (dimethylamido) dimolybdenum
[AD-A086239] N80-30486
Adlayer effects on the surface reactivity of W(100) and Mo(100) single crystals N80-31234
MOLYBDENUM ALLOYS
Fatigue of Ni-Al-Mo aligned eutectics N80-30473
MOLYBDENUM SULFIDES
Further fabrication studies of dry lubricated slip ring brush materials for satellite applications
[AERE-G-1480] N80-30864
Molybdenum disulphide lubrication. A continuation survey: 1979 to 1980
[STC-79/418] N80-30762
MOMENTS OF INERTIA
Phenomena at very high spins
[LBL-10645] N80-31184
MOMENTUM TRANSFER
The shear viscosity for the soft sphere liquid via discrete cell hydrodynamics N80-30669
Flux-spline method for heat, mass and momentum transfer N80-30671
MONITORS
Design and performance of an aerosol mass distribution monitor
[PB80-179310] N80-30973
MONOTONE FUNCTIONS
Viable and monotone trajectories of differential inclusions
[AD-A086382] N80-31109
MONSOONS
The 6th GARP Planning Meeting for the Monsoon Experiment (MONEX)
[GARP-SPEC-34] N80-31011
MONTANA
As-built design specification for phase 3 model areas added to the monthly data base of the US — Montana, South Dakota, Oklahoma, Nebraska, and Colorado
[E80-10263] N80-30846
Grizzly bear habitat analysis. Section 3: LANDSAT-1 multispectral imagery and computer analysis of grizzly bear habitat — Stalegoat, Scapegoat and Danaher areas, Montana
[NASA-CR-163382] N80-30887
MONTE CARLO METHOD
A Monte Carlo simulation of solar induced fluorescent scattering in optically thick high altitude plumes N80-30426
Direct simulation Monte Carlo method applied to shuttle flow field analysis N80-30427
MOORING
Mooring dynamics: Computer models and experiments at a sixty foot scale
[AD-A086854] N80-30565
MOROCCO
Application Explorer Mission-A heat capacity mapping mission — Bavaria, Germany and Marrakech, Morocco
[E80-10309] N80-30875
MOTION
Marangoni bubble motion in zero gravity N80-30682
MOTOR VEHICLES
Flywheel energy management systems for improving the fuel economy of motor vehicles
[PB80-175300] N80-31279
MULTICHANNEL COMMUNICATION
Survey of potential radio frequency interference sources
[AD-A086785] N80-30593
Bounds on the utilization of aloha-like multiple-access broadcast channels
[AD-A086655] N80-30607
MULTIPLE ACCESS
Distribution of packet delay and interdeparture time in carrier sense multiple access
[AD-A086446] N80-30589
A conflict resolution algorithm for noisy multiaccess channels
[AD-A086767] N80-30609
Collision-resolution algorithms and random-access communications
[AD-A086695] N80-30613
MULTIPLEXING
Studies on the reduction of intermodulation generation in communications systems
[AD-A086995] N80-30622
Microwave communication. Citations from the NTIS data base
[PB80-810831] N80-30639
MULTIPLICATION
Two's-complement fixed-point multiplication errors, theory
[AD-A086826] N80-31115
MULTIPROCESSING (COMPUTERS)
Throughput calculations for multiprocessor computer systems N80-31086
MULTISTATIC RADAR
Analytical study of the bistatic radar cross-section of a prolate spheroid
[AD-A086846] N80-30610
MULTIVARIATE STATISTICAL ANALYSIS
Some topics in reliability theory N80-30764
An investigation of satellite-radar correlation functions N80-30996
A hill-sliding strategy for initialization of Gaussian clusters in the multidimensional space
[NASA-TM-80721] N80-31072
Classification techniques for multivariate data analysis
[AD-A086521] N80-31114
Failure time distributions: Estimates and asymptotic results
[AD-A086828] N80-31133
MX MISSILE
Missile-X overview N80-30404
MX stage 1 N80-30405

N

NASA PROGRAMS
NASA authorization for fiscal year 1981. Part 4: Index
[GPO-65-791] N80-31288
NASA program plan N80-31289
NATIONAL SEVERE STORMS PROJECT
National Severe Local Storms Operations Plan
[PB80-187362] N80-31021
NATURAL LANGUAGE (COMPUTERS)
Affect units and narrative summarization
[AD-A086735] N80-31089
NAVIER-STOKES EQUATION
Finite element simulations of thermally induced convection in an enclosed cavity
[UCID-18602] N80-30702
NAVIGATION
Tactical night terrain flight navigation
[AD-A086458] N80-30289
Formulas for positioning at sea by circular, hyperbolic, and astronomic methods
[PB80-184757] N80-30295
An optimal state estimation algorithm for terrain-ranging systems N80-30820
NAVIGATION AIDS
Helicopter electro-optical system display requirements. 2: Performance of helicopter pilots when using a low-light-level television system during simulated nap-of-the-earth flight
[AD-A086855] N80-30308
Phased arrays. Citations from the NTIS data base
[PB80-808041] N80-30837
NEBRASKA
As-built design specification for phase 3 model areas added to the monthly data base of the US — Montana, South Dakota, Oklahoma, Nebraska, and Colorado
[E80-10263] N80-30846
Draft user procedures: Software wheat yield predictions/foreign equivalent test — Kansas, Oklahoma, and Nebraska
[E80-10287] N80-30855
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations — Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
An exploratory study to develop a cluster-based area estimation procedure — Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30880
NEGATIVE IONS
A zero core-contribution model for photodetachment of atomic and molecular negative ions N80-31160
NERVES
Introduction to electrochemistry of nerve membranes
[PB80-178908] N80-31036
NERVOUS SYSTEM
Introduction to electrochemistry of nerve membranes
[PB80-178908] N80-31036
NETWORK ANALYSIS
Development of a thermal model library: Application to dynamic simulation of thermal control for Spacelab fluid loops
[ESA-CR(P)-1302] N80-30709
Multiple objectives and the path determination problem
[AD-A086744] N80-31142
NEUTRON SCATTERING
Search for magnetic dipole strength and giant spin-flip resonances in heavy nuclei
[CONF-800540-1] N80-31181
NEW MEXICO
Aerial gamma ray and magnetic survey: Raton Basin project. The Raton and Santa Fe quadrangles of New Mexico
[GJBX-5(80)-VOL.2] N80-30881
NICKEL
Growth of grain boundary cavities under applied stress and internal pressure
[COO-2172-28] N80-31247
NICKEL ALLOYS
Fatigue of Ni-Al-Mo aligned eutectics N80-30473

The influence of coherency strains on the elevated temperature mechanical behavior of Ni-15r-Al-Ti-Mo alloys N80-30474

Hydrogen-related phenomena in a nickel-base alloy N80-30475

Evaluation of the cyclic behavior of aircraft turbine disk alloys, part 2
[NASA-CR-165123] N80-30482

Plastic flow and fracture processes in powder metallurgical nickel-base superalloys
[AD-A086697] N80-30490

Weldability of thermally grain-refined Fe12Ni-0.25Ti for cryogenic structural applications
[LBL-10259] N80-30506

Nickel-iron alloy corrosion in a sealed pyrotechnic system
[MLM-2707(OP)] N80-30511

On the thermomechanical response of 3.5 Ni-Mo-V alloy steel and type 304 stainless steel undergoing cyclic uniaxial inelastic deformation N80-30776

NICKEL PLATE

Pulse plating of nickel deposits
[BDX-613-2378] N80-30502

NIGHT FLIGHTS (AIRCRAFT)

Tactical night terrain flight navigation
[AD-A086458] N80-30288

NIMBUS PROJECT

Variations in the Nimbus-7 scanning multichannel microwave radiometer cold reference antenna signals and temperatures during two orbital periods
[NASA-TM-81984] N80-30355

NIOBIUM

Superconductivity in Th-Nb composites
N80-30643

NITROGEN

Formation and control of fuel-nitrogen pollutants in catalytic combustion of coal-derived gases
[FE-2762-7] N80-30466

NITROGEN LASERS

Short pulse UV-visible waveguide laser
[AD-A086856] N80-30738

NITROGEN OXIDES

Pilot scale combustion evaluation of waste and alternate fuels, phase 3
[PB80-177413] N80-30952

Photochemical study of NOx removal from stack gases
[PB80-181274] N80-30966

Remote monitoring of gaseous pollutants by differential absorption laser techniques
[PB80-179351] N80-30968

NOESS

Environmental satellite imagery, June 1979
[PB80-181852] N80-31015

NOISE (SOUND)

Submicron FETS using molecular beam epitaxy
[AD-A086422] N80-31244

NOISE MEASUREMENT

Introduction to the study of noise in charged coupled devices
[CNES-NT-80] N80-30631

Evaluation of ultrasonic cleaning systems
[GEPP-OP-501] N80-31158

NOISE POLLUTION

The blast noise prediction program: User reference manual
[CERL-IR-N-75] N80-31155

Mitigation of noise impact via operational changes
[CERL-TR-N-78] N80-31156

NOISE PREDICTION (AIRCRAFT)

The blast noise prediction program: User reference manual
[CERL-IR-N-75] N80-31155

NOISE REDUCTION

Studies on the reduction of intermodulation generation in communications systems
[AD-A086995] N80-30622

Mitigation of noise impact via operational changes
[CERL-TR-N-78] N80-31156

NONADIABATIC CONDITIONS

Non-adiabatic mass parameters
[LA-UR-80-1020] N80-31263

NONAQUEOUS ELECTROLYTES

Metal-electrolyte boundary studies with in situ photoemission
[ISM-257] N80-31258

NONDESTRUCTIVE TESTS

An ion beam microprobe for materials analysis
[AD-A086109] N80-30487

An investigation of mechanisms effecting environmental stress cracking in titanium alloy
[AD-A086979] N80-30499

Measuring the rate of corrosion of reinforcing steel in concrete --- nondestructive measuring of bridge deck deterioration
[PB80-170848] N80-30513

Wave propagation in honeycomb and foam-core panels for application to panel NDE
[AD-A086667] N80-30604

Computer aided automated hybrid substrate probe testing development
[AD-A087124] N80-30768

Quick reaction evaluation of materials for systems applications
[AD-A085859] N80-30789

Evaluation of a new fracture toughness measuring technique, and adaptation of the technique to use ultra-small specimens
[AD-A085892] N80-30791

TWCP electron beam testing program: Volume 2: Preliminary characterization of the Blackjack 3 pulsed electron beam for material response studies
[AD-A086306] N80-31179

TWCP electron beam testing program: Volume 3: Material response instrumentation for the Blackjack 3 electron beam facility
[AD-A086307] N80-31180

NONFLAMMABLE MATERIALS

Flame testing of two samples of exposure suit material
[AD-A086739] N80-31047

NONLINEAR EQUATIONS

Linear-nonlinear interface for finite element transient impact damage analysis N80-30777

Nonlinear behavior of guyed towers N80-30782

Generalized equations and their solutions. Part 2: Applications to nonlinear programming
[AD-A086365] N80-31075

How to homogenize a nonlinear diffusion equation E.G. Stefans problem
[AD-A086379] N80-31110

Asymptotic properties of solutions of nonlinear abstract Volterra equations
[AD-A086387] N80-31113

On multiple solutions of singularly perturbed systems in the conditionally stable case
[AD-A087049] N80-31119

High order time setting methods for nonlinear evaluation equations
[BNL-27011] N80-31123

NONLINEAR FEEDBACK

Foundations of feedback theory for nonlinear dynamical systems
[AD-A086578] N80-31091

NONLINEAR OPTICS

New nonlinear optical processes in molecules at infrared frequencies
[AD-A086206] N80-30459

Nonlinear optics in guided structures. Application to frequency doubling
[LCR-78-05/R/G5] N80-31202

NONLINEAR PROGRAMMING

A decomposition procedure for large scale optimal plastic design problems
[AD-A086560] N80-30798

Generalized equations and their solutions. Part 2: Applications to nonlinear programming
[AD-A086365] N80-31075

NONLINEAR SYSTEMS

Analysis of T-2C high angle of attack flight test data with nonlinear system identification methodology
[AD-A086327] N80-30298

Simple and complex models for nonlinear seismic response of reinforced concrete structures
[PB80-182413] N80-30576

A review of nonlinear fracture relative to fatigue
[AD-A086671] N80-30795

An integral bound on the strain energy for the traction problem in nonlinear elasticity with small strains
[AD-A086377] N80-30802

Foundations of feedback theory for nonlinear dynamical systems
[AD-A086578] N80-31091

On the number of periodic trajectories for a Hamiltonian flow and a convex energy surface
[AD-A086367] N80-31102

The nonlinear dynamics of MHD unstable plasmas
[AD-A086729] N80-31207

NONLINEARITY

Optically pumped far infrared molecular lasers
[AD-A086495] N80-30726

Lumped nonlinear system analysis with Volterra series
[AD-A086428] N80-31107

Regularizing effects of homogeneous evolution equations
[AD-A086561] N80-31108

Fully nonlinear second order elliptic equations with large zeroth order coefficient
[AD-A086383] N80-31111

Asymptotic behavior of positive solutions of nonlinear Volterra equations for heat flow
[AD-A086385] N80-31112

Studies of nonlinear phenomena in plasmas
[AD-A086456] N80-31210

NONNEWTONIAN FLUIDS

Non-Newtonian migration of a deformable drop in shearing flows N80-30680

NORMAL DENSITY FUNCTIONS

A hill-sliding strategy for initialization of Gaussian clusters in the multidimensional space
[NASA-TM-80721] N80-31072

A study of the properties of a new goodness-of-fit test
[AD-A086563] N80-31134

NORMALIZING (STATISTICS)

Cumulative processes: Linear combinations of order statistics and percentiles
[AD-A086372] N80-31136

NORTH CAROLINA

AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860

NORTH DAKOTA

AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860

An exploratory study to develop a cluster-based area estimation procedure --- Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863

NOSE WHEELS

Evaluation of the impact of towing the L-1011 airplane at Boston-Logan Airport
[AD-A086977] N80-30303

NOZZLE EFFICIENCY

Two-Phase nozzle theory and parametric analysis
[AD-A086795] N80-30696

NOZZLE FLOW

A nozzle boundary layer model including the subsonic sublayer usable for determining boundary layer effects on plume flowfields N80-30428

NUCLEAR ELECTRIC POWER GENERATION

Climate and energy: A comparative assessment of the Satellite Power System (SPS) and alternative energy technologies
[DOE/ER-0050] N80-30914

Comparative analysis of net energy balance for Satellite Power Systems (SPS) and other energy systems
[DOE/ER-0056] N80-30916

NUCLEAR FISSION

Non-adiabatic mass parameters
[LA-UR-80-1020] N80-31263

NUCLEAR FUELS

Magnetohydrodynamic generators in power generation. Citations from the NTIS data base
[PB80-810856] N80-30954

NUCLEAR FUSION

HLYWD: A program for post-processing data files to generate selected plots or time lapse graphics
[ORNL/CSD/TM-109] N80-31083

Intense pulsed ion beams for fusion applications
[SAND-80-0402] N80-31185

Assessment of the US Mirror Fusion program. Report of the 1980 Mirror Senior Review Panel
[DOE/ER-0057] N80-31214

NUCLEAR ISOBARS
Isobar production in heavy ion collisions N80-31161
NUCLEAR PHYSICS
European Scientific Notes. Volume 34, No. 6
[AD-A086806] N80-31304
NUCLEAR POWER PLANTS
European Scientific Notes. Volume 34, No. 6
[AD-A086806] N80-31304
NUCLEAR REACTORS
Piping inelastic fracture mechanics analysis --- nuclear reactors
[AD-A087002] N80-30810
Assessment of the US Mirror Fusion program. Report of the 1980 Mirror Senior Review Panel
[DOE/ER-0057] N80-31214
NUCLEAR SPIN
Phenomena at very high spins
[LBL-10645] N80-31184
NULL HYPOTHESIS
Bounds on mixtures of distributions arising in order restricted inference
[AD-A087117] N80-31139
NUMERICAL ANALYSIS
Viscosity of metals in explosive welding
[UCRL-TRANS-11542] N80-30504
Wave propagation in honeycomb and foam-core panels for application to panel NDE
[AD-A086667] N80-30604
Interacting inviscid and laminar viscous flow, and some aspects of their stability N80-30679
Numerical analysis of natural convection in two-dimensional square and circular containers in low gravity
[NASA-CR-163487] N80-30686
Simulation of viscous steady flow past an arbitrary two-dimensional body
[AD-A086799] N80-30694
Numerical operational methods in structural dynamics N80-30783
The surface singularity of cracks
[AD-A086491] N80-30799
Numerical studies in computer aided design. Part 2: Studies in high speed
[AD-A087060] N80-31060
A dual Algorithm to solve linear least absolute value approximations
[AD-A087078] N80-31080
Relationships among the slopes of lines derived from various data analysis techniques and the associated correlation coefficient
[NASA-TM-80733] N80-31097
High order time setting methods for nonlinear evaluation equations
[BNL-27011] N80-31123
NUMERICAL CONTROL
A digital temperature control and measurement system
[AD-A086805] N80-31052
NUMERICAL STABILITY
Studies of stability in applied mathematics
[ISBN-91-7222-268-9] N80-31130
NUMERICAL WEATHER FORECASTING
Shortrange forecasting through extrapolation of satellite imagery patterns. Part 2:. Testing motion vector techniques
[AD-A086862] N80-31003
NUTATION
Study of OTS 2: Inflight behavior nutation interaction with momentum wheel
[REPT-30/1357] N80-30364
NYLON (TRADEMARK)
The dynamic behavior of nylon and polyester line
[AD-A087106] N80-30529

O

OCEAN CURRENTS
Heat capacity mapping mission project HCM-051 --- East Australian Current and the Tasman Front
[E80-10278] N80-30850
Remote sensing of the ocean: Dynamics. Citations from the NTIS data base
[PB80-811243] N80-30885
Report of the 6th Ocean Thermal Energy Conversion Conference. Ocean Thermal Energy for the 1980's
[CONF-790631-1] N80-30922
Models of the equatorial ocean circulation N80-31024
Long-term measurement of abyssal currents in the North Pacific
[DOE/EV-71030/1] N80-31025
South Atlantic OCS physical oceanography, volume 2 --- monitoring ocean currents and sea states to assess effects of oil and gas activities on the environment
[PB80-181555] N80-31026
South Atlantic OCS physical oceanography, volume 3 --- monitoring ocean currents and sea states to assess the environment effects of oil and gas activities
[PB80-181563] N80-31027
OCEAN MODELS
Models of the equatorial ocean circulation N80-31024
OCEANOGRAPHIC PARAMETERS
The 7th WMO Executive Committe Inter-Government Panel Session on the First GARP Global Experiment
[GARP-SPEC-35] N80-31012
OCEANOGRAPHY
The development of a stepped frequency microwave radiometer and its application to remote sensing of the Earth N80-30822
Remote sensing of the ocean: Physical, chemical, and geologic properties. Citations from the NTIS data base
[PB80-811235] N80-30884
Report of the 6th Ocean Thermal Energy Conversion Conference. Ocean Thermal Energy for the 1980's
[CONF-790631-1] N80-30922
European Scientific Notes. Volume 34, No. 6
[AD-A086806] N80-31304
OFFSHORE PLATFORMS
Solar power satellite offshore rectenna study
[NASA-CR-161543] N80-30891
Design study and economic assessment of multi-unit offshore wind energy conversion systems application. Volume 1: Executive summary
[WASH-2330-78/4-VOL-1] N80-30930
South Atlantic OCS physical oceanography, volume 2 --- monitoring ocean currents and sea states to assess effects of oil and gas activities on the environment
[PB80-181555] N80-31026
South Atlantic OCS physical oceanography, volume 3 --- monitoring ocean currents and sea states to assess the environment effects of oil and gas activities
[PB80-181563] N80-31027
OHIO
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
OIL EXPLORATION
South Atlantic OCS physical oceanography, volume 2 --- monitoring ocean currents and sea states to assess effects of oil and gas activities on the environment
[PB80-181555] N80-31026
South Atlantic OCS physical oceanography, volume 3 --- monitoring ocean currents and sea states to assess the environment effects of oil and gas activities
[PB80-181563] N80-31027
OILS
Molybdenum disulphide lubrication. A continuation survey: 1979 to 1980
[STC-79/419] N80-30762
OKLAHOMA
As-built design specification for phase 3 model areas added to the monthly data base of the US --- Montana, South Dakota, Oklahoma, Nebraska, and Colorado
[E80-10263] N80-30846
Draft user procedures: Software wheat yield predictions/foreign equivalent test --- Kansas, Oklahoma, and Nebraska
[E80-10287] N80-30855
An exploratory study to develop a cluster-based area estimation procedure --- Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863
ON-LINE PROGRAMMING
GRAPH: An interactive computer program used for technical plotting
[AD-A086354] N80-31076
ONBOARD EQUIPMENT
Feasibility study for integrated flight trajectory control fighter
[AD-A084784] N80-30314
North-south station keeping with electric propulsion using onboard battery power N80-30395
OPERATING SYSTEMS (COMPUTERS)
Design specification for color coded spectral plots
[E80-10245] N80-30828
High Density Tape Reformatting System/LANDSAT imagery verification and Extraction System (HDTRS/LIVES) throughput analysis
[E80-10248] N80-30831
As-built design specification for the CMAS image-100 hybrid system. Volume 2: Detailed flow charts and program listings, part 1
[E80-10289] N80-30857
As-built design specification for the CAMS image-100 hybrid system. Volume 3: Utilities and shared subroutines
[E80-10290] N80-30858
OPERATIONS RESEARCH
Navigation network operational considerations N80-30338
Ground communication facility and network operations control center reconfiguration N80-30339
Missile-X overview N80-30404
OPERATORS (MATHEMATICS)
Approximation of the spectrum of closed operators, the determination of normal modes of a rotating basin
[AD-A086661] N80-31116
Banach space shift operators N80-31145
OPERATORS (PERSONNEL)
Human operator interface with FLIR displays
[AD-A086284] N80-31041
OPTICAL COMMUNICATION
Spatial acquisition of optical sources in the presence of intense interference N80-30337
Multiple scattering in clouds
[AD-A087043] N80-30616
Manufacturing methods and technology program for ruggedized tactical fiber optic cable
[AD-A086874] N80-31197
OPTICAL COUPLING
Optically Coupled Microwave Switch
[SAND-80-0029C] N80-30658
OPTICAL DATA PROCESSING
Optical interarray processing
[AD-A086665] N80-31195
OPTICAL EMISSION SPECTROSCOPY
Optical and photoemission studies of lanthanum hydrides
[ISM-264] N80-31257
OPTICAL EQUIPMENT
Mid-term progress report on the development of army Closed Cycle Circulator (CCC) system
[AD-A087219] N80-30744
Optical interarray processing
[AD-A086665] N80-31195
OPTICAL PROPERTIES
Biramis payload study. Determination of the radiation balance of the Earth with the space-borne microaccelerometer. Volume 2: Characterization and selection of spacecraft coatings
[CERT-VOL-2] N80-30365
Critically evaluated data on optical and transport properties of solids refractive index and absorption coefficient of selected optical materials
[AD-A086658] N80-31199
Electronic band structure and optical properties of the cubic Sc, Y and La hydride systems N80-31236
OPTICAL PUMPING
Research investigation directed toward extending the useful range of the electromagnetic spectrum
[AD-A087034] N80-30617
Laser physics and laser techniques
[AD-A087245] N80-30742
Energy transfer and optical spectroscopy of diatomic molecules in chemically reacting systems
[AD-A086829] N80-31165

OPTICAL RADAR
DIAL with heterodyne detection including speckle noise: Aircraft/shuttle measurements of O3, H2O, and NH3 with pulsed tunable CO2 lasers
[NASA-TP-1725] N80-30717
Remote monitoring of gaseous pollutants by differential absorption laser techniques
[PB80-179351] N80-30968
Study of a pulsed coherent lidar for crosswind sensing
[PB80-181027] N80-31013
OPTICAL TRACKING
Design of a dynamic test platform for autonomous robot vision systems
[RPI-TR-MP-69] N80-30352
Laser optical appraisal and design of a PRIME/Rover interface
[NASA-CR-163508] N80-31193
OPTICAL WAVEGUIDES
Signal to noise ratio calculation for fiber optics links N80-30331
Manufacturing methods and technology program for ruggedized tactical fiber optics cable
[AD-A086706] N80-31198
Comprehensive description of fields in optical fibers by means of the propagating beam method
[UCRL-84219] N80-31200
Use of integrated optics for analog data signal conditioning aboard spacecraft
[LCR-79-108/R/G5] N80-31203
OPTIMIZATION
Design guidelines and optimization procedures for test subsystem design
[AD-A087059] N80-30769
Optimality criterion techniques applied to structures composed of different element types
[AD-A086644] N80-30804
Study of optimality criteria in design of experiments
[AD-A086830] N80-31141
Decentralized algorithms for optimization of single commodity flows
[AD-A086736] N80-31143
On the optimal solution of large linear systems
[AD-A086349] N80-31147
OPTIONS
SPS salvage and disposal alternatives
[NASA-CR-161548] N80-30898
ORBIT TRANSFER VEHICLES
Analytical investigation of two hydrogen-oxygen rocket engine systems for low-thrust application --- for orbital transfer N80-30382
LEO-to-GEO low thrust chemical propulsion N80-30384
Advanced expander cycle engine for manned orbit transfer vehicles N80-30385
Upper stages utilizing electric propulsion N80-30386
Cryogenic LOX/H2 engine candidates for orbital transfer missions. Part 1: Expander cycle optimization N80-30387
ORBITAL ELEMENTS
Artificial satellites, list for 1957 to 1976
[AERONOMICA-ACTA-F-28-1979] N80-30353
ORBITALS
A zero core-contribution model for photodetachment of atomic and molecular negative ions N80-31160
ORBITRONS
Characteristics of electrical discharges on the T78-2 satellite (SCATHA)
[AD-A087249] N80-30360
ORDER-DISORDER TRANSFORMATIONS
Deformation of an alloy with a lamellar microstructure: Experimental
[AD-A087100] N80-30500
Molecular reorientations in liquid crystals. The 13 C -/1H/ nuclear Overhauser effects in liquid MBBA
[ISS-P-79/4] N80-31259
ORDNANCE
Electromagnetic shielding. Citations from the NTIS data base
[PB80-810849] N80-30640
ORGANIC MATERIALS
Dry anaerobic fermentation to methane of organic residues N80-30532
Downdraft gasification characteristics of major California residue-derived fuels N80-30534
ORGANOMETALLIC COMPOUNDS
The molybdenum-molybdenum triple bond. 7.1 bis (1,3-Di-p-tolytriazenido) tetrakis (dimethylamido) dimolybdenum
[AD-A086239] N80-30486
Organic metals and semiconductors: The chemistry of polyacetylene, (CH) sub x, and its derivatives
[AD-A086870] N80-30522
ORGANOMETALLIC POLYMERS
Conducting organic polymers: Doped polyacetylene
[AD-A086869] N80-30523
ORION NEBULA
Very long baseline interferometry observations of the masers toward Orion A N80-31282
ORTHOTROPISM
Laminated beams of isotropic or orthotropic materials subjected to temperature change
[AD-A087230] N80-30806
OSCILLATIONS
Oscillations of a liquid with a free surface in a wedge shaped container
[HSBW-FB-LRT-WE-9-4-79] N80-30708
OSMOSIS
Development of reverse osmosis membrane for seawater desalination
[PB80-182090] N80-30472
OTS (ESA)
Study of OTS 2: Inflight behavior nutation interaction with momentum wheel
[REPT-30/1357] N80-30364
OUTGASSING
Outgassing data for spacecraft materials
[NASA-RP-1061] N80-30441
OVERHAUSER EFFECT
Molecular reorientations in liquid crystals. The 13 C -/1H/ nuclear Overhauser effects in liquid MBBA
[ISS-P-79/4] N80-31259
OVERVOLTAGE
Lightning, surge and transient protection. Citations from the NTIS data base
[PB80-810781] N80-30667
OXIDATION
Pyrolysis and oxidation kinetic mechanisms for propane N80-30456
Transition metal-promoted oxidative fusion with carborane and borine anions. Synthesis of C4B sub n (n = 8-11) carborane systems in the presence of B5H8(-) or B-3H8(-) ions
[AD-A087252] N80-30463
Catalytic oxidation of carbon monoxide at high humidity and low temperature
[AD-A087206] N80-30465
Aqueous trifluoromethanesulfonic acid fuel cells
[AD-A086579] N80-30905
Materials for fuel cells
[PB80-182355] N80-30955
GaAs surface effects
[AD-A087033] N80-31249
OXYGEN PRODUCTION
Oxygen production for interplantary return missions N80-30399
Simultaneous photoproduction of hydrogen and oxygen by photosynthesis --- to convert solar energy into stored chemical free energy
[CONF-791072-32] N80-30550
OZONE
DIAL with heterodyne detection including speckle noise: Aircraft/shuttle measurements of O3, H2O, and NH3 with pulsed tunable CO2 lasers
[NASA-TP-1725] N80-30717
Remote monitoring of gaseous pollutants by differential absorption laser techniques
[PB80-179351] N80-30968
Atlas of the infrared frequencies of ozone, part 1 N80-30990
Atlas of the infrared frequencies of ozone, part 2 N80-30991

P

PACIFIC OCEAN
Heat capacity mapping mission project HCM-051 --- East Australian Current and the Tasman Front
[E80-10278] N80-30850
A climatological study of the forcing of the North Pacific Ocean by synoptic storm activity
[AD-A086841] N80-31002
Long-term measurement of abyssal currents in the North Pacific
[DOE/EV-71030/1] N80-31025
Coastal upwelling ecosystems analysis. Data report: Cruise B/1, SNP-1, 7604
[PB80-132921] N80-31026
PACKET SWITCHING
Distribution of packet delay and interdeparture time in carrier sense multiple access
[AD-A086446] N80-30589
PAIR PRODUCTION
The reaction positron electron yields hyperon + hadrons at high energy
[PM/79/18] N80-31189
PALLADIUM
Supply and use patterns for the platinum-group metals
[PB80-179088] N80-30514
PANELS
Design and construction of large-panel concrete structures. Report 6: Design methodology
[PB80-189137] N80-30577
Wave propagation in honeycomb and foam-core panels for application to panel NDE
[AD-A086667] N80-30604
PARABOLIC ANTENNAS
Theoretical antenna analysis
[AD-A086703] N80-30614
PARABOLIC DIFFERENTIAL EQUATIONS
An adaptive grid finite element method for initial-boundary value problems N80-31095
Convergent approximations in parabolic variational inequalities. 2: Hamilton-Jacobi inequalities
[AD-A086364] N80-31101
PARAFFINS
Solar thermal energy storage using a paraffin wax phase change material N80-30887
PARALLEL PLATES
Interaction between a parallel-plate EMP simulator and a cylindrical test object
[AD-A086815] N80-30597
Discrete and continuous spectra of finite-width, parallel-plate simulator fields
[AD-A086813] N80-30598
Parallel-plate transmission line type of EMP simulators: Systematic review and recommendations
[AD-A086814] N80-30599
PARALLEL PROCESSING (COMPUTERS)
A survey of synchronization problems
[AD-A086509] N80-31055
PARAMETER IDENTIFICATION
A hill-sliding strategy for initialization of Gaussian clusters in the multidimensional space
[NASA-TM-80721] N80-31072
PARAMETERIZATION
Two-Phase nozzle theory and parametric analysis
[AD-A086795] N80-30696
Planetary boundary layer parameterization for tropical cyclones based on generalized similarity theory
[AD-A086781] N80-31004
PARSING ALGORITHMS
Augmented predictive parsing N80-31066
PARTIAL DIFFERENTIAL EQUATIONS
Calculations of free turbulent shear flow with a three equation turbulence model by J. C. Rotta
[ESA-TT-525] N80-30712
On the maximum principle for pseudoparabolic equations
[AD-A086380] N80-31100
Analytic continuation of solutions to linear partial differential equations
[AD-A086712] N80-31105
Waves, caustics and Thom's theorem
[AD-A086974] N80-31122
PARTIAL PRESSURE
Aqueous trifluoromethanesulfonic acid fuel cells
[AD-A086579] N80-30905
PARTICLE ACCELERATION
A 35 GHz Doppler radar to measure the speed of small particles
[TUM-RT-KB-79/2] N80-30624
Doppler radar measurement in high speed fields
[TUM-RT-KB-79/8] N80-30625
PARTICLE ACCELERATORS
Field emission electric propulsion ion optics of double edged materials
[CLM-RR/E1/25] N80-30435

PARTICLE BEAMS
Interaction between particle beams and nonlinear states N80-31176
PARTICLE COLLISIONS
Inversion of spectral lineshapes to yield collisional rate constants
[AD-A086347] N80-30735
Effective collision frequency and electron temperature in a weakly ionized argon plasma
[MSB-UA-498-79OE] N80-31225
PARTICLE INTERACTIONS
Theoretical studies of molecular collision processes. 1: Two-potential approach for electron-molecular scattering. 2: Three-dimensional quantum mechanical study on atom-molecule reactive collision with rotationally pre-excited target molecule N80-31183
PARTICLE MOTION
The translational motion of particles in a viscoelastic liquid N80-30673
PARTICLE SIZE DISTRIBUTION
Structure and pathology of the steady state, stability and dynamics of the combustion of an impervious carbon particle N80-30455
Development study of a novel continuous-flow impactor
[PB80-179286] N80-30574
Deliquescence properties and particle size change of hydroscopic aerosols
[BNL-27094] N80-30963
PARTICLES
Development study of a novel continuous-flow impactor
[PB80-179286] N80-30574
PARTICULATE SAMPLING
Total particulate mass emission sampling errors
[PB80-181910] N80-30965
PASTES
Flammability testing of solids under the Federal Hazardous Substances Act
[PB80-179047] N80-30469
PATTERN RECOGNITION
Radar emitter recognition using pulse repetition interval
[AD-A086968] N80-30620
Degradation of picture quality by speckle in coherent mapping systems N80-30821
As-built design specification for Boundary Detection And Registration Program (BDARP1)
[E80-10216] N80-30824
Forest resource information system, phase 3 --- St. Regis Paper Co.: Picayune, Mississippi
[E80-10242] N80-30825
Design specification for color coded spectral plots
[E80-10245] N80-30826
High Density Tape Reformatting System/LANDSAT imagery verification and Extraction System (HDTRS/LIVES) throughput analysis
[E80-10248] N80-30831
Classification with spectral-spatial-temporal archetypes
[E80-10251] N80-30834
As-built design specification for CLASY program modification
[E80-10253] N80-30836
Classification of multispectral images according to crosswise textural characteristics --- Mato Grasso, Brazil
[E80-10257] N80-30840
Evaluating the reforested area for the municipality of Bun by automatic analysis of LANDSAT imagery --- Sao Paulo, Brazil
[E80-10258] N80-30841
Use of LANDSAT data for estimating the area of sugar cane in the state of Sao Paulo --- Brazil
[E80-10260] N80-30843
Utilization of LANDSAT data to inventory the sugar cane in the state of Sao Paulo
[E80-10261] N80-30844
As-built design specification for the Patterson-Pitt-Thadani minimum loss classifier
[E80-10262] N80-30845
The integrated analysis procedure for identification of spring small grains and barley --- Great Plains Corridor: U.S. and Canada
[E80-10274] N80-30847
Statistical Outlier Detection (SOD): A computer program for detecting outliners in data --- AgRISTARS Project
[E80-10275] N80-30848
Estimation of probabilities of label imperfections and correction of mislabels
[E80-10288] N80-30856
As-built design specification of the CAMS/CAS interface tape report generation program for LACIE 8
[E80-10306] N80-30872
As-built specification for CLASSY conversion
[E80-10307] N80-30873
The GMS users' guide, issue 1 N80-30897
A hill-sliding strategy for initialization of Gaussian clusters in the multidimensional space
[NASA-TM-80721] N80-31072
PATTERN REGISTRATION
Maximal analysis labeling procedure (preliminary)
[E80-10294] N80-30862
PAULI EXCLUSION PRINCIPLE
Array gain improvement by selective sensor exclusion N80-31154
PAVEMENTS
Use of fabrics and other measures for retarding reflective cracking of asphaltic concrete overlays
[AD-A085851] N80-30567
Pavement evaluation and overlay design using vibratory nondestructive testing and layered elastic theory. Volume 1: Development procedure
[AD-A087186] N80-30808
PAYLOAD DELIVERY (STS)
Flight feasibility assessment of shuttle/LANDSAT-D/LANDSAT-D' missions
[NASA-TM-81145] N80-30372
PAYLOAD RETRIEVAL (STS)
Flight feasibility assessment of shuttle/LANDSAT-D/LANDSAT-D' missions
[NASA-TM-81145] N80-30372
PAYLOADS
Payloads used in first three data-gathering BAMM flights
[AD-A086839] N80-30275
Simulant reaction temperature measurement via telemetry for the XM736 at charge 9
[AD-A086774] N80-30374
PEAT
Experimental program for the development of peat gasification. Task 2: Hydrogasification. Task 3: Fluidized-bed tests
[FE-2469-46] N80-30542
PENNSYLVANIA
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
PERFORMANCE PREDICTION
Vibrations of a compressor blade with slip at the root
[AD-A086852] N80-30312
Study and development of a slotted waveguide element in an antenna array --- for a synthetic aperture radar
[ESA-CR(P)-1286] N80-30626
Performance estimates for attached sunspace passive solar heated buildings
[LA-UR-80-853] N80-30913
PERFORMANCE TESTS
Advanced combustion systems for stationary gas turbine engines. Volume 4: Combustor verification testing, addendum
[PB80-179849] N80-30313
Safety and health hazard evaluation, general equipment
[AD-A086990] N80-30569
Keyboards and touch controls: An evaluation of reliability and constructional principles for 11 different types
[ECR-90] N80-30860
Optical power spectrum analyzer. Scanning laser beam system permits full format coverage
[AD-A087047] N80-30720
Development of high-temperature turbine subsystem technology to a technology readiness status, phase 2
[FE-1806-86] N80-30753
Hydrogen engine performance analysis project
[SAN-1212-T1] N80-30756
Advanced combustion systems for stationary gas turbine engines. Volume 3: Combustor verification testing
[PB80-177108] N80-30763
Orientation of measurement sensors for optimum end-of-life performance
[AD-A086280] N80-30767
Sencenbaugh: Model 1000-14 wind turbine generator
[RFP-3034/3533/79-5] N80-30931
Performance data for a lithium-silicon/iron disulfide, long-life, primary thermal battery
[SAND-79-2148C] N80-30933
PERSONNEL
Electromagnetic shielding. Citations from the NTIS data base
[PB80-810849] N80-30640
PERTURBATION
Generalized equations and their solutions. Part 2: Applications to nonlinear programming
[AD-A086365] N80-31075
A singular perturbations approach to reduced-order modeling and decoupling for large scale linear systems
[AD-A087050] N80-31118
PERTURBATION THEORY
Approximation of the spectrum of closed operators, the determination of normal modes of a rotating basin
[AD-A086661] N80-31116
Research program in elementary particle theory
[COO-3533-161] N80-31170
PHASE SHIFT CIRCUITS
Adaptive time delay circuitry for interference cancellation systems
[AD-A086326] N80-30605
PHASE TRANSFORMATIONS
Consequences of the re-transformation of precipitated austenite in ferritic cryogenic steels
[LBL-10128] N80-30508
Solar thermal energy storage using a paraffin wax phase change material N80-30887
PHASED ARRAYS
Phased arrays. Citations from the NTIS data base
[PB80-808041] N80-30637
Phased arrays. Citations from the engineering index data base
[PB80-808058] N80-30638
Satellite power system (SPS) magnetron tube assessment study
[NASA-CR-161547] N80-30897
PHENOLOGY
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
Use of soil moisture information in yield models
[E80-10302] N80-30869
PHENOLS
Survey analysis of phenolic compounds in industrial effluents by gas chromatography mass spectrometry
[PB80-177793] N80-30969
PHONONS
Phonon reflection from crystal interfaces and the kapitza problem N80-31238
Electron response theory of lattice vibrations: Emergence of concepts and a glance at the future
[LA-UR-80-1000] N80-31252
PHOSPHORIC ACID
Feasibility study for industrial cogeneration fuel cell application
[SAN-1889-T1] N80-30934
PHOTOCHEMICAL OXIDANTS
Modelling of simulated photochemical smog with kinetic mechanisms. Volume 2 CHEMK: A computer modeling scheme for chemical kinetics
[PB80-181084] N80-30970
PHOTOCHEMICAL REACTIONS
Photochemical study of NOx removal from stack gases
[PB80-181274] N80-30966
PHOTOCONDUCTIVITY
Photoconductivity in polyacetylene
[AD-A086942] N80-30527
The mode locked dye laser, 1. Picosecond photoconductivity of semi-insulating gallium-arsenide, 2 N80-30722
PHOTODETACHMENT
A zero core-contribution model for photodetachment of atomic and molecular negative ions N80-31160

PHOTODIODES
Model LS-2X laser source detector test system
[AD-A086540] N80-30739
A multidirectional photodiode array for the measurement of solar radiances
[PB80-181753] N80-30995
PHOTOELASTIC ANALYSIS
Determination of K-factors for arbitrarily shaped flaws at pressure vessel nozzle corners
[CONF-791118-11] N80-30816
PHOTOELECTRIC CELLS
A multidirectional photodiode array for the measurement of solar radiances
[PB80-181753] N80-30995
PHOTOELECTRIC EMISSION
Theoretical and experimental investigation of bonding of simple ligands to metal complexes as reflected in their photoelectron spectra N80-31229
Resonances and collective effects in photoemission N80-31230
Metal-electrolyte boundary studies with in situ photoemission
[ISM-257] N80-31258
PHOTOELECTRIC GENERATORS
Solar energy system economic evaluation final report for SEMCO-Loxahatchee, Loxahatchee National Wildlife refuge, Palm Beach County, Florida
[NASA-CR-161512] N80-30894
PHOTOELECTRON SPECTROSCOPY
Electronic structure studies of metal hydrides
[ISM-265] N80-31256
Optical and photoemission studies of lanthanum hydrides
[ISM-264] N80-31257
PHOTOGEOLOGY
The GMS users' guide, issue 1 N80-30997
PHOTOGRAPHIC RECORDING
Monitoring the use of riverways with aerial photography: The development, testing, and evaluation of a computer assisted methodology
[AD-A086471] N80-30877
PHOTOGRAPHY
Remote sensing of the ocean: Physical, chemical, and geologic properties. Citations from the NTIS data base
[PB80-811235] N80-30884
PHOTOINTERPRETATION
Degradation of picture quality by speckle in coherent mapping systems N80-30821
A labeling technology for LANDSAT imagery
[E80-10293] N80-30861
Maximal analysis labeling procedure (preliminary)
[E80-10294] N80-30862
An exploratory study to develop a cluster-based area estimation procedure --- Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863
Soil moisture in relation to geologic structure and lithology, northern California
[E80-10298] N80-30865
Monitoring the use of riverways with aerial photography: The development, testing, and evaluation of a computer assisted methodology
[AD-A086471] N80-30877
Multi-source image analysis --- radar, infrared, and photographic image interpretation
[AD-A086332] N80-30878
PHOTOIONIZATION
Resonances and collective effects in photoemission N80-31230
PHOTOLITHOGRAPHY
Integrated thin film dc SQUIDS
[AD-A086466] N80-30652
PHOTOMAPPING
Use of LANDSAT data for estimating the area of sugar cane in the state of Sao Paulo --- Brazil
[E80-10260] N80-30843
Utilization of LANDSAT data to inventory the sugar cane in the state of Sao Paulo
[E80-10261] N80-30844
PHOTOMETRY
A photometric investigation of possible binary occurrence in the central stars of seventeen planetary nebulae N80-31280
PHOTOSYNTHESIS
Simultaneous photoproduction of hydrogen and oxygen by photosynthesis --- to convert solar energy into stored chemical free energy
[CONF-791072-32] N80-30550
Use of soil moisture information in yield models
[E80-10302] N80-30869
PHOTOTHERMAL CONVERSION
Utility views on solar thermal central receivers
[SAND-80-8203] N80-30911
Regenerative energy sources for the production of low temperature heat: Energy sources, energy types, and energy conversion; results and applications; measures to promote use
[ISBN-3-7041-0038-2] N80-30951
PHOTOVOLTAIC CELLS
Pacific Missile Test Center energy projects. Summary of projects, contributions, and plans
[AD-A086196] N80-30903
Solar photovoltaic module degradation from electro-migration
[COO-4094-64] N80-30910
Hybrid photovoltaic/thermal systems with a solar-assisted heat pump
[BNL-27667] N80-30919
Photovoltaic systems and applications perspective
[SAND-80-0926C] N80-30923
Advanced photovoltaic concentrator cells
[DSE-4042-T30] N80-30946
PHOTOVOLTAIC CONVERSION
Thin films of InP for photovoltaic energy conversion
[COO-3004-2] N80-30912
System design, tests results, and economic analysis of a flywheel energy storage and conversion system for photovoltaic applications
[COO-4094-70] N80-30928
PHOTOVOLTAIC EFFECT
Conducting organic polymers: Doped polyacetylene
[AD-A086869] N80-30523
PHYSICAL CHEMISTRY
Analytic approaches to atomic response properties N80-31159
PHYSICAL EXERCISE
The effect of physical conditioning on +GZ tolerance N80-31031
PHYSICAL FITNESS
The effect of physical conditioning on +GZ tolerance N80-31031
PHYSICAL PROPERTIES
Effect of structure on physical properties of polymers
[AD-A086199] N80-30518
PHYSIOLOGICAL RESPONSES
Analysis of human auditory brainstem responses for complex stimuli N80-31034
PHYSIOLOGICAL TESTS
An investigation of cardiac threshold variability relative to stimulus shape and respiratory cycle N80-31032
PIEZOELECTRIC CRYSTALS
Doubly rotated cut saw devices
[AD-A086734] N80-31245
The growth of berlinite (AlPO4) single crystals
[AD-A086751] N80-31246
PILOT PERFORMANCE
Light twin-engine aircraft accidents following engine failures
[PB80-177306] N80-30287
Helicopter electro-optical system display requirements. 2: Performance of helicopter pilots when using a low-light-level television system during simulated nap-of-the-earth flight
[AD-A086855] N80-30308
An investigation of the dual task performance relationship to hemispheric specialization
[AD-A086808] N80-31042
PINCH EFFECT
MHD plasma channel response to propagating ion beams
[AD-A087214] N80-31211
PIONEER SPACE PROBES
Pioneers 6 through 9 support N80-30329
PIONEER VENUS SPACECRAFT
Pioneers 10 through 12 support N80-30328
PIONEER 10 SPACE PROBE
Pioneers 10 through 12 support N80-30328
PIONEER 11 SPACE PROBE
Pioneers 10 through 12 support N80-30328
PIONS
On the optimality of axiomatic constraints for pion pion scattering: The case of the lower bounds
[PM/79/16] N80-31175
PIPELINES
On the propagating buckle and its arrest --- offshore pipelines N80-30779
PIPES (TUBES)
The annular heat pipe operating limit equations and chemical reactor application N80-30674
Piping inelastic fracture mechanics analysis --- nuclear reactors
[AD-A087002] N80-30810
Solar thermal energy storage using a paraffin wax phase change material N80-30887
PITCH (INCLINATION)
Dynamic analysis of a rotor blade with lead-lag freedom, flapping freedom, and variable-controlled blade pitch angle
[ISD-258] N80-30950
PLANCKS CONSTANT
Critical requirements for mid-altitude IR predictions N80-30429
PLANETARY ATMOSPHERES
Planetary boundary layer parameterization for tropical cyclones based on generalized similarity theory
[AD-A086781] N80-31004
PLANETARY MASS
Orbital decay and accretion for planetary or binary systems within a planetary nebula N80-31288
PLANETARY NEBULAE
A photometric investigation of possible binary occurrence in the central stars of seventeen planetary nebulae N80-31280
Orbital decay and accretion for planetary or binary systems within a planetary nebula N80-31288
PLANETARY SURFACES
A high speed telemetry data link for an autonomous roving vehicle
[NASA-CR-163495] N80-30373
Interpretation of laser/multi-sensor data for short range terrain modeling and hazard detection
[NASA-CR-163492] N80-31294
PLANTING
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
PLANTS (BOTANY)
Grizzly bear habitat analysis. Section 3: LANDSAT-1 multispectral imagery and computer analysis of grizzly bear habitat --- Slategoat, Scapegoat and Danaher areas, Montana
[NASA-CR-163382] N80-30867
PLASMA COMPRESSION
Adiabatic compression of field-reversed plasma
[UCID-18614] N80-31220
PLASMA CONTROL
Particle confinement and magnetic fluctuations in Tokamak discharges with gas puffing N80-31206
Ideal magnetohydrodynamic equilibrium of a weakly toroidal plasma with elongated cross section. Part 1: Elliptic cross section
[REPT-79-121-PT-1] N80-31224
PLASMA CURRENTS
MHD plasma channel response to propagating ion beams
[AD-A087214] N80-31211
PLASMA DECAY
Simultaneous measurements of magnetotail dynamics by IMP spacecraft
[NASA-TM-81986] N80-30981
A search for the persistent velocity autocorrelation in hydrogen by dense plasma decay N80-31205
PLASMA DENSITY
Studies of laser selective excitation of atoms
[AD-A086497] N80-30734
PLASMA DIAGNOSTICS
Development of X-ray laser media: Measurement of gain and development of cavity resonators for wavelengths near 130 angstroms
[AD-A086670] N80-30730
Evaluation of a high power submillimeter pulsed laser system
[CONF-800138-1] N80-30745
PLASMA ENGINES
The 1980 JANNAF propulsion Meeting, volume 5
[AD-A087063] N80-30381
US Air Force programs in electric propulsion N80-30396

PLASMA EQUILIBRIUM
Nonlinear evolution of resistive interchange modes in reversed field pinches
[UCRL-84301] N80-31215
PLASMA GUNS
Auroral electrodynamics I. 1: Preliminary electron density profile. 2: Vehicle potential changes during an active beam experiment
[AD-A086728] N80-30989
PLASMA HEATING
Techniques of plasma production and heat. 32: Plan for the plasma microwave-heating system at the T-10M facility
[UCRL-TRANS-11563] N80-31216
Vortex formation during rf heating of plasma
[PPPL-1658] N80-31219
PLASMA JETS
Simultaneous measurements of magnetotail dynamics by IMP spacecraft
[NASA-TM-81986] N80-30981
PLASMA PHYSICS
Large aspect ratio Tokamak study
[CONF-791102-156] N80-31213
PLASMA POTENTIALS
Simultaneous measurements of magnetotail dynamics by IMP spacecraft
[NASA-TM-81986] N80-30981
PLASMA PROPULSION
Pulsed plasma propulsion technology N80-30398
Post-launch results of the TIP spacecraft pulsed-plasma microthrusters N80-30416
PLASMA TURBULENCE
Simultaneous measurements of magnetotail dynamics by IMP spacecraft
[NASA-TM-81986] N80-30981
Studies of nonlinear phenomena in plasmas
[AD-A086456] N80-31210
PLASMA WAVES
Studies of nonlinear phenomena in plasmas
[AD-A086456] N80-31210
Vortex formation during rf heating of plasma
[PPPL-1658] N80-31219
PLASMA-ELECTROMAGNETIC INTERACTION
Measuring and modeling rocket-plume Doppler spectral asymmetry in CW downlink transmissions N80-30430
PLASMA-PARTICLE INTERACTIONS
Interaction between particle beams and nonlinear states N80-31176
PLASMAS (PHYSICS)
High voltage switch using externally ionized plasmas
[AD-A086761] N80-30647
The nonlinear dynamics of MHD unstable plasmas
[AD-A086729] N80-31207
Solar wind flows associated with hot heavy ions
[LA-8344-T] N80-31299
PLASMONS
Surface plasmons confined by microstructures N80-31237
PLASTIC DEFORMATION
Effect of alloy deformation on the average spacing parameters of non-deforming particles
[COO-3084-75] N80-30509
Fatigue effects in the wear of polymers N80-30516
Techniques of analysis of load-displacement records by j-integral methods N80-30778
Use of endochronic plasticity for multi-dimensional small and large strain problems
[ANL-CT-79-19] N80-30817
PLASTIC FLOW
Fracture problems in power law viscoelastic materials
[AD-A087244] N80-30813
PLASTIC PROPERTIES
Accurate numerical solutions for elastic-plastic models
[ANL-80-31] N80-30815
Use of endochronic plasticity for multi-dimensional small and large strain problems
[ANL-CT-79-19] N80-30817
PLASTICS
Evaluation and prediction of long term space environmental effects on non-metallic materials
[NASA-CR-161545] N80-30436
Quick reaction evaluation of materials for systems applications
[AD-A085859] N80-30789
A decomposition procedure for large scale optimal plastic design problems
[AD-A086560] N80-30798
On the characterization of strain-hardening in plasticity
[AD-A086551] N80-30800
PLATINUM
Supply and use patterns for the platinum-group metals
[PB80-179088] N80-30514
PLATINUM ALLOYS
A low temperature specific heat study of some disordered alloy systems N80-30452
PLUMES
Plume interference with space shuttle range safety signals N80-30423
Technique and measurement of heat flux and flame temperature in rocket plume exposures
[AD-A086533] N80-30432
PLY ORIENTATION
Curing stress fields in involute exit cones
[AD-A086404] N80-30803
POGO
Pogo summary report main propulsion test static firings 1-7 for shuttle development flight instrumentation
[NASA-CR-160767] N80-30368
POINT SOURCES
Total particulate mass emission sampling errors
[PB80-181910] N80-30965
POINTS (MATHEMATICS)
Occurrences in a branching process --- point process analysis of population growth N80-31129
POLAR NAVIGATION
VLBI system for weekly measurement of UT1 and polar motion: Preliminary results N80-30323
POLAR REGIONS
Sounding rocket program aeronomy. Project Upper Polar Atmosphere. Supra-thermal auroral particle observations
[BMFT-FB-W-79-03] N80-30992
POLARIMETRY
Polarimetry of Jupiter at large phase angles N80-31293
POLARIZATION CHARACTERISTICS
The spectral characteristics of metal film beam splitters
[AD-A086419] N80-31196
Polarimetry of Jupiter at large phase angles N80-31293
POLLUTION
The design of a system for pre-prototype use of the chemical substance information network
[PB80-178320] N80-30438
POLLUTION CONTROL
Pilot scale combustion evaluation of waste and alternate fuels, phase 3
[PB80-177413] N80-30952
Photochemical study of NOx removal from stack gases
[PB80-181274] N80-30966
Scientific and technical needs for hazardous waste management
[PB80-177173] N80-30971
POLLUTION MONITORING
Probability sampling to measure pollution from rural land runoff
[PB80-175946] N80-30883
Remote monitoring of gaseous pollutants by differential absorption laser techniques
[PB80-179351] N80-30968
An evaluation study of EPA method 8 --- emissions from sulfuric acid plants
[PB80-181936] N80-30972
Design and performance of an aerosol mass distribution monitor
[PB80-179310] N80-30973
The South Pole automatic condensation nuclei counter: Instrument details and five years of observations
[PB80-181712] N80-31014
POLYAMIDE RESINS
Triaxially woven fabrics of Kevlar, Dacron polyester and hybrids of Kevlar and Dacron polyester
[AD-A086866] N80-30521
POLYCRYSTALS
Impurity effects on the creep of polycrystalline magnesium and aluminum oxides at elevated temperatures --- mixed transition metal impurities
[COO-1591-34] N80-30447
POLYESTER RESINS
Triaxially woven fabrics of Kevlar, Dacron polyester and hybrids of Kevlar and Dacron polyester
[AD-A086866] N80-30521
POLYESTERS
The dynamic behavior of nylon and polyester line
[AD-A087106] N80-30529
POLYETHYLENES
Fatigue effects in the wear of polymers N80-30516
POLYMERS
Effect of structure on physical properties of polymers
[AD-A086199] N80-30518
Model compound studies of rigid rod aromatic heterocyclic polymer systems. Part 1: The crystal and molecular structures of 2,6-diphenylbenzl (1,2-D:4,5-D') bisthiazole and 2,6-diphenylbenzo (1,2-D:5,4-D') bisoxazole
[AD-A086804] N80-30520
Moisture protective coatings for alkali halide IR optics
[AD-A086747] N80-30526
Photoconductivity in polyacetylene
[AD-A086942] N80-30527
POLYURETHANE FOAM
Thermal insulation materials for diver's underwear garment
[AD-A086743] N80-31048
POPULATION INVERSION
Nuclear isomer suitable for gamma ray laser
[NASA-CR-163482] N80-30727
POPULATION THEORY
Occurrences in a branching process --- point process analysis of population growth N80-31129
POROUS MATERIALS
Characterization of macromolecular films adsorbed in track-etched membranes N80-30515
POSITION (LOCATION)
Position determination with Loran-C triplets and the Hewlett-Packard HP-67/97 programmable calculators
[AD-A086823] N80-30290
Formulas for positioning at sea by circular, hyperbolic, and astronomic methods
[PB80-184757] N80-30295
Accurate radio positions with the Tidbinbilla interferometer N80-30320
POSITION INDICATORS
An algorithm for position determination using Loran-C triplets with a basic program for the Commodore 2001 microcomputer
[AD-A086790] N80-30291
POSITRON ANNIHILATION
Theoretical aspects of positron electron annihilation and hyperon hyperon collisions
[PM/79/15] N80-31174
The reaction positron electron yields hyperon + hadrons at high energy
[PM/79/18] N80-31189
POSTFLIGHT ANALYSIS
LANDSAT-2 and LANDSAT-3 flight evaluation report
[E80-10291] N80-30859
POTENTIOMETRIC ANALYSIS
Waste isolation safety assessment program: Task 4: Collection and generation of transport data theoretical and experimental evaluation of waste transport in selected rocks
[LBL-9945] N80-31182
POTTING COMPOUNDS
Development of alternate silicone potting compounds. Volume 6: Development of secondary alternates for Dow Corning's Aerospace Sealant, DC93-119
[UCRL-52434-VOL-6] N80-30445
POWDER (PARTICLES)
Flammability testing of solids under the Federal Hazardous Substances Act
[PB80-179047] N80-30469
POWDER METALLURGY
Review of European powder metallurgy of superalloys
[AD-A086682] N80-30488
Plastic flow and fracture processes in powder metallurgical nickel-base superalloys
[AD-A086697] N80-30490
POWER AMPLIFIERS
Reliability evaluation of GaAs power FETs
[AD-A086668] N80-30651

POWER GAIN
Mid-term progress report on the development of army Closed Cycle Circulator (CCC) system
[AD-A087219] N80-30744
POWER LINES
Power line carrier radiation and the low-frequency aeronautical radio compass
[AD-A087126] N80-30293
Power line anomalies as they affect the operation of a DSN station: Overview N80-30340
POWER PLANTS
Development of high-temperature turbine subsystem technology to a technology readiness status, phase 2
[FE-1806-86] N80-30753
PRECESSION
The description of the ROBIN program and its conversion to the Interdata 7-32 computer system
[AD-A086810] N80-31000
Torques on a nearly rigid body in a relativistic gravitational field
[NASA-TM-78295] N80-31289
PRECIPITATION
As-built design specification for phase 3 model areas added to the monthly data base of the US --- Montana, South Dakota, Oklahoma, Nebraska, and Colorado
[E80-10263] N80-30846
PRECIPITATION (METEOROLOGY)
Florida water resources
[E80-10246] N80-30829
Precipitation estimations from satellite measurements of heat radiation at 19.35 and 37 GHz
[MITT-26] N80-31008
The use of the climatic water budget to evaluate the validity of a precipitation record
[PB80-182157] N80-31019
The Sierra cooperative pilot project. Precipitation management research in the Sierra Nevada
[PB80-182389] N80-31023
PRECIPITATION HARDENING
The influence of coherency strains on the elevated temperature mechanical behavior of Ni-15r-Al-Ti-Mo alloys N80-30474
PREDICTION ANALYSIS TECHNIQUES
Fatigue effects in the wear of polymers N80-30516
Estimation of confidence limits for testing large logic networks
[AD-A086281] N80-30650
Integrated circuit reliability. Citations from the NTIS data base
[PB80-811128] N80-30666
Sensor failure analysis and multivariable control for airbreathing propulsion systems N80-30747
The prediction of response of solids to thermal loading using the finite element code AGGIE 1
[AD-A087042] N80-30812
Users manual for DWNWND: An interactive Gaussian plume atmospheric transport model with eight dispersion parameter options
[ORNL/TM-6874] N80-30962
The application of measures of synoptic similarity to the evaluation and development of atmospheric prediction models, task 2
[AD-A086034] N80-30998
Solar activity prediction of sunspot numbers (verification). Predicted solar radio flux; predicted geomagnetic indices Ap and Kp --- space shuttle program: satellite orbital lifetime
[NASA-TM-81139] N80-31297
PREFLIGHT ANALYSIS
Advanced flight design systems subsystem performance models. Executive summary
[NASA-CR-160768] N80-31044
Advanced flight design systems subsystem performance models. Sample model: Environmental analysis routine library
[NASA-CR-160770] N80-31046
PRESSURE DISTRIBUTION
Combined linear theory/impact theory method for analysis and design of high speed configurations
[NASA-CR-3314] N80-30273
An analytical solution of lift loss for a round planform with a central lifting jet
[AD-A086669] N80-30276
PRESSURE EFFECTS
Pressure dependence of the absolute rate constant for the reaction OH + C2H2 from 228 to 413K
[NASA-TM-80743] N80-30458
On the propagating buckle and its arrest --- offshore pipelines N80-30779
PRESSURE MEASUREMENTS
JANNAF 11th Plume Technology Meeting, volume 2
[AD-A079647] N80-30422
Plume impingement pressure measurements taken during sea level firings of a Tomahawk motor N80-30424
PRESSURE VESSELS
Fracture mechanics design of shuttle payload pressure vessels N80-30397
PREVENTION
Use of fabrics and other measures for retarding reflective cracking of asphaltic concrete overlays
[AD-A085851] N80-30567
PRINCE WILLIAM SOUND (AK)
Communications requirements for a Loran-C position monitoring system for VTS Valdez, Alaska
[AD-A087199] N80-30292
PRINTED CIRCUITS
Study and development of printed circuit elements for synthetic aperture radar array antennas
[ESA-CR(P)-1303] N80-30661
PROBABILITY DENSITY FUNCTIONS
Convergence of progressively censored likelihood ratio processes in life-testing
[AD-A087057] N80-31138
PROBABILITY DISTRIBUTION FUNCTIONS
Preposterior analysis of Bayes estimators of mean life, 1
[AD-A086771] N80-31135
PROBABILITY THEORY
Some topics in reliability theory N80-30764
Estimation of probabilities of label imperfections and correction of mislabels
[E80-10288] N80-30856
PROBLEM SOLVING
The propagation of elastic waves in heterogeneous media N80-30586
Communication control and leadership in telecommunications by small groups
[AD-A086746] N80-30612
Analytic continuation of solutions to linear partial differential equations
[AD-A086712] N80-31105
Multiple objectives and the path determination problem
[AD-A086744] N80-31142
On the optimal solution of large linear systems
[AD-A086349] N80-31147
PROCESS CONTROL (INDUSTRY)
Process evaluation: Steam reforming of diesel fuel oil
[AD-A087053] N80-30538
Upgrading of coal liquids for use as power generation fuels
[EPRI-AF-1225] N80-30547
PRODUCT DEVELOPMENT
Experimental program for the development of peat gasification. Task 2: Hydrogasification. Task 3: Fluidized-bed tests
[FE-2469-48] N80-30542
High power submillimeter and infrared radiation from intense relativistic electron beams
[AD-A086688] N80-30737
An advanced terrain modeler for an autonomous planetary rover
[NASA-CR-163485] N80-30749
The development of a stepped frequency microwave radiometer and its application to remote sensing of the Earth N80-30822
Sequential purification and crystal growth for the production of low cost silicon substrates
[DOE/SERI-8119-3/1] N80-31255
PROGRAM VERIFICATION (COMPUTERS)
Path selection for symbolic execution systems N80-31068
PROGRAMMING LANGUAGES
Augmented predictive parsing N80-31066
KL: A well-structured beginning computer language N80-31067
Discrete/continuous simulation language
[AD-A086487] N80-31074
Reliability of software generated by language processors
[SESA-P35532] N80-31084
Investigation into interactive graphics data base exchange via Gerber data
[SAND-80-0588] N80-31265
PROJECT MANAGEMENT
Report on European space activities, 1979 N80-30345
Plan and basis of the World Climatology Program, 1980 to 1983
[WMO-540] N80-31010
PROJECT PLANNING
National Severe Local Storms Operations Plan
[PB80-187362] N80-31021
NASA program plan N80-31269
PROJECTILES
Simulant reaction temperature measurement via telemetry for the XM736 at charge 9
[AD-A086774] N80-30374
PROLATE SPHEROIDS
Analytical study of the bistatic radar cross-section of a prolate spheroid
[AD-A086846] N80-30610
PROPAGATION MODES
On the propagating buckle and its arrest --- offshore pipelines N80-30779
PROPANE
Pyrolysis and oxidation kinetic mechanisms for propane N80-30456
PROPELLANT COMBUSTION
Modeling propellant combustion interacting with an eroding solid surface
[UCRL-83727] N80-30433
PROPELLANT GRAINS
Modulation of a gas generator N80-30414
LLMM SRAM 3-D grain structural analysis N80-30418
PROPELLANT TANKS
LeRC reduced gravity fluid management technology program N80-30383
PROPULSION SYSTEM CONFIGURATIONS
Space Shuttle Solid Rocket Motor (SRM) development and qualification N80-30389
A pump fed bipropellant propulsion system for planetary missions N80-30392
Propulsion subsystem for the satellite data systems satellite N80-30400
IUS motor case development N80-30402
MX stage 1 N80-30405
Single stage liquid propulsion systems: Specific optima for NRBM vehicles N80-30410
Mach 3 hydrogen external/base burning N80-30413
HARM rocket motor development N80-30415
A propulsion system for the Mars rover vehicle
[NASA-CR-163494] N80-30750
Hybrid vehicle potential assessment. Volume 3: Parallel systems
[CONS-4209-T1-VOL-3] N80-31270
Electric and hybrid vehicle system research and development project, hybrid vehicle potential assessment. Volume 4: Series systems
[CONS-4209-T1-VOL-4] N80-31273
Flywheel energy management systems for improving the fuel economy of motor vehicles
[PB80-175300] N80-31278
PROPULSION SYSTEM PERFORMANCE
Pulsed plasma propulsion technology N80-30398
Advances in propellant propulsion technology for intermediate range ballistic missile N80-30411
Development of a reduced smoke rocket motor for the AIM-9B, E, J, P Sidewinder missile N80-30412
Optimized propulsion/guidance analysis of ramjet powered vehicles N80-30420
Application of an advanced trajectory optimization method to ramjet propelled missiles N80-30421
PROPULSIVE EFFICIENCY
Recent developments in aerospace technology
[SNIAS-792-502-101] N80-31276
PROTECTIVE CLOTHING
Telemetry system for evaluation of burn protection in full-scale fuel fire manikin exposures
[AD-A086700] N80-30375
Flame testing of two samples of exposure suit material
[AD-A086739] N80-31047
Thermal insulation materials for diver's underwear garment
[AD-A086743] N80-31048
PROTECTIVE COATINGS
Dependence of silicon carbide coating properties on deposition parameters: Preliminary report --- coatings for high temperature gas cooled reactors
[ORNL/TM-7209] N80-30448

Advanced electron beam techniques for metallic and ceramic protective coating systems --- modifying gas turbine and diesel engines for alternative fuel use
[LBL-10520] N80-30449
Studies on corrosion prevention of Mardan connectors by organic coatings
[AD-A086730] N80-30491
An investigation of a composite oxide film as a corrosion inhibitor for 2024 aluminum
[AD-A086791] N80-30497
Evaluation of titanium bolts coated with ivadize aluminum and Kalgard 2240 C in torque tension tests
[SPS-5254] N80-30512
Moisture protective coatings for alkali halide IR optics
[AD-A086747] N80-30526
Manufacturing methods and technology program for ruggedized tactical fiber optic cable
[AD-A086874] N80-31197

PROTON BEAMS
Absolute calibration of a prompt gamma ray detector for intense bursts of protons
[AD-A086726] N80-31178
MHD plasma channel response to propagating ion beams
[AD-A087214] N80-31211

PROTONS
Semiconductor laser technology: Stripe structure
[LCR-34-078/R/G5] N80-30746

PSYCHOMOTOR PERFORMANCE
The psychomotor performance of men and women wearing two types of body armor
[AD-A086742] N80-31040

PUBLIC HEALTH
Proceedings of the Conference on Environmental Toxicology
[AD-A086341] N80-30958
The benefits of air and water pollution control: A review and synthesis of recent estimates
[PB80-178759] N80-30967

PULSE COMPRESSION
A new class of pulse compression codes and techniques
[AD-A086787] N80-30595

PULSE DURATION
Shuttle time and frequency transfer experiment
[NASA-TM-78288] N80-30342
Absolute calibration of a prompt gamma ray detector for intense bursts of protons
[AD-A086726] N80-31178

PULSE GENERATORS
Discrete and continuous spectra of finite-width, parallel-plate simulator fields
[AD-A086813] N80-30598
Parallel-plate transmission line type of EMP simulators: Systematic review and recommendations
[AD-A086814] N80-30599
Mid-term progress report on the development of army Closed Cycle Circulator (CCC) system
[AD-A087219] N80-30744
Auroral electrodynamics I. 1: Preliminary electron density profile. 2: Vehicle potential changes during an active beam experiment
[AD-A086728] N80-30989

PULSE RADAR
Radar emitter recognition using pulse repetition interval
[AD-A086968] N80-30620
Study of a pulsed coherent lidar for crosswind sensing
[PB80-181027] N80-31013

PULSE RATE
Radar emitter recognition using pulse repetition interval
[AD-A086968] N80-30620

PULSED LASERS
Studies of laser selective excitation of atoms
[AD-A086497] N80-30734
Short pulse UV-visible waveguide laser
[AD-A086856] N80-30738
Evaluation of a high power submillimeter pulsed laser system
[CONF-800138-1] N80-30745
Laser protective eyewear program at the Los Alamos Scientific Laboratory
[LA-UR-80-1038] N80-31049

PULSED RADIATION
CW and pulsed beam propagation in focusing media with random-axis misalignments N80-30584
Intense pulsed ion beams for fusion applications
[SAND-80-0402] N80-31185

PULSES
Modeling of pulses having arbitrary amplitude and frequency modulation
[AD-A086567] N80-30606

PURIFICATION
Sequential purification and crystal growth for the production of low cost silicon substrates
[DOE/SERI-8119-3/1] N80-31255

PYROLYSIS
Pyrolysis of (C2H5)4NBH4 to (C2H5) 4N 2B10H10: Use of a liquid heat transfer medium N80-30408
Pyrolysis and oxidation kinetic mechanisms for propane N80-30456
Devolatilization kinetics and elemental release in the pyrolysis of pulverized coal N80-30533

PYROPHORIC MATERIALS
Flammability testing of solids under the Federal Hazardous Substances Act
[PB80-179047] N80-30469

PYROTECHNICS
Nickel-iron alloy corrosion in a sealed pyrotechnic system
[MLM-2707(OP)] N80-30511
Design and evaluation of progressively burning pyrotechnic formulations
[SAND-80-0355C] N80-30553

Q

QUADRATIC PROGRAMMING
Quisp: A computer processor for the design and display of quadric-surface bodies N80-31069

QUADRUPOLES
Study of the anisotropic potential of KCl and CsCl in a rotation inelastic collision with rare gases. Part A: Study of the quadrupole moment of molecules from rotation inelastic scattering cross sections of CsF
[MPIS-19/1979-PT-A] N80-31261

QUALITY CONTROL
Analysis of discrete software reliability models
[AD-A086334] N80-30766

QUANTUM CHROMODYNAMICS
Research program in elementary particle theory
[COO-3533-161] N80-31170

QUANTUM STATISTICS
Zero-point energy of confined fermions
[DOE/ER-01545/274] N80-31173

QUANTUM THEORY
Quantum mechanical studies of molecular hyperpolarizabilities
[AD-A086662] N80-30733

QUARTZ CRYSTALS
Doubly rotated cut saw devices
[AD-A086734] N80-31245

QUASARS
Observations and interpretation of the permitted emission line spectra of quasi-stellar objects N80-31281
The relation between the galactic compact radio sources and the extragalactic compact radio sources N80-31303

QUENCHING (COOLING)
Splat-quenching of zirconium alloys, with special reference to martensite and precipitate reactions
[AD-A086847] N80-30489
Partial liquefaction of coal by direct hydrogenation
[FE-2044-51] N80-30540

R

RADAR
A new class of pulse compression codes and techniques
[AD-A086787] N80-30595
Phased arrays. Citations from the engineering index data base
[PB80-808058] N80-30638

RADAR CROSS SECTIONS
Analytical study of the bistatic radar cross-section of a prolate spheroid
[AD-A086846] N80-30610
Radar backscatter study of sea ice
[AD-A087032] N80-30618

RADAR DATA
An investigation of satellite-radar correlation functions N80-30996

RADAR ECHOES
Preliminary results of radar environmental mapping
[AD-A086788] N80-30596

RADAR IMAGERY
Degradation of picture quality by speckle in coherent mapping systems N80-30821
Multi-source image analysis --- radar, infrared, and photographic image interpretation
[AD-A086332] N80-30878

RADAR MAPS
Degradation of picture quality by speckle in coherent mapping systems N80-30821

RADAR NAVIGATION
Assessment of the capacity of the Automated Radar Terminal Systems (ARTS IIIA) for the years 1980-1990
[AD-A087243] N80-30621

RADAR SIGNATURES
Radar emitter recognition using pulse repetition interval
[AD-A086968] N80-30620

RADAR TARGETS
Analytical study of the bistatic radar cross-section of a prolate spheroid
[AD-A086846] N80-30610
A maximum likelihood estimator for the extent of radar or sonar targets using high resolution signals
[REPT-3/79] N80-30628

RADAR TRACKING
Comparison of results from the S3-2 satellite and the Chatanika radar in an early morning aurora
[AD-A086861] N80-30983

RADIANCE
Remote sensing research studies
[E80-10117] N80-30823
Design specification for color coded spectral plots
[E80-10245] N80-30828
Classification with spectral-spatial-temporal archetypes
[E80-10251] N80-30834
Study of the atmospheric effects on the radiation detected by the sensor aboard orbiting platforms (ERTS/LANDSAT) --- Ribeirao Preto and Brasilia, Brazil
[E80-10259] N80-30842
The contribution of the diffuse light component to the topographic effect on remotely sensed data
[NASA-TM-80728] N80-30876

RADIANT FLUX DENSITY
Comparison of estimated and observed values for solar radiation at the surface of the African continent
[PB80-180417] N80-31016
Hard X-ray spectrum from a one-fluid laser plasma mode
[NRL-MR-4241] N80-31218
Quasi-simultaneous observations of the BL Lac object MK 501 in X-ray, UV, visible, IR and radio frequencies
[NASA-TM-81985] N80-31285

RADIANT HEATING
Solar passive systems for buildings
[NP-24377] N80-30947

RADIATION ABSORPTION
A search for advanced fields in electro-magnetic radiation N80-30580
Critically evaluated data on optical and transport properties of solids refractive index and absorption coefficient of selected optical materials
[AD-A086658] N80-31199

RADIATION DAMAGE
Evaluation of radiation effects in the MA328 CCD image sensor
[SIRA-6/5309/00] N80-30662
Integrated circuit reliability. Citations from the NTIS data base
[PB80-811128] N80-30666

RADIATION DETECTORS
Analytical techniques for aromatic components in aircraft
[AD-A086343] N80-30536
Absolute calibration of a prompt gamma ray detector for intense bursts of protons
[AD-A086726] N80-31178

RADIATION DISTRIBUTION
Phased arrays. Citations from the NTIS data base
[PB80-808041] N80-30637
Phased arrays. Citations from the engineering index data base
[PB80-808058] N80-30638

RADIATION DOSAGE
Radiation dose in satellites at 1111 kilometers with an inclination of 63 deg
[AD-A086779] N80-30358
Evaluation of uncertainties in selected environmental dispersion needs --- radiation dosage
[CONF-791103-108] N80-30960
RADIATION EFFECTS
Laser protective eyewear program at the Los Alamos Scientific Laboratory
[LA-UR-80-1038] N80-31049
RADIATION PRESSURE
BIRAMIS payload study, volume 1 --- satellite measurements of the Earth's energy budget
[ONERA-RT-4/3373-SYP-VOL-1] N80-30379
BIRAMIS payload study. Volume 3: The accelerometer super-CACTUS
[ONERA-RT-5/3373-SY-VOL-3] N80-30380
RADIATION PROTECTION
European Scientific Notes. Volume 34, No. 6
[AD-A086806] N80-31304
RADIATION SHIELDING
High energy X-ray study
[AD-A086279] N80-30311
Radiation dose in satellites at 1111 kilometers with an inclination of 63 deg
[AD-A086779] N80-30358
RADIATIVE HEAT TRANSFER
Precipitation estimations from satellite measurements of heat radiation at 19.35 and 37 GHz
[MITT-26] N80-31008
How to homogenize a nonlinear diffusion equation E.G. Stefans problem
[AD-A086379] N80-31110
RADIATIVE LIFETIME
Studies of laser selective excitation of atoms
[AD-A086497] N80-30734
RADIATIVE TRANSFER
Study of the atmospheric effects on the radiation detected by the sensor aboard orbiting platforms (ERTS/LANDSAT) --- Ribeirao Preto and Brasilia, Brazil
[E80-10259] N80-30842
RADIO ALTIMETERS
Calibration validation for the GEOS-3 altimeter
[NASA-TM-80710] N80-30377
RADIO DIRECTION FINDERS
Power line carrier radiation and the low-frequency aeronautical radio compass
[AD-A087126] N80-30293
RADIO FREQUENCIES
Radio receiver, spurious response. Test operations procedure
[AD-A086463] N80-30602
RADIO FREQUENCY INTERFERENCE
Power line carrier radiation and the low-frequency aeronautical radio compass
[AD-A087126] N80-30293
Use of K sub A-band for radio metric determinations N80-30333
Survey of potential radio frequency interference sources
[AD-A086785] N80-30593
Radio receiver, spurious response. Test operations procedure
[AD-A086463] N80-30602
Adaptive time delay circuitry for interference cancellation systems
[AD-A086326] N80-30605
Study of interferences in satellite communication systems. Volume 3: Study report
[ESS/CCG-66-VOL-3] N80-30635
Study of interferences in satellite communication systems. Volume 4: Executive summary
[ESS/CCG-67-VOL-4] N80-30636
RADIO INTERFEROMETERS
The Tidbinbilla interferometer N80-30321
Digital recording acquisition subsystem for radio interferometry applications implementation plan N80-30322
RADIO RECEIVERS
Radio receiver, spurious response. Test operations procedure
[AD-A086463] N80-30602
RADIO SOURCES (ASTRONOMY)
The telecommunications and data acquisition report
[NASA-CR-163431] N80-30319
Accurate radio positions with the Tidbinbilla interferometer N80-30320
The Tidbinbilla interferometer N80-30321
RADIO SPECTRA
UHF task force: Executive overview and summary
[PB80-177280] N80-30641
RADIO TRANSMISSION
Bounds on the utilization of aloha-like multiple-access broadcast channels
[AD-A086655] N80-30607
A conflict resolution algorithm for noisy multiaccess channels
[AD-A086767] N80-30608
A predictor model for SHF and EHF MILSATCOM system availabilities in the presence of rain
[AD-A086714] N80-30609
RADIOACTIVE ISOTOPES
Thermoluminescence studies of the thermal and radiation histories of chrondritic meteorites N80-31292
RADIOACTIVE WASTES
Waste isolation safety assessment program: Task 4: Collection and generation of transport data theoretical and experimental evaluation of waste transport in selected rocks
[LBL-9945] N80-31182
Studies to assess the feasibility of storing nuclear waste in Columbia plateau basalts
[RHO-BWI-SA-19] N80-31183
National Waste Terminal Storage Program: Containment system concepts for transporting type B quantities of transuranic waste
[RFP-2862] N80-31187
Advanced three-dimensional thermal modeling of a baseline spent fuel repository
[UCID-18660] N80-31188
RADIOGRAPHY
X-ray examination of lapped electrical insulation
[BNL-27456] N80-30659
RAIN
A predictor model for SHF and EHF MILSATCOM system availabilities in the presence of rain
[AD-A086714] N80-30609
Florida water resources, Executive summary
[E80-10247] N80-30830
An investigation of satellite-radar correlation functions N80-30996
RAIN GAGES
An investigation of satellite-radar correlation functions N80-30996
RAINMAKING
Cloud seeding. Citations from the NTIS data base --- effects on irrigated farming
[PB80-811037] N80-31017
RAMAN SPECTRA
Research investigation directed toward extending the useful range of the electromagnetic spectrum
[AD-A087034] N80-30617
Optically pumped far infrared molecular lasers
[AD-A086495] N80-30728
Laser physics and laser techniques
[AD-A087245] N80-30742
Raman scattering by a molecule adsorbed at the surface of a thin metallic film N80-31235
RAMAN SPECTROSCOPY
Technical research activities for 1978 --- chemistry, hydrothermodynamics, information theory, raman spectroscopy, and composite materials and structures N80-30451
RAMJET MISSILES
Optimized propulsion/guidance analysis of ramjet powered vehicles N80-30420
Application of an advanced trajectory optimization method to ramjet propelled missiles N80-30421
RANDOM ACCESS MEMORY
Random access memomy, volume 1
[ESS/SS-935-VOL-1] N80-31062
Random access memory, volume 2
[ESS/SS-935-VOL-2] N80-31063
RANDOM NUMBERS
Random process generation
[AD-A086758] N80-31054
RANDOM PROCESSES
Random process generation
[AD-A086758] N80-31054
RANDOM SAMPLING
Probability sampling to measure pollution from rural land runoff
[PB80-175946] N80-30883
RANDOM VIBRATION
Commonality of earthquake and wind analysis
[PB80-178312] N80-30575
RANGE (EXTREMES)
Mitigation of noise impact via operational changes
[CERL-TR-N-76] N80-31156
MHD plasma channel response to propagating ion beams
[AD-A087214] N80-31211
RANGELANDS
Remote sensing of wildland resources: A state-of-the-art review
[PB80-184609] N80-30882
RANKINE CYCLE
Use of organic working fluids in Rankine engines
[DOE/CS-30202/T1] N80-30917
RARE GASES
Cross sections for ionization of rare gas excimers by electron impact and atomic and molecular processes in excimer laser
[AD-A086698] N80-30732
Study of the anisotropic potential of KCl and CsCl in a rotation inelastic collision with rare gases. Part A: Study of the quadrupole moment of molecules from rotation inelastic scattering cross sections of CsF
[MPIS-19/1979-PT-A] N80-31261
RAREFIED GASES
Gas channel formation studies including real-air thermodynamic properties
[AD-A086999] N80-31212
RATES (PER TIME)
Precipitation estimations from satellite measurements of heat radiation at 19.35 and 37 GHz
[MITT-26] N80-31008
RATIONAL FUNCTIONS
Some comments on the rational solutions of the Zakharov-Schabat equations N80-31128
RAWINSONDES
Project PHOENIX. The September 1978 field operation
[PB80-180433] N80-31022
RAY TRACING
Pattern analysis of a horn antenna in the presence of obstacles
[AD-A086426] N80-30590
RAYLEIGH NUMBER
Numerical analysis of natural convection in two-dimensional square and circular containers in low gravity
[NASA-CR-163487] N80-30686
RAYLEIGH SCATTERING
Applications of Rayleigh scattering to turbulent flows with heat transfer and combustion
[AD-A086660] N80-30689
RAYLEIGH WAVES
A 35 GHz radar to measure particles in Rayleigh fields
[TUM-RT-KB-78/4] N80-30623
RAYLEIGH-RITZ METHOD
RITZ 2 software: Dynamic longitudinal analysis using a variational method for slender bodies of revolution containing liquids
[CNES-NT-91] N80-30361
REACTION KINETICS
Pyrolysis and oxidation kinetic mechanisms for propane N80-30456
Chemiluminescent reactions of selenium and tellerium with fluorine
[AD-A087202] N80-30464
Devolatilization kinetics and elemental release in the pyrolysis of pulverized coal N80-30533
Simulations of gas phase detonation: Introduction of an induction parameter model
[AD-A087007] N80-30537
Alloy catalysts with monolith supports for methanation of coal-derived gases
[FE-2729-8] N80-30541
R2D2: A FORTRAN program for two-dimensional chemically reacting, hyperthermal, internal flows. Volume 2: User guide
[AD-A086762] N80-30695
Analysis of the copper vapor laser and development of a general laser plasma model N80-30725
Calculation of the energetics and collision dynamics of electronic transition lasers
[AD-A086657] N80-30731
Energy transfer and optical spectroscopy of diatomic molecules in chemically reacting systems
[AD-A086829] N80-31165

Reactions and relaxation of vibrationally excited hydrogen
[AD-A086976] N80-31168

REACTION TIME
An investigation of the dual task performance relationship to hemispheric specialization
[AD-A086808] N80-31042

REACTION WHEELS
Study of OTS 2: Inflight behavior nutation interaction with momentum wheel
[REPT-30/1357] N80-30364

REACTOR DESIGN
Advanced coal gasification system for electric power generation
[FE-1514-97] N80-30548
Molten salt coal gasification process development unit
[SAN-1429-52] N80-30554
Thermionic energy conversion. Citations from the NTIS data base
[PB80-810906] N80-30953
Magnetohydrodynamic generators in power generation. Citations from the NTIS data base
[PB80-810856] N80-30954
Large aspect ratio Tokamak study
[CONF-791102-156] N80-31213

REACTOR MATERIALS
Materials technology for coal-conversion processes
[ANL-80-12] N80-30551

REACTOR TECHNOLOGY
Studies of continuous chromatographic reactors
N80-30457
Assessment of the US Mirror Fusion program. Report of the 1980 Mirror Senior Review Panel
[DOE/ER-0057] N80-31214

REAL TIME OPERATION
Concerning the feasibility of a real time SAR digital processor for VOIR low resolution imaging modes
N80-30335

RECEIVERS
Model LS-2X laser source detector test system
[AD-A086540] N80-30739

RECIRCULATIVE FLUID FLOW
Computer analysis of the base-flow region of a rocket exhaust N80-30431

RECOVERABLE SPACECRAFT
SPS salvage and disposal alternatives
[NASA-CR-161548] N80-30898

RECREATION
Monitoring the use of riverways with aerial photography: The development, testing, and evaluation of a computer assisted methodology
[AD-A086471] N80-30877

RECTANGLES
Laminar natural convection along vertical corners and rectangular ducts N80-30675

RECTANGULAR GUIDES
Study and development of a slotted waveguide element in an antenna array --- for a synthetic aperture radar
[ESA-CR(P)-1286] N80-30626

RECTANGULAR WINGS
Study of an edge vortex by means of ultrasound in a close field behind a rectangular wing in a wind tunnel
[MPIS-11/1979] N80-30282

RECTENNAS
Solar power satellite offshore rectenna study
[NASA-CR-161543] N80-30891

RECURSIVE FUNCTIONS
A non-recursive incomplete Cholesky decomposition method for the solution of linear equations with a sparse matrix
[AD-A087005] N80-31117

RED SHIFT
A report on the gravitational redshift test for non-metric theories of gravitation
[NASA-CR-163496] N80-30978

REDUCED GRAVITY
LeRC reduced gravity fluid management technology program N80-30383

REDUCTION (CHEMISTRY)
Aqueous trifluoromethanesulfonic acid fuel cells
[AD-A086579] N80-30905

REENTRY GUIDANCE
STS-1 low-speed ground navigation console procedures
[NASA-TM-81134] N80-30370

REENTRY SHIELDING
A computer program for transient and axisymmetric ablation, conduction and radiation
[SNIAS-792-422-120] N80-30705

REFLECTANCE
Light reflectance, transmittance, and utilization within a vegetative canopy --- Texas
[E80-10282] N80-30851

REFLECTING TELESCOPES
Hipparcos payload study, volumes 1 and 2
[REPT-60/890] N80-31286

REFLECTION
Phonon reflection from crystal interfaces and the kapitza problem N80-31238

REFRACTIVITY
Rate measurement in shock waves with the laser-schlieren
[COO-4759-2] N80-30701
Optical turbulence forecasting: A tutorial
[AD-A086863] N80-31005
Critically evaluated data on optical and transport properties of solids refractive index and absorption coefficient of selected optical materials
[AD-A086658] N80-31199

REFRACTORY MATERIALS
Fracture studies of high temperature ceramics
[AD-A086653] N80-30524
Materials technology for coal-conversion processes
[ANL-80-12] N80-30551
Development of high temperature turbine subsystem technology to a technology readiness status, phase 2
[FE-1806-79] N80-30754

REGRESSION ANALYSIS
Differentially weighting linear models of behavior: An empirical comparison of six methods
[AD-A086876] N80-31043

REINFORCEMENT (STRUCTURES)
Simple and complex models for nonlinear seismic response of reinforced concrete structures
[PB80-182413] N80-30576
Design and construction of large-panel concrete structures. Report 6: Design methodology
[PB80-189137] N80-30577

REINFORCING FIBERS
A fundamental study of a new fabrication technique for fiber reinforced aluminum matrix composites
[AD-A086282] N80-30443
Comparison of quasi-isotropic fiber reinforced composite laminates --- candidate materials for flywheels
[UCRL-15225] N80-30450
Effect of applied stress, thermal environment and water in epoxy resins
[AD-A086200] N80-30517

RELATIVISTIC EFFECTS
Torques on a nearly rigid body in a relativistic gravitational field
[NASA-TM-78295] N80-31289

RELATIVISTIC ELECTRON BEAMS
Resonant interaction between an active molecular medium and a free electron laser
[AD-A087056] N80-30743
Experiments on the junction of relativistic electron beams into preformed channels in the atmosphere: A feasibility study
[AD-A086732] N80-30982

RELATIVISTIC PARTICLES
High power submillimeter and infrared radiation from intense relativistic electron beams
[AD-A086688] N80-30737

RELATIVISTIC THEORY
Symmetry mappings and conservation laws in relativistic fluids N80-30681

RELATIVITY
Experiments on the junction of relativistic electron beams into preformed channels in the atmosphere: A feasibility study
[AD-A086732] N80-30982

RELAXATION TIME
Laser physics and laser techniques
[AD-A087245] N80-30742

RELIABILITY
Reliability and maintainability improvement program for the AV-8 A/TAV-8A harrier head-up display set. Volume 2: Modifications to display set control, C10626/AV9-30(V)
[AD-A085310] N80-30307
Phased arrays. Citations from the NTIS data base
[PB80-808041] N80-30637
Some topics in reliability theory N80-30764
Orientation of measurement sensors for optimum end-of-life performance
[AD-A086260] N80-30767
Reliability of software generated by language processors
[SESA-P35532] N80-31084

RELIABILITY ENGINEERING
Nonoperating failure rates for avionics study
[AD-A087048] N80-30309
Design and development of Stirling engines for stationary power applications in the 500 to 3000 hp range. Subtask 1A report: State-of-the-art conceptual design
[DOE/ET-15209-T1] N80-30755
Imperfect repair
[AD-A086845] N80-30765
Real-world properties in the requirements for embedded systems
[AD-A086867] N80-31058

REMOTE SENSORS
Instrumentation for detecting hazardous materials
[AD-A086467] N80-30462
Remote sensing of wildland resources: A state-of-the-art review
[PB80-184609] N80-30882
Remote sensing of the ocean: Physical, chemical, and geologic properties. Citations from the NTIS data base
[PB80-811235] N80-30884
Remote sensing of the ocean: Dynamics. Citations from the NTIS data base
[PB80-811243] N80-30885
Remote monitoring of gaseous pollutants by differential absorption laser techniques
[PB80-179351] N80-30968

REPORT GENERATORS
HLYWD: A program for post-processing data files to generate selected plots or time lapse graphics
[ORNL/CSD/TM-109] N80-31083

REQUIREMENTS
STS-2 sail non-avionics subsystems math model requirements
[JSC-16748] N80-30369

RESEARCH
Technical research activities for 1978 --- chemistry, hydrothermodynamics, information theory, raman spectroscopy, and composite materials and structures N80-30451

RESEARCH AND DEVELOPMENT
Research in building construction and materials for 1978
[CSTB-192] N80-30571
Small Wind Turbine Systems 1979: A Workshop on R and D Requirements and Utility Interface/Institutional Issues. Volume 1: R and D requirements
[RFP-3014-VOL-1] N80-30943
Recent developments in aerospace technology
[SNIAS-792-502-101] N80-31276

RESEARCH MANAGEMENT
Review of European powder metallurgy of superalloys
[AD-A086682] N80-30488

RESERVES
Supply and use patterns for the platinum-group metals
[PB80-179088] N80-30514

RESONANCE
Resonances and collective effects in photoemission N80-31230

RESONANT FREQUENCIES
Oscillations of a liquid with a free surface in a wedge shaped container
[HSBW-FB-LRT-WE-9-4-79] N80-30708
Atlas of the infrared frequencies of ozone, part 1
N80-30990
Atlas of the infrared frequencies of ozone, part 2
N80-30991

RESPIRATION
An investigation of cardiac threshold variability relative to stimulus shape and respiratory cycle
N80-31032

RESPONSES
Measurement of optical fiber bandwidth in the time domain
[PB80-177421] N80-31204

RETROFITTING
Evaluation of the Ram-Jet device, a PCV air bleed
[PB80-170657] N80-30964
REVERSE FIELD PINCH
Nonlinear evolution of resistive interchange modes in reversed field pinches
[UCRL-84301] N80-31215
Adiabatic compression of field-reversed plasma
[UCID-18614] N80-31220
REYNOLDS NUMBER
A comparison among various theories for turbulent, reacting, planar mixing layers N80-30676
REYNOLDS STRESS
Calculations of free turbulent shear flow with a three equation turbulence model by J. C. Rotta
[ESA-TT-525] N80-30712
RHEOLOGY
Bubble dynamics in structural foam processing
N80-30677
RHODIUM
Supply and use patterns for the platinum-group metals
[PB80-179088] N80-30514
RIBBONS
Semiconductor laser technology: Stripe structure
[LCR-34-078/R/G5] N80-30746
RICCATI EQUATION
A singular perturbations approach to reduced-order modeling and decoupling for large scale linear systems
[AD-A087050] N80-31118
RICE
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
RIGID STRUCTURES
User's guide for a computer simulation program for multi-rigid-body systems
[ESA-STM-216] N80-31085
Torques on a nearly rigid body in a relativistic gravitational field
[NASA-TM-78295] N80-31289
RIGIDITY
Study of the interactions between friction, wear and system rigidity
[DOE/ER-10471/1] N80-30818
RISK
Earthquake risk and damage functions: An integrated preparedness and planning model applied to New Madrid
[PB80-170368] N80-30994
RIVER BASINS
Florida water resources
[E80-10246] N80-30829
ROADS
Pavement evaluation and overlay design using vibratory nondestructive testing and layered elastic theory. Volume 1: Development procedure
[AD-A087186] N80-30808
ROCKET ENGINE CASES
IUS motor case development N80-30402
Qualification of Minuteman stage 3 motor for spin stabilized perigee stages N80-30403
ROCKET ENGINE DESIGN
The 1980 JANNAF propulsion Meeting, volume 5
[AD-A087063] N80-30381
Analytical investigation of two hydrogen-oxygen rocket engine systems for low-thrust application --- for orbital transfer N80-30382
LEO-to-GEO low thrust chemical propulsion
N80-30384
Advanced expander cycle engine for manned orbit transfer vehicles N80-30385
Cryogenic LOX/H2 engine candidates for orbital transfer missions. Part 1: Expander cycle optimization N80-30387
Dual throat engine design for a SSTO launch vehicle N80-30388
Fluorine-Hydrazine Propulsion Technology update
N80-30391
US Air Force programs in electric propulsion
N80-30396
Pulsed plasma propulsion technology N80-30398
HARM rocket motor development N80-30415
ROCKET ENGINES
Development of a reduced smoke rocket motor for the AIM-9B, E, J, P Sidewinder missile N80-30412
ROCKET EXHAUST
JANNAF 11th Plume Technology Meeting, volume 2
[AD-A079647] N80-30422
Plume impingement pressure measurements taken during sea level firings of a Tomahawk motor
N80-30424
A Monte Carlo simulation of solar induced fluorescent scattering in optically thick high altitude plumes N80-30426
A nozzle boundary layer model including the subsonic sublayer usable for determining boundary layer effects on plume flowfields N80-30428
Critical requirements for mid-altitude IR predictions
N80-30429
Measuring and modeling rocket-plume Doppler spectral asymmetry in CW downlink transmissions
N80-30430
Computer analysis of the base-flow region of a rocket exhaust N80-30431
ROCKET VEHICLES
Wind-tunnel and flight tests of ablators and insulators for rocket vehicles
[SAND-80-05230] N80-30446
Auroral electrodynamics I. 1: Preliminary electron density profile. 2: Vehicle potential changes during an active beam experiment
[AD-A086728] N80-30989
ROCKS
Waste isolation safety assessment program: Task 4: Collection and generation of transport data theoretical and experimental evaluation of waste transport in selected rocks
[LBL-9945] N80-31182
ROCKY MOUNTAINS (NORTH AMERICA)
Grizzly bear habitat analysis. Section 3: LANDSAT-1 multispectral imagery and computer analysis of grizzly bear habitat --- Slategoat, Scapegoat and Danaher areas, Montana
[NASA-CR-163382] N80-30867
ROLL FORMING
The influence of prior warm rolling on fracture toughness of heat treated AISI 52100 steel
[AD-A086821] N80-30492
ROOTS OF EQUATIONS
Application of a root locus technique to multiloop velocity output feedback vibration suppression controllers N80-30784
ROTARY STABILITY
Stability and dynamic response to gravitational forces of the flapping and lead-lag hinges on a rigid rotor blade with the leading-edge angle of attack and flapping being coupled
[ISD-244] N80-30949
ROTARY WINGS
Design, development, and flight demonstration of the loads and stability characteristics of a bearingless main rotor
[AD-A086754] N80-30299
ROTATING LIQUIDS
RITZ 2 software: Dynamic longitudinal analysis using a variational method for slender bodies of revolution containing liquids
[CNES-NT-91] N80-30361
ROTATING PLASMAS
Plasma rotation in reversed-field theta pinches
[MSNW-80-1144-1] N80-31217
ROTATION
Torques on a nearly rigid body in a relativistic gravitational field
[NASA-TM-78295] N80-31289
ROTORS
Research and development of concept leading to an automotive alternator with significantly improved efficiency and weight
[COO-50042-1] N80-30654
Static investigation of rotor blades at rest and under quasi-stationary loading
[ISD-243] N80-30948
ROVING VEHICLES
Design of a dynamic test platform for autonomous robot vision systems
[RPI-TR-MP-69] N80-30352
A high speed telemetry data link for an autonomous roving vehicle
[NASA-CR-163495] N80-30375
Real-time operating system for a multi-laser/multi-detector system
[NASA-CR-163486] N80-30726
An advanced terrain modeler for an autonomous planetary rover
[NASA-CR-163485] N80-30749
A propulsion system for the Mars rover vehicle
[NASA-CR-163494] N80-30750
A propulsion and steering control system for the Mars rover
[NASA-CR-163501] N80-30751
Laser optical appraisal and design of a PRIME/Rover interface
[NASA-CR-163508] N80-31193
RUNWAYS
Pavement evaluation and overlay design using vibratory nondestructive testing and layered elastic theory. Volume 1: Development procedure
[AD-A087186] N80-30808
RURAL AREAS
Probability sampling to measure pollution from rural land runoff
[PB80-175946] N80-30583

S

S MATRIX THEORY
Fundamentals of a theory for conformal antennas
[REPT-2-79] N80-30627
SACRAMENTO VALLEY (CA)
Soil moisture in relation to geologic structure and lithology, northern California
[E80-10298] N80-30865
SAFETY
Safety and health hazard evaluation, general equipment
[AD-A086990] N80-30569
SAFETY FACTORS
Fracture mechanics design of shuttle payload pressure vessels N80-30397
SAFETY MANAGEMENT
Investigation of helicopter wire strike protection concepts
[AD-A086857] N80-30285
SAMPLING
Antithetic variates revisited — computerized simulation problems
[AD-A086114] N80-31131
SANDS
Studies of stability in applied mathematics
[ISBN-91-7222-268-9] N80-31130
SATELLITE CONTROL
Post-launch results of the TIP spacecraft pulsed-plasma microthrusters N80-30416
SATELLITE OBSERVATION
An investigation of satellite-radar correlation functions N80-30996
Environmental satellite imagery June 1979
[PB80-181852] N80-31015
SATELLITE ORBITS
Radiation dose in satellites at 1111 kilometers with an inclination of 63 deg
[AD-A086779] N80-30358
Satellite constellations for worldwide and hemisphere coverage
[AD-A086920] N80-30359
Solar activity prediction of sunspot numbers (verification). Predicted solar radio flux; predicted geomagnetic indices Ap and Kp — space shuttle program: satellite orbital lifetime
[NASA-TM-81139] N80-31297
SATELLITE SOLAR ENERGY CONVERSION
Satellite Power Systems (SPS) concept definition study. Volume 7: System/Subsystem requirements data book
[NASA-CR-3324] N80-30900
Satellite power systems (SPS) concept definition study. Volume 1: Executive summary
[NASA-CR-3317] N80-30901
Climate and energy: A comparative assessment of the Satellite Power System (SPS) and alternative energy technologies
[DOE/ER-0050] N80-30914
SATELLITE SOLAR POWER STATIONS
Solar power satellite offshore rectenna study
[NASA-CR-161543] N80-30891
SPS salvage and disposal alternatives
[NASA-CR-161548] N80-30898

Satellite Power Systems (SPS) concept definition study. Volume 7: System/Subsystem requirements data book
[NASA-CR-3324] N80-30900
Satellite power systems (SPS) concept definition study. Volume 1: Executive summary
[NASA-CR-3317] N80-30901
Comparative assessment of environmental welfare issues associated with the Satellite Power System (SPS) and alternative technologies
[DOE/ER-0055] N80-30915
Comparative analysis of net energy balance for Satellite Power Systems (SPS) and other energy systems
[DOE/ER-0056] N80-30916

SATELLITE-BORNE INSTRUMENTS
Pogo summary report main propulsion test static firings 1-7 for shuttle development flight instrumentation
[NASA-CR-160767] N80-30368
BIRAMIS payload study, volume 1 --- satellite measurements of the Earth's energy budget
[ONERA-RT-4/3373-SYP-VOL-1] N80-30379
BIRAMIS payload study. Volume 3: The accelerometer super-CACTUS
[ONERA-RT-5/3373-SY-VOL-3] N80-30380
LANDSAT-2 and LANDSAT-3 flight evaluation report
[E80-10291] N80-30859
Hipparcos payload study, volumes 1 and 2
[REPT-60/890] N80-31286
Hipparcos. Spacecraft design and development
[ESA-PF-616] N80-31287

SATELLITE-BORNE PHOTOGRAPHY
Shortrange forecasting through extrapolation of satellite imagery patterns. Part 2:. Testing motion vector techniques
[AD-A086862] N80-31003

SATELLITE-TO-SATELLITE TRACKING
Scheduler software for tracking and data relay satellite system loading analysis: User manual and programmer guide
[NASA-TM-78290] N80-31070

SAWTOOTH WAVEFORMS
Doubly rotated cut saw devices
[AD-A086734] N80-31245

SCALARS
Collisional plasma transport: Two dimensional scalar formulation of the initial boundary value problem and quasi one dimensional models
[REPT-79-120] N80-31223

SCALE EFFECT
Experimental study of three-dimensional shock wave turbulent boundary layer interaction: Scaling of sharp and blunt fin-induced flowfields
[AD-A086875] N80-30277

SCANDIUM COMPOUNDS
Electronic band structure and optical properties of the cubic Sc, Y and La hydride systems N80-31236

SCANNERS
Real-time operating system for a multi-laser/multi-detector system
[NASA-CR-163486] N80-30726

SCANNING
Variations in the Nimbus-7 scanning multichannel microwave radiometer cold reference antenna signals and temperatures during two orbital periods
[NASA-TM-81984] N80-30355
Instrument scanning and controlling: Using eye movement data to understand pilot behavior and strategies
[NASA-CR-3306] N80-31039

SCATTERING
The influence of random media on the propagation and depolarization of electromagnetic waves
N80-30579
Isobar production in heavy ion collisions
N80-31161
Theoretical studies of molecular collision processes. 1: Two-potential approach for electron-molecular scattering. 2: Three-dimensional quantum mechanical study on atom-molecule reactive collision with rotationally pre-excited target molecule N80-31163
Crystal defect studies using X-ray diffuse scattering
[CONF-800205-7] N80-31254

SCATTERING AMPLITUDE
On the optimality of axiomatic constraints for pion pion scattering: The case of the lower bounds
[PM/79/16] N80-31175

SCATTERING CROSS SECTIONS
A zero core-contribution model for photodetachment of atomic and molecular negative ions N80-31160
Measurement of the energy dependence of the integral scattering cross section for electronic stimulation in shocks of alkali with mercury, with spectral analysis of light
[MPIS-17/1979] N80-31260

SCHEDULING
Air traffic congestion and capacity. Citations from the NTIS data base
[PB80-811052] N80-30294

SCHLIEREN PHOTOGRAPHY
Schlieren and shadowgraph photography. Citations from the NTIS data base
[PB80-809775] N80-30721

SCHROEDINGER EQUATION
On some spectral problems and isospectral evolutions connected with the classical string problem. Part 2: Evolution equation
[PM/79/20-PT-2] N80-31127
Non-adiabatic mass parameters
[LA-UR-80-1020] N80-31263

SCIENCE
Technical research activities for 1978 --- chemistry, hydrothermodynamics, information theory, raman spectroscopy, and composite materials and structures N80-30451

SCIENTIFIC SATELLITES
Comparison of results from the S3-2 satellite and the Chatanika radar in an early morning aurora
[AD-A086861] N80-30983

SCINTILLATION
Spectral analysis of scintillation data taken from an aircraft, part 1
[AD-A086837] N80-30603

SCREWS
Stress concentrations in screw threads
[AD-A087218] N80-30809

SEA ICE
Radar backscatter study of sea ice
[AD-A087032] N80-30618
The development of a stepped frequency microwave radiometer and its application to remote sensing of the Earth N80-30822
Correlation of under-ice roughness with satellite and airborne thermal infrared data --- Beaufort Sea and Arctic Ocean pack ice
[AD-A085512] N80-30880

SEA STATES
Remote sensing of the ocean: Dynamics. Citations from the NTIS data base
[PB80-811243] N80-30885
South Atlantic OCS physical oceanography, volume 2 --- monitoring ocean currents and sea states to assess effects of oil and gas activities on the environment
[PB80-181555] N80-31026
South Atlantic OCS physical oceanography, volume 3 --- monitoring ocean currents and sea states to assess the environment effects of oil and gas activities
[PB80-181563] N80-31027

SEALERS
Chem-braze abradable seal attachment
[AD-A086872] N80-30525

SEAS
Heat capacity mapping mission project HCM-051 --- East Australian Current and the Tasman Front
[E80-10278] N80-30850

SEASAT SATELLITES
Survey of potential radio frequency interference sources
[AD-A086785] N80-30593

SECONDARY FLOW
Flow visualization study of secondary flow in a corner
[AD-A082634] N80-30688

SEDIMENTARY ROCKS
Soil moisture in relation to geologic structure and lithology, northern California
[E80-10298] N80-30865

SEDIMENTS
Aerial gamma ray and magnetic survey: Raton Basin project. The Raton and Santa Fe quadrangles of New Mexico
[GJBX-9(80)-VOL-2] N80-30881

SEEBECK EFFECT
Growth and application of cadmium telluride
[AD-A086991] N80-31250

SEISMIC WAVES
Study of seismic wave excitation for two earthquakes in northern Baha, California N80-30977

SEISMOLOGY
Simple and complex models for nonlinear seismic response of reinforced concrete structures
[PB80-182413] N80-30576

SELENIUM COMPOUNDS
Chemiluminescent reactions of selenium and tellerium with fluorine
[AD-A087202] N80-30464

SEMICONDUCTOR DEVICES
Growth and application of cadmium telluride
[AD-A086991] N80-31250

SEMICONDUCTOR LASERS
Semiconductor laser technology: Stripe structure
[LCR-34-078/R/G5] N80-30746

SEMICONDUCTORS (MATERIALS)
Organic metals and semiconductors: The chemistry of polyacetylene, (CH) sub x, and its derivatives
[AD-A086870] N80-30522
Conducting organic polymers: Doped polyacetylene
[AD-A086869] N80-30523
Magnetic soliton defects in polyacetylene
[AD-A086978] N80-30528

SENSITIVITY
Study and evaluation of impulse mass spectrometers for ion analysis in the D and E regions of the ionosphere
[NASA-CR-163490] N80-30979

SEPARATED FLOW
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 1: Formulation and analysis
[NASA-CR-161540] N80-30479
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 2: Software documentation
[NASA-CR-161541] N80-30480
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 3: Operating manual
[NASA-CR-161542] N80-30481
Nonsymmetric split of flow during cocurrent upflow at air-water mixtures through symmetric bifurcations
N80-30678

SERIES (MATHEMATICS)
Lumped nonlinear system analysis with Volterra series
[AD-A086428] N80-31107

SERVOAMPLIFIERS
High torque-to-inertial servo system for stabilizing sensor systems. Candidate systems include missile guidance, surveillance, and tracking
[AD-A086705] N80-30357

SERVOMECHANISMS
A propulsion and steering control system for the Mars rover
[NASA-CR-163501] N80-30751

SHADOWGRAPH PHOTOGRAPHY
Schlieren and shadowgraph photography. Citations from the NTIS data base
[PB80-809775] N80-30721

SHAFTS (MACHINE ELEMENTS)
The SHAFT book: Design charts for torsional properties of noncircular SHAFTS: User's manual
[AD-A086496] N80-30752

SHALLOW SHELLS
Nonlinear creep buckling analysis of initially imperfect shallow spherical shells
[AD-A087017] N80-30814

SHAPES
Stability of boundary-layer flows over curved walls
N80-30658
Quisp: A computer processor for the design and display of quadric-surface bodies N80-31069

SHARP LEADING EDGES
Experimental study of three-dimensional shock wave turbulent boundary layer interaction: Scaling of sharp and blunt fin-induced flowfields
[AD-A086875] N80-30277

SHEAR FLOW
The shear viscosity for the soft sphere liquid via discrete cell hydrodynamics N80-30669
Non-Newtonian migration of a deformable drop in shearing flows N80-30680
Calculations of free turbulent shear flow with a three equation turbulence model by J. C. Rotta
[ESA-TT-525] N80-30712

SHEAR STRESS
Deformation of an alloy with a lamellar microstructure: Experimental
[AD-A087100] N80-30500
The stability of a compressible free shear layer
[AD-A086664] N80-30691
The SHAFT book: Design charts for torsional properties of noncircular SHAFTS: User's manual
[AD-A086498] N80-30752
Laminated beams of isotropic or orthotropic materials subjected to temperature change
[AD-A087230] N80-30806
SHIPS
Communications requirements for a Loran-C position monitoring system for VTS Valdez, Alaska
[AD-A087199] N80-30292
The magnetic characteristics of tape wrapped cylindrical ferromagnetic laminations for frequencies below 50 kHz
[AD-A086333] N80-30592
SHOCK LOADS
Shock temperatures of materials: Experiments and applications to the high pressure equation of state
N80-30453
SHOCK WAVE INTERACTION
Rate measurement in shock waves with the laser-schlieren
[COO-4759-2] N80-30701
SHOCK WAVE PROPAGATION
A theoretical investigation of the shock location on an axisymmetric body and on a two dimensional airfoil in transonic flows affected by axial pressure gradients and shifts in pressure level
[MBB-FE-124/S/PUB/9] N80-30283
SHOCK WAVES
Experimental study of three-dimensional shock wave turbulent boundary layer interaction: Scaling of sharp and blunt fin-induced flowfields
[AD-A086875] N80-30277
On the initiation of detonations in a one-dimensional system
[AD-A086713] N80-30693
Rate measurement in shock waves with the laser-schlieren
[COO-4759-2] N80-30701
Gas channel formation studies including real-air thermodynamic properties
[AD-A086999] N80-31212
SHORT CIRCUITS
Computer aided automated hybrid substrate probe testing development
[AD-A087124] N80-30768
SICILY
Study of geological structure of Sicily and other Italian areas --- Gulf of Orosei, Eastern Sardinia
[E80-10299] N80-30866
SIDELOBES
Edge effects in low sidelobe array antennas
N80-30582
A new class of pulse compression codes and techniques
[AD-A086787] N80-30595
SIDEWINDER MISSILES
Development of a reduced smoke rocket motor for the AIM-9B, E, J, P Sidewinder missile N80-30412
SIERRA NEVADA MOUNTAINS (CA)
Investigation of the application of HCMM thermal data to snow hydrology --- Salt-Verde watershed, Arizona and the Sierra Nevada Mountains, California
[E80-10297] N80-30864
The Sierra cooperative pilot project. Precipitation management research in the Sierra Nevada
[PB80-182389] N80-31023
SIGNAL DETECTION
Superconductive devices for millimeter wave detection mixing and amplification
[AD-A086443] N80-30646
SIGNAL DISTORTION
Experimental validation of the antenna pattern distortion computer program: DISTORT (UHF antennas)
[AD-A086330] N80-30601
Cochlear microphonic evidence for mechanical propagation of distortion products (f2-f1) and (2f1-f2)
N80-31153
SIGNAL FADING
Multiple scattering in clouds
[AD-A087043] N80-30616
SIGNAL GENERATORS
Wideband beamformer to control a 38 element sonar antenna
[REPT-5/79] N80-30629
SIGNAL MIXING
Superconductive devices for millimeter wave detection mixing and amplification
[AD-A086443] N80-30646
SIGNAL PROCESSING
Input signal conditioner for the multimegasymbol telemetry system feasibility model N80-30332
On the extrapolation of band-limited signals
N80-30585
A new class of pulse compression codes and techniques
[AD-A086787] N80-30595
Radar emitter recognition using pulse repetition interval
[AD-A086968] N80-30620
SIGNAL TO NOISE RATIOS
Signal to noise ratio calculation for fiber optics links N80-30331
Radio receiver, spurious response. Test operations procedure
[AD-A086463] N80-30602
Measuring apparent target length using target resolving signals
[REPT-6/79] N80-30630
SIGNAL TRANSMISSION
Variations in the Nimbus-7 scanning multichannel microwave radiometer cold reference antenna signals and temperatures during two orbital periods
[NASA-TM-81984] N80-30355
Plume interference with space shuttle range safety signals N80-30423
Measuring and modeling rocket-plume Doppler spectral asymmetry in CW downlink transmissions
N80-30430
SIGNATURE ANALYSIS
As-built design specification for field statistics (FIELDSTAT)
[E80-10252] N80-30835
Maximal analysis labeling procedure (preliminary)
[E80-10294] N80-30862
An exploratory study to develop a cluster-based area estimation procedure --- Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863
Grizzly bear habitat analysis. Section 3: LANDSAT-1 multispectral imagery and computer analysis of grizzly bear habitat --- Slategoat, Scapegoat and Danaher areas, Montana
[NASA-CR-163382] N80-30867
SILICATES
Properties of a solar alumina-borosilicate sheet glass
[SERI/TP-334-565] N80-30530
SILICON
Perfecting of nuclear microanalysis of deuterium by means of ion implantation. Application to the study of the hydrogeneration of amorphous silicon through ionic implantation N80-30468
Sequential purification and crystal growth for the production of low cost silicon substrates
[DOE/SERI-8119-3/1] N80-31255
SILICON ALLOYS
Modified 430X steels for high toughness
[AD-A086453] N80-30496
SILICON CARBIDES
Structure and deformation characteristics of rheocast metals
[AD-A086469] N80-30442
Dependence of silicon carbide coating properties on deposition parameters: Preliminary report --- coatings for high temperature gas cooled reactors
[ORNL/TM-7209] N80-30448
Fracture studies of high temperature ceramics
[AD-A086653] N80-30524
SILICON COMPOUNDS
Development of alternate silicone potting compounds. Volume 6: Development of secondary alternates for Dow Corning's Aerospace Sealant, DC93-119
[UCRL-52434-VOL-6] N80-30445
SILICON JUNCTIONS
Second breakdown susceptibility of silicon-on-sapphire diodes having systematically different geometries
[AD-A086345] N80-30548
SILICON NITRIDES
Fracture studies of high temperature ceramics
[AD-A086653] N80-30524
SILICON OXIDES
Solar photovoltaic module degradation from electro-migration
[COO-4094-64] N80-30910
SILICONES
Development of alternate silicone potting compounds. Volume 6: Development of secondary alternates for Dow Corning's Aerospace Sealant, DC93-119
[UCRL-52434-VOL-6] N80-30445
SILVER ISOTOPES
Silver isotopic anomalies in iron meteorites: Cosmic-ray production and other possible sources
[LA-UR-80-1199] N80-31296
SIMILITUDE LAW
Similitude modeling of natural convection heat transfer through an aperture in passive solar heated buildings N80-30670
SIMULATION
Interaction between a parallel-plate EMP simulator and a cylindrical test object
[AD-A086815] N80-30597
Excitation of the parallel-plate section of a bounded wave EMP simulator by a conical transmission line
[AD-A086812] N80-30600
SIMULATORS
An advanced terrain modeler for an autonomous planetary rover
[NASA-CR-163485] N80-30749
SINGLE CRYSTALS
Microstructural aspects of impact of erosion in LiF, NaCl, Kcl and CaF2 single crystals N80-31232
Adlayer effects on the surface reactivity of W(100) and Mo(100) single crystals N80-31234
Epitaxial growth of single crystal films
[NASA-CR-161544] N80-31242
Impurity studies in the single crystal cadmium sulfide
[AD-A086741] N80-31248
Growth and application of cadmium telluride
[AD-A086991] N80-31250
SINGLE STAGE TO ORBIT VEHICLES
Dual throat engine design for a SSTO launch vehicle N80-30388
SINTERING
Processes to increase utilization of power solid wastes
[ISM-245] N80-30929
SITE SELECTION
Siting handbook for small wind energy conversion systems
[PNL-2521-REV-1] N80-30941
Scientific and technical needs for hazardous waste management
[PB80-177173] N80-30971
SIZE DETERMINATION
Sizing distributed systems: Overview and recommendations
[PB80-184377] N80-31088
SKYLARK ROCKET VEHICLE
Sounding rocket program aeronomy: Complex payload B2. Report of system design, integration, testing and flight
[ESA-TT-589] N80-30363
SLEEVES
Vacuum tests on a rotary/linear sleeve bearing
[ESA-ESTL-42] N80-30761
SLENDER BODIES
RITZ 2 software: Dynamic longitudinal analysis using a variational method for slender bodies of revolution containing liquids
[CNES-NT-91] N80-30361
SLIDING FRICTION
Studies of microscopic aspects of wear processes in metals
[AD-A086760] N80-30490
SLOT ANTENNAS
Study and development of a slotted waveguide element in an antenna array --- for a synthetic aperture radar
[ESA-CR(P)-1288] N80-30626
Study and development of printed circuit elements for synthetic aperture radar array antennas
[ESA-CR(P)-1303] N80-30661
Satellite power system (SPS) magnetron tube assessment study
[NASA-CR-161547] N80-30697

SLURRIES
Thermophysical properties of coal liquids
[BMI-2053] N80-30546
Thermophysical properties of coal liquids
[BMI-2043] N80-30557
Performance of a diesel engine operating on raw coal-diesel fuel and solvent refined coal-diesel fuel slurries
[CONS-3288-T6] N80-30758
SMALL PERTURBATION FLOW
On the number of periodic trajectories for a Hamiltonian flow and a convex energy surface
[AD-A088367] N80-31102
SMOG
Modeling of simulated photochemical smog with kinetic mechanisms. Volume 2 CHEMK: A computer modeling scheme for chemical kinetics
[PB80-181064] N80-30970
SNOW COVER
Investigation of the application of HCMM thermal data to snow hydrology — Salt-Verde watershed, Arizona and the Sierra Nevada Mountains, California
[E80-10297] N80-30864
SODIUM COMPOUNDS
Synthesis of CMP beginning with sodium borohydride N80-30407
SOFTENING
On the characterization of strain-hardening in plasticity
[AD-A086551] N80-30800
SOIL MOISTURE
Thermodynamic relations between selected parameters describing unsaturated flow
[DOE/DP-01253/18] N80-30704
Florida water resources
[E80-10246] N80-30829
Use of soil moisture information in yield models
[E80-10302] N80-30869
SOIL SCIENCE
Remote sensing research studies
[E80-10117] N80-30823
SOLAR ACTIVITY
Study of elf propagation anomalies as related to improved knowledge of electron density profiles produced by energetic particle precipitation
[AD-A087255] N80-30819
SOLAR ARRAYS
Study of a mathematical model of a flexible solar array sub-panel assembly (VELSA 2)
[REPT-10.2-93/NT] N80-30366
Solar energy system performance evaluation report for Solaron-Duffield, Duffield, Virginia
[NASA-CR-161507] N80-30892
Satellite Power Systems (SPS) concept definition study. Volume 7: System/Subsystem requirements data book
[NASA-CR-3324] N80-30900
A multidirectional photodiode array for the measurement of solar radiances
[PB80-181753] N80-30995
SOLAR BLANKETS
Study of a mathematical model of a flexible solar array sub-panel assembly (VELSA 2)
[REPT-10.2-93/NT] N80-30366
SOLAR CELLS
Controlled cadmium telluride thin films for solar cell applications (emerging materials systems for solar cell applications)
[DOE/ET-23023/T3] N80-30921
Photovoltaic systems and applications perspective
[SAND-80-0926C] N80-30923
SOLAR COLLECTORS
Properties of a solar alumina-borosilicate sheet glass
[SERI/TP-334-565] N80-30530
Solar heating and domestic hot water system installed at Kansas City, Fire Stations, Kansas City, Missouri
[NASA-CR-161513] N80-30895
Solar energy system performance evaluation report for IBM System 3, Glendo, Wyoming
[NASA-CR-161520] N80-30896
Pacific Missile Test Center energy projects. Summary of projects, contributions, and plans
[AD-A086196] N80-30903
Performance estimates for attached sunspace passive solar heated buildings
[LA-UR-80-853] N80-30913
Hybrid photovoltaic/thermal systems with a solar-assisted heat pump
[BNL-27667] N80-30919
SOLAR CORONA
Microcharacterization of interplanetary dust collected in the Earth's stratosphere N80-30976
SOLAR ENERGY
Solar energy system performance evaluation report for Solaron-Duffield, Duffield, Virginia
[NASA-CR-161507] N80-30892
Solar energy system economic evaluation final report for SEMCO-Loxahatchee, Loxahatchee National Wildlife refuge, Palm Beach County, Florida
[NASA-CR-161512] N80-30894
Solar heating and domestic hot water system installed at Kansas City, Fire Stations, Kansas City, Missouri
[NASA-CR-161513] N80-30895
Solar energy system performance evaluation report for IBM System 3, Glendo, Wyoming
[NASA-CR-161520] N80-30896
Solar site test module
[NASA-TM-78291] N80-30899
Comparative analysis of net energy balance for Satellite Power Systems (SPS) and other energy systems
[DOE/ER-0056] N80-30916
Supplementary material on passive solar heating concepts: A compilation of published articles. Presented in conjunction with a series of passive solar heating seminars sponsored by the Solar Energy Technology Transfer program
[PNL-SA-7820] N80-30920
Development of solar driven absorption air conditioners and heat pumps
[LBL-10771] N80-30925
Energy analysis program, FY 1979
[LBL-10320] N80-30942
SOLAR ENERGY CONVERSION
Simultaneous photoproduction of hydrogen and oxygen by photosynthesis — to convert solar energy into stored chemical free energy
[CONF-791072-32] N80-30550
Solar energy system economic evaluation final report for SEMCO-Loxahatchee, Loxahatchee National Wildlife refuge, Palm Beach County, Florida
[NASA-CR-161512] N80-30894
Solar energy system performance evaluation report for IBM System 3, Glendo, Wyoming
[NASA-CR-161520] N80-30896
Utility views on solar thermal central receivers
[SAND-80-8203] N80-30911
Solar assisted heat pump program overview and summary of work at Brookhaven National Laboratory
[BNL-27662] N80-30926
System design, tests results, and economic analysis of a flywheel energy storage and conversion system for photovoltaic applications
[COO-4094-70] N80-30928
SOLAR FLARES
Solar wind flows associated with hot heavy ions
[LA-8344-T] N80-31299
Solar-Geophysical data number 426, February 1980. Supplement: Explanation of data reports
[PB80-186133] N80-31300
SOLAR FLUX
Solar activity prediction of sunspot numbers (verification). Predicted solar radio flux; predicted geomagnetic indices Ap and Kp — space shuttle program: satellite orbital lifetime
[NASA-TM-81139] N80-31297
SOLAR FURNACES
Study on the utilization of solar energy for the operation of Spacelab material science furnaces
[ESA-CR(P)-1301] N80-30348
Study on the utilization of solar energy for the operation of Spacelab material science furnaces
[DS-ERT-21-79] N80-30349
SOLAR GENERATORS
Advanced photovoltaic concentrator cells
[DSE-4042-T30] N80-30946
Solar passive systems for buildings
[NP-24377] N80-30947
SOLAR HEATING
Similitude modeling of natural convection heat transfer through an aperture in passive solar heated buildings N80-30670
Solar thermal energy storage using a paraffin wax phase change material N80-30897
Solar energy system performance evaluation report for IBM System 4 at Clinton, Mississippi
[NASA-CR-161509] N80-30893
Performance estimates for attached sunspace passive solar heated buildings
[LA-UR-80-853] N80-30913
Solar atrium: A hybrid solar heating and cooling system
[DOE/CS-34135/T1] N80-30918
Solar passive systems for buildings
[NP-24377] N80-30947
Regenerative energy sources for the production of low temperature heat: Energy sources, energy types, and energy conversion; results and applications; measures to promote use
[ISBN-3-7041-0038-2] N80-30951
SOLAR HOUSES
Solar energy system performance evaluation report for IBM System 4 at Clinton, Mississippi
[NASA-CR-161509] N80-30893
Solar atrium: A hybrid solar heating and cooling system
[DOE/CS-34135/T1] N80-30918
SOLAR PHYSICS
Solar-geophysical data number 426, February 1980. Part 1: Prompt reports
[PB80-186141] N80-31301
Solar-geophysical data number 426, February 1980. Part 2: Comprehensive reports
[PB80-186158] N80-31302
SOLAR PONDS (HEAT STORAGE)
Solar passive systems for buildings
[NP-24377] N80-30947
SOLAR POWER SATELLITES
Satellite power system (SPS) magnetron tube assessment study
[NASA-CR-161547] N80-30997
SOLAR RADIATION
Variations in the Nimbus-7 scanning multichannel microwave radiometer cold reference antenna signals and temperatures during two orbital periods
[NASA-TM-81984] N80-30355
A Monte Carlo simulation of solar induced fluorescent scattering in optically thick high altitude plumes N80-30426
A multidirectional photodiode array for the measurement of solar radiances
[PB80-181753] N80-30995
Comparison of estimated and observed values for solar radiation at the surface of the African continent
[PB80-180417] N80-31016
SOLAR SPECTRA
New atlas of IR solar spectra
[NASA-CR-163499] N80-31298
SOLAR WIND
Solar wind flows associated with hot heavy ions
[LA-8344-T] N80-31299
SOLAR X-RAYS
Solar-geophysical data number 426, February 1980. Part 2: Comprehensive reports
[PB80-186158] N80-31302
SOLENOID VALVES
Assembly and testing of a catalytic hydrazine gas generator
[VS-0421-011-B] N80-30759
SOLID PHASES
Solar thermal energy storage using a paraffin wax phase change material N80-30897
SOLID PROPELLANT ROCKET ENGINES
High energy X-ray study
[AD-A086279] N80-30311
The 1980 JANNAF propulsion Meeting, volume 5
[AD-A087063] N80-30381
Space Shuttle Solid Rocket Motor (SRM) development and qualification N80-30389
Reduction in cost of rocket motor manufacture by use of liner with controllable cure N80-30409
Plume impingement pressure measurements taken during sea level firings of a Tomahawk motor N80-30434
SOLID PROPELLANTS
Command control of solid propellant gas generators and thrusters by hot cutters N80-30436
Pyrolysis of $(C_2H_5)_4N_8H_4$ to $(C_2H_5)_4N_2B_{10}H_{10}$: Use of a liquid heat transfer medium N80-30408
Explosibility of explosive and propellant dust
[AD-A087240] N80-30539
SOLID ROCKET PROPELLANTS
Heat Sterilizable propellant development N80-30380

Modulation of a gas generator N80-30414
Measured and predicted laser signal attenuation through a solid rocket plume N80-30417
LLMM SRAM 3-D grain structural analysis N80-30418

SOLID SURFACES
Modeling propellant combustion interacting with an eroding solid surface
[UCRL-83727] N80-30433

SOLID SUSPENSIONS
The effect of suspended solids on the viscous drag on an oscillating disk N80-30685

SOLIDIFICATION
Evaluation of forged helicopter components processed with controlled solidification and thermal mechanical treatments
[AD-A086818] N80-30302
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 1: Formulation and analysis
[NASA-CR-161540] N80-30479
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 2: Software documentation
[NASA-CR-161541] N80-30480
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 3: Operating manual
[NASA-CR-161542] N80-30481

SOLIDS
The prediction of response of solids to thermal loading using the finite element code AGGIE 1
[AD-A087042] N80-30812
Fracture problems in power law viscoelastic materials
[AD-A087244] N80-30813
Critically evaluated data on optical and transport properties of solids refractive index and absorption coefficient of selected optical materials
[AD-A086858] N80-31199

SOLITARY WAVES
The convergence of periodic waves to solitary waves in the long wave limit
[AD-A086370] N80-30700
Studies of nonlinear phenomena in plasmas
[AD-A086456] N80-31210

SOLUTIONS
On multiple solutions of singularly perturbed systems in the conditionally stable case
[AD-A087049] N80-31119

SOLVENT REFINED COAL
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes. Laboratory and pilot plant studies of the processing of SRC-1
[FE-2315-45] N80-30544
Upgrading of coal liquids: Hydrocracking of EDS process derived gas oils
[FE-2566-33] N80-30545
Applied research and evaluation of process concepts for liquefaction and gasification of western coals
[FE-2006-17] N80-30549
Materials technology for coal-conversion processes
[ANL-80-12] N80-30551

SOLVENTS
Thermophysical properties of coal liquids
[SMI-2053] N80-30546

SONAR
A maximum likelihood estimator for the extent of radar or sonar targets using high resolution signals
[REPT-3/79] N80-30628
Wideband beamformer to control a 39 element sonar antenna
[REPT-5/79] N80-30629

SORGHUM
Light reflectance, transmittance, and utilization within a vegetative canopy --- Texas
[E80-10282] N80-30851
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860

SORPTION
Waste isolation safety assessment program: Task 4: Collection and generation of transport data theoretical and experimental evaluation of waste transport in selected rocks
[LBL-9945] N80-31182

SOS (SEMICONDUCTORS)
Second breakdown susceptibility of silicon-on-sapphire diodes having systematically different geometries
[AD-A086345] N80-30648

SOUND WAVES
User's manual for NEMESIS and PLMODE
[AD-A087254] N80-31081
The blast noise prediction program: User reference manual
[CERL-IR-N-75] N80-31155
Analysis of scattering and radiation of acoustic waves from an axisymmetric structure in a infinite fluid medium
[AD-A086587] N80-31157

SOUNDING ROCKETS
Sounding rocket program aeronomy. Project Upper Polar Atmosphere. Supra-thermal auroral particle observations
[BMFT-FB-W-79-03] N80-30992

SOUTH CAROLINA
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860

SOUTH DAKOTA
As-built design specification for phase 3 model areas added to the monthly data base of the US --- Montana, South Dakota, Oklahoma, Nebraska, and Colorado
[E80-10263] N80-30846
An exploratory study to develop a cluster-based area estimation procedure --- Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863

SOYBEANS
Remote sensing research studies
[E80-10117] N80-30823
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
Maximal analysis labeling procedure (preliminary)
[E80-10294] N80-30862
Analysis of scanner data for crop inventories
[E80-10308] N80-30874

SPACE CHARGE
Characteristics of electrical discharges on the T78-2 satellite (SCATHA)
[AD-A087249] N80-30360

SPACE COMMUNICATION
Spatial acquisition of optical sources in the presence of intense interference N80-30337

SPACE COOLING (BUILDINGS)
Supplementary material on passive solar heating concepts: A compilation of published articles. Presented in conjunction with a series of passive solar heating seminars sponsored by the Solar Energy Technology Transfer program
[PNL-SA-7820] N80-30920

SPACE EXPLORATION
Halleys comet 1985-86: A unique opportunity for space exploration
[NASA-TM-80633] N80-30343
The space shuttle at work
[NASA-SP-432] N80-30367
An advanced terrain modeler for an autonomous planetary rover
[NASA-CR-163485] N80-30749

SPACE GLOSSARIES
An astronomical glossary
[AD-A084445] N80-30805

SPACE HEATING (BUILDINGS)
Solar energy system performance evaluation report for Solaron-Duffield, Duffield, Virginia
[NASA-CR-161507] N80-30892
Solar heating and domestic hot water system installed at Kansas City, Fire Stations, Kansas City, Missouri
[NASA-CR-161513] N80-30895
Supplementary material on passive solar heating concepts: A compilation of published articles. Presented in conjunction with a series of passive solar heating seminars sponsored by the Solar Energy Technology Transfer program
[PNL-SA-7820] N80-30920

SPACE MANUFACTURING
Project MINOS: Technical study
[REPT-601/01] N80-30344

SPACE MISSIONS
Halleys comet 1985-86: A unique opportunity for space exploration
[NASA-TM-80633] N80-30343

SPACE NAVIGATION
Navigation network operational considerations N80-30338

SPACE PLASMAS
Generation and injection of e.m. waves in space plasma by means of a long orbiting tether
[NASA-CR-161533] N80-30588

SPACE PROBES
GIOTTO: Comet Halley flyby. Report on the phase A study
[ESA-SCI(80)-4] N80-30346
Study on use of ISEE-B platform as a probe for ESA/NASA cometary mission. Volume 1: Technical results
[ESA-CR(P)-1316-VOL-1] N80-30362

SPACE PROCESSING APPLICATIONS ROCKET
Epitaxial growth of single crystal films
[NASA-CR-161544] N80-31242

SPACE SHUTTLE BOOSTERS
Space Shuttle Solid Rocket Motor (SRM) development and qualification N80-30389
Titan liquid boost module for shuttle performance augmentation N80-30390

SPACE SHUTTLE ORBITERS
Pogo summary report main propulsion test static firings 1-7 for shuttle development flight instrumentation
[NASA-CR-160767] N80-30368
Direct simulation Monte Carlo method applied to shuttle flow field analysis N80-30427

SPACE SHUTTLE PAYLOADS
Flight feasibility assessment of shuttle/LANDSAT-D/LANDSAT-D' missions
[NASA-TM-81145] N80-30372
Fracture mechanics design of shuttle payload pressure vessels N80-30397

SPACE SHUTTLES
The space shuttle at work
[NASA-SP-432] N80-30367
Plume interference with space shuttle range safety signals N80-30423
A study of a space communication system for the control and monitoring of the electric distribution system. Volume 2: Supporting data and analyses
[NASA-CR-163478] N80-30587
A study of a space communication system for the control and monitoring of the electric distribution system. Volume 1: Summary
[NASA-CR-163477] N80-31268
Solar activity prediction of sunspot numbers (verification). Predicted solar radio flux; predicted geomagnetic indices Ap and Kp --- space shuttle program: satellite orbital lifetime
[NASA-TM-81139] N80-31297

SPACE STATIONS
Power line anomalies as they affect the operation of a DSN station: Overview N80-30340
Project MINOS: Technical study
[REPT-601/01] N80-30344

SPACE TRANSPORTATION
Fluorine-Hydrazine Propulsion Technology update N80-30391

SPACE TRANSPORTATION SYSTEM
The space shuttle at work
[NASA-SP-432] N80-30367
Flight feasibility assessment of shuttle/LANDSAT-D/LANDSAT-D' missions
[NASA-TM-81145] N80-30372
Propulsion subsystem for the satellite data systems satellite N80-30400
NASA program plan N80-31269

SPACE TRANSPORTATION SYSTEM 1 FLIGHT
STS-1 low-speed ground navigation console procedures
[NASA-TM-81134] N80-30370
SPACE TRANSPORTATION SYSTEM 2 FLIGHT
STS-2 sail non-avionics subsystems math model requirements
[JSC-16748] N80-30369
Mission planning and analysis division development plan for STS-2 through STS-4
[NASA-TM-81133] N80-30371
SPACE TRANSPORTATION SYSTEM 3 FLIGHT
Mission planning and analysis division development plan for STS-2 through STS-4
[NASA-TM-81133] N80-30371
SPACE TRANSPORTATION SYSTEM 4 FLIGHT
Mission planning and analysis division development plan for STS-2 through STS-4
[NASA-TM-81133] N80-30371
SPACEBORNE EXPERIMENTS
Satellite density gauge instrumentation program
[AD-A086809] N80-30987
SPACECRAFT COMMUNICATION
DSN Monitor and Control System, Mark III-80
N80-30327
Pioneers 6 through 9 support N80-30329
Input signal conditioner for the multimegasymbol telemetry system feasibility model N80-30332
Use of K sub A-band for radio metric determinations N80-30333
Multiple scattering in clouds
[AD-A087043] N80-30616
Study of interferences in satellite communication systems. Volume 3: Study report
[ESS/CCG-66-VOL-3] N80-30635
Study of interferences in satellite communication systems. Volume 4: Executive summary
[ESS/CCG-67-VOL-4] N80-30636
SPACECRAFT CONSTRUCTION MATERIALS
Outgassing data for spacecraft materials
[NASA-RP-1061] N80-30441
SPACECRAFT CONTROL
Dynamics and control in modal-space of flexible spacecraft N80-30376
SPACECRAFT ELECTRONIC EQUIPMENT
STS-2 sail non-avionics subsystems math model requirements
[JSC-16748] N80-30369
SPACECRAFT ENVIRONMENTS
Advanced flight design systems subsystem performance models. Executive summary
[NASA-CR-160768] N80-31044
Advanced flight design systems subsystem performance models. Sample model: Environmental analysis routine library
[NASA-CR-160770] N80-31046
SPACECRAFT GUIDANCE
Phased arrays. Citations from the NTIS data base
[PB80-808041] N80-30637
SPACECRAFT ORBITS
Utilization of multi-body trajectories in the Sun-Earth-Moon system
[NASA-TM-80740] N80-31291
SPACECRAFT POWER SUPPLIES
LANDSAT-2 and LANDSAT-3 flight evaluation report
[E80-10291] N80-30859
SPACECRAFT PROPULSION
Analytical investigation of two hydrogen-oxygen rocket engine systems for low-thrust application --- for orbital transfer N80-30382
Upper stages utilizing electric propulsion
N80-30386
Cryogenic LOX/H2 engine candidates for orbital transfer missions. Part 1: Expander cycle optimization N80-30387
Propulsion subsystem for the satellite data systems satellite N80-30400
Post-launch results of the TIP spacecraft pulsed-plasma microthrusters N80-30416
SPACECRAFT RADIATORS
Optimization of a rotating thermally conducting joint and incorporation in a laboratory model deployable radiator
[DS-190-0-78] N80-30714
SPACECRAFT TRACKING
The telecommunications and data acquisition report
[NASA-CR-163431] N80-30319
Network functions and facilities N80-30326
SPACECRAFT TRAJECTORIES
Utilization of multi-body trajectories in the Sun-Earth-Moon system
[NASA-TM-80740] N80-31291
SPACELAB
Report on European space activities
[ESA-SP-1023] N80-30347
Study on the utilization of solar energy for the operation of Spacelab material science furnaces
[ESA-CR(P)-1301] N80-30348
Development of a thermal model library: Application to dynamic simulation of thermal control for Spacelab fluid loops
[ESA-CR(P)-1302] N80-30709
SPACELAB PAYLOADS
Report on European space activities, 1979
N80-30345
Study on the utilization of solar energy for the operation of Spacelab material science furnaces
[ESA-CR(P)-1301] N80-30348
Study on the utilization of solar energy for the operation of Spacelab material science furnaces
[DS-ERT-21-79] N80-30349
The role of Command and Data Management Subsystem (CDMS) in a future payload operations scenario
[ESA-CR(P)-1325] N80-30350
Study of technical feasibility and costing of Biorack. Volume 1: Technical report
[ESA-CR(P)-1332-VOL-1] N80-30351
SPALLATION
Silver isotopic anomalies in iron meteorites: Cosmic-ray production and other possible sources
[LA-UR-80-1199] N80-31296
SPARK IGNITION
Explosibility of explosive and propellant dust
[AD-A087240] N80-30539
SPATIAL DISTRIBUTION
Effect of alloy deformation on the average spacing parameters of non-deforming particles
[COO-3084-75] N80-30509
SPECIFIC HEAT
A low temperature specific heat study of some disordered alloy systems N80-30452
Thermophysical properties of coal liquids
[BMI-2053] N80-30546
Superconductivity in Th-Nb composites
N80-30643
Gas channel formation studies including real-air thermodynamic properties
[AD-A086999] N80-31212
SPECKLE PATTERNS
DIAL with heterodyne detection including speckle noise: Aircraft/shuttle measurements of O3, H2O, and NH3 with pulsed tunable CO2 lasers
[NASA-TP-1725] N80-30717
General shearing speckle interferometry and numerical boundary-integral techniques in experimental mechanics N80-30780
Degradation of picture quality by speckle in coherent mapping systems N80-30821
Measurement of surface roughness and correlation length using dichromatic speckle N80-31191
SPECTRAL BANDS
On the extrapolation of band-limited signals
N80-30585
SPECTRAL ENERGY DISTRIBUTION
Inelastic electron tunneling spectroscopy intensities as a function of surface coverage: Experimental determination, physical model, and application --- metal-oxide-metal tunnel junctions N80-31226
SPECTRAL LINE WIDTH
Inversion of spectral lineshapes to yield collisional rate constants
[AD-A086347] N80-30735
SPECTRAL REFLECTANCE
The contribution of the diffuse light component to the topographic effect on remotely sensed data
[NASA-TM-80728] N80-30876
SPECTRAL RESOLUTION
High resolution band models: Application to the 4.3 micrometer CO2 band N80-30425
SPECTRAL SIGNATURES
Remote sensing research studies
[E80-10117] N80-30823
As-built design specification for scatter plots for direct wheat
[E80-10250] N80-30833
Classification with spectral-spatial-temporal archetypes
[E80-10251] N80-30834
Classification of multispectral images according to crosswise textural characteristics --- Mato Grasso, Brazil
[E80-10257] N80-30840
Study of the atmospheric effects on the radiation detected by the sensor aboard orbiting platforms (ERTS/LANDSAT) --- Ribeirao Preto and Brasilia, Brazil
[E80-10259] N80-30842
A labeling technology for LANDSAT imagery
[E80-10293] N80-30861
Grizzly bear habitat analysis. Section 3: LANDSAT-1 multispectral imagery and computer analysis of grizzly bear habitat --- Stategoat, Scapegoat and Danaher areas, Montana
[NASA-CR-163382] N80-30867
A hill-sliding strategy for initialization of Gaussian clusters in the multidimensional space
[NASA-TM-80721] N80-31072
SPECTRAL THEORY
Approximation of the spectrum of closed operators, the determination of normal modes of a rotating basin
[AD-A086661] N80-31116
SPECTROSCOPIC ANALYSIS
Energy transfer and optical spectroscopy of diatomic molecules in chemically reacting systems
[AD-A086829] N80-31165
Low energy ion beam systems for surface analytical and structural studies
[SAND-79-2392C] N80-31171
Study and characterization of semiconductor surfaces and interfaces N80-31231
Electronic structure studies of metal hydrides
[ISM-265] N80-31256
Metal-electrolyte boundary studies with in situ photoemission
[ISM-257] N80-31258
SPECTROSCOPY
Symposium on Atomic Spectroscopy
[DOE/ER-10460/1] N80-30467
Inversion of spectral lineshapes to yield collisional rate constants
[AD-A086347] N80-30735
SPECTRUM ANALYSIS
Spectral analysis of scintillation data taken from an aircraft, part 1
[AD-A086837] N80-30603
Modeling of pulses having arbitrary amplitude and frequency modulation
[AD-A086567] N80-30606
Optical power spectrum analyzer. Scanning laser beam system permits full format coverage
[AD-A087047] N80-30720
Tunable laser survey of molecular air pollutants: Doppler-limited spectra of the C-H stretching bands of formaldehyde, ethylene, ethane and allene
[PB80-180003] N80-30974
On some spectral problems and isospectral evolutions connected with the classical string problem. Part 1: Constants of motion
[PM/79/19-PT-1] N80-31126
On some spectral problems and isospectral evolutions connected with the classical string problem. Part 2: Evolution equation
[PM/79/20-PT-2] N80-31127
The spectral characteristics of metal film beam splitters
[AD-A086419] N80-31196
Quasi-simultaneous observations of the BL Lac object MK 501 in X-ray, UV, visible, IR and radio frequencies
[NASA-TM-81985] N80-31285
New atlas of IR solar spectra
[NASA-CR-163499] N80-31298
SPENT FUELS
Advanced three-dimensional thermal modeling of a baseline spent fuel repository
[UCID-18660] N80-31188
SPHERICAL CAPS
A comparative study on the elastic-plastic collapse strength of initially imperfect deep spherical shells
[AD-A086006] N80-30794
SPHERICAL COORDINATES
Spherical Earth analysis and modeling of lithospheric gravity and magnetic anomlies
[NASA-TM-80709] N80-30950

SPHERICAL HARMONICS
A multidirectional photodiode array for the measurement of solar radiances
[PB80-181753] N80-30995
SPHERICAL SHELLS
A comparative study on the elastic-plastic collapse strength of initially imperfect deep spherical shells
[AD-A086006] N80-30794
Nonlinear creep buckling analysis of initially imperfect shallow spherical shells
[AD-A087017] N80-30814
SPIN RESONANCE
Magnetic soliton defects in polyacetylene
[AD-A086978] N80-30526
Search for magnetic dipole strength and giant spin-flip resonances in heavy nuclei
[CONF-800540-1] N80-31181
SPIN STABILIZATION
High torque-to-inertial servo system for stabilizing sensor systems. Candidate systems include missile guidance, surveillance, and tracking
[AD-A086705] N80-30357
Qualification of Minuteman stage 3 motor for spin stabilized perigee stages N80-30403
SPIN-LATTICE RELAXATION
Research investigation directed toward extending the useful range of the electromagnetic spectrum
[AD-A087034] N80-30617
SPLINE FUNCTIONS
Flux-spline method for heat, mass and momentum transfer N80-30671
Dichotomies for band matrices
[AD-A086373] N80-31148
What is the main diagonal of a biinfinite band matrix?
[AD-A086366] N80-31150
SPRAY CHARACTERISTICS
Detailed investigation of a vaporising fuel spray. Part 1: Experimental investigation of time averaged spary
[NASA-CR-163483] N80-30687
SPREAD SPECTRUM TRANSMISSION
Multi-user Time Division Multiple Access (TDMA) and Spread Spectrum (SS)-TDMA
[ESA-CR(P)-1324] N80-30633
SPREADING
On the spreading rate and structure of a turbulent spot
[AD-A086445] N80-30692
SPRINGS (ELASTIC)
Large deflection response of an elliptical section ring to disturbed axial load N80-30781
SPUTTERING
Integrated thin film dc SQUIDS
[AD-A086466] N80-30652
Controlled cadmium telluride thin films for solar cell applications (emerging materials systems for solar cell applications)
[DOE/ET-23023/T3] N80-30921
SQUID (DETECTORS)
Superconducting diamagnetism in samples of SN(x), TaSe(3) and NbS Ne(3) N80-30644
STAINLESS STEELS
High performance VCHP life test
[ESA-CR(P)-1321] N80-30770
On the thermomechanical response of 3.5 Ni-Mo-V alloy steel and type 304 stainless steel undergoing cyclic uniaxial inelastic deformation N80-30776
STANDARDIZATION
High energy X-ray study
[AD-A086279] N80-30311
Submicrosecond comparisons of time standards with the Navigation Technology Satellites (NTS)
[AD-A086780] N80-30564
Development of standards for superconductors
[PB80-175417] N80-30665
STANDARDS
Flammability testing of solids under the Federal Hazardous Substances Act
[PB80-179047] N80-30469
The calibration of angle blocks by intercomparison
[PB80-182132] N80-30578
Computer programming and coding standards for the FORTRAN and SIMSCRIPT II.5 programming languages
[AD-A086499] N80-31073
STATIC AERODYNAMIC CHARACTERISTICS
The USAF stability and control digital Datcom. Volume 2: Implementation of Datcom methods
[AD-A086558] N80-30316
STATIC LOADS
Comparison of wind tunnel and flight test measurements of static aerodynamic loading of a captive store
[AD-A087237] N80-30281
Static investigation of rotor blades at rest and under quasi-stationary loading
[ISD-243] N80-30948
STATIC TESTS
Pogo summary report main propulsion test static firings 1-7 for shuttle development flight instrumentation
[NASA-CR-160767] N80-30368
STATIONKEEPING
North-south station keeping with electric propulsion using onboard battery power N80-30395
STATISTICAL ANALYSIS
Statistical analysis of the fatigue of composite materials N80-30439
Solar site test module
[NASA-TM-78291] N80-30899
STATISTICAL CORRELATION
Relationships among the slopes of lines derived from various data analysis techniques and the associated correlation coefficient
[NASA-TM-80733] N80-31097
STATISTICAL DISTRIBUTIONS
Bounds on mixtures of distributions arising in order restricted inference
[AD-A087117] N80-31139
STATISTICAL TESTS
A study of the properties of a new goodness-of-fit test
[AD-A086563] N80-31134
Measures of lack of fit, and transportation of predictors in composite designs
[AD-A086562] N80-31137
Convergence of progressively censored likelihood ratio processes in life-testing
[AD-A087057] N80-31138
STATORS
Research and development of concept leading to an automotive alternator with significantly improved efficiency and weight
[COO-50042-1] N80-30654
STEADY FLOW
Simulation of viscous steady flow past an arbitrary two-dimensional body
[AD-A086799] N80-30694
STEADY STATE
Structure and pathology of the steady state, stability and dynamics of the combustion of an impervious carbon particle N80-30455
Novel approach to the computation of axisymmetric countercurrent patterns in gas centrifuges
[LA-8258-MS] N80-30703
STEELS
The computer simulation of martensitic transformations in idealized systems N80-30478
The influence of prior warm rolling on fracture toughness of heat treated AISI 52100 steel
[AD-A086821] N80-30492
Studies of microscopic aspects of wear processes in metals
[AD-A086760] N80-30493
Measuring the rate of corrosion of reinforcing steel in concrete --- nondestructive measuring of bridge deck deterioration
[PB80-170848] N80-30513
Evaluation of a new fracture toughness measuring technique, and adaptation of the technique to use ultra-small specimens
[AD-A085892] N80-30791
STEERABLE ANTENNAS
Phased arrays. Citations from the engineering index data base
[PB80-808058] N80-30638
STEERING
A propulsion and steering control system for the Mars rover
[NASA-CR-163501] N80-30751
STERILIZATION
Heat Sterilizable propellant development N80-30393
STIELTJES INTEGRAL
On some spectral problems and isospectral evolutions connected with the classical string problem. Part 2: Evolution equation
[PM/79/20-PT-2] N80-31127
STIFFNESS
The dynamic behavior of nylon and polyester line
[AD-A087106] N80-30529
STIMULATED EMISSION
Nuclear isomer suitable for gamma ray laser
[NASA-CR-163482] N80-30727
STIRLING CYCLE
Design and development of Stirling engines for stationary power applications in the 500 to 3000 hp range. Subtask 1A report: State-of-the-art conceptual design
[DOE/ET-15209-T1] N80-30755
STOCHASTIC PROCESSES
On the initiation of detonations in a one-dimensional system
[AD-A086713] N80-30693
Imperfect repair
[AD-A086845] N80-30765
Bounds on mixtures of distributions arising in order restricted inference
[AD-A087117] N80-31139
STOKES LAW (FLUID MECHANICS)
The effect of suspended solids on the viscous drag on an oscillating disk N80-30685
STOKES THEOREM (VECTOR CALCULUS)
Conventions and formulas for using the Mueller-Stokes calculus in ellipsometry
[LBL-10172] N80-31124
STOPPING POWER
Electronic stopping power calculations for all heavy ions at low velocity in all elements
[AD-A087107] N80-31188
STORAGE BATTERIES
Conceptual design of electrical balance of plant for advanced battery energy storage facility
[ANL-80-16] N80-30940
STORAGE TANKS
Hydrogen storage: Storage as a gas or liquid. Citations from the NTIS data base
[PB80-811086] N80-30560
STORMS (METEOROLOGY)
A climatological study of the forcing of the North Pacific Ocean by synoptic storm activity
[AD-A086841] N80-31002
STRAIN GAGES
Fatigue damage estimation for the BAeA aircraft fatigue data analysis system
[AD-A086470] N80-30301
Calibration of a strain-gauged CT4-A undercarriage
[AD-A086965] N80-30718
STRAIN HARDENING
Studies of microscopic aspects of wear processes in metals
[AD-A086760] N80-30493
On the characterization of strain-hardening in plasticity
[AD-A086551] N80-30800
STRESS (PHYSIOLOGY)
Use of soil moisture information in yield models
[E80-10302] N80-30869
Cold weather stress on humans. Citations from the NTIS data base
[PB80-810989] N80-31035
STRESS (PSYCHOLOGY)
Cold weather stress on humans. Citations from the NTIS data base
[PB80-810989] N80-31035
STRESS ANALYSIS
Planar mechanics of fully grouted concrete masonry N80-30562
Analysis of ground calibration data from strain gauges attached to the airframe of CT4-A airtrainer A19-031
[AD-A086970] N80-30719
A Three-Dimensional Stability Analysis/Design program (3DSAD). Report 1. General geometry module
[AD-A087074] N80-30807
Stress concentrations in screw threads
[AD-A087218] N80-30809
STRESS CONCENTRATION
Bubble dynamics in structural foam processing N80-30677
Non-contacting strain control and acoustic emission in high-temperature testing
[ICAF-1142] N80-30786
Stress concentrations in screw threads
[AD-A087218] N80-30809

Determination of K-factors for arbitrarily shaped flaws at pressure vessel nozzle corners
[CONF-791118-11] N80-30816

STRESS CORROSION
The role of hydrogen in the stress corrosion failure of high strength Al-Zn-Mg alloys and sensitized austenitic stainless steels
[AD-A086427] N80-30494

STRESS CYCLES
MINITWIST, a shortened version of TWIST
[NLR-MP-79018-U] N80-30785

STRESS FUNCTIONS
Accurate numerical solutions for elastic-plastic models
[ANL-80-31] N80-30815

STRESS INTENSITY FACTORS
Numerical estimation of stress intensity factors by a finite difference Eulerian method (The HELP code)
[AD-A086111] N80-30792

STRESSES
A review of nonlinear fracture relative to fatigue
[AD-A086671] N80-30795
Nonlocal stress field at Griffith crack
[AD-A086496] N80-30797

STRUCTURAL ANALYSIS
LLMM SRAM 3-D grain structural analysis
N80-30418
Structural defects in laser- and electron-beam annealed silicon
[CONF-791112-62] N80-30437
Characterization of macromolecular films adsorbed in track-etched membranes N80-30515
Cross-flow-induced instabilities of circular cylinders
N80-30773
Optimality criterion techniques applied to structures composed of different element types
[AD-A086644] N80-30804
A Three-Dimensional Stability Analysis/Design program (3DSAD). Report 1. General geometry module
[AD-A087074] N80-30807
Piping inelastic fracture mechanics analysis — nuclear reactors
[AD-A087002] N80-30810
Nonlinear creep buckling analysis of initially imperfect shallow spherical shells
[AD-A087017] N80-30814
Low energy ion beam systems for surface analytical and structural studies
[SAND-79-2392C] N80-31171

STRUCTURAL DESIGN
Prediction of earthquake resistance of structures
[PB80-170731] N80-30573
Measures of lack of fit, and transportation of predictors in composite designs
[AD-A086562] N80-31137

STRUCTURAL DESIGN CRITERIA
Design and construction of large-panel concrete structures. Report 6: Design methodology
[PB80-189137] N80-30577
Optimality criterion techniques applied to structures composed of different element types
[AD-A086644] N80-30804
Static investigation of rotor blades at rest and under quasi-stationary loading
[ISD-243] N80-30948

STRUCTURAL ENGINEERING
A Three-Dimensional Stability Analysis/Design program (3DSAD). Report 1. General geometry module
[AD-A087074] N80-30807

STRUCTURAL FAILURE
The Shock and Vibration Digest, volume 12, no. 5
[AD-A085326] N80-30771
A comparative study on the elastic-plastic collapse strength of initially imperfect deep spherical shells
[AD-A086006] N80-30794

STRUCTURAL MEMBERS
Optimality criterion techniques applied to structures composed of different element types
[AD-A086644] N80-30804

STRUCTURAL PROPERTIES (GEOLOGY)
Lateral density variations in elastic Earth models from an extended minimum energy approach
[NASA-TM-80742] N80-30787
Soil moisture in relation to geologic structure and lithology, northern California
[E80-10298] N80-30865
Study of geological structure of Sicily and other Italian areas — Gulf of Orosei, Eastern Sardinia
[E80-10299] N80-30866
Spherical Earth analysis and modeling of lithospheric gravity and magnetic anomalies
[NASA-TM-80709] N80-30880

STRUCTURAL RELIABILITY
Fatigue damage estimation for the BAeA aircraft fatigue data analysis system
[AD-A086470] N80-30301

STRUCTURAL STABILITY
Shock in solids: Army materials research and applications N80-30772

STRUCTURAL STRAIN
Non-contacting strain control and acoustic emission in high-temperature testing
[ICAF-1142] N80-30786

SUBMARINES
Multiple scattering in clouds
[AD-A087043] N80-30816

SUBMILLIMETER WAVES
High power submillimeter and infrared radiation from intense relativistic electron beams
[AD-A086688] N80-30737
Evaluation of a high power submillimeter pulsed laser system
[CONF-800138-1] N80-30745

SUBROUTINES
GRAPH: An interactive computer program used for technical plotting
[AD-A086354] N80-31076
A computer algorithm for generating a basis of the trades on t-designs
[AD-A087251] N80-31082

SUBSONIC FLOW
A nozzle boundary layer model including the subsonic sublayer usable for determining boundary layer effects on plume flowfields N80-30428

SUBSTITUTES
Development of alternate silicone potting compounds. Volume 6: Development of secondary alternates for Dow Corning's Aerospace Sealant, DC93-119
[UCRL-52434-VOL-6] N80-30445

SUBSTRATES
Development of reverse osmosis membrane for seawater desalination
[PB80-182090] N80-30472
Controlled cadmium telluride thin films for solar cell applications (emerging materials systems for solar cell applications)
[DOE/ET-23023/T3] N80-30921
Doubly rotated cut saw devices
[AD-A086734] N80-31245
Sequential purification and crystal growth for the production of low cost silicon substrates
[DOE/SERI-8119-3/1] N80-31255

SUDDEN IONOSPHERIC DISTURBANCES
Solar-Geophysical data number 426, Febuary 1980. Supplement: Explanation of data reports
[PB80-186133] N80-31300

SUGAR CANE
Production of sugarcane and tropical grasses as a renewable energy source
[ORO-5912-T3] N80-30543
Study of the atmospheric effects on the radiation detected by the sensor aboard orbiting platforms (ERTS/LANDSAT) — Ribeirao Preto and Brasilia, Brazil
[E80-10259] N80-30842
Use of LANDSAT data for estimating the area of sugar cane in the state of Sao Paulo — Brazil
[E80-10260] N80-30843
Utilization of LANDSAT data to inventory the sugar cane in the state of Sao Paulo
[E80-10261] N80-30844
Light reflectance, transmittance, and utilization within a vegetative canopy — Texas
[E80-10282] N80-30851

SUITS
Thermal insulation materials for diver's underwear garment
[AD-A086743] N80-31048

SULFUR DIOXIDES
Remote monitoring of gaseous pollutants by differential absorption laser techniques
[PB80-179351] N80-30968

SULFURIC ACID
Sulfuric acid and water chemical heat pump/chemical energy storage program, phase 2-A
[SAND-78-8176] N80-30924

SUN
Variations in the Nimbus-7 scanning multichannel microwave radiometer cold reference antenna signals and temperatures during two orbital periods
[NASA-TM-81984] N80-30355

SUNLIGHT
Solar passive systems for buildings
[NP-24377] N80-30947

SUNSPOTS
Solar activity prediction of sunspot numbers (verification). Predicted solar radio flux; predicted geomagnetic indices Ap and Kp — space shuttle program: satellite orbital lifetime
[NASA-TM-81139] N80-31297

SUPERCONDUCTING MAGNETS
Status of the structural design of superconducting magnets for the large coil program
[CONF-791102-160] N80-31151
Advanced designs for highly stable superconductor systems
[CONF-791102-148] N80-31253

SUPERCONDUCTING POWER TRANSMISSION
The dc superconducting power transmission line project at LASL: US DOE division of electric energy systems
[LA-8323-PR] N80-30656

SUPERCONDUCTIVITY
Superconductivity in Th-Nb composites
N80-30643
Integrated thin film dc SQUIDS
[AD-A086466] N80-30652
Influence of Josephson effect on proximity coupled superconductors N80-31226
Electron response theory of lattice vibrations: Emergence of concepts and a glance at the future
[LA-UR-80-1000] N80-31252

SUPERCONDUCTORS
Manufacture of superconducting wire
[DOE/ER-10367/2] N80-30570
Superconducting diamagnetism in samples of SN(x), TaSe(3) and NbS Ne(3) N80-30644
Superconductive devices for millimeter wave detection mixing and amplification
[AD-A086443] N80-30646
Development of standards for superconductors
[PB80-175417] N80-30665
Influence of Josephson effect on proximity coupled superconductors N80-31226
Advanced designs for highly stable superconductor systems
[CONF-791102-148] N80-31253

SUPERPOSITION (MATHEMATICS)
Some comments on the rational solutions of the Zakharov-Schabat equations N80-31128

SUPERSONIC COMBUSTION RAMJET ENGINES
LLMM SRAM 3-D grain structural analysis
N80-30418

SUPERSONIC FLOW
Experimental study of three-dimensional shock wave turbulent boundary layer interaction: Scaling of sharp and blunt fin-induced flowfields
[AD-A086875] N80-30277

SUPPRESSORS
Lightning, surge and transient protection. Citations from the NTIS data base
[PB80-810781] N80-30667

SURFACE ACOUSTIC WAVE DEVICES
Surface acoustic wave microwave oscillator and frequency synthesizer
[AD-A086336] N80-30649

SURFACE DIFFUSION
Diffusion induced grain boundary migration in Au-Cu and Au-Ag thin films N80-31240

SURFACE ENERGY
Inelastic electron tunneling spectroscopy intensities as a function of surface coverage: Experimental determination, physical model, and application — metal-oxide-metal tunnel junctions N80-31228

SURFACE FINISHING
Pavement evaluation and overlay design using vibratory nondestructive testing and layered elastic theory. Volume 1: Development procedure
[AD-A087186] N80-30808

SURFACE LAYERS
Transformation of a drop falling on the surface layer of a liquid in a vortex ring
[MPIS-15/1979] N80-30707
SURFACE PROPERTIES
Experimental study of three-dimensional shock wave turbulent boundary layer interaction: Scaling of sharp and blunt fin-induced flowfields
[AD-A086875] N80-30277
An experimental investigation of the King surface current probing technique in a transient application
[AD-A087203] N80-30615
Study and characterization of semiconductor surfaces and interfaces N80-31231
Metal-electrolyte boundary studies with in situ photoemission
[ISM-257] N80-31258
Interpretation of laser/multi-sensor data for short range terrain modeling and hazard detection
[NASA-CR-163492] N80-31294
SURFACE REACTIONS
Surface physics and chemistry of electrical contact phenomena
[AD-A086733] N80-30460
Review of the wall problem and conditioning techniques for Tokamaks
[PPPL-1666] N80-31221
Adlayer effects on the surface reactivity of W(100) and Mo(100) single crystals N80-31234
GaAs surface effects
[AD-A087033] N80-31249
SURFACE ROUGHNESS
Correlation of under-ice roughness with satellite and airborne thermal infrared data --- Beaufort Sea and Arctic Ocean pack ice
[AD-A085512] N80-30880
Measurement of surface roughness and correlation length using dichromatic speckle N80-31191
SURFACE TEMPERATURE
Florida water resources
[E80-10246] N80-30829
Florida water resources, Executive summary
[E80-10247] N80-30830
Correlation of under-ice roughness with satellite and airborne thermal infrared data --- Beaufort Sea and Arctic Ocean pack ice
[AD-A085512] N80-30880
SURFACES
Stability of boundary-layer flows over curved walls N80-30668
SURGES
An experimental investigation of the King surface current probing technique in a transient application
[AD-A087203] N80-30615
Lightning, surge and transient protection. Citations from the NTIS data base
[PB80-810781] N80-30667
SURVEILLANCE RADAR
Communications requirements for a Loran-C position monitoring system for VTS Valdez, Alaska
[AD-A087199] N80-30292
SUSPENSION SYSTEMS (VEHICLES)
Noncontacting suspension and propulsion for ground transportation
[PB80-176274] N80-31277
SWARMING
Fundamental investigation of interaction forces in bubble swarms and application to the design of centrifugal separators
[WTHD-115] N80-30706
SWINGBY TECHNIQUE
Utilization of multi-body trajectories in the Sun-Earth-Moon system
[NASA-TM-80740] N80-31291
SWITCHING CIRCUITS
High voltage switch using externally ionized plasmas
[AD-A086761] N80-30647
SYMMETRY
Symmetry mappings and conservation laws in relativistic fluids N80-30681
Novel approach to the computation of axisymmetric countercurrent patterns in gas centrifuges
[LA-8258-MS] N80-30703
SYNCHRONISM
Bounds on the utilization of aloha-like multiple-access broadcast channels
[AD-A086655] N80-30807
A survey of synchronization problems
[AD-A086509] N80-31055
SYNCHRONOUS SATELLITES
Mission operation report. Geostationary operational satellite GOES-D
[NASA-TM-81123] N80-30354
SYNCHROTRON RADIATION
Quasi-simultaneous observations of the BL Lac object MK 501 in X-ray, UV, visible, IR and radio frequencies
[NASA-TM-81985] N80-31285
SYNCOM SATELLITES
Satellite constellations for worldwide and hemisphere coverage
[AD-A086920] N80-30359
Characteristics of electrical discharges on the T78-2 satellite (SCATHA)
[AD-A087249] N80-30360
SYNOPTIC METEOROLOGY
The application of measures of synoptic similarity to the evaluation and development of atmospheric prediction models, task 2
[AD-A086034] N80-30998
Forecast worksheet: A new approach
[AD-A086151] N80-30999
A climatological study of the forcing of the North Pacific Ocean by synoptic storm activity
[AD-A086841] N80-31002
Gate phase 3 mean synoptic-scale radiative convergence profiles
[PB80-180797] N80-31020
SYNTHESIS (CHEMISTRY)
Synthesis of CMP beginning with sodium borohydride N80-30407
Transition metal-promoted oxidative fusion with carborane and borine anions. Synthesis of C4B sub n (n = 8-11) carborane systems in the presence of B5H8(-) or B-3H8(-) ions
[AD-A087252] N80-30463
SYNTHETIC APERTURE RADAR
Concerning the feasibility of a real time SAR digital processor for VOIR low resolution imaging modes N80-30335
Feasibility and cost study on VOIR SAR data transfer via a bent pipe link N80-30336
Study and development of printed circuit elements for synthetic aperture radar array antennas
[ESA-CR(P)-1303] N80-30661
SYNTHETIC FIBERS
The dynamic behavior of nylon and polyester line
[AD-A087106] N80-30529
Thermal insulation materials for diver's underwear garment
[AD-A086743] N80-31048
SYNTHETIC FUELS
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes. Laboratory and pilot plant studies of the processing of SRC-1
[FE-2315-45] N80-30544
Comparative assessment of five long-run energy projections
[DOE/EIA/CR-0016/02] N80-30936
SYSTEM EFFECTIVENESS
Vortex advisory system. Volume 1: Effectiveness for selected airports
[AD-A086982] N80-30286
Solar energy system performance evaluation report for IBM System 3, Glendo, Wyoming
[NASA-CR-161520] N80-30896
SYSTEM FAILURES
Orientation of measurement sensors for optimum end-of-life performance
[AD-A086280] N80-30767
SYSTEM 10 COMPUTER
Users manual for DWNWND: An interactive Gaussian plume atmospheric transport model with eight dispersion parameter options
[ORNL/TM-6874] N80-30962
SYSTEMS ANALYSIS
Satellite Power Systems (SPS) concept definition study. Volume 7: System/Subsystem requirements data book
[NASA-CR-3324] N80-30900
Advanced flight design systems subsystem performance models. Executive summary
[NASA-CR-160768] N80-31044
Advanced flight design systems subsystem performance models. User guide: Environmental analysis routine library
[NASA-CR-160769] N80-31045
Real-world properties in the requirements for embedded systems
[AD-A086867] N80-31058
Handbook of procedures for estimating computer system sizing and timing parameters. Volume 1: Procedures and techniques
[AD-A086444] N80-31059
SYSTEMS ENGINEERING
Satellite constellations for worldwide and hemisphere coverage
[AD-A086920] N80-30359
Sounding rocket program aeronomy: Complex payload B2. Report of system design, integration, testing and flight
[ESA-TT-589] N80-30363
MX stage 1 N80-30405
Wideband beamformer to control a 38 element sonar antenna
[REPT-5/79] N80-30629
Solar energy system performance evaluation report for IBM System 3, Glendo, Wyoming
[NASA-CR-161520] N80-30896
Satellite power system (SPS) magnetron tube assessment study
[NASA-CR-161547] N80-30897
Solar passive systems for buildings
[NP-24377] N80-30947
Handbook of procedures for estimating computer system sizing and timing parameters. Volume 1: Procedures and techniques
[AD-A086444] N80-31059
Tight rounds on the response of multivariable systems with component uncertainty
[AD-A086580] N80-31090
Electric and hybrid vehicle system research and development project: Hybrid vehicle potential assessment. Volume 1: Summary
[CONS-4209-T1-VOL-1] N80-31272
SYSTEMS STABILITY
Stability of power systems and other systems of second order differential equations N80-31094
Advanced designs for highly stable superconductor systems
[CONF-791102-148] N80-31253

T

TABLES (DATA)
The SHAFT book: Design charts for torsional properties of noncircular SHAFTS: User's manual
[AD-A086498] N80-30752
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 1: Coal-fired nocogeneration process boiler, section A
[NASA-CR-159770-PT-1-A] N80-30888
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 1: Coal-fired nocogeneration process boiler, section B
[NASA-CR-159770-PT-1-B] N80-30889
Cogeneration Technology Alternatives Study (CTAS). Volume 6: Computer data. Part 2: Residual-fired nocogeneration process boiler
[NASA-CR-159770-PT-2] N80-30890
User's manual for NEMESIS and PLMODE
[AD-A087254] N80-31081
New atlas of IR solar spectra
[NASA-CR-163499] N80-31298
TAIL ASSEMBLIES
Simultaneous measurements of magnetotail dynamics by IMP spacecraft
[NASA-TM-81986] N80-30981
TARGET RECOGNITION
A maximum likelihood estimator for the extent of radar or sonar targets using high resolution signals
[REPT-3/79] N80-30628
Measuring apparent target length using target resolving signals
[REPT-6/79] N80-30630
Multi-source image analysis --- radar, infrared, and photographic image interpretation
[AD-A086332] N80-30878
Laser optical appraisal and design of a PRIME/Rover interface
[NASA-CR-163508] N80-31193
TASMANIA
Heat capacity mapping mission project HCM-051 --- East Australian Current and the Tasman Front
[E80-10278] N80-30850

TDR SATELLITES
Scheduler software for tracking and data relay satellite system loading analysis: User manual and programmer guide
[NASA-TM-78290] N80-31070
TECHNOLOGICAL FORECASTING
Electric and hybrid vehicle system research and development project, hybrid vehicle potential assessment. Volume 6: Cost analysis
[CONS-4209-T1-VOL-6] N80-31274
Electric and hybrid vehicle system research and development project, hybrid vehicle potential assessment. Volume 8: Scenario generation --- impact of hybrid vehicles on petroleum consumption
[CONS-4209-T1-VOL-8] N80-31275
TECHNOLOGY ASSESSMENT
Engine cycle studies program
[NASA-CR-159500] N80-30310
Solar power satellite offshore rectenna study
[NASA-CR-161543] N80-30891
Comparative analysis of net energy balance for Satellite Power Systems (SPS) and other energy systems
[DOE/ER-0056] N80-30916
Hybrid photovoltaic/thermal systems with a solar-assisted heat pump
[BNL-27667] N80-30919
Report of the 6th Ocean Thermal Energy Conversion Conference. Ocean Thermal Energy for the 1980's
[CONF-790631-1] N80-30922
Photovoltaic systems and applications perspective
[SAND-80-0926C] N80-30923
Design study and economic assessment of multi-unit offshore wind energy conversion systems application. Volume 1: Executive summary
[WASH-2330-78/4-VOL-1] N80-30930
Fuel cells for electric utility and transportation applications
[BNL-27452] N80-30937
Thermally driven open-cycle heat pump system
[CONF-800549-1] N80-30938
Energy analysis program, FY 1979
[LBL-10320] N80-30942
Modeling the prospects for climatic change: Current state-of-the-art and implications
[CONF-800474-1] N80-30961
Consequences of a hypothetical world climate change produced by increased atmospheric carbon dioxide
[DOE/EV-10281/1] N80-31007
TECHNOLOGY TRANSFER
Mitigation of noise impact via operational changes
[CERL-TR-N-76] N80-31156
TECHNOLOGY UTILIZATION
Wider use of better computer software technology can improve management control and reduce losts
[PB80-178254] N80-31264
TELECOMMUNICATION
Distribution of packet delay and interdeparture time in carrier sense multiple access
[AD-A086446] N80-30589
Synthesis of MCJ codes
[AD-A086778] N80-30594
UHF task force: Executive overview and summary
[PB80-177280] N80-30641
TELECONFERENCING
The human use of telecommunication systems
[AD-A086745] N80-30611
Communication control and leadership in telecommunications by small groups
[AD-A086746] N80-30612
TELEMETRY
A high speed telemetry data link for an autonomous roving vehicle
[NASA-CR-163495] N80-30373
Simulant reaction temperature measurement via telemetry for the XM736 at charge 9
[AD-A086774] N80-30374
Telemetry system for evaluation of burn protection in full-scale fuel fire manikin exposures
[AD-A086700] N80-30375
TELEPHONY
The human use of telecommunication systems
[AD-A086745] N80-30611
TELLURIC LINES
New atlas of IR solar spectra
[NASA-CR-163499] N80-31298
TELLURIUM COMPOUNDS
Chemiluminescent reactions of selenium and tellerium with fluorine
[AD-A087202] N80-30464
TEMPEL 2 COMET
Halleys comet 1985-86: A unique opportunity for space exploration
[NASA-TM-80633] N80-30343
Study on use of ISEE-B platform as a probe for ESA/NASA cometary mission. Volume 1: Technical results
[ESA-CR(P)-1316-VOL-1] N80-30362
TEMPERATE REGIONS
Carbon Dioxide Effects Research and Assessment PRogram. The role of Temperate Zone Forests in the World Carbon Cycle: Problem Definition and Research Needs
[CONF-7903105] N80-30959
TEMPERATURE CONTROL
A digital temperature control and measurement system
[AD-A086805] N80-31052
TEMPERATURE DEPENDENCE
Critical requirements for mid-altitude IR predictions
N80-30429
Superconducting diamagnetism in samples of SN(x), TaSe(3) and NbS Ne(3) N80-30644
A holographic interferometric study of the temperature dependence of diffusion of aqueous sodium chloride in water, from 32 C to 50 C
N80-30715
Solar thermal energy storage using a paraffin wax phase change material N80-30887
TEMPERATURE EFFECTS
Variations in the Nimbus-7 scanning multichannel microwave radiometer cold reference antenna signals and temperatures during two orbital periods
[NASA-TM-81984] N80-30355
TEMPERATURE GRADIENTS
Simulant reaction temperature measurement via telemetry for the XM736 at charge 9
[AD-A086774] N80-30374
Measurements of electron heat flow along a dc magnetic field in strong temperature gradients
[LA-UR-80-1109] N80-31152
TEMPERATURE MEASUREMENT
Technique and measurement of heat flux and flame temperature in rocket plume exposures
[AD-A086533] N80-30432
Shock temperatures of materials: Experiments and applications to the high pressure equation of state
N80-30453
Similitude modeling of natural convection heat transfer through an aperture in passive solar heated buildings N80-30670
A digital temperature control and measurement system
[AD-A086805] N80-31052
High-temperature, high-resolution measurements of CO2 in the region of 2200 to 2400 CM-1
[AD-A087234] N80-31169
TENSILE DEFORMATION
Void nucleation in spheroidized steels during tensile deformation
[COO-3084-77] N80-30510
TERMINAL BALLISTICS
Simulant reaction temperature measurement via telemetry for the XM736 at charge 9
[AD-A086774] N80-30374
TERMINOLOGY
Multilingual Aeronautical Dictionary
[LC-77-93566] N80-30272
TERRAIN
Design of a dynamic test platform for autonomous robot vision systems
[RPI-TR-MP-69] N80-30352
TERRAIN ANALYSIS
Multi-source image analysis --- radar, infrared, and photographic image interpretation
[AD-A086332] N80-30878
Interpretation of laser/multi-sensor data for short range terrain modeling and hazard detection
[NASA-CR-163492] N80-31294
TETHERED BALLOONS
New hardware for tethered balloons
[AD-A086836] N80-30280
TETHERLINES
Generation and injection of e.m. waves in space plasma by means of a long orbiting tether
[NASA-CR-161533] N80-30588
TEXAS
Light reflectance, transmittance, and utilization within a vegetative canopy --- Texas
[E80-10282] N80-30851
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
An exploratory study to develop a cluster-based area estimation procedure --- Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863
TEXTURES
Classification of multispectral images according to crosswise textural characteristics --- Mato Grasso, Brazil
[E80-10257] N80-30840
THEMATIC MAPPING
Florida water resources
[E80-10246] N80-30829
Florida water resources, Executive summary
[E80-10247] N80-30830
Classification of multispectral images according to crosswise textural characteristics --- Mato Grasso, Brazil
[E80-10257] N80-30840
Evaluating the reforested area for the municipality of Buri by automatic analysis of LANDSAT imagery --- Sao Paulo, Brazil
[E80-10258] N80-30841
Use of LANDSAT data for estimating the area of sugar cane in the state of Sao Paulo --- Brazil
[E80-10260] N80-30843
Utilization of LANDSAT data to inventory the sugar cane in the state of Sao Paulo
[E80-10261] N80-30844
Grizzly bear habitat analysis. Section 3: LANDSAT-1 multispectral imagery and computer analysis of grizzly bear habitat --- Slategoat, Scapegoat and Danaher areas, Montana
[NASA-CR-163382] N80-30867
Mapping urbanized area expansion through digital image processing of LANDSAT and conventional data --- Orlando, Florida; Seattle, Washington; and Boston, Massachusetts
[E80-10301] N80-30868
The contribution of the diffuse light component to the topographic effect on remotely sensed data
[NASA-TM-80728] N80-30876
THEOREM PROVING
Notes on generalized boundary value problems Banach spaces
[AD-A086371] N80-31149
THERMAL BATTERIES
New processing for DEB powder for thermal batteries
[GEPP-OP-486] N80-30932
THERMAL BLOOMING
Unsteady thermal blooming of intense laser beams
[AD-A087207] N80-30741
THERMAL CONDUCTIVITY
Thermophysical properties of coal liquids
[BMI-2053] N80-30546
Thermophysical properties of coal liquids
[BMI-2043] N80-30557
THERMAL CYCLING TESTS
Diode behavior
[ESA-CR(P)-1319] N80-30710
THERMAL DIFFUSION
How to homogenize a nonlinear diffusion equation E.G. Stefans problem
[AD-A086379] N80-31110
THERMAL ENERGY
Finite element simulations of thermally induced convection in an enclosed cavity
[UCID-18602] N80-30702
Report of the 6th Ocean Thermal Energy Conversion Conference. Ocean Thermal Energy for the 1980's
[CONF-790631-1] N80-30922
Experimental study of the storage of thermal energy in confined aquifers
[ORNL/SUB-7338/1] N80-30944
THERMAL INSULATION
Wind-tunnel and flight tests of ablators and insulators for rocket vehicles
[SAND-80-05230] N80-30446

Thermal insulation materials for diver's underwear garment
[AD-A086743] N80-31048

THERMAL MAPPING
Heat capacity mapping mission project HCM-051 --- East Australian Current and the Tasman Front
[E80-10278] N80-30850
Investigation of the application of HCMM thermal data to snow hydrology --- Salt-Verde watershed, Arizona and the Sierra Nevada Mountains, California
[E80-10297] N80-30864
Soil moisture in relation to geologic structure and lithology, northern California
[E80-10298] N80-30865
Study of geological structure of Sicily and other Italian areas --- Gulf of Orosei, Eastern Sardinia
[E80-10299] N80-30866
Application Explorer Mission-A heat capacity mapping mission --- Bavaria, Germany and Marrakech, Morocco
[E80-10309] N80-30875

THERMAL PROTECTION
Wind-tunnel and flight tests of ablators and insulators for rocket vehicles
[SAND-80-05230] N80-30446

THERMAL SIMULATION
Development of a thermal model library: Application to dynamic simulation of thermal control for Spacelab fluid loops
[ESA-CR(P)-1302] N80-30709

THERMAL STABILITY
Heat Sterilizable propellant development
N80-30393
Use of organic working fluids in Rankine engines
[DOE/CS-30202/T1] N80-30917

THERMAL STRESSES
Laminated beams of isotropic or orthotropic materials subjected to temperature change
[AD-A087230] N80-30806
The prediction of response of solids to thermal loading using the finite element code AGGIE 1
[AD-A087042] N80-30812

THERMIONIC CONVERTERS
Thermionic energy conversion. Citations from the NTIS data base
[PB80-810906] N80-30953

THERMOCHEMISTRY
Technical research activities for 1978 --- chemistry, hydrothermodynamics, information theory, raman spectroscopy, and composite materials and structures N80-30451

THERMODYNAMIC PROPERTIES
On the thermomechanical response of 3.5 Ni-Mo-V alloy steel and type 304 stainless steel undergoing cyclic uniaxial inelastic deformation N80-30776
Gas channel formation studies including real-air thermodynamic properties
[AD-A086999] N80-31212

THERMODYNAMICS
Thermodynamics based on a work inequality
N80-31262

THERMOLUMINESCENCE
Thermoluminescence studies of the thermal and radiation histories of chrondritic meteorites
N80-31292

THERMOREGULATION
Thermoregulation in rats: Effects of varying duration of hypergravic fields
[NASA-CR-163481] N80-31030

THERMOSETTING RESINS
European Scientific Notes. Volume 34, No. 6
[AD-A086806] N80-31304

THETA PINCH
Plasma rotation in reversed-field theta pinches
[MSNW-80-1144-1] N80-31217

THICK FILMS
Computer aided automated hybrid substrate probe testing development
[AD-A087124] N80-30768

THIN FILMS
The flash evaporation of powdered indium antimonide
[AD-A086531] N80-30495
Metallographic preparation of titanium diboride coatings
[SAND-80-0596] N80-30503
Photoconductivity in polyacetylene
[AD-A086942] N80-30527
Studies on the reduction of intermodulation generation in communications systems
[AD-A086995] N80-30622
Second breakdown susceptibility of silicon-on-sapphire diodes having systematically different geometries
[AD-A086345] N80-30648
Integrated thin film dc SQUIDS
[AD-A086466] N80-30652
Thin films of InP for photovoltaic energy conversion
[COO-3004-2] N80-30912
Controlled cadmium telluride thin films for solar cell applications (emerging materials systems for solar cell applications)
[DOE/ET-23023/T3] N80-30921
The spectral characteristics of metal film beam splitters
[AD-A086419] N80-31196
Diffusion induced grain boundary migration in Au-Cu and Au-Ag thin films N80-31240

THOMAS-FERMI MODEL
Quantum limit magnetoconductivity in the dilute impurity regime N80-31227

THORIUM
Superconductivity in Th-Nb composites
N80-30543

THREADS
Stress concentrations in screw threads
[AD-A087218] N80-30809

THREE DIMENSIONAL BOUNDARY LAYER
Experimental study of three-dimensional shock wave turbulent boundary layer interaction: Scaling of sharp and blunt fin-induced flowfields
[AD-A086875] N80-30277

THREE DIMENSIONAL COMPOSITES
Measures of lack of fit, and transportation of predictors in composite designs
[AD-A086562] N80-31137

THREE DIMENSIONAL FLOW
Laminar natural convection along vertical corners and rectangular ducts N80-30675

THRESHOLDS (PERCEPTION)
An investigation of cardiac threshold variability relative to stimulus shape and respiratory cycle
N80-31032

THRUST AUGMENTATION
Titan liquid boost module for shuttle performance augmentation N80-30390
A pump fed bipropellant propulsion system for planetary missions N80-30392
Understanding flow blockage in small thrusters
N80-30394

THRUST CONTROL
Command control of solid propellant gas generators and thrusters by hot cutters N80-30406
Optimized propulsion/guidance analysis of ramjet powered vehicles N80-30420

THUNDERSTORMS
National Severe Local Storms Operations Plan
[PB80-187362] N80-31021

TIDES
Long-term measurement of abyssal currents in the North Pacific
[DOE/EV-71030/1] N80-31025

TIMBER IDENTIFICATION
Evaluating the reforested area for the municipality of Buri by automatic analysis of LANDSAT imagery --- Sao Paulo, Brazil
[E80-10258] N80-30841

TIMBER INVENTORY
Forest resource information system, phase 3 --- St. Regis Paper Co.: Picayune, Mississippi
[E80-10242] N80-30825
Evaluating the reforested area for the municipality of Buri by automatic analysis of LANDSAT imagery --- Sao Paulo, Brazil
[E80-10258] N80-30841

TIME DIVISION MULTIPLE ACCESS
Multi-user Time Division Multiple Access (TDMA) and Spread Spectrum (SS)-TDMA
[ESA-CR(P)-1324] N80-30633
Scheduler software for tracking and data relay satellite system loading analysis: User manual and programmer guide
[NASA-TM-78290] N80-31070

TIME DIVISION MULTIPLEXING
A conflict resolution algorithm for noisy multiaccess channels
[AD-A086767] N80-30608
Collision-resolution algorithms and random-access communications
[AD-A086695] N80-30613

TIME FUNCTIONS
High order time setting methods for nonlinear evaluation equations
[BNL-27011] N80-31123

TIME LAG
Adaptive time delay circuitry for interference cancellation systems
[AD-A086326] N80-30605

TIME MEASUREMENT
Shuttle time and frequency transfer experiment
[NASA-TM-78288] N80-30342
Characteristics of electrical discharges on the T78-2 satellite (SCATHA)
[AD-A087249] N80-30360

TIME OF FLIGHT SPECTROMETERS
Study and evaluation of impulse mass spectrometers for ion analysis in the D and E regions of the ionosphere
[NASA-CR-163490] N80-30979

TIMING DEVICES
Submicrosecond comparisons of time standards with the Navigation Technology Satellites (NTS)
[AD-A086780] N80-30564

TIN
Solar photovoltaic module degradation from electro-migration
[COO-4094-64] N80-30910

TIROS N SERIES SATELLITES
Environmental satellite imagery June 1979
[PB80-181852] N80-31015

TITAN LAUNCH VEHICLES
Titan liquid boost module for shuttle performance augmentation N80-30390

TITANIUM
The effects of titanium on submerged-arc weld metal N80-30748

TITANIUM ALLOYS
The influence of coherency strains on the elevated temperature mechanical behavior of Ni-15r-Al-Ti-Mo alloys N80-30474
An investigation of mechanisms effecting environmental stress cracking in titanium alloy
[AD-A086979] N80-30499
Deformation of an alloy with a lamellar microstructure: Experimental
[AD-A087100] N80-30500
Evaluation of titanium bolts coated with ivadize aluminum and Kalgard 2240 C in torque tension tests
[SPS-5254] N80-30512
Observations on the generality of the grain-size effect on fatigue crack growth in alpha plus beta titanium alloys
[AD-A087215] N80-30811

TITANIUM BORIDES
Metallographic preparation of titanium diboride coatings
[SAND-80-0596] N80-30503

TOKAMAK DEVICES
Status of the structural design of superconducting magnets for the large coil program
[CONF-791102-160] N80-31151
Particle confinement and magnetic fluctuations in Tokamak discharges with gas puffing N80-31206
Large aspect ratio Tokamak study
[CONF-791102-156] N80-31213
Techniques of plasma production and heat. 32: Plan for the plasma microwave-heating system at the T-10M facility
[UCRL-TRANS-11563] N80-31216
Review of the wall problem and conditioning techniques for Tokamaks
[PPPL-1666] N80-31221

TOPOGRAPHY
Study of geological structure of Sicily and other Italian areas --- Gulf of Orosei, Eastern Sardinia
[E80-10299] N80-30866
The contribution of the diffuse light component to the topographic effect on remotely sensed data
[NASA-TM-80728] N80-30876
Topographical simulation of the blood vessels of the human bulbar conjunctiva and application to pressure-flow relationships N80-31033

TOROIDAL PLASMAS
Ideal magnetohydrodynamic equilibrium of a weakly toroidal plasma with elongated cross section. Part 1: Elliptic cross section
[REPT-79-121-PT-1] N80-31224
TOROIDS
Rocket measurement of toroidal magnetic fields in an equatorial electrojet: Method of evaluation
[GAMMA-34] N80-30993
TORQUE
Evaluation of titanium bolts coated with ivadize aluminum and Kalgard 2240 C in torque tension tests
[SPS-5254] N80-30512
Torques on a nearly rigid body in a relativistic gravitational field
[NASA-TM-78295] N80-31289
TORQUE MOTORS
A propulsion and steering control system for the Mars rover
[NASA-CR-163501] N80-30751
TORSION
Torsional waves in a bimetallic cylinder. Part 1: Axially homogeneous case
[AD-A085822] N80-30793
TOUGHNESS
Evaluation of a new fracture toughness measuring technique, and adaptation of the technique to use ultra-small specimens
[AD-A085892] N80-30791
Influence of small scale yielding on dynamic fracture
[AD-A086335] N80-30801
TOWERS
Nonlinear behavior of guyed towers N80-30782
TOWING
Evaluation of the impact of towing DC-9 transport airplanes at Boston-Logan Airport
[AD-A086864] N80-30297
Evaluation of the impact of towing the L-1011 airplane at Boston-Logan Airport
[AD-A086977] N80-30303
TOXIC HAZARDS
Proceedings of the Conference on Environmental Toxicology
[AD-A086341] N80-30958
TOXICITY
Instrumentation for detecting hazardous materials
[AD-A086467] N80-30462
TOXICOLOGY
Proceedings of the Conference on Environmental Toxicology
[AD-A086341] N80-30958
TRACKING RADAR
The description of the ROBIN program and its conversion to the Interdata 7-32 computer system
[AD-A086810] N80-31000
TRACKING STATIONS
Network functions and facilities N80-30326
TRACTION
An integral bound on the strain energy for the traction problem in nonlinear elasticity with small strains
[AD-A086377] N80-30802
TRADEOFFS
A computer algorithm for generating a basis of the trades on t-designs
[AD-A087251] N80-31082
TRAILING EDGES
Study of an edge vortex by means of ultrasound in a close field behind a rectangular wing in a wind tunnel
[MPIS-11/1979] N80-30282
TRAINING AIRCRAFT
Calibration of a strain-gauged CT4-A undercarriage
[AD-A086965] N80-30718
TRAJECTORY ANALYSIS
Store separation trajectory analysis
[AD-A086704] N80-30284
TRAJECTORY CONTROL
Feasibility study for integrated flight trajectory control fighter
[AD-A084784] N80-30314
Post-launch results of the TIP spacecraft pulsed-plasma microthrusters N80-30416
TRAJECTORY OPTIMIZATION
Optimized propulsion/guidance analysis of ramjet powered vehicles N80-30420
Application of an advanced trajectory optimization method to ramjet propelled missiles N80-30421
TRANSDUCERS
Optical interarray processing
[AD-A086665] N80-31195
TRANSFER FUNCTIONS
Robustness with observers
[AD-A086610] N80-31092
Measurement of optical fiber bandwidth in the time domain
[PB80-177421] N80-31204
TRANSFER ORBITS
A pump fed bipropellant propulsion system for planetary missions N80-30392
TRANSFORMATIONS (MATHEMATICS)
Banach space shift operators N80-31145
TRANSIENT HEATING
A computer program for transient and axisymmetric ablation, conduction and radiation
[SNIAS-792-422-120] N80-30705
TRANSISTOR AMPLIFIERS
Simulation models for microwave power transistors under large signal operating conditions. Part 1: Theoretical and experimental results
[ESA-CR(P)-1336-PT-1] N80-30634
TRANSITION METALS
Impurity effects on the creep of polycrystalline magnesium and aluminum oxides at elevated temperatures --- mixed transition metal impurities
[COO-1591-34] N80-30447
Transition metal-promoted oxidative fusion with carborane and borine anions. Synthesis of C4B sub n (n = 8-11) carborane systems in the presence of B5H8(-) or B-3H8(-) ions
[AD-A087252] N80-30463
Materials for fuel cells
[PB80-182355] N80-30955
Theoretical and experimental investigation of bonding of simple ligands to metal complexes as reflected in their photoelectron spectra N80-31229
TRANSLATING
Augmented predictive parsing N80-31066
TRANSLATIONAL MOTION
The translational motion of particles in a viscoelastic liquid N80-30673
TRANSMISSION EFFICIENCY
Use of K sub A-band for radio metric determinations N80-30333
Spatial acquisition of optical sources in the presence of intense interference N80-30337
Plume interference with space shuttle range safety signals N80-30423
TRANSMISSION LINES
Parallel-plate transmission line type of EMP simulators: Systematic review and recommendations
[AD-A086814] N80-30599
Excitation of the parallel-plate section of a bounded wave EMP simulator by a conical transmission line
[AD-A086812] N80-30600
Manufacturing methods and technology program for ruggedized tactical fiber optic cable
[AD-A086874] N80-31197
TRANSONIC WIND TUNNELS
A theoretical investigation of the shock location on an axisymmetric body and on a two dimensional airfoil in transonic flows affected by axial pressure gradients and shifts in pressure level
[MBB-FE-124/S/PUB/9] N80-30283
TRANSPORT AIRCRAFT
Evaluation of the impact of towing DC-9 transport airplanes at Boston-Logan Airport
[AD-A086864] N80-30297
Evaluation of the impact of towing the L-1011 airplane at Boston-Logan Airport
[AD-A086977] N80-30303
TRANSPORT PROPERTIES
Evaluation of uncertainties in selected environmental dispersion needs --- radiation dosage
[CONF-791103-108] N80-30960
Critically evaluated data on optical and transport properties of solids refractive index and absorption coefficient of selected optical materials
[AD-A086658] N80-31199
TRANSPORT THEORY
Collisional plasma transport: Two dimensional scalar formulation of the initial boundary value problem and quasi one dimensional models
[REPT-79-120] N80-31223
TRANSPORTATION ENERGY
Minimizing the cost of operating aircraft on multistop tours N80-31140
TRANSURANIUM ELEMENTS
National Waste Terminal Storage Program: Containment system concepts for transporting type B quantities of transuranic waste
[RFP-2862] N80-31187
TREES (PLANTS)
Evaluating the reforested area for the municipality of Buri by automatic analysis of LANDSAT imagery --- Sao Paulo, Brazil
[E80-10258] N80-30841
TRIATOMIC MOLECULES
High resolution band models: Application to the 4.3 micrometer CO2 band N80-30425
TROPICAL METEOROLOGY
Models of the equatorial ocean circulation N80-31024
TROPICAL STORMS
Planetary boundary layer parameterization for tropical cyclones based on generalized similarity theory
[AD-A086781] N80-31004
TROPOSPHERE
Study of a pulsed coherent lidar for crosswind sensing
[PB80-181027] N80-31013
TROPOSPHERIC RADIATION
Gate phase 3 mean synoptic-scale radiative convergence profiles
[PB80-180797] N80-31020
TROPOSPHERIC WAVES
Gate phase 3 mean synoptic-scale radiative convergence profiles
[PB80-180797] N80-31020
TUNABLE LASERS
Theory of the longitudinal free electron laser, 1. A theoretical model of the linear electrooptic effect, 2 N80-30723
Model LS-2X laser source detector test system
[AD-A086540] N80-30739
TUNGSTEN
Adlayer effects on the surface reactivity of W(100) and Mo(100) single crystals N80-31234
TUNGSTEN CARBIDES
Compressive deformation characteristics of some cemented tungsten carbides at elevated temperatures N80-30440
TURBINE BLADES
Vibrations of a compressor blade with slip at the root
[AD-A086852] N80-30312
TURBINE EXHAUST NOZZLES
Development of high temperature turbine subsystem technology to a technology readiness status, phase 2
[FE-1806-79] N80-30754
TURBINE WHEELS
Evaluation of the cyclic behavior of aircraft turbine disk alloys, part 2
[NASA-CR-165123] N80-30482
TURBINES
Small Wind Turbine Systems 1979: A Workshop on R and D Requirements and Utility Interface/Institutional Issues. Volume 1: R and D requirements
[RFP-3014-VOL-1] N80-30943
TURBOFAN ENGINES
Sensor failure analysis and multivariable control for airbreathing propulsion systems N80-30747
TURBOGENERATORS
Navy-New Hampshire wind energy program
[AD-A086506] N80-30904
TURBOMACHINERY
Hydrodynamics of turbomachines
[AD-A086873] N80-30566
TURBULENCE
Visualization study of turbulent spots
[AD-A086831] N80-30699
TURBULENCE EFFECTS
Optical turbulence forecasting: A tutorial
[AD-A086863] N80-31005
TURBULENT BOUNDARY LAYER
Experimental study of three-dimensional shock wave turbulent boundary layer interaction: Scaling of sharp and blunt fin-induced flowfields
[AD-A086875] N80-30277
TURBULENT FLOW
Modeling propellant combustion interacting with an eroding solid surface
[UCRL-83727] N80-30433

Applications of Rayleigh scattering to turbulent flows with heat transfer and combustion
[AD-A086660] N80-30689
On the spreading rate and structure of a turbulent spot
[AD-A086445] N80-30692
Calculations of free turbulent shear flow with a three equation turbulence model by J. C. Rotta
[ESA-TT-525] N80-30712

TURBULENT HEAT TRANSFER
Turbulent heat transfer and fluid flow characteristics for air flow in an unsymmetrically heated triangular duct N80-30683

TURBULENT MIXING
A comparison among various theories for turbulent, reacting, planar mixing layers N80-30676

TWO DIMENSIONAL BODIES
Simulation of viscous steady flow past an arbitrary two-dimensional body
[AD-A086799] N80-30694

TWO DIMENSIONAL FLOW
R2D2: A FORTRAN program for two-dimensional chemically reacting, hyperthermal, internal flows. Volume 2: User guide
[AD-A086762] N80-30695

TWO PHASE FLOW
A theoretical study of developing gas-liquid flows in vertical pipes N80-30672
Nonsymmetric split of flow during cocurrent upflow at air-water mixtures through symmetric bifurcations N80-30678
Analysis of numerical methods for the equations of fluid dynamics
[AD-A086659] N80-30690
Two-Phase nozzle theory and parametric analysis
[AD-A086795] N80-30696

TWO STAGE TURBINES
Design study of a two-phase turbine bottoming cycle
[DOE/ET-15350-T1] N80-30757

U

UBV SPECTRA
A photometric investigation of possible binary occurrence in the central stars of seventeen planetary nebulae N80-31280

ULTRASONIC RADIATION
Ultrasonic in medicine. Citations from the Engineering Index data base
[PB80-810930] N80-31038
Evaluation of ultrasonic cleaning systems
[GEPP-OP-501] N80-31158

ULTRASONIC TESTS
Comparison of quasi-isotropic fiber reinforced composite laminates --- candidate materials for flywheels
[UCRL-15225] N80-30450

ULTRASONICS
Study of an edge vortex by means of ultrasound in a close field behind a rectangular wing in a wind tunnel
[MPIS-11/1979] N80-30282
Ultrasonics in medicine. Citations from the NTIS data base
[PB80-810922] N80-31037
Ultrasonic in medicine. Citations from the Engineering Index data base
[PB80-810930] N80-31038

ULTRAVIOLET SPECTROSCOPY
Determination of aromaticity of fuels and lubricant basestocks by ultraviolet spectroscopy
[AD-A086654] N80-30461

UNDERCARRIAGES
Calibration of mirage main undercarriage to determine wheel loads from measured strains
[AD-A086721] N80-30300
Calibration of a strain-gauged CT4-A undercarriage
[AD-A086965] N80-30718

UNDERGROUND STORAGE
Studies to assess the feasibility of storing nuclear waste in Columbia plateau basalts
[RHO-BWI-SA-19] N80-31183

UNDERGROUND TRANSMISSION LINES
The dc superconducting power transmission line project at LASL: US DOE division of electric energy systems
[LA-8323-PR] N80-30656
X-ray examination of lapped electrical insulation
[BNL-27456] N80-30659

UNITED STATES OF AMERICA
The space shuttle at work
[NASA-SP-432] N80-30367
As-built design specification for phase 3 model areas added to the monthly data base of the US --- Montana, South Dakota, Oklahoma, Nebraska, and Colorado
[E80-10263] N80-30846
The integrated analysis procedure for identification of spring small grains and barley --- Great Plains Corridor: U.S. and Canada
[E80-10274] N80-30847
Environmental data for sites in the National Solar Data Network
[SOLAR/0010-80/04] N80-30945

UNSTEADY FLOW
Unsteady swirling flows in gas turbines
[AD-A086765] N80-30697

UPPER ATMOSPHERE
Satellite density gauge instrumentation program
[AD-A086809] N80-30987
The description of the ROBIN program and its conversion to the Interdata 7-32 computer system
[AD-A086810] N80-31000

UPPER STAGE ROCKET ENGINES
Upper stages utilizing electric propulsion N80-30386

UPWELLING WATER
Coastal upwelling ecosystems analysis. Data report: Cruise B/1, SNP-1, 7604
[PB80-132921] N80-31028

URANIUM
Aerial gamma ray and magnetic survey: Raton Basin project. The Raton and Santa Fe quadrangles of New Mexico
[GJBX-9(80)-VOL-2] N80-30881

URBAN DEVELOPMENT
Department of Housing and Urban Development independent agencies appropriation bill, 1981
[S-96-926] N80-31267

URBAN RESEARCH
Mapping urbanized area expansion through digital image processing of LANDSAT and conventional data --- Orlando, Florida; Seattle, Washington; and Boston, Massachusetts
[E80-10301] N80-30868

URBAN TRANSPORTATION
Noncontacting suspension and propulsion for ground transportation
[PB80-176274] N80-31277

USER MANUALS (COMPUTER PROGRAMS)
The USAF stability and control digital datcom. Volume 1: User's manual
[AD-A086557] N80-30315
RITZ 2 software: Dynamic longitudinal analysis using a variational method for slender bodies of revolution containing liquids
[CNES-NT-91] N80-30361
Analysis and calculation of macrosegregation in a casting ingot. MPS solidification model. Volume 3: Operating manual
[NASA-CR-161542] N80-30481
Airborne antenna pattern code user s manual
[AD-A086331] N80-30591
Preliminary user guide for the program GTDDM (Ground Truth Dot Dump)
[E80-10244] N80-30827
User's guide Large Area Crop Inventory Experiment (LACIE) phase 3 PDP 11/45 automatic status and tracking system
[E80-10256] N80-30839
User's guide for the Yield Estimation Subsystem Data Management System (YESDAMS)
[E80-10276] N80-30849
Operator's guide for LACIE phase 3 automatic status and tracking system
[E80-10284] N80-30852
Draft user procedures: Software wheat yield predictions/foreign equivalent test --- Kansas, Oklahoma, and Nebraska
[E80-10287] N80-30855
Users manual for DWNWND: An interactive Gaussian plume atmospheric transport model with eight dispersion parameter options
[ORNL/TM-6874] N80-30962
The GMS users' guide, issue 1 N80-30997
Advanced flight design systems subsystem performance models. User guide: Environmental analysis routine library
[NASA-CR-160769] N80-31045
Scheduler software for tracking and data relay satellite system loading analysis: User manual and programmer guide
[NASA-TM-78290] N80-31070
Discrete/continuous simulation language
[AD-A086487] N80-31074
User's manual for NEMESIS and PLMODE
[AD-A087254] N80-31081
The blast noise prediction program: User reference manual
[CERL-IR-N-75] N80-31155

V

V/STOL AIRCRAFT
Reliability and maintainability improvement program for the AV-8 A/TAV-8A harrier head-up display set. Volume 1: Modifications to digital display indicator IP-1351/AVQ-30(v)
[AD-A085309] N80-30306

VACUUM
Outgassing data for spacecraft materials
[NASA-RP-1061] N80-30441

VACUUM APPARATUS
Further fabrication studies of dry lubricated slip ring brush materials for satellite applications
[AERE-G-1480] N80-30664

VACUUM CHAMBERS
Review of the wall problem and conditioning techniques for Tokamaks
[PPPL-1666] N80-31221

VACUUM TESTS
Vacuum tests on a rotary/linear sleeve bearing
[ESA-ESTL-42] N80-30761

VALUE ENGINEERING
SPS salvage and disposal alternatives
[NASA-CR-161548] N80-30898

VANES
Static investigation of rotor blades at rest and under quasi-stationary loading
[ISD-243] N80-30948
Stability and dynamic response to gravitational forces of the flapping and lead-lag hinges on a rigid rotor blade with the leading-edge angle of attack and flapping being coupled
[ISD-244] N80-30949
Dynamic analysis of a rotor blade with lead-lag freedom, flapping freedom, and variable-controlled blade pitch angle
[ISD-258] N80-30950

VAPOR DEPOSITION
Advanced electron beam techniques for metallic and ceramic protective coating systems --- modifying gas turbine and diesel engines for alternative fuel use
[LBL-10520] N80-30449
Metallographic preparation of titanium diboride coatings
[SAND-80-0596] N80-30503

VAPORIZING
Devolatilization kinetics and elemental release in the pyrolysis of pulverized coal N80-30533

VARIABILITY
A climatological study of the forcing of the North Pacific Ocean by synoptic storm activity
[AD-A086841] N80-31002
Long-term measurement of abyssal currents in the North Pacific
[DOE/EV-71030/1] N80-31025
Differentially weighting linear models of behavior: An empirical comparison of six methods
[AD-A086876] N80-31043
Convergent approximations in parabolic variational inequalities. 2: Hamilton-Jacobi inequalities
[AD-A086364] N80-31101

VARIABLE CYCLE ENGINES
Engine cycle studies program
[NASA-CR-159500] N80-30310

VARIABLE STARS
A photometric investigation of possible binary occurrence in the central stars of seventeen planetary nebulae N80-31280

VARIANCE (STATISTICS)
Antithetic variates revisited --- computerized simulation problems
[AD-A086114] N80-31131

VARIATIONAL PRINCIPLES
On some spectral problems and isospectral evolutions connected with the classical string problem. Part 2: Evolution equation
[PM/79/20-PT-2] N80-31127
VECTOR ANALYSIS
Shortrange forecasting through extrapolation of satellite imagery patterns. Part 2:. Testing motion vector techniques
[AD-A086862] N80-31003
Numerical studies in computer aided design. Part 2: Studies in high speed
[AD-A087060] N80-31060
VECTORS (MATHEMATICS)
Simulation development and evaluation of an improved longitudinal velocity vector control wheel steering mode and electronic display format
[NASA-TP-1664] N80-30305
VEGETATION
Florida water resources
[E80-10246] N80-30829
Florida water resources, Executive summary
[E80-10247] N80-30830
Study of geological structure of Sicily and other Italian areas --- Gulf of Orosei, Eastern Sardinia
[E80-10299] N80-30866
Application Explorer Mission-A heat capacity mapping mission --- Bavaria, Germany and Marrakech, Morocco
[E80-10309] N80-30875
VEGETATION GROWTH
Cloud seeding. Citations from the NTIS data base --- effects on irrigated farming
[PB80-811037] N80-31017
VELOCITY
Simulation development and evaluation of an improved longitudinal velocity vector control wheel steering mode and electronic display format
[NASA-TP-1664] N80-30305
Electronic stopping power calculations for all heavy ions at low velocity in all elements
[AD-A087107] N80-31166
VELOCITY DISTRIBUTION
Non-Newtonian migration of a deformable drop in shearing flows N80-30680
Atomic and molecular processes
[AD-A086764] N80-31164
A search for the persistent velocity autocorrelation in hydrogen by dense plasma decay N80-31205
VELOCITY MEASUREMENT
A 35 GHz radar to measure particles in Rayleigh fields
[TUM-RT-KB-78/4] N80-30623
A 35 GHz Doppler radar to measure the speed of small particles
[TUM-RT-KB-79/2] N80-30624
Doppler radar measurement in high speed fields
[TUM-RT-KB-79/8] N80-30625
Applications of Rayleigh scattering to turbulent flows with heat transfer and combustion
[AD-A086660] N80-30689
On the spreading rate and structure of a turbulent spot
[AD-A086445] N80-30692
VENUS ATMOSPHERE
Study of a chemical analyzer of the condensables in the atmosphere of Venus by attenuated total IR-reflection
[ANL-TRANS-1184] N80-31295
VERTICAL TAKEOFF AIRCRAFT
An analytical solution of lift loss for a round planform with a central lifting jet
[AD-A086669] N80-30276
VERY LONG BASE INTERFEROMETRY
VLBI system for weekly measurement of UT1 and polar motion: Preliminary results N80-30323
Progress report on the Block 1 VLBI correlator implementation N80-30324
Block 1, phase 1 very long baseline interferometry implementation N80-30325
Very long baseline interferometry observations of the masers toward Orion A N80-31282
VIBRATION
Vibrations of a compressor blade with slip at the root
[AD-A086852] N80-30312
Rocky Flats Small Wind Systems Test Center activities. Volume 2: Controlled velocity, vibration and dynamometer testing of Small Wind Energy Conversion Systems
[RFP-3004-VOL-2] N80-30908
VIBRATION MEASUREMENT
Study of the interactions between friction, wear and system rigidity
[DOE/ER-10471/1] N80-30818
VIBRATION MODE
The Shock and Vibration Digest, volume 12, no. 5
[AD-A085328] N80-30771
VIBRATION TESTS
Pavement evaluation and overlay design using vibratory nondestructive testing and layered elastic theory. Volume 1: Development procedure
[AD-A087186] N80-30808
VIBRATIONAL SPECTRA
Application of a root locus technique to multiloop velocity output feedback vibration suppression controllers N80-30784
On some spectral problems and isospectral evolutions connected with the classical string problem. Part 1: Constants of motion
[PM/79/19-PT-1] N80-31126
High-temperature, high-resolution measurements of CO2 in the region of 2200 to 2400 CM-1
[AD-A087234] N80-31169
VINYL POLYMERS
Fatigue effects in the wear of polymers N80-30516
VISCOELASTICITY
The translational motion of particles in a viscoelastic liquid N80-30673
Fracture problems in power law viscoelastic materials
[AD-A087244] N80-30813
Use of endochronic plasticity for multi-dimensional small and large strain problems
[ANL-CT-79-19] N80-30817
VISCOSITY
Viscosity of metals in explosive welding
[UCRL-TRANS-11542] N80-30504
Thermophysical properties of coal liquids
[BMI-2053] N80-30546
Thermophysical properties of coal liquids
[BMI-2043] N80-30557
VISCOUS DRAG
The effect of suspended solids on the viscous drag on an oscillating disk N80-30685
VISCOUS FLOW
Interacting inviscid and laminar viscous flow, and some aspects of their stability N80-30679
Simulation of viscous steady flow past an arbitrary two-dimensional body
[AD-A086799] N80-30694
Thermodynamic relations between selected parameters describing unsaturated flow
[DOE/DP-01253/18] N80-30704
VISCOUS FLUIDS
The translational motion of particles in a viscoelastic liquid N80-30673
VOIDS
Void nucleation in spheroidized steels during tensile deformation
[COO-3084-77] N80-30510
VOLATILITY
Outgassing data for spacecraft materials
[NASA-RP-1061] N80-30441
VOLTERRA EQUATIONS
Lumped nonlinear system analysis with Volterra series
[AD-A086428] N80-31107
Asymptotic behavior of positive solutions of nonlinear Volterra equations for heat flow
[AD-A086385] N80-31112
VORTEX RINGS
Transformation of a drop falling on the surface layer of a liquid in a vortex ring
[MPIS-15/1979] N80-30707
VORTICES
Study of an edge vortex by means of ultrasound in a close field behind a rectangular wing in a wind tunnel
[MPIS-11/1979] N80-30282
Vortex advisory system. Volume 1: Effectiveness for selected airports
[AD-A086982] N80-30286
Unsteady swirling flows in gas turbines
[AD-A086765] N80-30697
Vortex formation during rf heating of plasma
[PPPL-1658] N80-31219
VOYAGER 1 SPACECRAFT
Voyager-Jupiter radio science data papers N80-30341
VOYAGER 2 SPACECRAFT
Voyager-Jupiter radio science data papers N80-30341

W

WALL FLOW
Stability of boundary-layer flows over curved walls N80-30658
WARNING SYSTEMS
Vortex advisory system. Volume 1: Effectiveness for selected airports
[AD-A086982] N80-30286
Real-time operating system for a multi-laser/multi-detector system
[NASA-CR-163486] N80-30726
WASHINGTON
Mapping urbanized area expansion through digital image processing of LANDSAT and conventional data --- Orlando, Florida; Seattle, Washington; and Boston, Massachusetts
[E80-10301] N80-30868
WASTE DISPOSAL
Processes to increase utilization of power solid wastes
[ISM-245] N80-30929
Proceedings of the Conference on Environmental Toxicology
[AD-A086341] N80-30958
Scientific and technical needs for hazardous waste management
[PB80-177173] N80-30971
Waste isolation safety assessment program: Task 4: Collection and generation of transport data theoretical and experimental evaluation of waste transport in selected rocks
[LBL-9945] N80-31182
Studies to assess the feasibility of storing nuclear waste in Columbia plateau basalts
[RHO-BWI-SA-19] N80-31183
National Waste Terminal Storage Program: Containment system concepts for transporting type B quantities of transuranic waste
[RFP-2862] N80-31187
Advanced three-dimensional thermal modeling of a baseline spent fuel repository
[UCID-18660] N80-31188
WASTE ENERGY UTILIZATION
US Department of Energy's methane from landfills program
[CONF-7910126-1] N80-30558
Design study of a two-phase turbine bottoming cycle
[DOE/ET-15350-T1] N80-30757
Industrial application and assessment of waste energy recovery technologies N80-30886
Thermally driven open-cycle heat pump system
[CONF-800549-1] N80-30938
WASTE TREATMENT
Scientific and technical needs for hazardous waste management
[PB80-177173] N80-30971
WASTE UTILIZATION
Processes to increase utilization of power solid wastes
[ISM-245] N80-30929
Scientific and technical needs for hazardous waste management
[PB80-177173] N80-30971
Industrial wastes: An unexplored source of valuable minerals
[PB80-180250] N80-31279
WATER BALANCE
Use of soil moisture information in yield models
[E80-10302] N80-30869
WATER FLOW
The use of the climatic water budget to evaluate the validity of a precipitation record
[PB80-182157] N80-31019
WATER HEATING
Solar energy system performance evaluation report for Solaron-Duffield, Duffield, Virginia
[NASA-CR-161507] N80-30892

Experimental study of the storage of thermal energy in confined aquifers
[ORNL/SUB-7338/1] N80-30944
Regenerative energy sources for the production of low temperature heat: Energy sources, energy types, and energy conversion; results and applications; measures to promote use
[ISBN-3-7041-0038-2] N80-30951

WATER MANAGEMENT
Florida water resources
[E80-10246] N80-30829
Florida water resources, Executive summary
[E80-10247] N80-30830

WATER MASERS
Very long baseline interferometry observations of the masers toward Orion A N80-31282

WATER POLLUTION
Probability sampling to measure pollution from rural land runoff
[PB80-175946] N80-30883
Proceedings of the Conference on Environmental Toxicology
[AD-A086341] N80-30958
The benefits of air and water pollution control: A review and synthesis of recent estimates
[PB80-178759] N80-30967
Scientific and technical needs for hazardous waste management
[PB80-177173] N80-30971

WATER RESOURCES
Florida water resources
[E80-10246] N80-30829
Florida water resources, Executive summary
[E80-10247] N80-30830

WATER TEMPERATURE
Heat capacity mapping mission project HCM-051 --- East Australian Current and the Tasman Front
[E80-10278] N80-30850
Solar heating and domestic hot water system installed at Kansas City, Fire Stations, Kansas City, Missouri
[NASA-CR-161513] N80-30895
Experimental study of the storage of thermal energy in confined aquifers
[ORNL/SUB-7338/1] N80-30944

WATER TREATMENT
Development of reverse osmosis membrane for seawater desalination
[PB80-182090] N80-30472

WATER VAPOR
DIAL with heterodyne detection including speckle noise: Aircraft/shuttle measurements of O3, H2O, and NH3 with pulsed tunable CO2 lasers
[NASA-TP-1725] N80-30717

WATER VEHICLES
Formulas for positioning at sea by circular, hyperbolic, and astronomic methods
[PB80-184757] N80-30295

WATER WAVES
The convergence of periodic waves to solitary waves in the long wave limit
[AD-A086370] N80-30700
Models of the equatorial ocean circulation N80-31024

WATERSHEDS
Investigation of the application of HCMM thermal data to snow hydrology --- Salt-Verde watershed, Arizona and the Sierra Nevada Mountains, California
[E80-10297] N80-30864

WAVE EQUATIONS
The propagation of elastic waves in heterogeneous media N80-30586
Waves, caustics and Thom's theorem
[AD-A086974] N80-31122

WAVE FRONTS
Heat capacity mapping mission project HCM-051 --- East Australian Current and the Tasman Front
[E80-10278] N80-30850

WAVE FUNCTIONS
Electron ionization cross sections in the distorted-wave approximation
[AD-A087210] N80-31167

WAVE GENERATION
Generation and injection of e.m. waves in space plasma by means of a long orbiting tether
[NASA-CR-161533] N80-30588

WAVE PROPAGATION
The influence of random media on the propagation and depolarization of electromagnetic waves N80-30579
Propagation in a dielectric waveguide using the Green's function method N80-30583
The propagation of elastic waves in heterogeneous media N80-30586
Wave propagation in honeycomb and foam-core panels for application to panel NDE
[AD-A086667] N80-30604
Study of elf propagation anomalies as related to improved knowledge of electron density profiles produced by energetic particle precipitation
[AD-A087255] N80-30619
Microwave communication. Citations from the NTIS data base
[PB80-810831] N80-30639
User's manual for NEMESIS and PLMODE
[AD-A087254] N80-31061
Collective ion acceleration and electron beam propagation in dielectric guides
[AD-A086493] N80-31177

WAVEFORMS
The convergence of periodic waves to solitary waves in the long wave limit
[AD-A086370] N80-30700

WAVEGUIDES
Cerenkov radiation in dielectric-loaded waveguides N80-30581
Propagation in a dielectric waveguide using the Green's function method N80-30583
Short pulse UV-visible waveguide laser
[AD-A086856] N80-30738
Collective ion acceleration and electron beam propagation in dielectric guides
[AD-A086493] N80-31177
Nonlinear optics in guided structures. Application to frequency doubling
[LCR-78-05/R/G5] N80-31202
Vortex formation during rf heating of plasma
[PPPL-1658] N80-31219

WAXES
Solar thermal energy storage using a paraffin wax phase change material N80-30887

WEAPON SYSTEM MANAGEMENT
MX stage 1 N80-30405

WEAPON SYSTEMS
A plan for developing and validating a gun system design trade-off methodology
[AD-A087239] N80-30304
Missile-X overview N80-30404

WEAPONS
Center of gravity
[AD-A086961] N80-30568

WEAPONS DELIVERY
Feasibility study for integrated flight trajectory control fighter
[AD-A084784] N80-30314

WEAR
Lubricating oil analysis for wear monitoring. Citations from the NTIS data base
[PB80-807688] N80-30531
Pavement evaluation and overlay design using vibratory nondestructive testing and layered elastic theory. Volume 1: Development procedure
[AD-A087186] N80-30808
Study of the interactions between friction, wear and system rigidity
[DOE/ER-10471/1] N80-30818

WEAR TESTS
Structure and deformation characteristics of rheocast metals
[AD-A086469] N80-30442
Studies of microscopic aspects of wear processes in metals
[AD-A086760] N80-30493
Evaluation of titanium bolts coated with ivadize aluminum and Kalgard 2240 C in torque tension tests
[SPS-5254] N80-30512

WEATHER
The GMS users' guide, issue 1 N80-30997
Selective guide to climatic data sources
[PB80-187354] N80-31018

WEATHER FORECASTING
The application of measures of synoptic similarity to the evaluation and development of atmospheric prediction models, task 2
[AD-A086034] N80-30998
Forecast worksheet: A new approach
[AD-A086151] N80-30999

WEDGES
Oscillations of a liquid with a free surface in a wedge shaped container
[HSBW-FB-LRT-WE-9-4-79] N80-30708

WEIGHT REDUCTION
A Three-Dimensional Stability Analysis/Design program (3DSAD). Report 1. General geometry module
[AD-A087074] N80-30807

WEIGHTLESSNESS
Marangoni bubble motion in zero gravity N80-30682
Flow phenomena in gravitationless melting zones in the presence of electromagnetic fields
[ESA-TT-592] N80-30713
Investigation of the solidification behavior of electron beam welds under microgravitational conditions
[ESA-TT-591] N80-30760

WELDABILITY
Weldability of thermally grain-refined Fe12Ni-0.25Ti for cryogenic structural applications
[LBL-10259] N80-30506

WETLANDS
Florida water resources
[E80-10246] N80-30829
Florida water resources, Executive summary
[E80-10247] N80-30830

WHEAT
Detailed design specification for the automatic status and tracking system modifications for LACIE procedure 1
[E80-10243] N80-30826
As-built design specification for scatter plots for direct wheat
[E80-10250] N80-30833
As-built design specification for phase 3 model areas added to the monthly data base of the US --- Montana, South Dakota, Oklahoma, Nebraska, and Colorado
[E80-10263] N80-30846
Light reflectance, transmittance, and utilization within a vegetative canopy --- Texas
[E80-10282] N80-30851
Draft user procedures: Software wheat yield predictions/foreign equivalent test --- Kansas, Oklahoma, and Nebraska
[E80-10287] N80-30855
AgRISTARS cropping practices and crop characteristics based on 1979 ESCS observations --- Alabam, Arkansas, California, Georgia, Illinois, Iowa, Louisiana, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, North Dakota, Ohio, Pennsylvania, South Carolina, and Texas
[E80-10292] N80-30860
Maximal analysis labeling procedure (preliminary)
[E80-10294] N80-30862
An exploratory study to develop a cluster-based area estimation procedure --- Colorado, Kansas, Minnesota, Nebraska, Texas, South Dakota, Oklahoma, and North Dakota
[E80-10295] N80-30863
Analysis of scanner data for crop inventories
[E80-10308] N80-30874

WHEELS
Calibration of mirage main undercarriage to determine wheel loads from measured strains
[AD-A086721] N80-30300

WHISTLERS
Generation and injection of e.m. waves in space plasma by means of a long orbiting tether
[NASA-CR-161533] N80-30588

WIDEBAND COMMUNICATION
Digital recording acquisition subsystem for radio interferometry applications implementation plan N80-30322

WILDERNESS
Remote sensing of wildland resources: A state-of-the-art review
[PB80-184609] N80-30882

WILDLIFE
Grizzly bear habitat analysis. Section 3: LANDSAT-1 multispectral imagery and computer analysis of grizzly bear habitat --- Slategoat, Scapegoat and Danaher areas, Montana
[NASA-CR-163382] N80-30867

WIND (METEOROLOGY)
Small Wind Turbine Systems 1979: A Workshop on R and D Requirements and Utility Interface/Institutional Issues. Volume 1: R and D requirements
[RFP-3014-VOL-1] N80-30943

WIND EFFECTS
Commonality of earthquake and wind analysis
[PB80-178312] N80-30575
WIND MEASUREMENT
Study of a pulsed coherent lidar for crosswind sensing
[PB80-181027] N80-31013
WIND PRESSURE
Commonality of earthquake and wind analysis
[PB80-178312] N80-30575
WIND SHEAR
A climatological study of the forcing of the North Pacific Ocean by synoptic storm activity
[AD-A086841] N80-31002
Planetary boundary layer parameterization for tropical cyclones based on generalized similarity theory
[AD-A086781] N80-31004
WIND TUNNEL CALIBRATION
A theoretical investigation of the shock location on an axisymmetric body and on a two dimensional airfoil in transonic flows affected by axial pressure gradients and shifts in pressure level
[MBB-FE-124/S/PUB/9] N80-30283
WIND TUNNEL TESTS
Study of an edge vortex by means of ultrasound in a close field behind a rectangular wing in a wind tunnel
[MPIS-11/1979] N80-30282
Wind-tunnel and flight tests of ablators and insulators for rocket vehicles
[SAND-80-05230] N80-30446
WIND VELOCITY
Navy-New Hampshire wind energy program
[AD-A086506] N80-30904
Rocky Flats Small Wind Systems Test Center activities. Volume 1: Atmospheric test data collected from Small Wind Energy Conversion Systems
[RFP-3004-VOL-1] N80-30907
Rocky Flats Small Wind Systems Test Center activities. Volume 2: Controlled velocity, vibration and dynamometer testing of Small Wind Energy Conversion Systems
[RFP-3004-VOL-2] N80-30908
Small Wind Turbine Systems 1979: A Workshop on R and D Requirements and Utility Interface/Institutional Issues. Volume 1: R and D requirements
[RFP-3014-VOL-1] N80-30943
WINDMILLS (WINDPOWERED MACHINES)
Rocky Flats Small Wind Systems Test Center activities. Volume 1: Atmospheric test data collected from Small Wind Energy Conversion Systems
[RFP-3004-VOL-1] N80-30907
Rocky Flats Small Wind Systems Test Center activities. Volume 2: Controlled velocity, vibration and dynamometer testing of Small Wind Energy Conversion Systems
[RFP-3004-VOL-2] N80-30908
Sencenbaugh: Model 1000-14 wind turbine generator
[RFP-3034/3533/79-5] N80-30931
Wind power. Citations from the NTIS data base
[PB80-811433] N80-30956
Wind power. Citations from the Engineering Index data base
[PB80-811441] N80-30957
WINDPOWER UTILIZATION
Navy-New Hampshire wind energy program
[AD-A086506] N80-30904
Dynamic analysis of a rotor blade with lead-lag freedom, flapping freedom, and variable-controlled blade pitch angle
[ISD-258] N80-30950
Wind power. Citations from the NTIS data base
[PB80-811433] N80-30956
Wind power. Citations from the Engineering Index data base
[PB80-811441] N80-30957
WINDPOWERED GENERATORS
Pacific Missile Test Center energy projects. Summary of projects, contributions, and plans
[AD-A086196] N80-30903
Design study and economic assessment of multi-unit offshore wind energy conversion systems application. Volume 1: Executive summary
[WASH-2330-78/4-VOL-1] N80-30930
Sencenbaugh: Model 1000-14 wind turbine generator
[RFP-3034/3533/79-5] N80-30931
Siting handbook for small wind energy conversion systems
[PNL-2521-REV-1] N80-30941
WING LOADING
MINITWIST, a shortened version of TWIST
[NLR-MP-79018-U] N80-30785
WING ROOTS
MINITWIST, a shortened version of TWIST
[NLR-MP-79018-U] N80-30785
WIRING
A propulsion system for the Mars rover vehicle
[NASA-CR-163494] N80-30750
WORK
Thermodynamics based on a work inequality
N80-31252
WORK FUNCTIONS
Experimental determination of the temperature dependence of metallic work functions at low temperatures
[DOE/ER-02314] N80-30501
WORKING FLUIDS
Use of organic working fluids in Rankine engines
[DOE/CS-30202/T1] N80-30917
WORLD METEOROLOGICAL ORGANIZATION
Plan and basis of the World Climatology Program, 1980 to 1983
[WMO-540] N80-31010

X

X RAY ANALYSIS
Crystal defect studies using X-ray diffuse scattering
[CONF-800205-7] N80-31254
X RAY APPARATUS
High energy X-ray study
[AD-A086279] N80-30311
X RAY ASTRONOMY
Variable X-ray spectra of BL Lac objects: HEAO-1 observations of PKS 0548-322 and 2A 1219+305
[NASA-TM-80700] N80-31283
X-ray astronomical spectroscopy
[NASA-TM-80737] N80-31284
X RAY FLUORESCENCE
X-ray emission in heavy-ion collisons
[DOE/ER-06036/3] N80-31186
X RAY INSPECTION
High energy X-ray study
[AD-A086279] N80-30311
X-ray examination of lapped electrical insulation
[BNL-27456] N80-30659
X RAY SPECTRA
Hard X-ray spectrum from a one-fluid laser plasma mode
[NRL-MR-4241] N80-31218
Variable X-ray spectra of BL Lac objects: HEAO-1 observations of PKS 0548-322 and 2A 1219+305
[NASA-TM-80700] N80-31283
X RAY SPECTROSCOPY
X-ray astronomical spectroscopy
[NASA-TM-80737] N80-31284
X RAYS
Development of X-ray laser media: Measurement of gain and development of cavity resonators for wavelengths near 130 angstroms
[AD-A086670] N80-30730

Y

YIELD
Remote sensing research studies
[E80-10117] N80-30823
As-built design specification for phase 3 model areas added to the monthly data base of the US — Montana, South Dakota, Oklahoma, Nebraska, and Colorado
[E80-10263] N80-30846
User's guide for the Yield Estimation Subsystem Data Management System (YESDAMS)
[E80-10276] N80-30849
Use of soil moisture information in yield models
[E80-10302] N80-30869
YIELD STRENGTH
Hydrostatic stress dependent yield of 7075-T6 aluminum
[SAND-79-2220] N80-30505
Influence of small scale yielding on dynamic fracture
[AD-A086335] N80-30801
YTTRIUM COMPOUNDS
Electronic band structure and optical properties of the cubic Sc, Y and La hydride systems N80-31236

Z

ZINC SULFIDES
Localized impact damage in ceramics. Localized impact damage in zinc sulfide crack growth from small flaws in larger grains in alumina
[AD-A085874] N80-30790
ZIRCONIUM ALLOYS
Splat-quenching of zirconium alloys, with special reference to martensite and precipitate reactions
[AD-A086847] N80-30489
ZONE MELTING
Study on the utilization of solar energy for the operation of Spacelab material science furnaces
[DS-ERT-21-79] N80-30349
Flow phenomena in gravitationless melting zones in the presence of electromagnetic fields
[ESA-TT-592] N80-30713

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing

Listings in this Index are arranged alphabetically by personal author. The NASA accession number denotes the number by which the citation is identified.

CORPORATE SOURCE INDEX

Typical Corporate Source Index Listing

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The NASA accession number denotes the number by which the citation is identified. The titles are arranged under each corporate source in ascending accession number order.

A

ACUREX CORP., MOUNTAIN VIEW, CALIF.
Pilot scale combustion evaluation of waste and alternate fuels, phase 3
[PB80-177413] N80-30952

ADVANCED RESEARCH AND APPLICATIONS CORP., SUNNYVALE, CALIF.
A study of low-temperature processes in non-equilibrium electronic states
[AD-A086494] N80-30729

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).
Multilingual Aeronautical Dictionary
[LC-77-93566] N80-30272

AERODYNE RESEARCH, INC., BEDFORD, MASS.
High resolution band models: Application to the 4.3 micrometer CO2 band N80-30425
A Monte Carlo simulation of solar induced fluorescent scattering in optically thick high altitude plumes N80-30426

AEROJET LIQUID ROCKET CO., SACRAMENTO, CALIF.
Advanced expander cycle engine for manned orbit transfer vehicles N80-30385
Dual throat engine design for a SSTO launch vehicle N80-30388
Titan liquid boost module for shuttle performance augmentation N80-30390
Single stage liquid propulsion systems: Specific optima for NRBM vehicles N80-30410

AEROJET SOLID PROPULSION CO., SACRAMENTO, CALIF.
Development of a reduced smoke rocket motor for the AIM-9B, E, J, P Sidewinder missile N80-30412

AERONAUTICAL RESEARCH LABS., MELBOURNE (AUSTRALIA).
Calibration of mirage main undercarriage to determine wheel loads from measured strains
[AD-A086721] N80-30300
Fatigue damage estimation for the BAeA aircraft fatigue data analysis system
[AD-A086470] N80-30301
Sea king Mk. 50 helicopter flight control system: A mathematical model of the AFCS (ASW) mode
[AD-A086969] N80-30318
Scatter of fatigue crack rates in 7XXX aluminum alloys
[AD-A086543] N80-30498
Calibration of a strain-gauged CT4-A undercarriage
[AD-A086965] N80-30718
Analysis of ground calibration data from strain gauges attached to the airframe of CT4-A airtrainer A19-031
[AD-A086970] N80-30719

AEROSPACE CORP., EL SEGUNDO, CALIF.
Characteristics of electrical discharges on the T78-2 satellite (SCATHA)
[AD-A087249] N80-30360
Theoretical antenna analysis
[AD-A086703] N80-30614
Orientation of measurement sensors for optimum end-of-life performance
[AD-A086280] N80-30767
Study of hydrogen-powered versus battery-powered automobiles
[ATR-79(7759)-1-VOL-1] N80-31271

AEROSPACE ENGINEERING OFFICE, ZURICH (SWITZERLAND).
Study of a mathematical model of a flexible solar array sub-panel assembly (VELSA 2)
[REPT-10.2-93/NT] N80-30366

AEROTHERM ACUREX CORP., MOUNTAIN VIEW, CALIF.
Development and testing of two-stage hybrid launcher
[AD-A086268] N80-30356

AIR FORCE ACADEMY, COLO.
Chemiluminescent reactions of selenium and tellerium with fluorine
[AD-A087202] N80-30464

AIR FORCE AERO PROPULSION LAB., WRIGHT-PATTERSON AFB, OHIO.
Liquid airbreathing missile fuels: An overview of properties and applications N80-30419
GRAPH: An interactive computer program used for technical plotting
[AD-A086354] N80-31076

AIR FORCE GEOPHYSICS LAB., HANSCOM AFB, MASS.
Comparison of results from the S3-2 satellite and the Chatanika radar in an early morning aurora
[AD-A086861] N80-30983
Shortrange forecasting through extrapolation of satellite imagery patterns. Part 2: Testing motion vector techniques
[AD-A086862] N80-31003
Optical turbulence forecasting: A tutorial
[AD-A086863] N80-31005
High-temperature, high-resolution measurements of CO2 in the region of 2200 to 2400 CM-1
[AD-A087234] N80-31169

AIR FORCE MATERIALS LAB., WRIGHT-PATTERSON AFB, OHIO.
Model compound studies of rigid rod aromatic heterocyclic polymer systems. Part 1: The crystal and molecular structures of 2,6-diphenylbenzl (1,2-D:4,5-D') bisthiazole and 2,6-diphenylbenzo (1,2-D:5,4-D') bisoxazole
[AD-A086804] N80-30520
Curing stress fields in involute exit cones
[AD-A086404] N80-30803
Impurity studies in the single crystal cadmium sulfide
[AD-A086741] N80-31248

AIR FORCE ROCKET PROPULSION LAB., EDWARDS AFB, CALIF.
US Air Force programs in electric propulsion N80-30396
Pulsed plasma propulsion technology N80-30398

AIR FORCE WRIGHT AERONAUTICAL LABS., WRIGHT-PATTERSON AFB, OHIO.
Vibrations of a compressor blade with slip at the root
[AD-A086852] N80-30312
An investigation of a composite oxide film as a corrosion inhibitor for 2024 aluminum
[AD-A086791] N80-30497

AMES LAB., IOWA.
Processes to increase utilization of power solid wastes
[ISM-245] N80-30929
Electronic structure studies of metal hydrides
[ISM-265] N80-31256
Optical and photoemission studies of lanthanum hydrides
[ISM-264] N80-31257
Metal-electrolyte boundary studies with in situ photoemission
[ISM-257] N80-31258

ANALYTIC SCIENCES CORP., READING, MASS.
Development of Loran-C data collection and analysis procedures
[AD-A086683] N80-30289
A plan for developing and validating a gun system design trade-off methodology
[AD-A087239] N80-30304
A fast estimation algorithm for two-dimensional gravity data, geofast
[AD-A086835] N80-30988

APPLIED PHYSICS LAB., JOHNS HOPKINS UNIV., LAUREL, MD.
The 1980 JANNAF propulsion Meeting, volume 5
[AD-A087063] N80-30381
Post-launch results of the TIP spacecraft pulsed-plasma microthrusters N80-30416
JANNAF 11th Plume Technology Meeting, volume 2
[AD-A079647] N80-30422
Report of the 6th Ocean Thermal Energy Conversion Conference: Ocean Thermal Energy for the 1980's
[CONF-790631-1] N80-30922

ARCON CORP., WALTHAM, MASS.
Assessment of the capacity of the Automated Radar Terminal Systems (ARTS IIIA) for the years 1980-1990
[AD-A087243] N80-30621

ARGONNE NATIONAL LAB., ILL.
Materials technology for coal-conversion processes
[ANL-80-12] N80-30551
Environmental implications of accelerated gasohol production: Preliminary assessment
[ANL/ES-91] N80-30555
US Department of Energy's methane from landfills program
[CONF-7910126-1] N80-30558
Cross-flow-induced instabilities of circular cylinders N80-30773
Accurate numerical solutions for elastic-plastic models
[ANL-80-31] N80-30815
Use of endochronic plasticity for multi-dimensional small and large strain problems
[ANL-CT-79-19] N80-30817
Climate and energy: A comparative assessment of the Satellite Power System (SPS) and alternative energy technologies
[DOE/ER-0050] N80-30914
Comparative assessment of environmental welfare issues associated with the Satellite Power System (SPS) and alternative technologies
[DOE/ER-0055] N80-30915

SOURCE

Comparative analysis of net energy balance for Satellite Power Systems (SPS) and other energy systems
[DOE/ER-0056] N80-30916
Development of advanced batteries at Argonne National Laboratory
[ANL-80-32] N80-30927
Conceptual design of electrical balance of plant for advanced battery energy storage facility
[ANL-80-16] N80-30940
Study of a chemical analyzer of the condensables in the atmosphere of Venus by attenuated total IR-reflection
[ANL-TRANS-1184] N80-31295

ARIZONA UNIV., TUCSON.
A singular perturbations approach to reduced-order modeling and decoupling for large scale linear systems
[AD-A087050] N80-31118
On multiple solutions of singularly perturbed systems in the conditionally stable case
[AD-A087049] N80-31119
Scatterplate interferometry N80-31190
Polarimetry of Jupiter at large phase angles N80-31293

ARMY ARMAMENT RESEARCH AND DEVELOPMENT COMMAND, DOVER, N. J.
Explosibility of explosive and propellant dust
[AD-A087240] N80-30539
The SHAFT book: Design charts for torsional properties of noncircular SHAFTS: User's manual
[AD-A086498] N80-30752

ARMY ARMAMENT RESEARCH AND DEVELOPMENT COMMAND, WATERVLIET, N. Y.
Stress concentrations in screw threads
[AD-A087218] N80-30809

ARMY AVIATION RESEARCH AND DEVELOPMENT COMMAND, ST. LOUIS, MO.
Investigation of helicopter wire strike protection concepts
[AD-A086857] N80-30285

ARMY COLD REGIONS RESEARCH AND ENGINEERING LAB., HANOVER, N. H.
Radio-echo sounding in the Allan Hills, Antarctica, in support of the meteorite field program
[AD-A086858] N80-30879

ARMY CONSTRUCTION ENGINEERING RESEARCH LAB., CHAMPAIGN, ILL.
The blast noise prediction program: User reference manual
[CERL-IR-N-75] N80-31155
Mitigation of noise impact via operational changes
[CERL-TR-N-76] N80-31156

ARMY ELECTRONICS RESEARCH AND DEVELOPMENT COMMAND, WHITE SANDS MISSILE RANGE, N. MEX.
Objective quality control of artillery computer meteorological messages
[AD-A086554] N80-31001

ARMY ENGINEER WATERWAYS EXPERIMENT STATION, VICKSBURG, MISS.
Use of fabrics and other measures for retarding reflective cracking of asphaltic concrete overlays
[AD-A085851] N80-30567
A Three-Dimensional Stability Analysis/Design program (3DSAD). Report 1. General geometry module
[AD-A087074] N80-30807
Pavement evaluation and overlay design using vibratory nondestructive testing and layered elastic theory. Volume 1: Development procedure
[AD-A087186] N80-30808

ARMY MATERIALS AND MECHANICS RESEARCH CENTER, WATERTOWN, MASS.
Shock in solids: Army materials research and applications N80-30772

ARMY MILITARY PERSONNEL CENTER, ALEXANDRIA, VA.
Multiple objectives and the path determination problem
[AD-A086744] N80-31142

ARMY MISSILE COMMAND, REDSTONE ARSENAL, ALA.
Mid-term progress report on the development of army Closed Cycle Circulator (CCC) system
[AD-A087219] N80-30744

ARMY NATICK RESEARCH AND DEVELOPMENT COMMAND, MASS.
The psychomotor performance of men and women wearing two types of body armor
[AD-A086742] N80-31040

ARMY RESEARCH INST. FOR THE BEHAVIORAL AND SOCIAL SCIENCES, ALEXANDRIA, VA.
Tactical night terrain flight navigation
[AD-A086458] N80-30288
Helicopter electro-optical system display requirements. 2: Performance of helicopter pilots when using a low-light-level television system during simulated nap-of-the-earth flight
[AD-A086855] N80-30308

ARMY TEST AND EVALUATION COMMAND, ABERDEEN PROVING GROUND, MD.
Center of gravity
[AD-A086961] N80-30568
Safety and health hazard evaluation, general equipment
[AD-A086990] N80-30569
Radio receiver, spurious response. Test operations procedure
[AD-A086463] N80-30602

ARNOLD ENGINEERING DEVELOPMENT CENTER, ARNOLD AIR FORCE STATION, TENN.
Comparison of wind tunnel and flight test measurements of static aerodynamic loading of a captive store
[AD-A087237] N80-30281

ASPEN INST. FOR HUMANISTIC STUDIES, BOULDER, COLO.
Modeling the prospects for climatic change: Current state-of-the-art and implications
[CONF-800474-1] N80-30961
Aerosols and climate
[CONF-800309-5] N80-31006
Consequences of a hypothetical world climate change produced by increased atmospheric carbon dioxide
[DOE/EV-10281/1] N80-31007

AUBURN UNIV., ALA.
Synthesis of CMP beginning with sodium borohydride N80-30407
Second breakdown susceptibility of silicon-on-sapphire diodes having systematically different geometries
[AD-A086345] N80-30648
A theoretical study of developing gas-liquid flows in vertical pipes N80-30672
Experimental study of the storage of thermal energy in confined aquifers
[ORNL/SUB-7338/1] N80-30944

AUSTRIAN SOLAR AND SPACE AGENCY, VIENNA.
Regenerative energy sources for the production of low temperature heat: Energy sources, energy types, and energy conversion; results and applications; measures to promote use
[ISBN-3-7041-0038-2] N80-30951

AUTOMATION INDUSTRIES, INC., RICHLAND, WASH.
Environmental data for sites in the National Solar Data Network
[SOLAR/0010-80/04] N80-30945

B

BALLISTIC RESEARCH LABS., ABERDEEN PROVING GROUND, MD.
Effect of near-zero spin on instability of controlled projectiles in ascending or descending flight
[AD-A086775] N80-30278
Simulant reaction temperature measurement via telemetry for the XM736 at charge 9
[AD-A086774] N80-30374

BATTELLE COLUMBUS LABS., OHIO.
Analytical techniques for aromatic components in aircraft
[AD-A086343] N80-30536
Thermophysical properties of coal liquids
[BMI-2053] N80-30546
Thermophysical properties of coal liquids
[BMI-2043] N80-30557
Quantum mechanical studies of molecular hyperpolarizabilities
[AD-A086662] N80-30733
Critically loaded hole technology advisory group for aerospace research and development
[AD-A086021] N80-30788

BATTELLE PACIFIC NORTHWEST LABS., RICHLAND, WASH.
Supplementary material on passive solar heating concepts: A compilation of published articles. Presented in conjunction with a series of passive solar heating seminars sponsored by the Solar Energy Technology Transfer program
[PNL-SA-7820] N80-30920
Siting handbook for small wind energy conversion systems
[PNL-2521-REV-1] N80-30941

BEHAVIORAL RESEARCH APPLICATIONS GROUP, INC., ROCHESTER, N. Y.
Instrument scanning and controlling: Using eye movement data to understand pilot behavior and strategies
[NASA-CR-3306] N80-31039

BELL TELEPHONE LABS., INC., MURRAY HILL, N. J.
Conventions and formulas for using the Mueller-Stokes calculus in ellipsometry
[LBL-10172] N80-31124

BENDIX CORP., KANSAS CITY, MO.
Pulse plating of nickel deposits
[BDX-613-2378] N80-30502

BIPHASE ENERGY SYSTEMS, INC., SANTA MONICA, CALIF.
Design study of a two-phase turbine bottoming cycle
[DOE/ET-15350-T1] N80-30757

BOEING AEROSPACE CO., SEATTLE, WASH.
Application of an advanced trajectory optimization method to ramjet propelled missiles N80-30421

BOEING VERTOL CO., PHILADELPHIA, PA.
Design, development, and flight demonstration of the loads and stability characteristics of a bearingless main rotor
[AD-A086754] N80-30299
Evaluation of forged helicopter components processed with controlled solidification and thermal mechanical treatments
[AD-A086818] N80-30302

BOWDOIN COLL., BRUNSWICK, MAINE.
The benefits of air and water pollution control: A review and synthesis of recent estimates
[PB80-178759] N80-30967

BRIGHAM YOUNG UNIV., PROVO, UTAH.
Alloy catalysts with monolith supports for methanation of coal-derived gases
[FE-2729-8] N80-30541

BRITISH AEROSPACE DYNAMICS GROUP, BRISTOL (ENGLAND).
Study of interferences in satellite communication systems. Volume 3: Study report
[ESS/CCG-66-VOL-3] N80-30635
Study of interferences in satellite communication systems. Volume 4: Executive summary
[ESS/CCG-67-VOL-4] N80-30636
Study and evaluation of modular packaging techniques for on board data handling: Technology assessment
[ESS/SS-918] N80-30663
Random access memomy, volume 1
[ESS/SS-935-VOL-1] N80-31062
Random access memory, volume 2
[ESS/SS-935-VOL-2] N80-31063

BROBECK (WILLIAM M.) AND ASSOCIATES, BERKELEY, CALIF.
Control system considerations for an aluminum-air battery powered electric vehicle
[UCRL-15241] N80-30939

BROOKHAVEN NATIONAL LAB., UPTON, N. Y.
X-ray examination of lapped electrical insulation
[BNL-27456] N80-30659
Hybrid photovoltaic/thermal systems with a solar-assisted heat pump
[BNL-27667] N80-30919
Solar assisted heat pump program overview and summary of work at Brookhaven National Laboratory
[BNL-27662] N80-30926
Comparative assessment of five long-run energy projections
[DOE/EIA/CR-0016/02] N80-30936
Fuel cells for electric utility and transportation applications
[BNL-27452] N80-30937
Deliquescence properties and particle size change of hydroscopic aerosols
[BNL-27094] N80-30963

High order time setting methods for nonlinear evaluation equations
[BNL-27011] N80-31123

BROWN AND ROOT, INC., HOUSTON, TEX.
Solar power satellite offshore rectenna study
[NASA-CR-161543] N80-30891

BROWN UNIV., PROVIDENCE, R. I.
Effect of alloy deformation on the average spacing parameters of non-deforming particles
[COO-3084-75] N80-30509
Void nucleation in spheroidized steels during tensile deformation
[COO-3084-77] N80-30510

BUNDESMINISTERIUM FUER FORSCHUNG UND TECHNOLOGIE, BONN (WEST GERMANY).
Static investigation of rotor blades at rest and under quasi-stationary loading
[ISD-243] N80-30948
Stability and dynamic response to gravitational forces of the flapping and lead-lag hinges on a rigid rotor blade with the leading-edge angle of attack and flapping being coupled
[ISD-244] N80-30949
Dynamic analysis of a rotor blade with lead-lag freedom, flapping freedom, and variable-controlled blade pitch angle
[ISD-258] N80-30950

C

CALIFORNIA INST. OF TECH., PASADENA.
Shock temperatures of materials: Experiments and applications to the high pressure equation of state N80-30453
Non-steady behavior of a flame spreading from a point in a two-dimensional duct N80-30454
Hydrodynamics of turbomachines
[AD-A086873] N80-30566
The influence of random media on the propagation and depolarization of electromagnetic waves N80-30579
Monolithic integration of gallium arsenide optoelectronic devices N80-30642
The translational motion of particles in a viscoelastic liquid N80-30673
Non-Newtonian migration of a deformable drop in shearing flows N80-30680
Natural convection film boiling on a vertical surface N80-30684

STUTTGART UNIV. (WEST GERMANY).
Static investigation of rotor blades at rest and under quasi-stationary loading
[ISD-243] N80-30948
Stability and dynamic response to gravitational forces of the flapping and lead-lag hinges on a rigid rotor blade with the leading-edge angle of attack and flapping being coupled
[ISD-244] N80-30949
Dynamic analysis of a rotor blade with lead-lag freedom, flapping freedom, and variable-controlled blade pitch angle
[ISD-258] N80-30950
Computer controlled measurement of shapes and their variations by means of active targets and an optoelectronic converter
[ISD-245] N80-31201

SUSSEX UNIV., BRIGHTON (ENGLAND).
Splat-quenching of zirconium alloys, with special reference to martensite and precipitate reactions
[AD-A086847] N80-30489

SYRACUSE UNIV., N. Y.
Surface physics and chemistry of electrical contact phenomena
[AD-A086733] N80-30460
Experimental validation of the antenna pattern distortion computer program: DISTORT (UHF antennas)
[AD-A086330] N80-30601
Research program in elementary particle theory
[COO-3533-161] N80-31170

SYSTEMS APPLICATIONS, INC., SAN RAFAEL, CALIF.
Modelling of simulated photochemical smog with kinetic mechanisms. Volume 2 CHEMK: A computer modeling scheme for chemical kinetics
[PB80-181084] N80-30970

SYSTEMS CONTROL, INC., PALO ALTO, CALIF.
Analysis of T-2C high angle of attack flight test data with nonlinear system identification methodology
[AD-A086327] N80-30298

T

TATA INST. OF FUNDAMENTAL RESEARCH, BOMBAY (INDIA).
Solar passive systems for buildings
[NP-24377] N80-30947

TECHNISCHE HOGESCHOOL, DELFT (NETHERLANDS).
Fundamental investigation of interaction forces in bubble swarms and application to the design of centrifugal separators
[WTHD-115] N80-30706

TECHNISCHE UNIVERSITAET, BRUNSWICK (WEST GERMANY).
Rocket measurement of toroidal magnetic fields in an equatorial electrojet: Method of evaluation
[GAMMA-34] N80-30993

TECHNISCHE UNIVERSITAET, MUNICH (WEST GERMANY).
A 35 GHz radar to measure particles in Rayleigh fields
[TUM-RT-KB-78/4] N80-30623
A 35 GHz Doppler radar to measure the speed of small particles
[TUM-RT-KB-79/2] N80-30624
Doppler radar measurement in high speed fields
[TUM-RT-KB-79/8] N80-30625

TEL-AVIV UNIV. (ISRAEL).
On the spreading rate and structure of a turbulent spot
[AD-A086445] N80-30692

TEMPLE UNIV., PHILADELPHIA, PA.
Failure time distributions: Estimates and asymptotoc results
[AD-A086828] N80-31133

TENNESSEE UNIV., KNOXVILLE.
Differential charge transfer to the continuum by ions in atomic hydrogen
[DOE/ER-10512/T1] N80-31172

TENNESSEE UNIV., TULLAHOMA.
Unsteady swirling flows in gas turbines
[AD-A086765] N80-30697

TENNESSEE UNIV. SPACE INST., TULLAHOMA.
Flow visualization study of secondary flow in a corner
[AD-A082634] N80-30688

TERRA TEK, INC., SALT LAKE CITY, UTAH.
Evaluation of a new fracture toughness measuring technique, and adaptation of the technique to use ultra-small specimens
[AD-A085892] N80-30791
TEXAS A&M UNIV., COLLEGE STATION.
The prediction of response of solids to thermal loading using the finite element code AGGIE 1
[AD-A087042] N80-30812
X-ray emission in heavy-ion collisons
[DOE/ER-06036/3] N80-31186
TEXAS INSTRUMENTS, INC., DALLAS.
Reliability evaluation of GaAs power FETs
[AD-A086668] N80-30651
TEXAS UNIV., AUSTIN.
A dual Algorithm to solve linear least absolute value approximations
[AD-A087078] N80-31080
TEXAS UNIV. AT AUSTIN.
New nonlinear optical processes in molecules at infrared frequencies
[AD-A086206] N80-30459
User's manual for NEMESIS and PLMODE
[AD-A087254] N80-31081
TEXTRON BELL AEROSPACE CO., BUFFALO, N. Y.
Modulation of a gas generator N80-30414
THIOKOL CORP., BRIGHAM CITY, UTAH.
Space Shuttle Solid Rocket Motor (SRM) development and qualification N80-30389
Qualification of Minuteman stage 3 motor for spin stabilized perigee stages N80-30403
MX stage 1 N80-30405
HARM rocket motor development N80-30415
LLMM SRAM 3-D grain structural analysis N80-30418
THIOKOL CORP., HUNTSVILLE, ALA.
Reduction in cost of rocket motor manufacture by use of liner with controllable cure N80-30409
THOMSON-CSF, MEUDON-LA-FORET (FRANCE).
Use of integrated optics for analog data signal conditioning aboard spacecraft
[LCR-79-108/R/G5] N80-31203
THOMSON-CSF, ORSAY (FRANCE).
Perfecting of nuclear microanalysis of deuterium by means of ion implantation. Application to the study of the hydrogeneration of amorphous silicon through ionic implantation N80-30468
Semiconductor laser technology: Stripe structure
[LCR-34-078/R/G5] N80-30746
Nonlinear optics in guided structures. Application to frequency doubling
[LCR-78-05/R/G5] N80-31202
THOMSON-CSF, PARIS (FRANCE).
Study and development of a slotted waveguide element in an antenna array
[ESA-CR(P)-1286] N80-30626
TOLEDO UNIV., OHIO.
Marangoni bubble motion in zero gravity N80-30682
Sensor failure analysis and multivariable control ior airbreathing propulsion systems N80-30747
TORONTO UNIV., DOWNSVIEW (ONTARIO).
Studies of laser selective excitation of atoms
[AD-A086497] N80-30734
TRANSPORTATION SYSTEMS CENTER, CAMBRIDGE, MASS.
Vortex advisory system. Volume 1: Effectiveness for selected airports
[AD-A086982] N80-30286
TRW DEFENSE AND SPACE SYSTEMS GROUP, REDONDO BEACH, CALIF.
Understanding flow blockage in small thrusters N80-30394
Fracture mechanics design of shuttle payload pressure vessels N80-30397
Surface acoustic wave microwave oscillator and frequency synthesizer
[AD-A086336] N80-30649
Advanced flight design systems subsystem performance models. Executive summary
[NASA-CR-160768] N80-31044
Advanced flight design systems subsystem performance models. User guide: Environmental analysis routine library
[NASA-CR-160769] N80-31045
Advanced flight design systems subsystem performance models. Sample model: Environmental analysis routine library
[NASA-CR-160770] N80-31046
TRW ENERGY SYSTEMS, REDONDO BEACH, CALIF.
Feasibility study for industrial cogeneration fuel cell application
[SAN-1889-T1] N80-30934
TRW SYSTEMS AND ENERGY, REDONDO BEACH, CALIF.
Development study of a novel continuous-flow impactor
[PB80-179286] N80-30574
Total particulate mass emission sampling errors
[PB80-181910] N80-30965
TUFTS UNIV., MEDFORD, MASS.
Payloads used in first three data-gathering BAMM flights
[AD-A086839] N80-30275
New hardware for tethered balloons
[AD-A086836] N80-30280

U

UELAND AND JUNKER, ARCHITECTS AND PLANNERS, PHILADELPHIA, PA.
Solar atrium: A hybrid solar heating and cooling system
[DOE/CS-34135/T1] N80-30918
UNITED KINGDOM ATOMIC ENERGY AUTHORITY, CULHAM (ENGLAND).
Field emission electric propulsion ion optics of double edged materials
[CLM-RR/E1/25] N80-30435
UNITED KINGDOM ATOMIC ENERGY AUTHORITY, HARWELL (ENGLAND).
Further fabrication studies of dry lubricated slip ring brush materials for satellite applications
[AERE-G-1480] N80-30664
UNITED TECHNOLOGIES CORP., EAST HARTFORD, CONN.
Two-Phase nozzle theory and parametric analysis
[AD-A086795] N80-30696
UNITED TECHNOLOGIES CORP., SOUTH WINDSOR, CONN.
Conceptual design of electrical balance of plant for advanced battery energy storage facility
[ANL-80-16] N80-30940
UNITED TECHNOLOGIES CORP., SUNNYVALE, CALIF.
IUS motor case development N80-30402
UNITED TECHNOLOGIES RESEARCH CENTER, EAST HARTFORD, CONN.
Autoignition characteristics of aircraft-type fuels
[NASA-CR-159886] N80-30535
Calculation of the energetics and collision dynamics of electronic transition lasers
[AD-A086657] N80-30731
Short pulse UV-visible waveguide laser
[AD-A086856] N80-30738
UNIVERSITE DES SCIENCES ET TECHNIQUES DU LANGUEDOC, MONTPELLIER (FRANCE).
On some spectral problems and isospectral evolutions connected with the classical string problem. Part 2: Evolution equation
[PM/79/20-PT-2] N80-31127
Some comments on the rational solutions of the Zakharov-Schabat equations N80-31128
UNIVERSITY COLL. OF SWANSEA (WALES).
Review of European powder metallurgy of superalloys
[AD-A086682] N80-30486
Molybdenum disulphide lubrication. A continuation survey: 1979 to 1980
[STC-79/419] N80-30762
UNIVERSITY OF SOUTHERN CALIFORNIA, LOS ANGELES.
Tight rounds on the response of multivariable systems with component uncertainty
[AD-A086580] N80-31090
UOP, INC., DES PLAINES, ILL.
Upgrading of coal liquids: Hydrocracking of EDS process derived gas oils
[FE-2566-33] N80-30545
UTAH UNIV., SALT LAKE CITY.
Impurity effects on the creep of polycrystalline magnesium and aluminum oxides at elevated temperatures
[COO-1591-34] N80-30447
Applied research and evaluation of process concepts for liquefaction and gasification of western coals
[FE-2006-17] N80-30549

V

VANDERBILT UNIV., NASHVILLE, TENN.
Solar thermal energy storage using a paraffin wax phase change material N80-30887
Augmented predictive parsing N80-31086
VARIAN ASSOCIATES, PALO ALTO, CALIF.
High energy X-ray study
[AD-A086279] N80-30311
Submicron FETS using molecular beam epitaxy
[AD-A086422] N80-31244
VIRGINIA POLYTECHNIC INST. AND STATE UNIV., BLACKSBURG.
Dynamics and control in modal-space of flexible spacecraft N80-30376
Comparison of quasi-isotropic fiber reinforced composite laminates
[UCRL-15225] N80-30450
CW and pulsed beam propagation in focusing media with random-axis misalignments N80-30584
Stability of boundary-layer flows over curved walls N80-30658
Interacting inviscid and laminar viscous flow, and some aspects of their stability N80-30679
Performance of a diesel engine operating on raw coal-diesel fuel and solvent refined coal-diesel fuel slurries
[CONS-3288-T6] N80-30758
Measurement of surface roughness and correlation length using dichromatic speckle N80-31191
VIRGINIA UNIV., CHARLOTTESVILLE.
Transition metal-promoted oxidative fusion with carborane and borine anions. Synthesis of C4B sub n (n = 8-11) carborane systems in the presence of B5H8(-) or B-3H8(-) ions
[AD-A087252] N80-30453
VOUGHT ASTRONAUTICS, DALLAS, TEX.
Fatigue and fracture of ultrahigh strength steel and titanium roll bonded and diffusion bonded laminates
[AD-A086511] N80-30796

W

WASHINGTON UNIV., SEATTLE.
Techniques of analysis of load-displacement records by j-integral methods N80-30778
Influence of small scale yielding on dynamic fracture
[AD-A086335] N80-30901
Long-term measurement of abyssal currents in the North Pacific
[DOE/EV-71030/1] N80-31025
Cochlear microphonic evidence for mechanical propagation of distortion products (f2-f1) and (2f1-f2) N80-31153
Thermoluminescence studies of the thermal and radiation histories of chrondritic meteorites N80-31292
WASHINGTON UNIV., ST. LOUIS, MO.
Microcharacterization of interplanetary dust collected in the Earth's stratosphere N80-30976
WATER AND POWER RESOURCES SERVICE, DENVER, COLO.
The Sierra cooperative pilot project. Precipitation management research in the Sierra Nevada
[PB80-182389] N80-31023
WEAPONS SYSTEMS RESEARCH LAB., ADELAIDE (AUSTRALIA).
Discrete/continuous simulation language
[AD-A086487] N80-31074
WEATHER WING (7TH), SCOTT AFB, ILL.
Forecast worksheet: A new approach
[AD-A086151] N80-30999
WESTINGHOUSE DEFENSE AND ELECTRONIC SYSTEMS CENTER, BALTIMORE, MD.
High voltage switch using externally ionized plasmas
[AD-A086761] N80-30647
WESTINGHOUSE ELECTRIC CORP., EAST PITTSBURGH, PA.
Design study and economic assessment of multi-unit offshore wind energy conversion systems application. Volume 1: Executive summary
[WASH-2330-78/4-VOL-1] N80-30930
WESTINGHOUSE ELECTRIC CORP., MADISON, PA.
Advanced coal gasification system for electric power generation
[FE-1514-97] N80-30548

WESTINGHOUSE ELECTRIC CORP., PITTSBURGH, PA.
Second phase of a coalbed methane extraction and utilization program
[AESD-TM-3026] N80-30556
MHD electrode development
[FE-15529-5] N80-31222

WISCONSIN UNIV. - MADISON.
The convergence of periodic waves to solitary waves in the long wave limit
[AD-A086370] N80-30700
A decomposition procedure for large scale optimal plastic design problems
[AD-A086560] N80-30798
An integral bound on the strain energy for the traction problem in nonlinear elasticity with small strains
[AD-A086377] N80-30802
Monitoring the use of riverways with aerial photography: The development, testing, and evaluation of a computer assisted methodology
[AD-A086471] N80-30877
Design considerations for data-flow database machines
[AD-A086374] N80-31056
Generalized equations and their solutions. Part 2: Applications to nonlinear programming
[AD-A086365] N80-31075
Convergence estimates for semidiscrete parabolic equation approximations
[AD-A086369] N80-31099
On the maximum principle for pseudoparabolic equations
[AD-A086380] N80-31100
Convergent approximations in parabolic variational inequalities. 2: Hamilton-Jacobi inequalities
[AD-A086364] N80-31101
On the number of periodic trajectories for a Hamiltonian flow and a convex energy surface
[AD-A086367] N80-31102
Stationary points and finite-difference schemes for differential inclusions
[AD-A086381] N80-31103
Regularizing effects of homogeneous evolution equations
[AD-A086561] N80-31108
Viable and monotone trajectories of differential inclusions
[AD-A086382] N80-31109
How to homogenize a nonlinear diffusion equation E.G. Stefans problem
[AD-A086379] N80-31110
Fully nonlinear second order elliptic equations with large zeroth order coefficient
[AD-A086383] N80-31111
Asymptotic behavior of positive solutions of nonlinear Volterra equations for heat flow
[AD-A086385] N80-31112
Asymptotic properties of solutions of nonlinear abstract Volterra equations
[AD-A086387] N80-31113
Cumulative processes: Linear combinations of order statistics and percentiles
[AD-A086372] N80-31136
Measures of lack of fit, and transportation of predictors in composite designs
[AD-A086562] N80-31137
Dichotomies for band matrices
[AD-A086373] N80-31148
Notes on generalized boundary value problems Banach spaces
[AD-A086371] N80-31149
What is the main diagonal of a biinfinite band matrix?
[AD-A086366] N80-31150
Flywheel energy management systems for improving the fuel economy of motor vehicles
[PB80-175300] N80-31278

WISCONSIN UNIV., STOUGHTON.
Electronic structure studies of metal hydrides
[ISM-265] N80-31256
Optical and photoemission studies of lanthanum hydrides
[ISM-264] N80-31257

WORLD METEOROLOGICAL ORGANIZATION, GENEVA (SWITZERLAND).
Parameterization of extended cloudiness and radiation for climate models N80-31009
Plan and basis of the World Climatology Program, 1980 to 1983
[WMO-540] N80-31010
The 6th GARP Planning Meeting for the Monsoon Experiment (MONEX)
[GARP-SPEC-34] N80-31011
The 7th WMO Executive Committe Inter-Government Panel Session on the First GARP Global Experiment
[GARP-SPEC-35] N80-31012

Y

YALE UNIV., NEW HAVEN, CONN.
A survey of synchronization problems
[AD-A086509] N80-31055
Affect units and narrative summarization
[AD-A086735] N80-31089

Z

ZENTRALSTELLE FUER GEO-PHOTOGRAMMETRIE UND FERNERKUNDUNG, MUNICH (WEST GERMANY).
Application Explorer Mission-A heat capacity mapping mission

CONTRACT NUMBER INDEX

Typical Contract Number Index Listing

DEN3-61 ..... N80-16493

CONTRACT NUMBER — NASA ACCESSION NUMBER

Listings in this index are arranged alphanumerically by contract number. Under each contract number the NASA accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The NASA accession number denotes the number by which the citation is identified.

REPORT/ACCESSION NUMBER INDEX

Typical Report/Accession Number Index Listing

Listings in this index are arranged alphanumerically by report number. The NASA accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley

COLORADO
University of Colorado, Boulder

DISTRICT OF COLUMBIA
Library of Congress

GEORGIA
Georgia Institute of Technology, Atlanta

ILLINOIS
The John Crerar Library, Chicago

MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge

MISSOURI
Linda Hall Library, Kansas City

NEW YORK
Columbia University, New York

OKLAHOMA
University of Oklahoma, Bizzell Library

PENNSYLVANIA
Carnegie Library of Pittsburgh

WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library

COLORADO
Denver Public Library

CONNECTICUT
Hartford Public Library

MARYLAND
Enoch Pratt Free Library, Baltimore

MASSACHUSETTS
Boston Public Library

MICHIGAN
Detroit Public Library

MINNESOTA
Minneapolis Public Library

MISSOURI
Kansas City Public Library
St. Louis Public Library

NEW JERSEY
Trenton Public Library

NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library

OHIO
Akron Public Library
Cincinnati Public Library
Cleveland Public Library
Dayton Public Library
Toledo Public Library

TENNESSEE
Memphis Public Library

TEXAS
Dallas Public Library
Fort Worth Public Library

WASHINGTON
Seattle Public Library

WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

BRANCH

NASA

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

NAS1.9/4:

WHAT YOU CAN DO FOR *STAR*

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those that you will transmit to NASA, DoD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Scientific and Technical Information Facility, P. O. Box 8757, B. W. I. Airport, Maryland 21240.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR's* companion journal, *International Aerospace Abstracts*.

You may specify a particular source to be included in a report announcement if you wish, otherwise the report will be placed on public sale at the National Technical Information Service. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

The semimonthly issues and the cumulative index issues are available postpaid on subscription and in single copy from the Superintendent of Documents, United States Government Printing Office, Washington, D.C. 20402, United States of America.

Semimonthly issues.

Annual subscription rates: $60.00 domestic, $75.00 foreign. Price per single copy: $2.50 domestic, $3.15 foreign.

Cumulative index issues, semiannual and annual.

Annual subscription rates for both: $25.00 domestic, $31.25 foreign. Price per single copy: semiannual $9.50 domestic, $11.90 foreign, annual $16.00 domestic, $20.00 foreign.

Domestic subscription rates.

Apply to the United States, Canada, Mexico, and all Central and South American countries, except as noted below.

Foreign subscription rates.

Apply to Argentina, Brazil, French Guiana, Guyana, Surinam, Belize, and all other countries throughout the world.

Payment should be by check, money order, or document coupons, and must accompany order. Remittances from foreign countries should be made by international money order or draft on an American bank, payable to the Superintendent of Documents, or by UNESCO book coupons.

PUBLISHED BY:

UNITED STATES GOVERNMENT
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
SCIENTIFIC AND TECHNICAL INFORMATION BRANCH
Scientific and Technical Aerospace Reports, Volume 18, is prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by PRC Data Services Company.

The Administrator of the National Aeronautics and Space Administration has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Agency. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through June 30, 1981.

US ISSN 0036-8741

INTRODUCTION

Scientific and Technical Aerospace Reports (STAR) is a major component of a comprehensive National Aeronautics and Space Administration information system covering aeronautics, space, and supporting disciplines. *STAR* is issued on the 8th and 23rd of each month and announces current publications of the following types:

- NASA, NASA contractor, and NASA grantee reports
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms
- Translations in report form
- NASA-owned patents and patent applications
- Dissertations and theses

NEWARK PUBLIC LIBRARY
DEC 11 1980
U. S. GOVT. PUBS.
DEPOSITORY 376

Cumulative index volumes are published semiannually and annually.

Journal, book, and conference literature, cover-to-cover journal translations, and certain foreign dissertations are announced in a companion journal, *International Aerospace Abstracts (IAA)*, available on subscription from the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

ON-GOING RESEARCH PROJECTS

By arrangement between NASA and the Smithsonian Science Information Exchange (SSIE), a separate section of information on aerospace-related *On-Going Research Projects* is inserted into each issue of *STAR*. The insert presents titles of active NASA grants and university contracts, summary portions of recently updated *NASA Research and Technology Objectives and Plans (RTOPs)*, and notices of non-NASA research projects that were funded in the most recent or current fiscal year. The latter are selected by SSIE. The project announcements in the insert are arranged by *STAR* divisions but are otherwise entirely separate from *STAR*. They are not indexed nor machine-searchable by NASA. Current and retrospective searches are available from SSIE, 1730 M Street, N.W., Washington, D.C. 20036.

SUBJECT SCOPE

Subject scope of *STAR*, *IAA*, and *On-Going Research Projects* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

OTHER NASA PUBLICATIONS

Other NASA publications and information services are described in the publication, *The NASA Scientific and Technical Information System ... and How to Use It*, available without charge from the NASA Scientific and Technical Information Facility, P. O. Box 8757, B. W. I. Airport, Maryland 21240.

HOW TO USE STAR SUBJECT CATEGORIES

STAR is categorized by 10 major subject divisions divided into 74 specific subject categories and one general category/division. The major subject divisions are listed in the Table of Contents, together with a note for each that defines its scope and provides any cross-references. For example:

AERONAUTICS

Includes aeronautics (general), aerodynamics, air transportation and safety, aircraft communications and navigation, aircraft design, testing and performance, aircraft instrumentation, aircraft propulsion and power, aircraft stability and control, and research and support facilities (air).

For related information see also *Astronautics*.

Each major division is further divided into as many as nine specific categories, which are identified by category numbers.

Abstracts in *STAR* are grouped by specific category, the categories appearing in sequential order. Category breaks in the abstract section are identified by the category number and title, and a scope note. Cross-references to other categories are provided as appropriate. For example:

02 AERODYNAMICS

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces, and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*.

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents on microfiche[1] are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

AVAILABILITIES

One or more sources from which a document announced in *STAR* is available to the public is given in each citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $3.50 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free. (See discussion of patents and patent applications below.)

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report/Accession Number Index, patents are indexed by the NASA Case Number (which appears in lieu of the report number in other indexes), the U.S. Patent Number, the U.S. Patent Application Serial Number, and the U.S. Patent Class. Patent applications for which patents have not yet been issued are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

NASA *patent application specifications* are sold in paper copy by the National Technical Information Service at price code A02 ($5.00 domestic; $10.00 foreign). Microfiche are sold at price code A01 ($3.50 domestic; $5.25 foreign). The US-Patent-Appl-SN- number should be used in ordering either paper copy or microfiche from NTIS. Printed copies of *patents* (which are not microfiched) are available for purchase at 50 cents per copy from:

Commissioner of Patents and Trademarks
U.S. Patent and Trademark Office
Washington, D.C. 20231

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, preferably by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the Patent and Trademark Office. The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

Assistant General Counsel for Patent Matters/Code GP-1
National Aeronautics and Space Administration
Washington, D.C. 20546

ELIGIBILITY AND REGISTRATION FOR NASA INFORMATION PRODUCTS AND SERVICES

A variety of services, in addition to the distribution of NASA scientific and technical reports and of *STAR* and its cumulative indexes, is available to organizations of the following types that have registered with NASA to receive specific services or products:

1. NASA offices, research centers, contractors, subcontractors, grantees, and consultants;

2. Other U.S. Government agencies and their contractors;
3. Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
4. Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
5. Organizations abroad that have established reciprocal document exchange arrangements with NASA.

Only the central service points or central points of document acquisition and control within qualified organizations are eligible to register for NASA products and services. Domestic organizations that may be eligible to receive various classes of NASA publications and services should address their requests for registration or for further information to:

NASA Scientific and Technical Information Facility
Attn.: Registration Activity
P.O. Box 8757
B.W.I. Airport, Maryland 21240

Organizations abroad should direct requests to the same address, but to the attention of: International Exchange Program.

AVAILABILITY OF STAR ABSTRACTS ON MICROFICHE

Microfiche of the abstract sections of this issue ahd other issues of *STAR* are available on annual subscription from NTIS, Attn: Subscriptions, 5285 Port Royal Road, Springfield, Virginia 22161. Annual subscription rates are $45.00 North America; $90.00 foreign. Abstract sections for previous years retroactive to 1964 are available at the current rates. Microfiche for individual *STAR* issue abstract sections are not available.

VOLUME 18 NUMBER 22/NOVEMBER 23, 1980

TABLE OF CONTENTS

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics*.

01 AERONAUTICS (GENERAL) 2939

02 AERODYNAMICS 2944

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*.

03 AIR TRANSPORTATION AND SAFETY 2947

Includes passenger and cargo air transport operations; and aircraft accidents.

For related information see also *16 Space Transportation* and *85 Urban Technology and Transportation*.

04 AIRCRAFT COMMUNICATIONS AND NAVIGATION 2948

Includes digital and voice communication with aircraft; air navigation systems (satellite and ground based); and air traffic control.

For related information see also *17 Spacecraft Communications, Command and Tracking* and *32 Communications*.

05 AIRCRAFT DESIGN, TESTING AND PERFORMANCE 2949

Includes aircraft simulation technology.

For related information see also *18 Spacecraft Design, Testing and Performance* and *39 Structural Mechanics*.

06 AIRCRAFT INSTRUMENTATION 2952

Includes cockpit and cabin display devices; and flight instruments.

For related information see also *19 Spacecraft Instrumentation* and *35 Instrumentation and Photography*.

07 AIRCRAFT PROPULSION AND POWER 2953

Includes prime propulsion systems and systems components, e.g., gas turbine engines and compressors; and on-board auxiliary power plants for aircraft.

For related information see also *20 Spacecraft Propulsion and Power*, *28 Propellants and Fuels*, and *44 Energy Production and Conversion*.

08 AIRCRAFT STABILITY AND CONTROL 2954

Includes aircraft handling qualities; piloting; flight controls; and autopilots.

09 RESEARCH AND SUPPORT FACILITIES (AIR) 2956

Includes airports, hangars and runways; aircraft repair and overhaul facilities; wind tunnels; shock tube facilities; and engine test blocks.

For related information see also *14 Ground Support Systems and Facilities (Space)*.

ASTRONAUTICS

Includes astronautics (general); astrodynamics; ground support systems and facilities (space); launch vehicles and space vehicles; space transportation; spacecraft communications, command and tracking; spacecraft design, testing and performance; spacecraft instrumentation; and spacecraft propulsion and power.

For related information see also *Aeronautics*.

12 ASTRONAUTICS (GENERAL) 2956

For extraterrestrial exploration see *91 Lunar and Planetary Exploration*.

13 ASTRODYNAMICS 2958

Includes powered and free-flight trajectories; and orbit and launching dynamics.

14 GROUND SUPPORT SYSTEMS AND FACILITIES (SPACE) N.A.

Includes launch complexes, research and production facilities; ground support equipment, e.g., mobile transporters; and simulators.

For related information see also *09 Research and Support Facilities (Air)*.

15 LAUNCH VEHICLES AND SPACE VEHICLES 2958

Includes boosters; manned orbital laboratories; reusable vehicles; and space stations.

16 SPACE TRANSPORTATION 2959

Includes passenger and cargo space transportation, e.g., shuttle operations; and rescue techniques.

For related information see also *03 Air Transportation and Safety* and *85 Urban Technology and Transportation*.

17 SPACECRAFT COMMUNICATIONS, COMMAND AND TRACKING N.A.

Includes telemetry; space communications networks; astronavigation; and radio blackout.

For related information see also *04 Aircraft Communications and Navigation* and *32 Communications*.

18 SPACECRAFT DESIGN, TESTING AND PERFORMANCE 2961

Includes spacecraft thermal and environmental control; and attitude control.

For life support systems see *54 Man/System Technology and Life Support*. For related information see also *05 Aircraft Design, Testing and Performance* and *39 Structural Mechanics*.

19 SPACECRAFT INSTRUMENTATION 2961

For related information see also *06 Aircraft Instrumentation* and *35 Instrumentation and Photography*.

20 SPACECRAFT PROPULSION AND POWER 2961

Includes main propulsion systems and components, e.g., rocket engines; and spacecraft auxiliary power sources.

For related information see also *07 Aircraft Propulsion and Power, 28 Propellants and Fuels,* and *44 Energy Production and Conversion*.

CHEMISTRY AND MATERIALS

Includes chemistry and materials (general); composite materials; inorganic and physical chemistry; metallic materials; nonmetallic materials; and propellants and fuels.

23 CHEMISTRY AND MATERIALS (GENERAL) 2964

Includes biochemistry and organic chemistry.

24 COMPOSITE MATERIALS 2965

Includes laminates.

25 INORGANIC AND PHYSICAL CHEMISTRY 2967

Includes chemical analysis, e.g., chromatography; combustion theory; electrochemistry; and photochemistry.

For related information see also *77 Thermodynamics and Statistical Physics*.

26 METALLIC MATERIALS 2972

Includes physical, chemical, and mechanical properties of metals, e.g., corrosion; and metallurgy.

27 NONMETALLIC MATERIALS 2975

Includes physical, chemical, and mechanical properties of plastics, elastomers, lubricants, polymers, textiles, adhesives, and ceramic materials.

28 PROPELLANTS AND FUELS 2977

Includes rocket propellants, igniters, and oxidizers; storage and handling; and aircraft fuels.

For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power,* and *44 Energy Production and Conversion*.

ENGINEERING

Includes engineering (general); communications; electronics and electrical engineering; fluid mechanics and heat transfer; instrumentation and photography; lasers and masers; mechanical engineering; quality assurance and reliability; and structural mechanics.

For related information see also *Physics*.

31 ENGINEERING (GENERAL) 2991

Includes vacuum technology; control engineering; display engineering; and cryogenics.

32 COMMUNICATIONS 2993

Includes land and global communications; communications theory; and optical communications.

For related information see also *04 Aircraft Communications and Navigation* and *17 Spacecraft Communications, Command and Tracking*.

33 ELECTRONICS AND ELECTRICAL ENGINEERING 3000

Includes test equipment and maintainability; components, e.g., tunnel diodes and transistors; microminiaturization; and integrated circuitry.

For related information see also *60 Computer Operations and Hardware* and *76 Solid-State Physics*.

34 FLUID MECHANICS AND HEAT TRANSFER 3003

Includes boundary layers; hydrodynamics; fluidics; mass transfer; and ablation cooling.

For related information see also *02 Aerodynamics* and *77 Thermodynamics and Statistical Physics*.

35 INSTRUMENTATION AND PHOTOGRAPHY 3006

Includes remote sensors; measuring instruments and gages; detectors; cameras and photographic supplies; and holography.

For aerial photography see *43 Earth Resources*. For related information see also *06 Aircraft Instrumentation* and *19 Spacecraft Instrumentation*.

36 LASERS AND MASERS 3007

Includes parametric amplifiers.

37 MECHANICAL ENGINEERING 3008

Includes auxiliary systems (non-power); machine elements and processes; and mechanical equipment.

38 QUALITY ASSURANCE AND RELIABILITY 3010

Includes product sampling procedures and techniques; and quality control.

39 STRUCTURAL MECHANICS 3011

Includes structural element design and weight analysis; fatigue; and thermal stress.

For applications see *05 Aircraft Design, Testing and Performance* and *18 Spacecraft Design, Testing and Performance*.

GEOSCIENCES

Includes geosciences (general); earth resources; energy production and conversion; environment pollution; geophysics; meteorology and climatology; and oceanography.

For related information see also *Space Sciences*.

42 GEOSCIENCES (GENERAL) 3017

43 EARTH RESOURCES 3017

Includes remote sensing of earth resources by aircraft and spacecraft; photogrammetry; and aerial photography.

For instrumentation see *35 Instrumentation and Photography*.

44 ENERGY PRODUCTION AND CONVERSION 3019

Includes specific energy conversion systems, e.g., fuel cells and batteries; global sources of energy; fossil fuels; geophysical conversion; hydroelectric power; and wind power.

For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power, 28 Propellants and Fuels*, and *85 Urban Technology and Transportation*.

45 ENVIRONMENT POLLUTION 3032

Includes air, noise, thermal and water pollution; environment monitoring; and contamination control.

46 GEOPHYSICS 3036

Includes aeronomy; upper and lower atmosphere studies; ionospheric and magnetospheric physics; and geomagnetism.

For space radiation see *93 Space Radiation*.

47 METEOROLOGY AND CLIMATOLOGY 3040

Includes weather forecasting and modification.

48 OCEANOGRAPHY 3043

Includes biological, dynamic and physical oceanography; and marine resources.

LIFE SCIENCES

Includes life sciences (general); aerospace medicine; behavioral sciences; man/system technology and life support; and planetary biology.

51 LIFE SCIENCES (GENERAL) 3044

Includes genetics.

52 AEROSPACE MEDICINE 3045

Includes physiological factors; biological effects of radiation; and weightlessness.

53 BEHAVIORAL SCIENCES 3049

Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

54 MAN/SYSTEM TECHNOLOGY AND LIFE SUPPORT 3051

Includes human engineering; biotechnology; and space suits and protective clothing.

55 PLANETARY BIOLOGY N.A.

Includes exobiology; and extraterrestrial life.

MATHEMATICAL AND COMPUTER SCIENCES

Includes mathematical and computer sciences (general); computer operations and hardware; computer programming and software; computer systems; cybernetics; numerical analysis; statistics and probability; systems analysis; and theoretical mathematics.

59 MATHEMATICAL AND COMPUTER SCIENCES (GENERAL) N.A.

60 COMPUTER OPERATIONS AND HARDWARE 3052

Includes computer graphics and data processing.

For components see *33 Electronics and Electrical Engineering*.

61 COMPUTER PROGRAMMING AND SOFTWARE 3054

Includes computer programs, routines, and algorithms.

62 COMPUTER SYSTEMS 3057

Includes computer networks.

63 CYBERNETICS 3058

Includes feedback and control theory.

For related information see also *54 Man/System Technology and Life Support*.

64 NUMERICAL ANALYSIS 3058

Includes iteration, difference equations, and numerical approximation.

65 STATISTICS AND PROBABILITY 3060

Includes data sampling and smoothing; Monte Carlo method; and stochastic processes.

66 SYSTEMS ANALYSIS 3062

Includes mathematical modeling; network analysis; and operations research.

67 THEORETICAL MATHEMATICS 3062

Includes topology and number theory.

PHYSICS

Includes physics (general); acoustics; atomic and molecular physics; nuclear and high-energy physics; optics; plasma physics; solid-state physics; and thermodynamics and statistical physics.

For related information see also *Engineering*.

70 PHYSICS (GENERAL) 3063

For geophysics see *46 Geophysics*. For astrophysics see *90 Astrophysics*. For solar physics see *92 Solar Physics*

71 ACOUSTICS 3063
Includes sound generation, transmission, and attenuation.
For noise pollution see *45 Environment Pollution*.

72 ATOMIC AND MOLECULAR PHYSICS 3064
Includes atomic structure and molecular spectra.

73 NUCLEAR AND HIGH-ENERGY PHYSICS 3065
Includes elementary and nuclear particles; and reactor theory.
For space radiation see *93 Space Radiation*.

74 OPTICS 3066
Includes light phenomena.

75 PLASMA PHYSICS 3068
Includes magnetohydrodynamics and plasma fusion.
For ionospheric plasmas see *46 Geophysics*. For space plasmas see *90 Astrophysics*.

76 SOLID-STATE PHYSICS 3071
Includes superconductivity.
For related information see also *33 Electronics and Electrical Engineering* and *36 Lasers and Masers*.

77 THERMODYNAMICS AND STATISTICAL PHYSICS N.A.
Includes quantum mechanics; and Bose and Fermi statistics.
For related information see also *25 Inorganic and Physical Chemistry* and *34 Fluid Mechanics and Heat Transfer*.

SOCIAL SCIENCES

Includes social sciences (general); administration and management; documentation and information science; economics and cost analysis; law and political science; and urban technology and transportation.

80 SOCIAL SCIENCES (GENERAL) N.A.
Includes educational matters.

81 ADMINISTRATION AND MANAGEMENT 3075
Includes management planning and research.

82 DOCUMENTATION AND INFORMATION SCIENCE 3075
Includes information storage and retrieval technology; micrography; and library science.
For computer documentation see *61 Computer Programming and Software*.

83 ECONOMICS AND COST ANALYSIS N.A.
Includes cost effectiveness studies.

84 LAW AND POLITICAL SCIENCE N.A.
Includes space law; international law; international cooperation; and patent policy.

85 URBAN TECHNOLOGY AND TRANSPORTATION 3078
Includes applications of space technology to urban problems; technology transfer; technology assessment; and surface and mass transportation.
For related information see *03 Air Transportation and Safety*, *15 Space Transportation*, and *44 Energy Production and Conversion*.

SPACE SCIENCES

Includes space sciences (general); astronomy; astrophysics; lunar and planetary exploration; solar physics; and space radiation.
For related information see also *Geosciences*.

88 SPACE SCIENCES (GENERAL) N.A.

89 ASTRONOMY 3079
Includes radio and gamma-ray astronomy; celestial mechanics; and astrometry.

90 ASTROPHYSICS 3080
Includes cosmology; and interstellar and interplanetary gases and dust.

91 LUNAR AND PLANETARY EXPLORATION 3080
Includes planetology; and manned and unmanned flights.
For spacecraft design see *18 Spacecraft Design, Testing and Performance*. For space stations see *15 Launch Vehicles and Space Vehicles*.

92 SOLAR PHYSICS 3081
Includes solar activity, solar flares, solar radiation and sunspots.

93 SPACE RADIATION 3082
Includes cosmic radiation; and inner and outer earth's radiation belts.
For biological effects of radiation see *52 Aerospace Medicine*. For theory see *73 Nuclear and High-Energy Physics*.

STUDY OF THE FEASIBILITY ASPECTS OF FLIGHT TESTING AN AEROELASTICALLY TAILORED FORWARD SWEPT RESEARCH WING ON A BQM-34F DRONE VEHICLE
D. J. Mourey 3 Sep 1979 409 p refs
(Contract NAS1-15624)
(NASA-CR-159149) Avail: NTIS HC A18/MF A01
CSCL 01C

The aspects of flight testing an aeroelastically tailored forward swept research wing on a BQM-34F drone vehicle are examined. The geometry of a forward swept wing, which is incorporated into the BQM-34F to maintain satisfactory flight performance, stability, and control is defined. A preliminary design of the aeroelastically tailored forward swept wing is presented.
A.W.H.

ON-GOING RESEARCH PROJECTS

This is a listing of research projects - not publications

AERONAUTICS

Includes Aeronautics (general); Aerodynamics; Air Transportation and Safety; Aircraft Communications and Navigation; Aircraft Design, Testing, and Performance; Aircraft Instrumentation; Aircraft Propulsion and Power; Aircraft Stability and Control; and Research and Support Facilities (air). 1.0005, BASIC RESEARCH IN DIGITAL STOCHASTIC MODEL ALGORITHMIC CONTROL
R.K. Mehra, Scientific Systems Inc., *1640 Massachusetts Ave., Cambridge, Massachusetts* 02138 (DF143940; F33615-79-C-3613)

This effort supports AFFDL TP03, flight control technology, and specific goal FG02, flight control system design techniques. Most current digital design methodology used in practice is in reality a conversion of a predesigned analog system, using various approximate transformations. These procedures do not take into account the inherent flexibility and uniqueness of the digital computer to solve control of flight problems. The specific objective of this research is to create the mathematical basis that may be utilized by practicing control system engineer to directly design a robust and hierarchical digital control system for a flight vehicle characterized as multiple input/output and whose dynamics are characterized by equations of motion that are piecewise-continuous and nonstationary. In addition, the mathematics must account for state and control constraints and allow for a mixed analog/digital controller design. The payoff of such research is dramatic in that robustness permits some uncertainty in the dynamics of the unaugmented flight vehicle, hierarchy transitions analog frequency design procedures to direct digital control design and, finally, the capability to mix analog and digital controllers helps to minimize the risk of transition of the control system designs from totally analog to direct digital. This latter payoff will be particularly beneficial for advanced control configured vehicle control system designs currently envisioned, as they have been flight test proven primarily by analog mechanization. A satisfactory conclusion of the research will lead to a cost and performance optimized digital control system for future military aircraft.

The first task in the research effort is to critically evaluate current implementations of the MAC concept to identify those algorithm parameters that are sensitive to process and measurement noise, and those parameters that determine stability, sample rate selection, and robustness of the digital controller. This first task will be largely analytical. The second task of the research effort is to demonstrate the analytical conclusions and design guidelines using a digital simulation of a generic tactical missile-autopilot combination. The final product for this research shall be an explicit description of the criteria necessary to achieve the stated digital control design objective using the model algorithmic control (MAC) concept. 1.0009, A DIGITAL CONTROL VALVE INVESTIGATION
G.D. Jenney, Dynamic Controls Inc., *Dayton, Ohio* (DF143560; F33615-79-C-3605)

This effort addresses flight control actuation technology for military aircraft. Conventional analog electrohydraulic control valves contain a spool valve which moves in proportion to the amplitude of the input signal. The spool valve is sensitive to hydraulic fluid particle contamination and has a leakage path between the spool and its sleeve. reducing this leakage path by reducing the clearance between the spool and sleeve increases contamination sensitivity and the possibility of galling due to spool and sleeve thermal and structural distortions. The objective of this effort is to establish the feasibility of using a digital (solenoid) control valve in place of the conventional analog electrohydraulic control valve for aircraft control systems. This will significantly simplify the mechanical control actuator design and improve reliability.

A digital control valve will be mechanized with solenoid operated two position poppet valves which exhibit both positive seal off and contamination insensitivity. The control valve will be assembled in an actuator assembly with driving electronics and the assembly tested. The investigation will also concentrate on developing a suitable solenoid valve specifically for the digital valve application.

SUPPORTED BY U.S. Dept. of Defense, Air Force, Flight Dynamics Lab.

1.0010, COMPUTATIONAL METHODS FOR LARGE AEROSPACE STRUCTURES
V. Venkayya, U S. Dept. of Defense, Air Force, Flight Dynamics Lab., *Wright Patterson A.F.B., Dayton, Ohio* 45433 (DF143120)

The Air Force function that this work effort supports is basic research in structural mechanics for aerospace vehicles. The deficiency is in computational models for large aerospace structures which incorporate static, dynamic and thermal loading. The objective is to assess our computational capability to work such problems, develop more efficient methods, and improve our understanding of the exo-atmospheric loading environment. This work will contribute to improving the design of low-cost, lightweight, large aerospace vehicles.

Initial activities will concentrate on an assessment of current local computational methods for problems involving discrete structures under static, dynamic, and thermal loading. Methods will be improved as necessary using numerical algorithms and modelling techniques currently being developed. Large lattice type structures will be examined to improve methods for systems with many degrees of freedom.

CHEMISTRY AND MATERIALS

Includes Chemistry and Materials (general); Composite Materials; Inorganic and Physical Chemistry; Metallic Materials; Nonmetallic Materials; and Propellants and Fuels.

3.0001, CONVERSION OF CELLULOSIC AND WASTE POLYMER MATERIAL TO GASOLINE
J.L. Kuester, Arizona State University, School of Engineering & Applied Sciences, Dept. of Chemical Engineering, *Tempe, Arizona* 85281 (EY-76-S-02-2982)

The project is aimed at the conversion of cellulosic or waste polymer materials to liquid, transportable fuels. The cellulose source may be from urban refuse, agricultural or forest residues or from crops deliberately grown for energy conversion purposes (land or marine). Since cellulose (biomass) is obtained by photosynthesis (carbon dioxide plus water plus sunlight), the project is solar in nature and the feedstock (plant material) is considered a renewable resource. The process involves decomposing the feed material to basic compounds under the influence of heat (pyrolysis). The basic compounds are then introduced into a chemical reactor where a diesel or jet fuel type material is produced. If a high octane gasoline is desired, a final reaction step is used (reforming).

H.S. Johnston, University of California, Berkeley Campus, Lawrence Berkeley Lab., *Berkeley, California* 94720 (ERDA EC 04-01-01)

(1) A small telescope, spectrometer, optical multichannel analyzer, and minicomputer are used to follow light directly from the sun and from Rayleigh-scattered zenith sky light during sunrise or sunset. (2) Laboratory studies are made of elementary chemical and photochemical reactions for which rate constants are needed for model calculations in the atmosphere, and such model calculations are made. (1) By the end of calendar 1976, we hope to have established the feasibility (or not) of the method being used. (2) The results expected are new rate constants for reactions involving HO, HOO, Cl, ClO, and NO/sub 3/ free radicals and for molecular N/sub 2/O/sub 5/. (1) If the method is feasible, the apparatus will be simplified to a maximum possible extent, and another simpler system will be built. (2) Each new or better rate constant is a goal in itself, and it can be entered in tables of such values used by modelers of atmospheric reactions or of other processes involving the same reactions.

3.0004, CROSSED MOLECULAR BEAMS

Y.T. Lee, University of California, Berkeley Campus, Lawrence Berkeley Lab., *Berkeley, California* 94720

Investigation of the dynamics of elementary atomic and molecular processes and the energetics of exotic radicals and ion clusters using crossed molecular beams. Information on mechanism and dynamics of chemical reactions obtained from the direct identification and measurements of velocity and angular distributions of product molecules from single collisions. Reactions of oxygen atoms and free radicals with carbon-containing molecules and radicals under single collision conditions; primary products of many important reactions of oxygen atoms; hyperthermal chemical reactions of hydrogen, deuterium and halogen atoms; reaction of electronically excited atoms and molecules; interaction potentials between atomic and molecular species; inter- and intramolecular energy transfers and the energetics of radical molecules and the spectroscopy of molecule ions. (DOE/ER-0002)

3.0005, RESEARCH IN CHEMICAL KINETICS

F.S. Rowland, University of California, Irvine Campus, School of Physical Sciences, Dept. of Chemistry, *Irvine, California* 92664

(1) Laboratory measurement of the cross-sections for absorption of solar ultraviolet and visible radiation by molecules of stratospheric interest, including CCl/sub 2/F/sub 2/, CCl/sub 3/F, CClFO, ClONO/sub 2/, etc. (2) Laboratory measurement of chemical reaction rates pertinent to stratospheric chlorine chemistry. (3) Computer calculations of atmospheric profiles for various chemical compounds, including CCl/sub 2/F/sub 2/, CCl/sub 3/F, CClFO, etc. (4) Consideration of the physicochemical processes for removal of halogen-containing molecules from all parts of the atmosphere. (1) Completion of above tasks. (2) Formulation of new problems in response to results and/or interpretations of experiments described above. The results should aid in control decisions on the possible ban of certain chlorofluorocarbon compounds (and exclusion of others) because of the hazard of stratospheric ozone depletion. (1) No scheduled decision dates. (2) No dates scheduled for completion of particular instruments, or for particular research tasks among those listed above. (3) Next scheduled project report: September, 1977. (4) Reports on completed phases of the scientific work as each phase reaches a suitable stage of completion.

3.0007, ELECTRODE POLARIZATION STUDIES IN HOT CORROSION SYSTEMS

O.F. Devereux, University of Connecticut, Storrs Campus, School of Engineering, Dept. of Metallurgy, *Box U-37, Storrs, Connecticut* 06268 (EY-76-J-02-2960)

Hot corrosion of structural metals, iron, chromium, nickel, steel, and stainless steel, will be studied via electrode polarization in electrolytes which may arise in coal gasification reactors, specifically, molten sodium carbonate equilibrated with various sulfur-bearing reducing gas mixtures. Gas chemistry will be controlled by control of P/sub H2/, P/sub CO/, and P/sub H2S/, with a total pressure of one atmosphere and a temperature of 1000 degrees C. The nature and activity of other gas and liquid-phase species will be determined by thermodynamic modelling. Parallel manometric studies will be conducted on the nature of the gas/metal reaction in the absence of an electrolyte. These studies are intended to yield both empirical design data and detailed information concerning the nature of the hot corrosion reactions in these systems, and thermodynamic and kinetic parameters pertaining thereto.

3.0009, INVESTIGATIONS OF INTERMETALLIC ALLOY HYDRIDING MECHANISMS

B.R. Livesay, Georgia Inst. of Technology, Georgia Tech Research Inst., *225 North Ave. N.W., Atlanta, Georgia* 30332 (EY-76-S-05-5246)

The objective of this program is to characterize the microstructure and physical properties of selected intermetallic compounds as related to the hydrogen sorption and desorption processes The investigations primarily concern films (both thin and thick) of FeTi and certain RT5 alloy systems where R repesents a rare earth and T a transition metal element. Through hydrogen absorption, these alloys present significant energy storage possibilities. Changes in the microstructure, magnetic properties, electronic structure, and pressure-composition relationships caused by modifications to the alloy system are studied. Surface coatings, ternary element substitutions and thermal-mechanical treatments are among the modifications made to provide information which will lead to fir Jing an optmal alloy system for hydrogen storage. The hydrogen-alloy system properties are characterized using such analytical techniques as TEM, AES and SEM as well as resistivity and magnetic measurements. The high critical hydrogen-alloy compositional curves are determined using microbalance techniques. Film thicknesses are also adjusted to provide a separation between bulk and surface properties. Attention is directed towards establishing factors that determine such chracteristics as hydride nucleation sites, growth

mechanisms, hydride decomposition, hysteresis and stability, which govern the hydriding behavior of these systems.

RESULTS: Developed methods for preparation and study of hydriding intermetallic compounds in form of thin films which remain intact during hydride cycling. Measured behavior of magnetization and magnetic anisotropy energies as function of equilibrium hydrogen pressure. Developed high hydrogen pressure equipment systems for in situ physical property measurements: 1a. Torque magnetometer; 2a. Tricrobalance; and 3a. Four-point-probe resistivity cell.

3.0010, HYDROGEN BEHAVIOR IN BCC METALS

H.K. Birnbaum, University of Illinois, Urbana Champaign Campus, School of Engineering, Dept. of Metallurgy & Mining Engineering/Materials Research, *207 Engineering Hall, Urbana, Illinois* 61801 (EY-76-C-02-1198)

The mobility of hydrogen and its isotopes in solids is being studied using a variety of techniques. Emphasis is being placed on understanding the quantum diffusion mechanism of these light interstitials. Long range diffusion measurements using the Gorsky effect and local reorientation studies of H and its clusters with other solutes using acoustic techniques are being carried out. In addition to measurements of the H jump frequencies over a wide temperature range, these techniques allow a determination of the non-classical isotope effects and of the structure and behavior of small solute clusters containing H. A new technique, anelastic piezo-resistance is being applied to these studies.

In addition to its behavior inside the metal, the mobility of hydrogen at the metal-gas surface is being studied using the combined techniques of Raman spectroscopy, Auger analysis and permeation methods. This study determines the vibrational modes of H, its interactions with absorbed surface species such as SO2, H2S and H2O, and the effect of these factors on entry of hydrogen into the solid.

In cooperation with Argonne National Laboratory we are using electron diffraction, T.E.M. and neutron scattering methods to study the behavior of hydrogen in high concentration alloys. Phonon dispersion curves, diffuse scattering and crystal structure determinations are all being applied in an attempt to understand the dramatic changes in physical properties on forming the high H concentration alloys.

3.0011, APPLICATIONS OF ELECTRON MICROSCOPY IN MATERIALS SCIENCE

H.L. Fraser, University of Illinois, Urbana Champaign Campus, School of Engineering, Dept. of Metallurgy & Mining Engineering/Materials Research, *207 Engineering Hall, Urbana, Illinois* 61801 (EY-76-C-02-1198)

This project is divided into three subgroups; one involves the development of techniques and interpretative methods of analytical electron microscopy. In this area, much work has been done on the use of x-ray energy dispersive analysis for microchemical determination in thin foils on the scale of approximately 200 Angstrom units. The sources of spurious x-ray signals have been determined and methods to reduce their contribution to the measured x-ray spectrum have been accomplished. Electron energy loss spectroscopy for light element determination has also been developed. The other two parts of this project involve a study of plasmon losses evident in the electron energy spectrum in specimens of various hydrogen metal alloys, and the effect of surface oxidation on defect production in B2 compounds (specifically Beta-NiAl). In the study of plasmon losses, the aim is to develop a technique of identifying and possibly quantifying hydrogen hydrides in thin metal foils. In the case of surface oxidation, it is important to understand the source of defects that are generated during annealing.

3.0012, MECHANISM OF STRESS-CORROSION CRACKING PROPAGATION STUDIES

E.N. Pugh, University of Illinois, Urbana Champaign Campus, School of Engineering, Dept. of Metallurgy & Mining Engineering, *207 Engineering Hall, Urbana, Illinois* 61801 (EY-76-C-02-1198)

The propagation of stress-corrosion cracks is being investigated in a range of engineering materials, primarily using fractographic and acoustic-emission techniques. In 1978, the studies were focussed on two alloys, namely Ti-8Al-1Mo-1V and Admiralty Metal. In the former, a comparison was completed of the characteristics of stress-corrosion cracking (SCC) in aqueous chloride solutions, internal hydrogen embrittlement (IHE) and gaseous hydrogen embrittlement (GHE). The comparison provided strong evidence that SCC in Ti-8Al-1Mo-1V is a form of hydrogen embrittlement. A layer of titanium hydride was observed on fracture surfaces produced by GHE, supporting the view that cracking proceeds discontinuously by the repeated formation and rupture of this brittle layer. Crack propagation was also discontinuous in SCC and IHE, but there was no evidence for hydride formation, leaving the specific role of hydrogen in doubt in these cases. In the case of Admiralty Metal, SCC in ammoniacal solutions was found to occur by discontinuous cleavage on (110) planes. The cause of embrittlement has not been established in this case but both hydrogen and selective dissolution of zinc are currently being investigated.

3.0013, THE APPLICATION OF X-RAY PHOTOELECTRON AND AUGER SPECTROSCOPY TO SOME SELECTED GEOCHEMICAL PROBLEMS

I. Adler, University of Maryland, College Park Campus, School of Agriculture, Dept. of Chemistry, *College Park, Maryland* 20742 (EAR78-16421)

This project is concerned with the use of X-ray photoelectron and Auger Spectroscopy for research in several diverse areas including electronic structures of minerals, interaction processes between small organic molecules with clay and mineral surfaces, radiation damage in mineral systems such as those associated with solar wind bombardment of lunar surfaces and finally the Auger Spectra of the transition metals. Some of the proposed studies include the study of ion induced chemical alterations by XPS, the electronic structure and spectra of sulfide minerals, the electronic structure of silicates and studies on the interactions of small organic molecules with clay mineral surfaces.

3.0014, SOURCES AND DISTRIBUTION OF TRACE ELEMENTS IN THE ANTARCTIC ATMOSPHERE

W.H. Zoller, University of Maryland, College Park Campus, School of Agriculture, Dept. of Chemistry, *College Park, Maryland* 20742 (DPP79-08964)

Gaseous and particulate samples from the Antarctic atmosphere that were collected over the past austral winter and summer at South Pole and aboard an instrumented LC-130 aircraft during the past austral summer will be analyzed. The chemical composition of these aerosols will be determined. Their variation as a function of particle size and time will be investigated, and these parameters will be related to the history of the air masses that were sampled. The size distribution of the particulate material will also be determined, and the effect of ice crystals scavenging for the removal of the particulate material from the atmosphere will be investigated. The samples taken of the Mt. Erebus plume will be evaluated to determine if Erebus emissions are a source of the aerosols observed at South Pole.

3.0016, METAL VAPOR EXCIMERS
J. Jacob, Avco Corp., Everett Research Laboratory, *2385 Revere Beach Pkwy., Everett, Massachusetts* 02149 (ES-77-C-02-4275)

The objective of this research is to investigate metal vapor excimers and CdHg in particular. To achieve this objective, a 600 degrees C discharge cell will be designed and fabricated. This cell will be interfaced with a high energy electron gun. Initially the discharge physics will be studied; we will obtain V-I characteristics. The fluorescence efficiency of CdHg will be measured. Also, by probing the active medium with a dye laser we will measure the gain and absorption as a function of wavelength. Finally, an optical cavity will be constructed and laser experiments on the CdHg will be attempted.
